A disappointment, however, is deletion of the education tax credit. This provision would have allowed tax credits of up to $250 a year for parents of children in colleges and vocational schools. Unfortunately it was torpedoed by the Carter administration.

I have supported this concept since first being elected to Congress. In the current Congress I am sponsoring H.R. 165, which would provide an income tax credit of $300 for tuition expenses at an institution of higher education.

The credit would have provided some welcome tax relief to families faced with skyrocketing education costs. Lower and middle income families would have found it especialy beneficial. Its removal from the bill is a great mistake.

All in all, H.R. 9346 is a bad bill. Our citizens should not be subjected to the massive tax increases that it would impose. I strongly urge the defeat of the conference report.

Mr. CONABLE. Mr. Speaker, I yield 3 minutes to the gentleman from Pennsylvania (Mr. Coughlin).

Mr. COUGHLIN. Mr. Speaker, once again, I am compelled—out of the conflicting emotions of fair play and frustration—to call my colleagues' attention to the fact that the will of the House has again been thwarted by the leadership and a threatened Presidential pocket veto. We have again been denied a clear-cut vote on the merits of the legislation to provide tax credits for higher education expenses.

As long ago as 1970, I began introducing such legislation in recognition of the growing onerous financial burden on middle-income taxpayers trying to educate their children in colleges and universities. In this Congress alone, there are more than 210 House Members who have sponsored some form of education tax credit legislation.

I want to thank my many colleagues—Democrat and Republican—who have sponsored and worked for this legislation through the years. I thank them also for enduring numerous "Dear Colleague" letters from me on tax credits and want to warn them to expect many more until we are afforded the democratic opportunity for a direct vote.

The senior Senator from Delaware, whose tax credit proposal we gather here today to inter for this session, first introduced his legislation in 1975 as a tax deduction bill and changed it to a tax credit on the advice of the Senate Finance Committee. The Senate has passed education tax credits three times in the past 15 months. In addition to the senior Senator from Delaware's bill's 26 sponsors, a similar piece of Senate legislation based on education tax deductions has 50 sponsors.

Consider this scenario:

Approved by the Senate in four of the last five Congresses, the principle of education tax credits was overwhelmingly approved by the House, 311 to 76, when I forced a vote last September on reserving funds for it in the fiscal 1978 second budget resolution.

Because the distinguished Ways and Means chairman continued to refuse to bring the matter before the House for a vote on the merits, the only way to force consideration was the senior Senator from Delaware's amendment to the social security bill. An earlier commitment to bring the matter to vote in the dying days of the last Congress had been killed by a ruse.

Less than 3 weeks ago, when the House agreed to go to conference on the social security bill, I intended to make a motion which would have instructed House conferees to recede to the Roth tax credit amendment. Knowing this, a member of Ways and Means demanded the "previous question" which cut off the opportunity even to offer the motion.

There then followed an even quainter maneuver in the social security conference in the final days of this session. A suggestion was advanced that the education tax credit amendment be dropped from the social security bill and brought before the House as a rider to a minor bill. This would, of course, be subject to a quiet pocket veto by the President and the issue never would be joined.

A second alternative, a motion to recommit the social security bill with instructions to accept the tax credit provision, also was denied when—defying all practices and traditions and the House calendar—the conference report was given to the Senate to act upon first rather than the House.

Again and again, the rules and practices of the House have been bent, twisted and broken to suit the House Democratic leadership and thwart the will of the majority. In this instance, middle income working Americans again were the victims and again were denied higher education tax credits which would provide a measure of help and tax relief at a time in their lives of the greatest financial stress.

Mr. CONABLE. Mr. Speaker, I reserve the balance of my time.

Mr. ULLMAN. Mr. Speaker, I yield 1 minute to the gentleman from Florida (Mr. PEPPER).

Mr. PEPPER. Mr. Speaker, every month 33 million Americans draw their social security checks and one-third of them are over 72 years of age. All of those people know that this Congress came back here today from all over America to pass a social security bill that would give the assurance that in the future social security would be solvent and that they will get what we promised them. If the word goes out at the end of this day that, notwithstanding the Senate passing the bill by an overwhelming majority, the House of Representatives defeated it, a wave of fear will sweep through the hearts of every one of those Americans wondering about the future solvency and soundness of our social security funds which are the sole source of livelihood for very many of those people.

This bill does not do everything the elderly would like to have it do. It is not perfect in terms of the taxes that it provides. But we have the future ahead of us, if we keep the funds sound, to improve it from the tax point of view and from the viewpoint of the recipients.

I hope the conference report will be adopted.

Mr. ULLMAN. Mr. Speaker, I yield 1 minute to the gentleman from Texas (Mr. PICKLE).

Mr. PICKLE. Mr. Speaker, when this measure was up before the House recently, I voted against it on final passage. Now I stand here in support of this conference agreement.

On October 27, 146 Members of this body voted against this bill. Given the urgency of this legislation, I think that number indicated a great reservation about the approach taken in the House measure and the rule we have barely passed, signals other reservations.

But today we have a different bill, a bill which I think is sound and fair.

It will not be popular in the short run. It is a steep tax bill. But it is as sound, and it is as fair, as we could expect, and that is our best guarantee that we can be satisfied with this bill. The alternatives would be to let the social security system go down the drain, and we cannot allow that to happen.

The conference report corrects several matters which I think had caused widespread concern.

First, it removes the provision allowing for general revenues. I had an amendment to the House measure to remove that provision, and it failed by a 196 to 221 vote. The action of the conferees in removing this provision was probably their most significant action. We can now say in all honesty to the American people that the social security system will make it, and will make it on its own. It will not become a needs or welfare program.

Second, the conferees brought relief on the problem of the outside earnings ceiling, but they did not lift the ceiling entirely. This just would have been too costly during the time when the system faces some of its most critical financing problems. I think the conference approach here, again, is fair in that it does what we can without unduly endangering future generations who will rely on social security benefits.

Third, the conferees maintained a provision which was in the original House bill but altered in the Senate. That provision is parity. When we are levying heavy taxes, the only thing we can do is to try to be fair to all sides. I think parity is essential to that sense of fairness, and I am very pleased to see it remain in the Conference bill. In addition, this bill provides for "decoupling," and this provides a consistent wage-replacement ratio.

In passing this bill we can say to the American people that we are putting social security on a sound financial basis for the next 25 to 50 years. Nothing can be more reassuring to the public than taking this strong action. This is particularly important to the many young people who have felt that when their time came the money would not be there.

We are not through. We must begin early next year to address the many problems in the disability system. We will face the issue of universal coverage in 2 years. And we must look at possible steps toward preventing opting out of the system before universal coverage is in place. I do not like the welfare provision in one section of the conference, and I hope we can make other changes in the offset provisions.

But we have come a long, long way.

Mr. Speaker, for months—years—we have been hearing how important it is for us to take the necessary steps to shore up a faltering social security system.

The necessary steps have proved to be difficult ones. They are more difficult now than they would have been 2 years ago, as I tried to do in my subcommittee, when we on the Social Security Subcommittee first made an effort to come up with a concrete bill.

But stunning as this bill is, it is less difficult than the horror which will face us if we do not act now.

Every passing month sees the social security trust funds draining away—to the tune of about $470 million each month in the big OASDI fund. This pace is stepped up from the $269 million average monthly drain in 1976. But it is far less than the $575 million average monthly drain currently predicted for next year. And it is far less than the drain of nearly a billion a month which we will face in 1981 if we do not do something and do it now.

That billion a month—as we might suspect—will completely exhaust the OASDI trust funds if we do not act. And we won't make it until 1981 if all else does not go according to the experts' rather optimistic projections.

The message in all this is simple. It will be a lot harder to deal with this problem then, with a billion a month drain on the trust fund, than it is to deal with it now, with a drain of less than half a billion.

No option in this program is pleasant. We must stand up and take the bad news home now, or we must face the prospect of having the damage of this great system on our consciences for the rest of our lives.

Social security is more than an apple pie program. It is a critical foundation for democracy. Historically, throughout the world, the types of political philosophies most pernicious to democracy have taken root where great numbers of the populace face extreme personal deprivations—or see the threat of extreme deprivation hanging over themselves and their families like Damocles' sword. It was not accident that the United States came forward with a social security system out of the Great Depression of the 1930's.

Social security is not, and was never intended to be, a total retirement plan. It is both much less and much more. It is not a retirement plan but it is an insurance program against extreme deprivation not only in retirement but also in situations of disability or death of the family breadwinners.

Social security also has become an integral part of our national economic picture. A healthy social security system is an incalculable aid to a healthy economy. The sustained economic power of those who receive social security, as well as their reduced need for public economic assistance help to keep the economy up and deficits down. And we could use more of both of those items.

The bill we pass today, therefore, is a tax bill, but it is more than an ordinary tax bill. I hope that we—and the Nation—can keep that foremost in mind.

Mr. ULLMAN. Mr. Speaker, I reserve the remainder of my time.

Mr. CONABLE. Mr. Speaker, I yield 2 minutes to the gentleman from Minnesota (Mr. FRENZEL).

Mr. FRENZEL. Mr. Speaker, in the Social Security Financing Amendments of 1977, Congress had the opportunity to make some sensible changes in our present social security system. H.R. 9346 could have provided us with: First, a sound financial structure that guarantees the benefits we have promised; second, a removal of the earnings penalties for our social security beneficiaries; third, and this could have been done without a tax increase in the next few years and a small tax increase thereafter.

What we have in this bill is an unnecessary, substantial tax increase and enormous raises in the wage base which still leaves us with a 75-year deficit of 1.45 percent of taxable payroll or a staggering deficit of $600 billion-plus. I could not support the House version of this bill because I felt it could only result in decreasing employment and depressing our economy—the conference version is worse.

While we did remove the earnings limitations for retirees aged 70 and over, we are still stuck with earnings penalties for retirees below age 70. The limit is raised in the conference report, but to an inadequate level. The mandatory of earnings limits is a serious flaw in this bill.

As I understand the conference report, it will place a devastating burden on middle-income taxpayers in my district and across the Nation. People in my district, who earn $20,000 a year, now pay about $960 a year in social security taxes. Under this bill, if inflation and wages both raise at 6 or 7 percent, these peoples wages will increase to $35,000 without an increase in real wages. Worse, their social security taxes will increase from $960 to nearly $2,600. That is nearly a tripling of social security taxes for middle-income Americans in the next 10 years.

The House, at least, had a better choice in the Conable-Archer proposal, but chose not to accept it. This proposal would have placed the system within safe actuarial bounds, solved the bulk of the problems and inequities under the current system and would have accomplished this without a tax increase until 1982. While rejecting the bulk of the provisions of the Conable-Archer proposal, the House included many of the gender-based inequities in the House bill. The conference version of the bill, however, throws even these provisions out, by the decision to include them in an HEW study.

The Conable-Archer proposal would have moved us a step closer to universal coverage. The conference version provides us with another study which will only result in delaying universal coverage for possibly another four decades. In my view, universal coverage is of great importance toward assuring good protection, portability, and equality for all American workers.

We may manage to get a bill passed before the end of this session of Congress, but it is not going to appeal to many of my constituents—or me. I cannot support this bill. It lays a heavier burden on my constituents than is necessary, and in fact a heavier burden than was in either the House or the Senate version.

The question is not, as the distinguished chairman has phrased it, one of a vote for or against the system. The question is whether this is the best temporary solution for our social security problems. The answer is, of course, no.

The tax increases are too severe. The earnings limits, which this House voted to repeal, is still with us. Many of the gender-based improvements passed by the House have been removed. The long term cash deficits have not been overcome. We have not stopped double dipping. We have not achieved universal coverage and as a sepcial bonus, we get expensive Senate non-germane amendments.

Other than decoupling, there is not much that is attractive about this bill other than its title. It should be rejected and the committee directed to bring a better bill.

Mr. Speaker, because it has been suggested and noted here that the Republican alternative, the Conable-Archer bill, was superior in all respects to this bill, I insert at this point a description of that bill:

Statement on a New Republican Initiative on Social Security by Congressmen Rhodes, Conable, Archer, Steiger, Ketchum, and Schulze

We believe that the nation's social security system should be restored to financial stability on a long range basis. We owe this not only to the 100 million Americans who support the system and the 34 million who already benefit from it, but to the next generation as well. They deserve no less.

We also believe that a number of longstanding inequities in the system, especially those related to the treatment of women, should be corrected.

We futher believe that the system should be adjusted to changing American life styles, that beneficiaries no longer should be penalized for continuing to lead productive lives, and that we should move closer toward truly universaal social security coverage.

And we believe these desirable goals can—and should—be attained without: (1) altering the basic structure or nature of the system; (2) adding heavily to tax burdens in the future; or (3) requiring any tax increases over the next several years, in light of an uncertain economy and current payroll levies on both employers and employees.

Toward these ends we are presenting, for the consideration of the Congress and the American people, a comprehensive 15-point social security proposal. It would place the system on a sound financial footing for at least the next 75 years, it would solve the immediate financial shortfall in the trust funds, it would strengthen the system's insurance character, and it would correct a number of inequities. It would do all this with no tax increase until 1982 and with less than a 1¼ percent increase through the year 2050.

The proposal does not, it should be emphasized, offer the myth of something-for-nothing. It is realistic. There are prices to pay for the problems it solves. But we feel the prices are reasonable, especially in view of obvious alternatives: (1) a drastic lowering of benefits, (2) a heavy increase in payroll taxes now and in the future, or (3) the illusory use of general revenues, which would require substantial borrowing by the Treasury, an even bigger public debt, and eventually higher taxes and more inflation for all.

Our proposal, which includes a number of "tradeoffs," should be considered as a unit. Its parts—interdependent and not interchangeable—have been blended carefully into a particular whole, and it should be judged as such.

As far as we know, this proposal stands alone. If there is another—to solve the system's financial problems, to correct so many of its inequities, and yet to cost the taxpayers so relatively little—it has remained well hidden from public view.

Specifically, our proposal would:

A. Meet the immediate financial needs of the Social Security Trust Funds by:

(1) Reallocating taxes collected, between the Old Age and Survivors Insurance Fund (OASI), and the Disability Insurance (DI) Fund, which is expected to become exhausted soon if preventive steps are not taken.

(2) Temporarily diverting three-fourths of a Medicare tax rate increase (0.2% per employee and employer) already scheduled to take place next year, to the OASI and DI Trust Funds. This diversion, which would not damage the Medicare Fund, would continue only through 1981.

(3) Permitting any of the three major Trust Funds (OASI, DI and Medicare) to borrow from another if necessary and with appropriate arrangements for repayment with interest. This would be a permanent provision, which should serve as a "fail safe" device against the insolvency of any of the funds.

B. Put the system on a sound financial basis at least 75 years into the future by:

(1) Decoupling the automatic benefit adjustment mechanism (to correct a flaw in the mechanism) and indexing workers' earnings records to wage trends. These changes follow generally the recommendations of both the Ford and Carter Administrations. This proposal would, however, adjust the ultimate benefit level to account for overexpansion that has occurred since the automatic adjustment flaw was enacted. A savings clause would be included guaranteeing that no future retirees would receive lower benefits than they would have received under the present-law benefit formula as it was at the time of the change. (Decoupling and wage indexing would reduce the system's long-range deficit by slightly more than half.)

(2) Advancing gradually and slowly—from 65 to 68—the age at which full retirement benefits would be payable. The adjustment would not begin until 1990 and would not reach maturity until 2001. Each year during that span the full benefit retirement age would be advanced by one quarter year. Workers could continue to retire as early as age 62 but with slightly greater actuarial reductions than at present. Gradual and distant implementation of this change, which is in keeping both with efforts to abolish mandatory retirement policies and with increased longevity and productivity of American workers, is designed to permit orderly retirement planning. (This provision would further reduce the system's deficit, by about 20%.)

(3) Permanently reassigning one-fourth of the Medicare tax rate increase, scheduled next year, to the OSADI Trust Funds. This amount approximately equals additional money which would enter the Medicare Fund

because of other provisions of this proposal.

(4) Increasing tax rates for employees, employers and the self-employed in three stages; 0.5 percent in 1982, 0.3 percent in 1990, and 0.4 percent in 2000. This means that tax rates would rise, under this proposal, less than 1-and-¼-percent over a 75-year span. (The Medicare tax reassignment and the three-stage rate increase would reduce the remaining deficit to less than 0.5% of taxable payroll—an actuarily sound margin.

C. Make four significant improvements in the treatment of women under Social Security, by:

(1) Providing a new benefit—a "working spouse's benefit"—designed to give adequate recognition to wives who work outside the home. The benefit would be equal to (a) the higher benefit amount due either as a worker or the spouse of a worker, PLUS (b) 25 percent of the smaller of those two benefits.

(2) Reducing from 20 years to five years the duration-of-marriage requirement for one spouse to receive a benefit based on the other's earnings record. This provision is designed to remove what many divorcees have come to view as an unfair and arbitrary requirement.

(3) Ending the cutoff or reduction of benefits for beneficiaries who remarry. This provision is included largely because many widows who rewed before reaching age 60, and divorced wives who remarry at any age, lose entitlement to their benefits under current law.

(4) Amending the Social Security Act to remove all remaining sexually discriminatory language.

D. Move the nation's social insurance system closer to the ideal of universal coverage by providing for the participation of all federal government employees, including Members of Congress not otherwise covered, by 1979. The objective is integration of the Civil Service Retirement and Social Security systems without reducing benefits or protection for, or increasing contributions from, participants in either program.

E. Remove the earnings limitation imposed on beneficiaries. Under present law, benefits are reduced and eventually eliminated for earnings above $3,000 per year. (The limitation is adjusted annually.) This proposal would boost the limit to $5,000 in 1978, to $7,500 in 1979, and remove it entirely in 1980.

F. Freeze the minimum primary benefit at its current level of $114.30 per month, but increase the special minimum benefit from a maximum of $180 to $$219, and make it subject (as are other benefits) to automatic annual adjustments in the future. The minimum primary benefit goes, in large numbers, to governmental employees who either "moonlight" or retire early and work just long enough under Social Security to meet minimal eligibility requirements. The special minimum applies only to those who have worked many years at relatively low wages under the system.

G. Limit disability and survivorship benefits to the maximum primary benefit payable to a worker reaching age 62. Under present law, some younger beneficiaries receive benefits substantially higher than those awarded older beneficiaries who have worked longer under the system. This provision would remove that disparity.

This proposal is not being offered as a "trial balloon" or in a partisan spirit.

It is being presented, in light of alternatives already proposed, to reassure the millions of Americans who are concerned about social security that the system not only can be made financially secure, but can be made more equitable for generations to come. And this can be accomplished without imposing unacceptable tax burdens or dipping into the deceptive pool of general revenues.

We hope and trust it will be given serious consideration by our Democratic colleagues in the Congress as well as by the Administration. We are sending copies of the proposal to the President and the Secretary of Health, Education, and Welfare, and are confident they will give it their attention promptly.

The Subcommittee on Social Security of the Committee on Ways and Means is scheduled to begin, Monday morning, the development of legislation dealing with the system's financial problems. We are particularly interested in having our proposal considered in that forum, and stand ready to present it there.

Of all interested parties, we ask only that the proposal be given fair-minded consideration, not in fragmented form, but in its entirety.

The proposal is described in greater detail in a separate document entitled, A Proposal for Financial Restoration and Equity Strengthening of the Social Security System. Our staff members and consultants will be pleased to discuss it in greater detail at your convenience.

This proposal has five general objectives.

First, it would put the social security system on a sound financial footing for at least the next 75 years.

Second, it would strengthen the insurance character of the system.

Third, it would improve the treatment of women under the system.

Fourth, it would make long-needed adjustments in the program to reflect changes in the living and working patterns of the American people.

Fifth, it would move closer to universal coverage, which is appropriate for a nationwide, mandatory social insurance system.

The most important objective of the proposal is, of course, restoration of the financial soundness of the system, which faces an estimated deficit of 8.2 percent of taxable payroll over the next 75 years. This proposal would virtually eliminate the long-term deficit. It also would solve the serious cash-flow problems facing the Social Security trust funds now and in the near future.

One of the two major trust funds—the one providing for payment of disability benefits—is estimated to become exhausted in early 1979 (or possibly late in 1978). This proposal would avoid that contingency, without requiring any increase in taxes over those scheduled in present law, on either employers or employees, until 1982.

PROPOSAL ANALYSIS

The proposal has 15 distinct elements.

Three elements deal with the short-term trust fund problem—by reallocating monies among the funds and by permitting one fund to borrow from another.

Three more deal with the long-range financial deficit of the system, through decoupling-and-earnings-indexing (to correct a flaw in current law and to stabilize future benefit ratios) and through modest tax adjustments and increases between 1982 and 2000.

Four deal with sex discrimination and the treatment of women through: (1) liberalizing substantially the benefit legibility or divorced spouses; (2) providing a new "working spouse's benefit", primarily to give greater recognition to wives who work; (3) eliminating the reduction or cutoff of benefits to widows or widowers who remarry; and (4) removing all remaining sexually discriminatory language from the Social Security Act.

One element would bring the system closer to the ideal of universal coverage, by requiring the participation of all Federal employees by 1979.

Another element responds to a major change in our society—the increasing longevity and productivity of American workers—by advancing slowly and gradually, in the future, the retirement age for full Social Security benefits. This would *not* prevent workers from retiring at age 62 with actuarially-reduced benefits. It *would* move, eventually to 68, the age at which full retirement benefits are payable.

The three final elements are designed to improve equity and strengthen the insurance character of the system by:

(1) Eliminating one of the most unpopular provisions of the Social Security Act—the one that imposes a limit on the earned income of beneficiaries;

(2) Freezing the minimum primary benefit but also increasing the special minimum benefit for those who have worked under the system for many years at low wages and

(3) Providing that benefits for the disabled and survivors may not exceed the maximum benefit payable to a retiree.

I. SHORT-TERM FINANCING

The financial problems facing the system between now and 1982 would be taken care of through: (1) reallocation of Social Security taxes between the Old-Age and Survivors Insurance (OASI) and Disability Insurance (DI) Trust Funds; and (2) a temporary reassignment of an increase in the tax rates for the Hospital Insurance (HI) Trust Fund, which already (under existing law) is scheduled to take place next year.

The current OASDI tax rate of 9.9 percent (on employers and employees combined) now is allocated: 1.15 percent for DI and 8.75 percent for OASI. It should be reallocated: 1.5 percent for DI and 8.4 percent for OASI. The increased allocation of 0.35 percent to the DI Trust Fund should be sufficient to prevent it from becoming exhausted by 1979 (as can be expected without a change in the law). Reallocation also should cause both Funds to remain viable at least until 1981.

In order to assure further the viability of these two Trust Funds, and to cover the cost of certain improvements in the system starting next year, part of the scheduled increase in the HI tax rate should be diverted temporarily to the OASDI Trust Funds. Present law calls for an increase in the HI tax rate, starting in 1978, from 0.9 percent to 1.1 percent for each employee, employer, and self-employed person. If three-fourths of this increase, or 0.15 percent per worker and employer, were directed to the OASDI Trust Funds beginning January 1, 1978 and ending December 31, 1981, this would not only bolster those two Funds, but also would permit a three year phase-out of the earnings limitation starting January 1, 1978.

[In addition, one-fourth of the 1978 increase in the HI tax rate (i.e., 0.05 percent for both workers and employers) would be permanently directed to the OASDI Trust Funds after 1981. This would not adversely affect the operation of the HI Trust Fund, because the amount of money involved in the diversion approximately equals the savings to this fund as a result of extending coverage to federal employees.]

To guarantee the financial viability of all three Trust Funds over the next several years, each should be permitted to borrow from another, solely for the purpose of preventing exhaustion and with appropriate arrangements made in each case for repayment with interest.

II. LONG-RANGE FINANCING

(1) The long-term deficit of the system would be reduced by slightly more than 50 percent through a process called "decoupling." plus wage indexing of the earnings record of the insured worker.

Decoupling was made necessary by what has been termed an inadvertent flaw in the 1972 law which adjusts benefits automatically according to annual increases in the Consumer Price Index. Under the present coupled system, the CPI increases are applied both to payments already being paid to those on the benefit rolls and to the benefit formula which is applicable to future beneficiaries. Decoupling would apply the cost-of-living percentage increases only to current beneficiaries.

Decoupling would be accompanied by indexing of a worker's covered earnings record. Virtually all observers of the social security system have agreed that decoupling plus indexing should be accomplished to achieve rational and reasonable benefit levels in the future. There has been disagreement, however, as to the level at which decoupling should take place, and as to whether the earnings record should be indexed to prices rather than wage trends. Both the Carter and Ford Administrations proposed decoupling at current benefit levels and indexing of the earnings record according to wages.

This proposal follows the wage-indexing approach, on the main ground that, for future retirees, it more equitably stabilizes the wage replacement ratio; that is, the relationship between the benefits they receive and the most recent covered earnings on which those benefits are based. The proposal would, however, adjust the ultimate benefit level for the overexpansion that has occurred since the automatic-benefit-increase provision was enacted.

It is an accepted fact that decoupling is made necessary because of a "mistake" in the 1972 amendments to the Social Security Act. The "mistake" has led to overexpansion of benefit levels since that time, and would lead to increasingly exaggerated overexpansion in the future. It seems logical to have the ultimate benefit level adjusted for the overexpansion which has taken place since the "mistake" was made.

Starting just before the "mistake" was made, and continuing to the present time, the cost-of-living has risen 53.0 percent, while Social Security benefits have increased 62.1 percent. Thus, benefits have increased about 6 percent more than the cost-of-living over that span of time (162.1 compared with 153.0 produces a difference of about 6 percent). Accordingly, it is reasonable to decouple at a 6 percent lower level ultimately.

This does not mean that benefits would be reduced for those currently receiving benefits. They would be treated exactly as under existing law. Whenever the cost-of-living (as measured by the Consumer Price Index) advances in a year by 3 percent or more, benefits would continue to be increased commensurately.

Nor does it mean that dollar amounts of benefits paid in the future would be lower than present levels. To the contrary, dollar amounts—as well as the purchasing power of benefits—for future retirees would be higher than present levels.

A major difference between this proposal and the present system is that wage replacement ratios (the relationships between benefits and recent covered earnings on which those benefits were based) would remain stable in the future.

It is important to note that, under this proposal, a savings clause—or guarantee—would be provided so that no future retiree would receive less than he or she would under the present-law formula as it was at the time of the change. In other words, retirees in the future would have their choice. They could take the benefit available under present law at the point of changeover, or they could take the benefit provided under the new method, whichever is larger.

(2) The long-range deficit would be reduced further (by about 20 percent) through a slow and gradual advancement in the retirement age at which full benefits are payable. This proposal would move that age from 65 to 68, by degrees, starting in 2000 and ending in 2011.

When the Social Security system was enacted, 42 years ago, American workers were not living as long as they are now, nor were they as productive for as long a period of time. From time to time, the system has responded to other changes in the working and living habits of the people it serves, and it is reasonable for the system to adjust to these trends also.

It should be borne in mind that the longevity of the American people is expected to continue increasing in the foreseeable future. The birth rate, meanwhile, has declined drastically and may well continue downward (or else remain at a low level) for years to come. This means there will be fewer workers making contributions, but more retirees receiving benefits. In view of such projections, because of the improvement in mortality as well as the physical conditions of older people, and in light of wide-spread dissatisfaction with mandatory retirement, the proposal above can have a generally salutary impact both on the Social Security system and on the social and economic lives of the American people.

It is important to note that workers could continue to retire at earlier ages—62, for example—but with slightly greater actuarial reductions than at present, to take into account the longer period of time over which the beneficiaries could be expected to receive payments.

Under the proposal, the standard retirement age of 65 would be increased by three months (or one-quarter year) each year starting in 2000. By the year 2011, the minimum retirement age for full benefits would have been increased gradually to 68.

A gradual implementation of this change, with a starting date almost 25 years in the future would give people sufficient time to plan for their retirement without severe disruption in any one year, and would permit management and labor to revise employment practices carefully and systematically.

(3) As noted earlier (on page 5), the long range deficit in the OASDI Trust Funds would be reduced further by a permanent reassignment, starting in 1982, of a small portion of the Hospital Insurance tax rate. This redirected rate would equal 0.05 percent for workers and employers.

(4) To further strengthen the financing of the system in future years, contribution (tax) rates for employees, employers, and the self-employed would be increased by 0.5 percent in 1981, 0.45 percent in 1985, and 0.25 percent in 2000. Thus, the net addition to the presently scheduled OASDI tax rates over the next 75 years would be less than 1¼ percent on employees, employers, and the self-employed.

III. TAX TREATMENT OF WOMEN AND SEX DISCRIMINATION

The proposal would make four significant changes in the Social Security Act designed to improve the treatment of women and to remove remaining sex discrimination language.

First, the proposal would reduce from 20 years to 5 years the duration-of-marriage requirement for one spouse to receive a benefit based on the other's earnings record. Under present law, a divorced spouse retains auxiliary benefit rights only if the divorce occurs after 20 full years of marriage. Critics of the system long have contended that this requirement was unfair, arbitrary, and unrealistic in view of social changes.

Second, the proposal would provide a new benefit—a "working spouse's benefit". Under present law a covered worker is always eligible for a benefit based on his or her own earnings record. But if the worker also becomes entitled to an auxiliary benefit, such as a spouse's benefit, he or she is entitled, in essence, only to the higher of the two benefits available. A number of working spouses (especially wives) have found that they would have been as well off financially, as far as Social Security benefits were concerned, if they had never left the home to enter the labor force. To alleviate this problem and to provide greater recognition of the employment record of a working spouse, the proposal would make the following changes:

1. A spouse who is eligible for an auxiliary or survivor benefit, who also worked under Social Security, could receive a new "working spouse's benefit", which would be equal to (A) the larger amount due either as a spouse or as a worker, plus (B) 25 percent of the smaller of the two benefits (but in no event greater than the maximum primary benefit).

2. Any pension or benefit based on governmental employment not covered under Social Security would be cosidered as a primary benefit in determining the amount of the Social Security auxiliary or survivor benefit payable. (This change is designed to remove what amounts to a "windfall" benefit in some cases under present law. For example, if a wife worked under Social Security for her entire career, she would be entitled to a primary benefit based on her own earnings record. If her husband had worked exclusively under a state employee's retirement system, he would be entitled to a pension under that system and also might be entitled to an auxiliary (spouse's) benefit based on his wife's Social Security record. Inasmuch as auxiliary and survivors benefits are based more on social adequacy (or need) than on individual equity, the "windfall" situation described above is not one which the Congress contemplated when it provided for survivors and auxiliary benefits in the first place.)

3. The proposal would end the cutoff or reduction in benefits for widows or widowers who remarry. Under the proposal, benefits would not be terminated because of a beneficiary's remarriage or marriage at any age. Under present law, for example, a widow's remarriage before age 60, or a surviving divorced wife's remarriage at any age, will prevent entitlement to benefits unless the subsequent marriage ends. A number of persons, especially those living in retirement communities, have complained that current law requires them to "live in sin" in order not to lose Social Security benefits.)

4. The proposal also would amend the Social Security Act to remove all remaining sexually discriminatory language. (Example: The terms "husband's benefit" and "wife's benefit" would be replaced by one term, "spouse's benefit."

IV. UNIVERSAL COVERAGE

Universal coverage is a natural and desirable goal of any nationwide, mandatory social insurance system. Although about nine of every 10 American workers now participate in the U.S. social security system, it is increasingly difficult to justify to the "nine" why the "one" is not covered. This is especially true in view of the impact of the Social Security payroll tax on the incomes of contributors.

Public discussion of universal coverage has taken place for many years. It has long appeared that a large majority of Americans favor it, but no action has been taken by the Congress. Many difficulties—legal and administrative—have stood in the way.

But the latest Advisory Council on Social Security stated that despite these difficulties, "it is of great importance from the standpoint of assuring good protection for all workers on an equitable basis that all jobs be compulsorily covered under social security." The Council urged the Congress to move promptly toward that goal.

A major step in that direction would be mandatory coverage for all Federal workers. Integration of the Civil Service Retirement and Social Security systems would be an extremely difficult task, crossing jurisdictional boundaries of major committees in both the House and Senate, and involving many complex technical problems. But integration could be achieved, in an equitable way, within one year.

Therefore, an important objective of this proposal is the immediate enactment of legislation requiring the various committees of jurisdiction to work together over the next year and produce a workable—and equitable—plan for an integrated system, to become effective no later than January 1, 1979.

An integrated system would in no way prevent the continuance of the Civil Service Retirement system as a supplement to Social Security.

V. INSURANCE AND EQUITY STRENGTHENING

To strengthen the insurance character of the system and, at the same time, to provide greater equity, the proposal also would:

1. Eliminate the earnings limitation on beneficiaries. This is probably the most unpopular provision of the Social Security Act. More bills have been introduced to abolish the limitation than to make any other change in the system. During recent public hearings before the Ways and Means Committee's Subcommittee on Social Security, repeal of the limitation was the most widely discussed item. Witnesses pointed out that the limitation enforces the under-utilization of experienced older people and also encourages retirees to adopt artificial work and pay practices. Under this proposal, the limitation would be phased out over a 3-year period, by increasing the annual exempt amount of earnings to $5,000 for 1978 and to $7,500 for 1979, and by removing it entirely for 1980 and thereafter.

2. Freeze the minimum primary benefit at its current level of $114.30 per month, but at the same time increase, now and in the future, the special minimum benefit

Freezing the minimum primary benefit follows a recommendation of the latest Advisory Council on Social Security, and is designed to lessen, and eventually eliminate, certain "windfalls" accruing to persons who work in covered employment for very short periods of time and thus acquire rights to the relatively large minimum, which has been weighted in favor of low-income workers.

In practice, a substantial number of Federal, state, and municipal government workers, outside the Social Security system, have either "moonlighted" or retired early from their regular jobs and worked under Social Security just long enough to obtain the minimum primary benefit.

Ironically, the minimum primary benefit was not established to help those short-term workers, but to assist other workers who had labored long under the system, at low wages. Recognizing that the minimum primary benefit was not serving its basic purpose, the Congress in 1972 added a "special minimum benefit" to better take care of the workers with many years of covered service at relatively low wages.

In so doing, the Congress did not change the minimum primary benefit, which continues to be of greatest value to those who need it least. This proposal would correct that anomaly by freezing the minimum primary benefit while improving the special minimum benefit.

The special minimum is now $180 per month for workers with at least 30 years of coverage. When the $180 figure was adopted in the 1973 Social Security Amendments (effective for March 1974), it was not made subject to the automatic adjustments for changes in prices; if it had been, it would now be $219.

Under this proposal, the special minimum would be increased to $219 in January 1978 and would be subject to automatic adjustment thereafter (as are all other benefits).

3. Provide that benefits for the disabled and survivors never could be based on a primary benefit in excess of the maximum primary benefit for a worker reaching minimal retirement age of 62 in the year of death or disability.

At least partly because of the technical flaw in the automatic-adjustment-of-benefits provision (discussed above), benefits to young and middle-aged beneficiaries may be unduly large—in some cases considerably larger than those awarded to older disabled persons or retirees with much longer earning records (and therefore with greater contribution payments). This disparity in benefit levels (which would be increased if no changes are made) has long been considered inequitable in a national social insurance program. The proposal would end that disparity.

PROPOSAL FOR FINANCIAL RESTORATION AND EQUITY STRENGTHENING OF THE SOCIAL SECURITY SYSTEM

Impact on long-term OASDI Trust Funds' Deficit

Provision	*(Loss or gain) as percentage of taxable payroll*
Decoupling and wage-indexing based on pre-automatic-benefit-adjustment flaw	+4.50
Freezing regular minimum benefit and updating special minimum benefit	+0.07
Increasing the retirement age	+1.65
Limiting disability and survivor benefits to maximum retiree benefits	+0.02
Covering Federal employees	+0.10
Cutting marriage duration requirement for divorcees' eligibility from 20 to 5 years	−0.01
Removing benefit cutoff or reduction for marriage or remarriage	−0.05
Adding working spouse's benefit, with offset for other government pension	−0.45
Ending the earnings limitation	−0.20
3-stage tax increase and HI tax diversion	+2.13
Total Net Effect	7.76
Deficit under Present Law	8.20
Deficit under Proposal	—0.44

NOTE: The system is considered to be within safe actuarial bounds (sufficiently close to absolute balance) if the deficit is no greater than 0.50% of taxable payroll.

SHORT-TERM COST IMPACT OF PROPOSAL ON OASDI PROGRAM

[In billions]

Year	Contributions from Federal employees	Transfer of HI taxes	Increase in OASDI taxes	Cost of change in earnings test	Net cost effect
1978		$2.7		$0.4	+$2.3
1979	$4.0	3.0		1.6	+5.4
1980	4.2	3.2		7.0	+.4
1981	4.5	3.4		7.1	+.8
1982	4.8	1.2	$11.9	7.3	+10.6
1983	5.1	1.2	12.5	7.4	+11.4
1984	5.4	1.3	12.9	7.6	+12.0

ESTIMATED OPERATIONS OF OASDI TRUST FUNDS UNDER PROPOSAL FOR FINANCIAL RESTORATION AND EQUITY STRENGTHENING OF SYSTEM

[In billions]

Calendar year	Total income[1]	Total outgo	Net increase in funds	Funds at end of year
1977	$82.1	$87.7	−$5.6	$35.5
1978	93.5	97.7	−4.2	31.3
1979	107.6	111.3	−3.7	27.6
1980	117.6	126.5	−8.9	18.7
1981	125.8	136.5	−10.7	8.0
1982	145.0	146.4	−1.4	6.6

1984	164.6	166.4	−1.8	2.9
1985	175.3	175.8	−.5	2.4
1986	186.8	185.5	+1.3	3.7

[1] Including interest on invested assets.

Note: After 1986, trust funds balance is estimated to increase each year.

Mr. MICHEL. Mr. Speaker, will the gentleman yield?

Mr. FRENZEL. I yield to the gentleman from Illinois.

Mr. MICHEL. I thank the gentleman for yielding.

Mr. Speaker, the passage of the social security legislation now before us will have 3 disastrous results: it will place a crushing and well-nigh intolerable burden onto the shoulders of taxpayers and consumers; it will begin a fierce conflict between generations in this country, as the young are asked to pay more and begin to fear they will never regain in old age what they contribute to it; and, finally, it will once and for all confirm in the minds of the American people the serious doubts they have about the capability of the Congress to deal with national problems.

Columnist Tom Wicker of the New York Times recently described this bill as an "economic disaster." He pointed out the following:

> Long-term tax increases totaling $227 billion dollars would be imposed in regular steps between 1979 and 1987. Note that the Congress that voted this body-blow to the American wallet prudently put off the first of the increases until *after* its members try to get themselves re-elected next year.
>
> These payroll tax increases are regressive and severe. Under current law, a worker paying the maximum tax in 1979 would have been hit for 6.0 percent of the first $18,900 of his earnings, or $1,143.45, which is bad enough; under the new bill, a worker at the maximum would pay 6.13 percent on $22,900, or $1,403.77, in 1979. How does a new one-year tax bite of $260.32 grab you?
>
> By 1987, workers and employers will be taxed at 7.15 percent on the first $42,600 of income— $3,045.90 at the maximum. Thus, over the life of the bill, the payroll taxes of persons paying the maximum will be nearly tripled, as will the matching taxes of their employers.

The Wall Street Journal had the following to say about this legislation:

> In essence, the Social Security bill will be but another government program that encourages consumption at the expense of capital formation. That can only mean more inflationary pressure, which creates a vicious cycle by pushing tax rates higher and higher.

This is not just another bill. It has to be regarded as the biggest tax bill of all time. I tell you, Mr. Speaker, the American people will never forgive or soon forget what this bill will do to their families.

The irony of all this is, we don't have to travel this particular route. We are told that it will save the social security system. But what kind of salvation do we purchase with the crippling taxes this bill will impose, with the inflation it will create, with the bitterness it will form in the large, hard-working middle-class, from whom so much is taken and to whom nothing seems to be given, except a heavier tax burden?

Let us not deceive ourselves. This is one issue on which there are partisan views, in which there are partisan differences. Our Republican version of the social security bill would place the social security system on a sound financial basis for the next 75 years. This plan would require no new taxes until at least 1982 and even then only a modest increase of one and one-quarter percent over the remainder of the 75 years. We Republicans have tried five times to cut Federal income taxes in the first session of this Congress. Five times. And the majority has opposed us every time.

The American people are not so easily fooled, Mr. Speaker. They surely are not fooled by the President's rhetoric that he will reduce taxes. This social security tax and those proposed energy taxes will not only take money from the taxpayers but cause inflationary pressures that will reduce the taxpayers purchasing power of what he has left.

Today, on the eve of the 204th anniversary of the Boston tea party, the ancient enemy of the American people—high taxes—is still alive. Two hundred years ago tomorrow the people retaliated by dumping tea into a harbor—next year I predict they will retaliate in the voting booth. We have found there is one thing worse than taxation without representation. It is taxation with representation—of the wrong kind.

We are asked to vote yes for higher taxes and to sidetrack an attempt by Senator ROTH to give tax relief to those sending their children to college.

I call upon members, in the spirit of those colonists who showed their contempt for the King's taxes, to dump this bill, sink it to the bottom, and join with those of us who have a better alternative.

Mr. Speaker, while I have to vote against the social security conference report, I think it important to call to the Members' attention the fact that the report contains several welfare reform provisions which were added in the Senate.

The provisions included would provide fiscal relief to the States and localities, incentives for lowering AFDC error rates, access by AFDC agencies to wage records, and authorization for State welfare demonstration projects.

All four of these provisions are among those contained in the welfare reform bill I introduced 2 weeks ago, entitled the Welfare Improvement and Cost Reduction Act. The only difference is in the amount provided for fiscal relief. The conference report provides $187 million over a 1-year period, while my bill contains $2 billion in fiscal relief for the States and localities over a 2-year period. I would provide more relief for New York State alone than this report provides for the entire country.

Numbers aside, I commend the House conferees for accepting these four provisions. This action represents a significant first step in the direction of legitimate and realistic welfare reform. To be sure, of course, there is still a long way to go, and the bill I have introduced contains many other provisions which would take us a long way toward completing the process. I would do so in a manner that does not alter our current programs. I do not drop the food stamp program; I do not eliminate the SSI program; I do not structurally change the AFDC program.

What we do in essence is to zero in on the administration of our present programs. We provide tools and incentives designed to reduce the error rates. Eliminate the ineligibles, correct structural deficiencies, and strengthen the work options and requirements. We also provide the States with increased opportunities to experiment with alternatives, part of which is provided for in this conference report.

All told, with these reforms in place, my bill would result in net savings of $1.1 billion to the Federal Government and $2.5 billion to the States in the first full year of implementation. In the RECORD at the end of my remarks, I will be inserting a breakdown of the costs or savings for each section of the bill, based in the main on estimates provided by HEW.

We know, of course, that the Ad Hoc Committee on Welfare has accepted the Carter welfare proposal virtually intact. I don't think anyone here expects that action to stand, and rightly so, because the Carter wholesale alteration contains too many imponderables on which we simply do not have sufficient information to construct sound legislation. The bill I have introduced represents a moderate approach that makes improvements in the present system while buying us the necessary time to more thoroughly consider alternatives. I will be reintroducing the bill today with cosponsors, and I welcome any others who may be interested.

WELFARE IMPROVEMENT AND COST REDUCTION ACT OF 1977 (H.R. 10193) TABLE OF CONTENTS

TITLE I—CHILD SUPPORT

Sec. 101. Method of Payment for Child Support Collection Services.

Sec. 102. Treatment of Certain Child Support Collections after termination of aid to families with dependent children.

Sec. 103. Child Support Collection and Paternity Determination services.

Sec. 104. Payments to states for compensation of court personnel in child support cases.

Sec. 105. Federal matching for computer systems under child support and establishment of paternity programs.

TITLE II—PROGRAM ADMINISTRATION IMPROVEMENTS

Sec. 201. Additional federal funding under aid to families with dependent children programs for certain mechanized claims processing and information retrieval systems.

Sec. 202. Access to wage information.

Sec. 203. Safeguards restricting disclosure of certain information under aid to families with dependent children program.

Sec. 204. Recipient Identification Card.

Sec. 205. Federal financial participation in the investigation and prosecution of fraud.

Sec. 206. Payment of Administrative Costs to localities.
Sec. 207. Compilation of fraud data by Inspector General.
Sec. 208. Determination of benefits in certain cases where child lives with relative not legally responsible for his support.
Sec. 209. Immediate Access to Parent Locator Service.
Sec. 210. Establishment of a Monthly Retrospective Accounting Period for the aid to families with dependent children, food stamp, and medicaid programs.
Sec. 211. Federal financial participation in certain restricted payments under aid to families with dependent children program.
Sec. 212. Aliens receiving public assistance.
Sec. 213. Continued absence definition.
Sec. 214. Establishment of quality control system for aid to families with dependent children programs.

TITLE III—CHILD CARE IMPROVEMENTS

Sec. 301. Increase in ceiling on federal social services funding, extension of special provisions relating to child day care services.

TITLE IV—WORK RELATED PROVISIONS

Sec. 401. Incentive 'to report earned income by aid to families with dependent children.
Sec. 402. Earned income disregard.
Sec. 403. Improvements of work and training requirements under aid to families with dependent children programs.
Sec. 404. State demonstration projects.
Sec. 405. Community work and training programs.

TITLE V—FISCAL RELIEF FOR STATE AND LOCAL WELFARE COSTS

Sec. 501. Fiscal relief with respect to costs of welfare programs.

Mr. ROSTENKOWSKI. Mr. Speaker, the conference report currently before the House is one that deserves the strong support of this body. It represents a very thoughtful compromise of the issues in dispute in this bill—the most complex and important legislative initiative on which we, in this first session, have completed our work. This is, I believe, one of the rare instances in which the product of a conference committee can truly be said to be a better bill than either version that was sent to the conference.

Early in this session, we began consideration of this legislation primarily because of the impending insolvency of two of the three social security trust funds. Yet, during both House and Senate consideration of this emergency financing bill, too much emphasis, in my opinion, was placed on expanding the benefit structure of the program and too little concern was focused on the real problem—assuring the financial stability of the three trust funds. I am pleased to say that I believe the conference committee has carefully addressed this problem and rectified what I believe was a serious weakness in both the House and Senate bills.

One indication of the strength of the conference compromise is that under the House version of H.R. 9346 the OASDI trust fund would have had on hand at the beginning of 1987 an amount equal to only 37 percent of that year's obligations. In the Senate bill, that percentage would have been 44 percent. Under the conference compromise, the OASDI trust fund, in 1987, will have on hand a reserve equal to 60 percent of the projected outgo for that year.

Mr. Speaker, such a result was achieved through a careful adjustment in the rates and wage bases and the willingness of the conferees to forsake benefit expansions at this time in order to assure both today's retirees and those who expect to benefit from the program in the years ahead that the promises of social security protection can be fully relied upon.

Mr. Speaker, we have read much in the press about the dramatic increases in taxes embodied in this bill. I hope everyone will remember, in reviewing the higher contribution rate and base included in this bill, that existing law already includes substantial future adjustments in the rate and base to cover anticipated future financial needs. The appropriate comparison, then, is not with today's social security taxes, but with the increases already scheduled in existing law.

Also we must all keep in mind that any increases in the contribution bases will utimately provide higher benefits to current workers when they retire. For example, the maximum benefit in 1977 of $5,244 will be increased to approximately $9,900 in 1987 as a result of the higher contribution base.

Finally, Mr. Speaker, I would like to address myself to the subject of the hospital insurance fund—the often ignored third part of our social security insurance system. As the result of a poorly structured floor amendment in the House relating to the exclusion of Federal employees from the program, assets in the medicare trust fund would be reduced between 1982 and 1987 by almost $25 billion below the level originally recommended in the Ways and Means Committee bill. Although it was not possible in the conference to restore the actuarial balance of the medicare trust fund to the level incorporated in the Ways and Means bill, every effort that was possible within the scope of conference was exerted to restore financial stability to the medicare program—the main source of financing health care for America's elderly. The long-range stability of the medicare trust fund will inevitably have to be reviewed in the context of any proposed changes in the Federal Government's role in the delivery and financing of health services. In the meantime, let me assure my colleagues that the medicare trust fund has been somewhat strengthened through this legislation and is on firm footing at least through the end of the next decade.

Mr. VANIK. Mr. Speaker, I rise in support of the conference report to H.R. 9346, the Social Security Financing Amendments of 1977. This legislation represents a responsible attempt on our part to assure the actuarial viability of the social security trust funds for many years to come.

Why has the social security fund run into financial trouble? The major culprit is the problem of the recession and the persistently high rate of unemployment which reduced contributions to the social security fund. If unemployment over the past 6 years had remained below 5 percent, a reasonable goal, the fund would have been in surplus by $46.5 billion instead of confronting a deficit.

The first social security benefits were paid in 1940. Since 1950, social security beneficiaries have enjoyed 12 cost-of-living increases:

	(In percent)
September 1950	77
September 1952	12.5
September 1954	13
January 1959	7
February 1968	13
January 1970	15
January 1971	10
September 1972	20
June 1974	11
June 1975*	8
June 1976*	6.4
June 1977*	5.9

*Automatic cost-of-living increases, as provided in the Social Security Amendments of 1972.

Benefit levels this year are 150 percent over 1959. No insurance policy in America recognized inflation and provided a comparable cost-of-living boost.

These cost-of-living increases over the years were never adequately funded. The social security reserves were depleted by the reduced contributions of the recession and this failure to properly fund cost-of-living increases. These higher payouts were not arbitrary; they were necessary to prevent the shift of millions of Americans from social security support to public assistance. It must be acknowledged that the social security fund carried a tremendous burden which substantially belonged to the general fund.

This legislation before us today will increase social security taxes. However, compared to other nations, we are still providing more coverage for less. Thirty-three million people receive monthly social security checks. Most will receive infinitely more than they have paid in. If the average social security retiree lives as little as 2 or 3 or 4 years beyond retirement, he will have received more than his contribution.

In view of increased premiums, why should a young worker accept the social security program? Because social security does more than take care of the retired worker. Its most important task is insuring against loss of family income due to death or disability. Today, monthly payments to widows and families are double the payout to the retired worker. Two-thirds of social security benefits are paid to the family as income insurance rather than to the retiree.

Even with the social security tax increases that we are voting today, the social security and survivors insurance benefits received under this program are the best bargain available to American people at any age.

Mr. JENKINS. Mr. Speaker, I rise to express both a note of optimism and one of caution to my fellow Members.

First, I shall support the report of the conference committee which provides for sufficient revenues to pay the retirement checks to 33 million Americans who are now dependent on social security old age retirement, survivorship, and disability benefits. While I do not like the financing scheme in the House bill, the Senate bill or the conference report, it would simply produce unimaginable chaos and confusion throughout the Nation for this Congress to allow the retirement program to become insolvent.

Essentially, a vote today against this report is a vote for preferred insolvency placing millions of elderly, blind, and disabled Americans in severe and destitute circumstances.

However, I must tell you as emphatically as I did when we debated this bill here on October 26 and 27 that it was a serious mistake not to adopt my amendment which would have provided an alternative financing measure. Every bit of the burden to bail out this system has been leveled on the shoulders of middle-income Americans, self-employed citizens, small and independent business people. My amendment gave them some relief.

Again, I must say that I do not know your people individually, but I would believe that they must feel similar to my people.

These middle-income Americans are deeply upset over the sudden and large added burden to the State property and income taxes; the local service and user charges and the Federal income and FICA taxes. I do not believe that they intend soon to forget our action here.

Finally, I am deeply gratified that the conference report provides for the National Commission on Social Security which I proposed. To most working Americans this high level and nonpartisan independent analysis of social security is the only gleam of hope in this law for a sound and economically affordable system of financing retirement over the long term.

This legislation has been very difficult for most Members. Raising taxes is always difficult and unpopular. It should be said in conclusion that the system will be made solvent while we look for better approaches.

I hope that this action today does not end our struggle with this issue. We must give the problems of social security financing attention next year and the next year to assure the best, safest, and most economical system.

Mr. REUSS. Mr. Speaker, the social security proposal before the House is inflationary and inequitable. It threatens the health of the economic recovery, and will discourage many firms from hiring additional workers. I intend we should rely less on payroll taxes and more on general revenues.

The conference agreement on social security does go a long way toward putting the system on a sound financial basis. There is no doubt that the system is in need of reform. Without some change, the system will be faced with mounting deficits over the next decade. But the urgency of the situation does not justify precipitous action on a bill that creates as many problems as it solves.

Take a hard look at what we are about to enact. Sharp increases in payroll taxes are sure to be reflected in the cost of goods and services. What we do not need is more inflation.

Every time we increase payroll taxes it becomes more expensive to hire a worker. There are already some 7 million Americans looking for work who cannot find it. There is no need to add to that total.

A sharp rise in payroll taxes takes money out of consumers' pockets and leaves unsold goods on merchants' shelves. That is no way to keep a recovery moving. Worse, the increase in taxes will really begin to bite in 1979, when many already expect a downturn in the economy.

And payroll taxes put an added burden on workers who are at the very bottom of the income scale. By putting considerable emphasis on increasing the taxable base, the conference report may mitigate the inequities that come with payroll taxes. But tax rates are already scheduled to rise under present law, and the conference agreement would raise them even higher.

The conference agreement reflects long hours and a delicate compromise. There is an understandable reluctance to put all that effort aside for a fresh start. We are also urged to act quickly so that the administration can set its budget and tax plans in a manner that will attempt to undo the adverse economic impact of the social security bill. What a way to legislate. Why not do it right the first time?

Mr. Speaker, the social security bill should be put over until the next session. A new bill should be drawn up that will restore financial health to the social security system without causing so many unfortunate economic consequences.

Mr. OTTINGER. Mr. Speaker, during earlier House consideration of this bill designed to alleviate the financial problems of the social security system, I stated my grave reservations regarding the increased payroll taxes mandated by this legislation. My overriding concern remains the effect of these increases on the low- and middle-income taxpayers. These workers are the backbone of our Nation. They must not be taxed out of existence.

I am voting for this bill because of the urgent need to protect social security recipients. However, I believe we should consider immediately alternate means of financing social security programs.

I have joined the chairman of the House Social Security Subcommittee, Representative JAMES BURKE in sponsoring legislation to provide relief to middle-income workers. This legislation would cut the social security taxes for employees and employers almost in half, from 6.05 percent to 3.09 percent in 1979, and make up the income loss to the trust funds from general revenues. This would mean more take-home pay for most workers. For example, under the present plan, social security taxes for a worker earning $15,000 a year will be $907.50 in 1979. Under my plan, the tax would be $585; a savings of $322.50.

In addition, this bill would keep the social security trust funds secure and provide a much more equitable distribution of the tax burden. The Social Security Administration estimates this proposal would result in a substantial surplus in the trust funds in 10 years. And at the going rate of interest, the trust funds would earn close to $140 billion during these 10 years, eliminating any need for future increases in taxes.

Mr. Speaker, I also would like to express my disappointment that the final version of this social security legislation does not contain the House-passed provisions regarding the social security earnings limitation. The House bill would have phased out the current $3,000 limit on wages a social security beneficiary may earn without a reduction in benefits. We voted to eliminate the limit entirely in 1982. The bill we are considering today liberalizes the earnings ceiling to $4,000 in 1978, $4,500 in 1979, $5,000 in 1980, $5,500 in 1981, and the conferees added $6,000 in 1982. The bill also contains a Senate provision which reduces from age 72 to age 70 (effective in 1982) the age at which beneficiaries are no longer subject to the retirement test. While I support these changes, I believe we should eliminate the limit altogether. By not allowing social security recipients to supplement their social security benefits with earned income we are undermining an objective of the Social Security program—to supplement retirement income. The ones who are hurt the most are the lower income retirees since they have greater need to supplement their social security benefits and are unlikely to have investment or other income which is not subject to the earnings limit. Despite passage of this bill today, I plan to continue to press for the elimination of this unfair earnings test.

Finally, Mr. Speaker, I would like to comment on the deletion of the $250-a-year tuition tax credit from this bill. I strongly support tax relief to help families meet their educational expenses. I have cosponsored several bills to provide this desperately needed financial assistance. We must provide assistance to middle-income families who are seldom eligible for grant or scholarship aid and find it increasingly difficult to meet the high cost of education.

A large number of House Members have shown their strong support for this kind of relief by cosponsoring similar measures in the House and by voting for an amendment to the budget resolution to allow enactment of this kind of legislation. This proposal has strong backing in my district as well. In fact, a grassroots organization has been formed to work for passage of this measure. They have my full support for their efforts.

I understand that the Senate conferees agreed to drop the proposal for now rather than hold up any longer passage of this social security bill. Supporters of the proposal promised to be back with it next year and the chairman of the House Ways and Means Committee said the college tax credit will be considered by his committee next year as part of an overall review of the tax system. Once the issue has been considered carefully by this House committee I am confident the need for relief will be clear and this measure will be enacted.

Mr. KEMP. Mr. Speaker, this bill today will raise taxes and the tax rates on the

American people by $227 billion over the next decade. In their haste to ram this tax increase down the throats of the American people the administration and the majority party in Congress have given little thought to the economic consequences of what they are doing. This bill will further depress our fragile economic situation and lead to job loss not job creation.

As I have often said before, when you tax something you get less of it. There are no two ways about that. So here we are preparing to tax employment at a time when the Nation has 7 percent unemployment plus. The result will be more unemployment, with all the political, sociological, and economic problems it will cause. Even now the President is proposing passage of the Humphrey-Hawkins "full employment at any price" bill. Will not demands for further massive public employment programs intensify if we take actions which will increase unemployment in the private sector?

The increasing social security tax rates, from 5.85 on both workers and employers—for a combined rate of 11.7 percent—to 7.65 percent—for a combined rate of 15.3 percent—will increase the wedge between the total cost of hiring a worker and the after tax income of the worker by almost 4 percent. This means that a single worker earning $16,000 per year is virtually in the 50-percent tax bracket—34 percent Federal income tax plus 15.3 percent social security tax, for a combined rate of 49.3 percent. And this does not count State income taxes. In New York State this worker would pay another 10 percent State income tax, for a total tax rate burden at $16,000 of 60 percent. The result will be a loss of initiative and incentive plus a net loss of economic output.

Some may say that this analysis is not correct because employers are paying half of the social security tax bill. But the total cost of employment is not only the worker's salary but all the taxes as well. In other words, it will cost an employer $1.66 to give an employee in New York State earning $16,000 per year an additional $1 take home pay. The Government gets all the rest.

This point was recently emphasized in a report released by joint council 16 of the Teamsters Union in New York City prepared by its chief legislative counsel, Mr. Nicholas Kisburg. In this report on factory earnings the Teamsters said:

> What government extracts from the individual employer irrevocably reduces the amount of money the employees of that employer will be able to secure through union collective bargaining or individual negotiation.
>
> What government extracts in the form of open and concealed taxes from the individual worker simply reduces the amount of money available to the family for food, clothing and shelter.
>
> Having only one source to turn to, the worker attempts to replace the monies expropriated by government by escalating his wage demands on the employer. Thus begins the chain reaction which frequently leads to reduced employment opportunities and, worse, relocation of business.
>
> The simple and ironical fact is that the tax collector does not pay union dues, does not walk the picket line, but is nevertheless the first beneficiary of any wage increases secured by the worker. This perfect stranger gets his cut first, leaving a substantially reduced amount for the family.

Furthermore, we should not delude ourselves into thinking that the increase in the wage base proposed in this bill, from $16,500 to $42,600, will shift the burden of taxation off of moderate income workers. This is because inflation is increasing nominal incomes daily, pushing people into higher and higher tax brackets. Thus a person earning only $12,000 per year now will find himself in the 50 percent combined tax bracket by the 1980s, at present inflation rates. I think there are very few people in this country who believe that a person earning $12,000 per year ought to pay 50 percent of his additional income in taxes. Is it any wonder that many unions have already shifted their primary demands away from higher wages to more nontaxed benefits?

Of course, the social security tax increases before us today will not solve the fundamental problem of the social security system, which is that it is not an insurance or pension system at all, but rather a vast transfer payment from those presently working to those who have retired. Unfortunately, the illusion that it is an insurance or pension system has blinded us to some serious side effects of social security on the economy.

The most important of these side effects is the effect on capital formation. Historically, much of the Nation's real savings, and hence its capital, came as the result of individuals saving for retirement. This motivation, and hence the savings, has gone down steadily over the years as social security taxes and benefits have gone up. The result, as Prof. Martin Feldstein has pointed out, is a reduction in capital formation with which to create jobs and modernize and expand our Nation's plant and equipment.

The present bill will accelerate this trend by motivating employers to cut back on private pension plans. Private pension plans currently provide the Nation with roughly $30 billion in capital per year. The Social Security Trust Fund, by contrast, creates no capital whatsoever because the funds are not invested, merely transferred.

One last point should be raised about provision of the conference bill to give a one-shot payment of $187 million to local governments for welfare costs. I can only assume that this was put in as a sweetener to induce local governments to support this legislation. If this is the tradeoff, it is certainly a one-side trade. According to my estimates, Erie County, New York would get about $1,000,000. In return, every employee and employer in Erie County would have their taxes raised. Since there are roughly 340,000 workers in Erie County earning roughly $3.5 billion per year it means that Erie County stands to lose more than $125 million per year by 1990. And this does not even begin to calculate the effects of inflation, which could easily increase this figure by many millions of dollars.

In conclusion, I must urge my colleagues to oppose this measure and realistically face up to the increasing long term deficit of the social security system along the lines suggested by those of us who want expanded growth in private enterprise and which would not depend on an increase in taxes to bail the system out. Federal employees, millions incidentally, must be included if the system is to be saved, as it must be. We must study all alternative and reform measures while not acting so precipiteously. The long run implications of this tax increase are devastating.

Mr. BIAGGI. Mr. Speaker, it is with a high degree of reluctance that I support this conference report today. Inevitably, legislation of this magnitude is a product of compromise and this bill is no exception. I differ with much of what is being proposed here today. I believe the House-passed bill was far better.

However, the compelling factor which leads me to support it, is the disaster which would strike the elderly of this Nation if social security benefits were to stop. This is not a figment of imagination, but an imminent reality. Based on the most reliable projections, without some new and immediate infusions of funds into the trust fund, it would dry up in the early 1980's.

What would this mean? For 75 percent of our elderly it would mean the loss of their principal source of income. It would result in these seniors after working and contributing faithfully for their retirement years be forced to turn to welfare or other sources of income. The consequences would be tragic and traumatic for all concerned. The specter of seniors without income would be more than the conscience of this Nation could endure.

This legislation is regressive instead of progressive. It places an inordinate burden on employers and employees. Why we continue to fear tapping the general treasury to preserve the Social Security Trust Fund is beyond me. I have joined and will again with the distinguished gentleman from Massachusetts (Mr. BURKE) as a cosponsor of legislation providing a one-third employer, one-third employee and one-third general revenue arrangement for funding the system.

I have also in the past, proposed that a National lottery be established for an additional means of maintaining the system. Either of these approaches would be far better than what we have before us today. The demographic facts of life dictate a change in our thinking about future funding for social security. I have conducted hearings in the House Select Committee on Aging, which identify a rapidly aging population, with a corresponding reduction in the numbers of workers contributing to the system. The leadership of our committee resulted in the passage of H.R. 5383, to curtail mandatory retirement. We saw and still see this as a logical means of helping the system—allowing people to work past 65—contribute to the system, thus insuring its future solvency. Hopefully, this legislaion can be signed into law without further delay.

The continued decline between workers and beneficiaries is the reality we must deal with. A few years ago, it was 4 to 1, today it is 3.2 to 1. By the year

2030, the ratio will approach 2 to 1. The answer to this dilemma is not more taxes on the limited workers but rather to provide a sharing arrangement between payroll taxes and general revenues for future social security trust funds.

Let no one here believe that this legislation represents the alpha or omega with respect to social security reform. It is imperfect but it is necessary, without it we would have unparalleled economic hardships directed against the elderly.

Mr. HARRIS. Mr. Speaker, while it is gratifying that Congress has taken strong steps to shore up the social security program for current and future retirees, I am disappointed that Congress has not developed reforms of the tax rate and wage base aspects of the program.

I believe that ultimately we must take a hard look at how the revenues generated from the social security tax on the employee and employer are truly used and develop a system that supports only retirement. Currently, 1 percent of the social security tax constitutes a contribution for the medicare hospitalization program and almost 1 percent is used for disability insurance. Additionally, out of the employee's and employer's contribution come administrative costs of the social security program, including the construction and rental of buildings and the salaries of personnel.

I am preparing legislation, which I will introduce in January when Congress reconvenes, to make real reforms and lower the tax rate for the employee and employer. It is my view that these "nonretirement" aspects of the social security program should be financed out of general revenues, not employee's salaries. The employee, I think, is willing to provide for his or her future retirement. But by putting other programs in with social security, I think we are misleading people and asking them to accept a payroll tax to finance programs that ought to be supported by general revenues.

OFFSET FOR DEPENDENTS UNFAIR

I oppose the provision, recommended by the Senate, to offset social security dependents benefits received by one spouse by the amount of government—Federal, State, and local—retirement benefits received by the other spouse. In my view, this provision will force serious financial hardship on many retired couples and in November I wrote the conferees urging them to delete the offset language from the bill. We should not try to shore up the social security system by reducing the benefits rightfully earned by people who paid into this system simply because the spouses of these people happened to work for the Government.

It is my understanding that the conferees' amendment provides an exemption to the offset provision for persons who, within 5 years after the date of enactment: First, qualify for or receive a public pension; and second, meet all requirements for receiving spouse's dependency benefits which were in effect on January 1, 1977, but do not now receive them either because they are too young or because their spouses, although eligible, do not yet receive benefits. While this 5-year delay for some people will be of some help, it is not a satisfactory solution.

The apparent rationale for the offset provision is that men who receive public pensions will get some sort of a "windfall" if they are also allowed to receive social security dependent's benefits, and that since they may not be "truly dependent," they must be able to "prove" their dependency in order to get a permanent exemption from the offset provision. Last March, the Supreme Court decided that men need not prove their dependency upon their wives to receive social security benefits—Goldfarb against Califano.

I think it is unfair and discriminatory against men to require only men who receive public pensions to prove their "dependency" or to reduce the benefits that their wives worked for and earned, to help see them through their retirement.

Unfortunately, by waiving the 3-day layover rule for conference report consideration, we have not had sufficient time to fully understand the offset language worked out by the conferees. I hope Congress will take a hard look at these changes in the second session and guarantee Government retirement benefits and social security retirement benefits to people who have earned them and expect to receive them.

CIRCUMVENTING CIVIL SERVICE RULES

I am also concerned about a provision adopted by the conferees that converts 150 "temporary" employees at the Social Security Administration into permanent career, civil service jobs. A bill, H.R. 5723, which is identical to this section of the conference report, was jointly referred to the Committee on Post Office and Civil Service and the Committe on Ways and Means. The Civil Service Subcommittee on Employee Ethics and Utilization, on which I serve, developed and reported a reasonable solution to this problem, giving these employees an opportunity to qualify for career jobs. I believe the action of the conferees violates the merit principles of employment, the foundation of our Federal personnel system and is a disservice to other Federal employees who must compete and qualify for Federal jobs according to standard civil service procedures. Quite frankly, we should not be legislating people into jobs. We either have a merit system or we do not. We should not create an impartial, orderly merit system and then thwart it.

While the social security financing bill is flawed, I must reluctantly vote for it because the State of the fund requires our immediate action, in order to guarantee a secure, predictable retirement for our citizens. Both Houses of Congress have made a commendable effort to shore up social security. I will work in the second session to rectify what I think are mistakes and bring true reform to the program.

Mr. CONYERS. Mr. Speaker, as the social security financing bill, H.R. 9346, comes to a vote, I will support the bill, but with serious reservations.

Social security taxes will be the highest tax paid by two-thirds of the Nation's income recipients, including individuals and families living below the poverty level. These payroll taxes are also among the most regressive, and will become only slightly less regressive in future years as a result of this legislation. They will continue to exact a far greater tax burden on low- and moderate-income earners, as a percentage of earned income, than on upper-income groups. Payroll taxes are regressive in several ways. The ceiling on outside earnings, though raised somewhat, means that retirees who are able and willing to work to derive additional income will continue to lose social security benefits above the earned income ceilings, while retirees who draw income from assets lose no benefits whatsoever. Payroll taxes and benefits, in disregarding retirees' wealth and income derived from assets, serve to perpetuate a system that places a greater tax liability on income derived from labor than on income derived from property.

The increased payroll taxes will place yet another disproportionate burden on low- and moderate-income earners. Employers pass on their additional social security taxes in the form of higher prices and also use these taxes as a reason to suppress demands for higher wages. The inflationary impact of higher prices resulting from increased social security taxes, their depressive effect on the economy, including the prospect of yet higher unemployment, will hit hardest the pocketbooks, wages, and employment of lower-income groups and marginal workers.

The social security financing bill has to be viewed in the larger context of overall Federal taxes, tax expenditures, and spending. It is part and parcel of a pattern of Federal action that is increasing the tax breaks that go to higher-income groups while increasing the liabilities of low- and moderate-income groups.

There are two Federal systems for affecting income distribution in this country. One is direct Federal spending and stimulus programs to cut unemployment that, overall, have a positive redistributive effect on the incomes of the working class and lower-income groups. The other system consists of tax expenditures and payroll taxes that, overall, redistribute income to those groups that should be shouldering a greater burden rather than receiving greater benefits. In fiscal year 1978 tax expenditures will amount to more than $124 billion, nearly 30 percent of total direct Federal spending. These tax credits and subsidies overwhelmingly favor the propertied, upper-income groups, and the corporations. As taxes imposed on workers and low-income families increase, so do tax breaks to the well-off. It is no accident that in the conference on H.R. 9346, the Senate nearly succeeded in coupling increased payroll taxes to yet another tax break for upper-income groups, a $250 a year tax credit for higher education.

The effect of recent Federal tax action along with the Government's failure to achieve full employment and price stability is to deepen the already gross income disparities among citizens. This country urgently needs full employment—the most equitable income distribution system of all—and a decent income maintenance program for those unable to work. What is needed is a thorough reexamination of the impact off all Federal tax and spending programs on income distribution, and fundamental reforms that apportion benefits and burdens equitably and adequately.

Mr. AMBRO. Mr. Speaker, although I voted for the conference report on the bill to provide adequate financing for the social security system, I firmly believe that substantive redrafting of legislation to insure the solvency of the trust funds is needed. The increases in both the taxable wage base and the percentage rate contained in this bill will have so severe an impact on the average American taxpayer and will result in such a huge drain on the economy, generally, that a large Federal tax reduction is a necessity.

When the House of Representatives originally considered this bill, I did not favor the use of money from general revenues to offset the contributions made into the system by the employer and the employee. The specific provisions of the conference report, however, require that we take a second look at the possibility of using general revenue funds for a portion of the money needed by the social security system. Since its inception, the trust funds have been supported on a bipod of employer/employee contributions, but now we must seriously consider instituting a tripod of employer/employee/general revenue funds to support the social security system. A tripod of this nature would give increased stability to the social security system, especially if we could—and we can—devise a practicable formula to use the third leg only when the other two weaken.

I was unhappy with the Ketchum amendment to the original version of this bill, but I supported it, inasmuch as there was no alternative, but the conferees' version of the earnings limitation is simply not responsive to present-day circumstances. I have sponsored legislation dating back to 1975 which would increase the outside earnings limitation to $7,500 immediately—a figure which is more realistic than this bill provides in these inflationary times.

I sincerely hope that the Commission on Social Security created by this bill will be able to make a comprehensive study of the social security system and recommend remedies for the ills of the system so that we will be in a position to draft amendments to this bill in the near future which will be more deliberatively practical to the working man and woman, to the employer, and to the Nation as a whole.

A yes vote on this debatable measure means only that I solidly support the attempts—however hastily conceived—to assure the solvency of the social security trust fund, but I do so with the conviction that this bill desperately needs in-depth review and revision.

Mr. GORE. Mr. Speaker, we are about to make a grave mistake by passing this bill. There is no question about the fact that we must put social security on a firm financial foundation. I support that effort wholeheartedly. However, there are good ways to accomplish that goal and bad ways to accomplish that goal.

The imposition of a highly regressive increase in the payroll tax is the wrong way to strengthen social security. The payroll tax hits hardest at working families and small business and, in general, at those who can least afford to pay it. It is already too high.

Early in this century, when the late Secretary of State Cordell Hull was a young Congressman representing the same district I now serve, he led the fight in favor of the principle of progressive taxation. The reform he championed can be stated quite simply: "Those who can most afford it should be asked to carry a larger share of the tax burden; those who have fewer resources should be asked to pay a proportionately smaller percentage."

This bill does precisely the opposite. That is the reason I opposed it last month and the reason I oppose it again today.

In addition, the taxes imposed by this bill will have an enormous inflationary effect. We are told that this defect will be remedied by next year's reduction in the income tax—a proposal which began as a tax reform.

However, the tandem effect of these two bills will be to shift the entire American tax structure toward a much more regressive system.

As a new Member of this body, I oppose this bill somewhat reluctantly because of my respect for the wisdom and experience of so many of my colleagues who are supporting it and who have labored long and hard to fashion it. Nevertheless, I am convinced that it is an undemocratic, regressive measure, and I intend to vote against it once again.

I insert into the RECORD at this point a column by Mr. Tom Wicker of the New York Times which further discusses the reasons this bill should be defeated:

PAYROLL TAX—UP, UP, UP

(By Tom Wicker)

President Carter seems eager for House-Senate conferees to break their deadlock on the minor issue of a college-tuition tax credit so they can send him a finished Social Security bill in this calendar year. But the American people would be better off if the deadlock lasted long enough for this massive tax bill to be recognized for the economic disaster it is. For example:

Long-term tax increases totaling 227 billion dollars would be imposed in regular steps between 1979 and 1987. Note that the Congress that voted this body-blow to the American wallet prudently put off the first of the increases until *after* its members try to get themselves re-elected next year.

These payroll tax increases are regressive and severe. Under current law, a worker paying the maximum tax in 1979 would have been hit for 6.0 percent of the first $18,900 of his earnings, or $1,143.45, which is bad enough; under the new bill, a worker at the maximum would pay 6.13 percent on $22,900, or $1,403.77, in 1979. How does a new one-year tax bite of $260.32 grab you?

By 1987, workers and employers will be taxed at 7.15 percent on the first $42,600 of income—$3,045.90 at the maximum. Thus, over the life of the bill, the payroll taxes of persons paying the maximum will be nearly tripled, as will the matching taxes of their employers.

The increases are inflationary, since it is an established economic fact that most employers pass on payroll tax increases to the consumer via higher prices. Thus, Congress has voted strong upward pressure on the price level in each of the years from 1979 through 1987.

Despite the general inflationary effect, in some cases, the bill might also work against employment. Some employers might either not hire new hands or reduce their work forces as a hedge against increasing employment costs.

In addition to these effects on inflation and employment, the payroll tax increases will cut heavily into workers' buying power. At one and the same time, Congress has managed a bill that will depress the economy and fuel inflation.

President Carter's plan to cut income taxes to compensate for these effects, even if passed, won't necessarily help that much. Annual income tax reduction will certainly not stop employers from passing weekly and monthly payroll tax increases to consumers; and whether payroll deductions for income taxes can be reduced sufficiently to maintain buying power remains to be seen. Remember that Social Security comes "off the top" of the worker's weekly check; an income tax refund at the end of the year won't put food on the table day by day.

Some may ask, "But what could Congress do? How else could it save Social Security?" Well, it could have "saved" Social Security by doing what other industralized countries do—feeding general fund revenues into tripartite system supported by employers, employees and the general revenues for 25 to 45 percent of their social insurance funding; West Germany has been using 15 to 33 percent general funding since 1891 (I am informed by Alfred Kutzik of the University of Maryland at Baltimore).

Most of the planners of the American Social Security originally envisioned, when doing their work in the 1930's, that sometime in the 1960's it would become necessary to put general fund revenues into the system. What's more, the Federal Government has been matching all medical insurance contributions, to the Medicare system since 1965. Where's the difference in principle? Yet, Congress remains wedded to the myth that to support Social Security with general revenues would convert it to "welfare."

Mr. Carter must know that's poppycock. He proposed unsucceessfully that in years when unemployment exceeds 6 percent, the Treasury should contribute the difference between Social Security taxes actually collected and what they would have totaled at 6 percent unemployment. His later proposal to lower income taxes in compensation for higher payroll taxes would indirectly divert general funds to Social Security financing. Even the original House bill provided for automatic Treasury loans to the Social Security trust funds if they fell below 25 percent of annual outlays; but this sensible beginning step toward general funding did not survive.

Mr. Carter nevertheless is eager to claim the "rescue" of Social Security as a legislative achievement. Since the system is in no immediate danger (whatever alarmists say), payroll taxpayers might welcome instead a veto of this huge, inflationary tax increase and a new start next year.

Mr. PEPPER. Mr. Speaker, each month 33 million persons receive benefit checks totaling over $6.5 billion drawn on social security trust funds. Of the 33 million, over three-quarters are age 60 or over and more than one-third are over 72 years of age. These persons need to be assured that their benefits are guaranteed for years to come. For this reason, I am very pleased that the conferees have acted to get this conference report before us before we adjourn in order to provide this guarantee. I commend the House and Senate conferees for their efforts.

This conference report contains a number of provisions that I have long advocated and which I support strongly.

The "decoupling issue" is addressed in a way that greatly reduces the projected long-range deficit in the trust funds and at the same time provides a wage-indexed formula which allows retirees to share in productivity increases in the economy over their working years and which protects those scheduled to retire in the near future from being disadvantaged because of the formula change.

I am extremely happy to see that the conference report would correct a major injustice in the program by increasing the special minimum benefit for long-term, low-paid workers and including it in future cost-of-living increases. For some reason, this special minimum added in 1972 was about the only benefit not subject to the cost-of-living provisions and has suffered severe erosion as a result of high inflation over the past few years.

I am very pleased to note that the report would increase the present 1-percent credit for delayed receipt of benefits beyond age 65 to 3 percent. This almost "sleeper" provision in the 1972 amendments has not been overly utilized. I believe it contains the potential for helping to alleviate some of the financial problems of the trust funds by encouraging and rewarding persons who are willing and able to continue working to do so. I believe this approach of allowing greater options to people is infinitely superior to any attempt to force people to stay in the work force by increasing the age of eligibility from 65 to 68.

The report provides for an annual increase in the level of outside earnings of the retirement test for those between 62 and 72 at a faster rate than under current law until 1982 and lowers the age from 72 to 70 at which the earnings test is applicable in 1982. While I am happy to see some liberalization of this limitation, I wish that the report would have adopted the House provision or at least the faster increase in the level of the Senate version.

Perhaps one of the most symbolic provisions of this report is the elimination, at least for widows and widowers age 60 or over, of the so-called living-in-sin requirement of present law in order to avoid a loss or reduction in benefits. I only wish that the conferees could have accepted the House version of this provision intact.

While I find many provisions in this conference report that I support, I do have some concerns that I wish to point out. In particular, I am concerned that the standby loan authority from Federal general revenues is not included in this legislation.

In my testimony before the Social Security Subcommittee, I strongly supported the provision in the President's proposal to use general revenues on at least a limited basis. In fact, I support the proposal of Congressman BURKE to make the Federal Government an equal partner in the financing of social security benefits. While the House bill did not adopt either of these proposals, it did have a "safety valve" provision that would have allowed the old age and survivors insurance (OASI) and disability insurance (DI) trust funds to borrow from Federal general revenues whenever the assets of the trust funds drop below 25 percent of annual outgo. In my opinion, such a provision is essential to providing the needed guarantee to social security beneficiaries, both present and future, that the funds are secure and will be there when needed. I have been told that a survey of workers indicated that 60 percent did not believe social security benefits would be there when they retired. In my view, the "safety valve" provision would be a major step in dispelling this disbelief. Hopefully, the provisions now in this conference report will be sufficient to achieve this end.

While there are some other provisions that cause me concern—for example, reduction of benefits for spouses of Government pensioners, no semiannual cost-of-living increases, more rapid tax rate increases than the House bill—I am happy to see that we are taking steps to insure the financial integrity of the social security system and to assure future beneficiaries that their benefits will be paid. While I anticipate and shall work for many improvements in our social security legislation in respect to taxation and benefits this conference report gives us the best bill we can get now, which will mean so much to so many, and I support it.

Mr. McCLORY. Mr. Speaker, I would like to address a point raised by the gentlelady from Colorado, Congresswoman SCHROEDER, and others regarding the provision in the conference report relating to administrative law judges. It appears that under this bill the status of 150 temporary hearing examiners would be adjusted so as to make them permanent administrative law judges. Taking into account the recently passed Age Discrimination in Employment Act amendments—H.R. 5383—which would totally remove mandatory retirement from the civil service, what we would effectively do by adopting the conference report is give life tenure to 150 judges.

The reason that I raise this point is that during debate on the Bankruptcy Act revision—H.R. 8200—the Danielson-Railsback amendment was adopted, thereby removing from the bill the provision which would have given an estimated 100 bankruptcy judges life tenure. The controversy was whether H.R. 8200 as reported out by the Judiciary Committee went too far by creating as many as 100 new life tenured positions. The debate on this issue continues to this day within the committee. The provision in this social security bill would create at least one and one-half times the number of new life-tenured positions as the bankruptcy bill.

Without even going into the myriad of other objectionable aspects of H.R. 9345, I strongly believe that a vote to adopt the conference report would be extremely irresponsible in that it would summarily create such a large number of permanent life-tenured judgeship positions.

Mr. LEVITAS. Mr. Speaker, the only justification for the social security bill before the House today is that it contains my proposal for a National Commission on Social Security which can bring about a complete transition from the present social security mess we now have.

There are some people who would advocate doing nothing, but merely let the social security go bankrupt, as it will, beginning next year. It seems to me that if we have one last chance to change the present system and make it livable and workable, we should try it and not merely let the system bankrupt.

If we simply bankrupt overnight the social security system—something which is totally unconscionable—there are millions of Americans who are retired and at present depend on social security as a supplement to their savings and who will become destitute welfare cases, even though they faithfully paid their social security taxes all their working lives. There are widows and orphans who would become public welfare cases if we bankrupt the program next year, even though their deceased fathers and husbands had paid their social security taxes. Millions of Americans soon approaching retirement, having worked for years and having paid their taxes, would be left out in the cold. We must provide an alternative to this and the only way to go about that task is to thoroughly study the system and make basic changes; to question the payroll tax; to let people opt for private rather than Government coverage; and to eliminate the inequities. Now, with the establishment of the Commission I proposed, the means for change are possible.

However, we cannot go on with the present system any more. This is the end. The American people are fed up with paying more and more regressive taxes into the fiscal pit of social security as it now is operated. This bill provides the first light at the end of the dark tunnel. It provides the first—and possibly the last—hope for making fundamental changes in the social security system and thereby rescuing it in some different form. I am, of course, referring to my proposal, which is now part of this bill, the section which creates a National Commission on Social Security. As I said earlier, the existence of this National Commission is the only justification for the present bill. Without it, neither I nor many other Members would even consider voting for this bill and its increased taxes.

I might point out that if the National Commission does its job properly, as I believe it will, then the social security tax increases, which we have heard so much about and which are scheduled to be phased in during the next number of years, will never be phased in at all. If the National Commission does its job and provides us with a new system, the American people will not ever have to pay the new taxes contained in this bill for several years in the future.

Just what is the National Commission and why must we have it?

The vast and complex social security system cannot be rewritten on the floor of Congress, with the stroke of a pen. It needs careful study to be transformed. A transition is needed to avoid chaos. What took 40 years to mess up will take a few years to clean up. If you are traveling down the highway at 100 m.p.h., you do not slow down by crashing into a bridge. You must make a safe and planned transition. That is what the National Commission on Social Security will do.

Previously, efforts to analyze and change the social security system have been controlled by the bureaucracy. All they have done over the years is rearrange the furniture on the deck of the *Titanic*. Now, we need something different and fundamental. The National Commission on Social Security will be independent of the bureaucracy and will be mandated to consider long-term and fundamental changes and solutions.

In many ways the adoption of the National Commission on Social Security is revolutionary. It is not just another study. It marks a turning point, a milestone. The social security system will never be the same again.

As we all know, social security was enacted in 1936 to meet an overwhelming need. Pensions and annuities used to be rare indeed, and mighty small when they did exist. In civilian life, the average person was on his own. Either he provided for his own old age—something few could do—or he faced such unwelcome alternatives as living in poverty, moving in with relatives willing to support him, becoming a public charge, or continuing to work, despite illness and old age.

But social security was never intended to be a complete retirement plan that would cover all of a person's needs. It was intended to be a supplement, to provide approximately one-third of what a retiree would need to maintain a comfortable standard of living.

Introduced in the early days of the Roosevelt administration, it was designed as an insurance program with mandatory premiums which would maintain actuarial integrity and would provide minimum subsistence. The system was really designed to help rural migrants to urban areas who had no means of providing for their own retirement and who constituted a potential heavy burden on society. A major failing of the concept, in my opinion, is that the supplementary nature of social security benefits has never been adequately publicized and is realized by only a few Americans. All too many people work the bulk of their lives confidently expecting social security alone or in tandem with a pension to maintain them during retirement at their same level of living, and by the time they realize otherwise, it is too late.

Consequently, social security retirement benefits have had to rise over the decades to partially reduce what would otherwise have been a flood of applicants for State and local welfare programs. Instead of providing one-third of a retiree's income, social security for a low-paid worker now gives him about 60 percent of the wages he last got when he was working; those who were making a median wage receive about 40 percent; and the higher-paid obtain 30 percent or less of their retirement income from social security—a progressive benefit structure which to some extent offsets the regressive social security tax on employees.

This rise in benefits far beyond the increase in the cost of living over the past 40 years has obviously resulted in great changes in both the tax rate and the tax base—to the point where over half of the country's taxpayers pay more in social security taxes than they do in income taxes. By way of comparison, the social security tax rate in 1937 was 1 percent on a maximum base of $3,000, giving a total annual tax of $30 or less. These figures have now risen to a rate of 5.85 percent for social security and medicare combined, to a base of $16,500 and to a tax of up to $965.25—an increase of 3,200 percent.

Another way of illustrating this is to take the example of an employee who entered the work force shortly before 1937 and who has paid the maximum social security tax each year since then. His payment into the trust fund last year of $895.05 represented almost 9 percent of the total contribution he has made over the last 40 years—a total of $7,763.10 by the end of 1976, plus a matching sum from his employer.

The National Commission will examine thoroughly our present social security program in all of its aspects and recommend viable alternatives to a system which many experts and a large, concerned portion of the public believe is no longer tolerable.

Specifically, my measure provides for a National Commission of nine citizens, independent of the executive branch, to make a careful and intensive study of the entire subject—not to be confined to the limits of the present program—and to recommend specific proposals for the type of system which will best suit the needs of Americans for the rest of this century and well into the next.

This National Commission of private citizens will travel to all parts of the Nation and, in addition to testimony from experts and economists, will hear from businessmen, retired persons, professionals, widows, working people, single career persons—in short, from every element of our society.

The National Commission's final comprehensive report will set forth findings and recommendations including, but certainly not limited to, the following areas:

First, the adequacy of the fiscal condition of the present social security programs;

Second, any inequities in these programs based upon marital status, sex, or similar classifications or categories; and

Third, possible alternatives to the current programs, including a substitution of the payroll tax by general revenues, mandatory participation in a private insurance program, and a system permitting individuals a choice of public and/or private programs.

Let me emphasize that last part again. The National Commission is mandated to consider alternatives to the present system including letting people have a choice of going to the private sector and buying their own retirement, disability, and survivorship programs. I know many Americans who would even let go what they have contributed to social security thus far if they could only be free to go to the private sector for coverage henceforth.

Other changes which the National Commission will consider include removing the welfare-type programs from social security and handling them in the same way as other welfare programs.

We have a national commitment to a retirement, survivor, and disability benefits program, and we cannot allow that commitment to founder because the existing delivery system has become unsuited to our current and future needs. Our responsibility is to develop an affordable and realistic program to provide true financial security for retirees and for families whose wage earner has died or become disabled.

This National Commission, with its citizen base and high visibility, will get the job done. It is the first time since 1969 that the fundamental questions for fundamental changes are being asked. Even though the present and last administration did not advocate this idea; even though the present and past Secretary of HEW and Social Security Administrator did not want it, the American people did. Now, we have a chance.

The time for rhetoric and bandaid-and-aspirin solutions is past. The time for simply taxing people beyond the breaking point is past. Brave and bold and visionary solutions are needed. This bill with my amendment provides the framework for such solutions. Americans are ready for this approach. A courageous Congress can provide these solutions, and the time for us to do so is now.

Mrs. HOLT. Mr. Speaker, I believe it is important to recall the original purpose of the Social Security Act of 1935. It was to provide a basic retirement system financed with mandatory contributions by workers and their employers. It was not conceived to cover personal tragedies such as death, disability, or ill health.

Over the many years since then, the Congress has added survivors' benefits, disability benefits, and medicare to the program, and has increased both the benefit levels and the taxes to support them.

But Congress over-reached in the normal political fashion. It legislated a growth rate of benefits that could not be matched by revenues from the tax rate.

We started in 1935 with a relatively simple, self-supporting retirement system, but today we have a huge, complex, and fast-growing system that cannot pay for itself unless we do something drastic.

The proposal put before us today is for drastic tax increases, which is the worst possible way to go. I believe we should return social security to that basic retirement system which it was originally intended to be. We should never have tried to cover the broad-range of personal tragedies with the social security program. We have other programs to cover personal tragedies.

Social security, as originally conceived, had one purpose: To provide retirement income for workers who were taxed throughout their working years to pay for these retirement benefits. We should not be raising their social security taxes to support outlays that were never part of the original bargain and should be covered by general revenues.

We should also be extremely concerned about the harmful economic consequences of the proposed social security tax increases on which we must vote today. These tax increases will cause higher inflation and more unemployment at a time when inflation and unemployment are the most critical problems facing our country.

The social security tax is a direct tax on jobs. The portion paid by the employer is a tax on every job, drains away capital that could be used to expand production, and increases the cost of production. This translates into fewer jobs and higher consumer prices. The portion paid by the employee reduces his ability to save and diminishes the pool of capital needed for economic growth.

And I would remind this House that there is no real economic relief to the worker in having the employer pay some share of this tax. The employer ultimately calculates it as part of the total compensation of the worker.

I would also remind this House that the middle-income taxpayer, on whom this legislation would impose a terrible burden, is outraged by the total tax burden he already pays to all levels of government. The income tax legislation of recent years has attempted to relieve low-income families, but nothing significant has been done to relieve middle-income families. To the contrary, inflation induced by loose government fiscal policy has pushed them into higher tax brackets and dramatically increased the tax load they carry.

This social security tax legislation is the third major act of the House this year that would cause serious economic damage. The large increase in the minimum wage will surely cause more unemployment and higher consumer prices. The huge energy taxes proposed by President Carter would be a disastrous blow against our hopes for reducing inflation and unemployment.

What is needed, Mr. Speaker, is a general income tax reduction for all income groups. It should be great enough to cancel out the harmful effects of the higher minimum wage, the new energy taxes, and the higher social security taxes which will surely be enacted by this Congress. But the tax reduction should also do much more. It should be large enough to provide real relief from the inflation we have experienced in recent years.

If we want strong economic growth for our economy, if we want investment in production and the creation of productive jobs, then a general tax reduction is the remedy we should be enacting.

Mr. ROGERS. Mr. Speaker, I rise to express the concern I have about this Nation's social security program, as well as about the method of funding which is proposed to us today.

Over the years millions of Americans have made their plans for retirement in reliance on a fiscally dependable social security system. Now, we find that the ability of the system to meet its obligations is being seriously questioned. Were we not to take action to quell this uncertainty as to the future of the system, we would invite catastrophe of major proportion in the lives of many Americans. The social security system has become so important to us that, if it were to go bankrupt, there could be a loss of confidence in the economy to an extent we have not seen since the Depression of the thirties.

Now, the legislation we are considering today seeks to bail out the social security system by increasing the flow of revenues. The motives of this legislation are unquestionable. We must assure the fiscal integrity of the system. However I am very concerned about the consequences of the rate of taxation which is required to generate these revenues.

Businessmen and employees alike from my district have written to voice their concern over the increased payroll tax.

All in all, I feel that the Congress has no alternative but to adopt the legislation before us. However, I would strongly urge that we not consider the matter of social security financing closed, but rather continue to seek to structure the payroll tax rate and wage base in a manner to lessen or hold steady rather than increase this burden in the future.

Ms. MIKULSKI. Mr. Speaker, the question of a social security system for our elderly is one of great importance to me. People have worked their entire lives, looking forward to the day when they could retire and social security would meet the basic needs of their life. Now the social security system is threatened with bankruptcy. For too many years, we have increased the benefits without adequately increasing the revenues. This year we have heard reports of doom—if something is not done the trust fund will be bankrupt in the early 1980's.

When President Carter introduced his proposal, he suggested that general revenues funds be used at times to supplement the funds. I support this idea. When unemployment is high, there are fewer people contributing to the fund. Using general revenues, in part, was a solution that I agreed with. Yet when the bill was reported from the Ways and Means and Rules Committees, there were certain restrictions placed on amendments from the floor. Only certain predetermined amendments were allowed and there were none to alllow the use of general revenue to augment the trust fund. The House bill would have allowed the trust fund to borrow from general revenues in certain circumstances, which I supported. This has been deleted by the Senate.

At that time, I weighed my vote very hard. Should I vote for the social security bill as reported from committee? My overriding concern was to insure that the elderly that retired would get the benefits that they had paid for and expected. Yet I was concerned about the increased burden on the workers and employers and the economy in general. I finally decided that the responsible vote was to vote for the increases.

Since that time, I have given this matter a lot of thought. I have had many community meetings. By far, the most discussed issue has been social security. The people in our country do not think it is a fair system. They know that there are serious inequities. They are angry. And I think with real cause. The social security system was devised in 1935; the American society and economy have changed enormously in that period of time; yet social security is based on the old assumptions.

I am voting against this conference report because I think we have used stopgap measures too long to "solve" the problems of financing. I think now is the time to do a total overhaul. We need a system whose benefits are determined by how much you pay in. People who work for 35 years and pay throughout the entire time should receive more benefits than the people who meet their minimum quota.

The Supreme Court has ruled that the allotment of benefits cannot be different for men and women. Through the actions of the Congresswoman's Caucus, there is a task force studying this now.

My vote against this conference report is not a vote against paying the retired people of this country, the benefits that are due them, but it is a vote to send the entire bill back to committee and to assure that this system is corrected.

Mr. CLEVELAND. Mr. Speaker, I intend to vote against the rule and the conference report on H.R. 9346, the Social Security Amendments of 1977, as I did against the earlier House version. When I voted against the House bill, my principal objections included a belief that the amounts of the tax rate and wage base increases were excessive and far too costly for the already overburdened American taxpayer.

Unfortunately, the conference report before us today accelerates those tax rate increases even more and retains the House-passed wage base increases except for the typically crafty—and cynical—election year maneuvering which delays the effect of that change until after the 1978 elections.

No one can argue that our social security system is in deplorable financial condition. Nor can one justifiably argue that changes are not needed. It is important not to lose sight of the fact, however, that solutions to the deficit problem are not without their own inherent difficulties. The phenomenal tax increases imposed by this bill will depress our already shaky economy and dig deeper into taxpayers' pockets at a time when they can least afford it. They may well lead to increased speculation that our Federal Government and its attendant costs are out of control. Decreased confidence in the Government's ability to provide sound programs, such as retirement income security, is bound to occur as well.

In anticipation of these problems, in 1976, I asked the Social Security Administration to provide me with some figures on the maximum employee contribution toward social security and the total maximum accumulation of these contributions. The results are startling: amount of wages taxable under the so- An employee who earned the maximum cial security program in each calendar year from 1937 to 1975 would have paid contributions totalling $6,868.05 through 1975. This is taken from a chart which lists maximum contributions at the rate of 1 percent of the $3,000 wage base in 1937, or an annual contribution of $30, through 1975's maximum annual contribution of $824.85 based on 5.85 percent of the wage base of $14,000. At the same maximum total accumulation if the amount of the employee's contribution for each calendar year had been deposited at the end of the year into an account paying interest at 5 percent compounded annually. The accumulated total based on that type of arrangement would have been $11,330.92.

The enormity of the tax hikes for middle-income Americans contained in this bill is illustrated by the fact that beginning in 1979 it will take only 3 years for a worker's taxes—based on maximum contributions—to equal if not exceed those paid by someone who had contributed the maximum amount in taxes from 1937 to 1972, a period of 35 years.

The progressively rising wage base increases, in addition, will impact not only on the rich; but, given present rates of inflation, will cut deeper and deeper into the paychecks of those with average incomes. At the same time, however, there will be a number of lower-salaried persons whose chances of receiving maximum social security retirement benefits will be reduced by the sharp increases in the wage base ceilings.

It is particularly ironic to me that the Carter administration apparently has come to its senses and agreed with congressional Republicans that tax cuts are sorely needed. Unfortunately, ramming through the social security bill will negate any ultimate significant relief that income tax reductions could provide.

Furthermore, one truly beneficial attempt to aid middle-income taxpayers with the increasingly high costs of education, namely, the Roth tuition tax credit amendment was deleted in conference although other nongermane and controversial provisions were retained. The elimination of the tuition tax credit is more than regrettable; it is a nagging sign of the Congress' insensitivity to the very real problem of inflation and the Government's contribution to its impact on hard-working, taxpaying middle Americans.

Mr. COTTER. Mr. Speaker, as a member of the conference committee on the Social Security Financing Amendments of 1977, I rise to urge the support of my colleagues for the passage of this most important legislation.

As you know, the conferees have agreed on the largest social security tax increase in our Nation's history. In 1987, taxes for both employer and employee will be 7.35 percent on a base of $42,900. This base will cover approximately 90 percent of the U.S. wage base.

Raising taxes is never pleasant but this much needed bill assures that both OASDI (2030), and DI (2007) will be funded until the year 2000. Over $227 billion will be raised within the next 9 years.

There are some pleasant surprises. The conferees have agreed to keep parity between employer and employee, and have rejected the use of general revenue funding by removing both the borrowing authority which has been passed by this body, and a Senate amendment to use general revenues to assist local governments and nonprofit organizations.

We have also adopted a decoupling amendment to separate existing benefit increases from benefits of future recipients. Under the conference version, a wage replacement ratio for future beneficiaries will average 43 percent which is well below the 60 percent projected in the present law for the 1980's.

The conferees have put a freeze on the minimum benefit that has been subject to abuse by late entrants into the social security system, and, at the same time, adopted a proposal to limit a spouse's social security payment to a spouse who is receiving a State or local pension, but made this prospective and retroactive for 5 years for women; therefore it will not affect workers who are eligible for retirement.

The retirement test age will be reduced in 1982 from the present 72 to 70, and the earned income limitation has been increased as follows:

1977	$3,000
1978	4,000
1979	4,500
1980	5,000
1981	5,500
1982	6,000
1983	[1]6,000

[1] Plus cost of living.

The conferees have also agreed to decrease the number of years for a spouse to be vested in social security from 20 years to 10.

One hundred and eighty-seven million dollars was given in welfare relief to the States. Connecticut will receive $2.4 million, and a study was mandated on gender-based differences. We have disallowed social security for limited partnerships that were designed just to make partners eligible for benefits and taxed employers on tip income for social security purposes.

The income disregard level for all disabled blind persons has been increased to the same as the retirement test and finally, it was agreed to allow marriage and remarriage to all widows over 65.

I believe that we all have an obligation to our elderly, our disabled, and ourselves to see that this bill is passed before the end of this year. We must assure the beneficiaries that their checks will continue. We must remove the doubt and worry from the minds of our senior citizens who are financially dependent on this income.

Mr. Speaker, I sincerely believe that we must act, and we must act now to establish a sound financial basis which is essential to save the social security trust fund.

I strongly urge my colleagues to vote along with me to see that this is done.

As a member of the Social Security Subcommittee, I would be remiss if I did not tell my colleagues that in the early 1980's I believe both Congress and the President will act to restructure the financial base of social security. By mid-1980's when the full impact of the tax increases are felt, I believe there will be a widespread consensus to restructure the entire social security system. However, given our information to date, this is the best legislation we could responsibly develop.

Mr. BINGHAM. Mr. Speaker, today, on the last day of the 1st session of the 95th Congress, I rise to urge my colleagues to approve the conference report on H.R. 9346, the Social Security Amendments of 1977. While there may be provisions in this complex bill which each of us dislikes, I believe the House-Senate conference committee has produced a remarkably good piece of compromise legislation which the majority of Americans can support. Enactment of the Social Security Amendments of 1977 will insure the soundness of the Social Security Trust Funds far into the future and guarantee that all beneficiaries under the system will continue to receive their social security checks. After approval of this conference report, we in Congress can be proud of what we have accomplished in this first session. If we can come to an agreement on the difficult and controversial financing problems of the social security system, then there is real hope we can effectively deal with the major issues facing resolution in the second session—energy, welfare reform, economic stimulus and employment.

Since H.R. 9346, when enacted, will affect the future of the vast majority of Americans, I want to outline the provisions in this compromise bill crafted by the House-Senate conference committee.

INCREASES IN THE TAX RATE AND WAGE BASE

The bill provides for modest increases—beyond present law—in the social security tax rate on employers and employees, but prudently waits until 1979 to begin putting them into effect.

In addition, it gradually increases—beyond present law—the wage base on which social security taxes are paid, beginning next year, so as to cover 94 percent of payroll by 1981—the system now covers about 85 percent, a drop from 92 percent of payroll covered when social security was first established. The tables below will indicate the changes in tax rates and base this section of the bill provides for:

SOCIAL SECURITY TAX RATES

[In percent]

Calendar year	Present law			Calendar year	Conference agreement				
	OASDI	HI	Total		OASI[1]	DI[1]	OASDI	HI	Total
Employees and employers, each:				Employees and employers, each:					
1977	4.95	0.90	5.85	1977	4.375	0.575	4.95	0.90	5.85
1978-80	4.95	1.10	6.05	1978	4.275	.775	5.05	1.00	6.05
1981	4.95	1.35	6.30	1979-80	4.330	.750	5.08	1.05	6.13
1982-84	4.95	1.35	6.30	1981	4.525	.825	5.35	1.30	6.65
1985	4.95	1.35	6.30	1982-84	4.575	.825	5.40	1.30	6.70
1986-89	4.95	1.50	6.45	1985	4.750	.950	5.70	1.35	7.05
1990-2010	4.95	1.50	6.45	1986-89	4.750	.950	5.70	1.45	7.15
2011 and later	5.95	1.50	7.45	1990 and later	5.100	1.100	6.20	1.45	7.65
Self-employed persons:				Self-employed:

[1] Automatic thereafter.

After 1981, wage base is increased in line with wage levels, as is the case under present law.

In agreeing to equal increases in the contribution and benefit base for employees, employers and the self-employed, the conferees rejected the concept of expanding the base for employers faster than for employees advocated by the Senate-passed bill and the President. I would have preferred the idea of limiting the tax burden on employees by expanding the base faster for employers, who can deduct the contributions from their business income taxes, but I can understand the concern the conferees had about the effect such a rapid increase in social security taxes would have on the business community.

The conferees accepted the provisions in the House bill regarding railroad retirement tier II. Under it, the tax base for tier II of the Railroad Retirement Act for both benefits and tax purposes would be the same as under the automatic-increase provisions of the present law and would not be affected by increases in the social security taxable wage base contained in the bill.

Also accepted by the conferees was the House provision dealing with the Pension Benefit Guaranty Corporation (PBGC). It provides that the pension insurance administered by PBGC would not be affected by the ad hoc increases in the wage base under social security. The insured pension amount would increase as it would under automatic-increase provisions of present law.

THE TAX RATE ON THE SELF-EMPLOYED

H.R. 9346 further restores the tax rate on the self-employed to its original level of 1½ times the employee rate, effective beginning in 1981. Since 1972 the rate has been frozen at 7 percent.

REALLOCATION OF FUNDS AMONG THE HI, OASI, AND DI TRUSTS

As you will note by the tables, the bill also reallocates a portion of funds from the hospital insurance (HI) trust fund to the old age, and survivors insurance (OASI) and disability insurance (DI) trust funds to help cover their short-run deficit problems. In addition, H.R. 9346 reallocates funds from the OASI to the DI trust fund which faces a more immediate financial problem than the former. In fact, if the present law is not changed and no reallocations are made, the DI trust fund will be exhausted in 1979 and the OASI trust fund will run out in 1983. Under this reallocation provision, a total of $10 billion in additional revenue will flow to the OASI and DI trust funds by 1983 In the meantime, implementation of various hospital cost containment programs now under active consideration by Congress will improve the financial stability of the HI trust fund.

STANDBY BORROWING AUTHORITY FROM GENERAL REVENUES DROPPED

One provision of the House-passed bill I sincerely regret the conferees dropping is the standby borrowing authority for automatic loans from general income tax revenues to the OASI and DI trust funds. These loans would be provided whenever the trust fund's assets at the end dropped below 25 percent of annual outgo. A temporary payroll social security tax rate increase was included to insure automatic repayment with interest when assets at the end of a year exceeded 30 percent of the year's outgo from the funds. This provision was of special interest to me because it moved in the direction of the concept of supplementing social security funds with general revenues on an on-going basis. I have supported this concept for years along with Congressman BURKE, the chairman of the Social Security Subcommittee and over 140 other Members of the House. A limited version of the supplementing idea was proposed earlier this year by President Carter. It is also supported by major senior citizen organizations.

I would point out to my colleagues who refuse to accept the idea of direct supplements to the trust funds from general tax revenues, that supporting a raising of social security taxes to be followed by partially offsetting cuts in income taxes—contemplated next year—is a type of indirect supplementing with general revenues.

"DECOUPLING"—MODIFICATION OF BENEFIT FORMULA

H.R. 9346 takes care of half of the existing long-range deficit in the OASI and DI trust funds by correcting an error made in the 1972 law providing automatic cost-of-living increases in social security. This law unexpectedly resulted in windfall benefits for many future retirees by overadjusting for inflation in wages and prices in the complicated 1972 benefit formula. When the automatic provisions were enacted, it was expected that future replacement rates—initial benefits as a percentage of latest earning—would remain fairly constant.

However, current projections of the present law show that benefit levels will rise by about 50 percent more than wages over the next 75 years, with most of this increase occurring after the 1990's. So if the law is not changed, certain retirees will receive more in initial benefits than they were last paid in wages and this will lead to continued financial problems for the system. To correct this error in the 1972 law, H.R. 9346 makes several technical changes which results in "decoupling" the system—that is, separating the procedure for granting current retirees cost-of-living increases from the method for calculating initial benefits for future retirees. Beginning in 1979, replacement rates will be stabilized in relation to wage levels. This is accomplished by "wage indexing."

Under H.R. 9346's new formula, each worker's earnings would be updated—indexed—to reflect the increases in average wages that have occurred since the earnings were paid. This adjustment would be done just prior to when the worker reaches 62, becomes disabled, or dies. Under present law, a worker's earnings are counted in actual dollar value. Earnings after age 62 or disability would be counted in actual dollar amounts; cost-of-living increases would apply beginning with age 62, disability or death—not before as under the 1972 law. The new "decoupled" benefit formula produces benefit amounts roughly 5 percent lower than estimated present-law benefits at implementation—January 1, 1979. The formula for relating maximum family benefits to primary insurance amounts (PIA's) has a similar effect. To assure that workers now approaching retirement age will not be placed at a disadvantage, a 5-year transition period is provided. A worker who reaches age 62 after 1978 and before 1984 would be guaranteed a benefit no lower than he would have received under present law as of January 1979.

PARTIALLY FREEZING THE MINIMUM BENEFIT

Regarding another windfall benefit in present law, H.R. 9346 seeks to partially freeze the minimum benefit—paid to those with the minimum required coverage—for future retirees at an amount equal to the value of the minimum benefit which will be in effect in January 1979—estimated to be about $121. Under this compromise provision the $121 minimum is adjusted by CPI increases beginning generally with the year in which the eligible recipient actually became entitled to benefits not before. In the case of a worker or aged widow or widower the CPI adjustments to the minimum would not begin to apply until the earlier of: First, the first year the worker or aged widow—widower—was paid part or all of the benefits to which he was entitled for that year, after application of the retirement test; second, the year of attainment of age 65. Under current law the base amount rises annually with the cost-of-living both before and after benefits are paid.

CHANGES IN THE SPECIAL MINIMUM BENEFIT

Under the bill the special minimum benefit paid to future retirees with long work records at low pay is also frozen but for the initial payment only. Under present law this benefit is equal to $9 times the number of years of coverage a worker has in excess of 10 up to 30; thereafter it is not subject to annual cost-of-living increases. H.R. 9346 would increase the $9 figure to $11.50 and thus the maximum base payment from $180 to $230 effective 1979. It would also provide that the special minimum benefit would be kept up-to-date with future increases in the cost-of-living for both present and future beneficiaries.

INCREASE IN THE DELAYED RETIREMENT CREDIT

I am happy to report the conferees accepted the House provision increasing the delayed retirement credit from 1 percent to 3 percent per year for workers age 62 and older effective after 1978. This means that workers who delay receiving retirement benefits between ages 65 and 72 would have their payments increased by 3 percent for each year they do not take benefits as compared with 1 percent under present law.

Also the conferees included a Senate amendment which would make the delayed retirement credit applicable to widow's and widower's insurance benefits, as well as to the worker's benefit.

INCREASE IN EARNINGS LIMITATION (RETIREMENT TEST)

H.R. 9346 also contains compromise provisions liberalizing certain aspects of social security benefits which many of us have urged for years. The most important change involves the so-called retirement test. Under present law, the amount a beneficiary under age 72 may earn in a year and still be paid full benefits for that year is set at $3,000 with future automatic increases annually as wage levels rise. This bill would increase the set amount for those over 65 only to $4,000 in 1978—from $3,240 to $4,500 in 1979—from $3,480 and in $500 stages annually up to $6,000 in 1982. After that the automatic adjustment provision in present law would take over. The retirement test figure in present law would continue to apply to beneficiaries under age 65. The bill would also eliminate the present monthly measure of the retirement test which allows the payment of full social security benefits for any month in which a person earns no more than one-twelfth of the annual earnings limit—in the case of 1977 this means no more than $250 a month, one-twelfth of $3,000.

The conferees rejected the idea of eliminating the retirement test altogether for those 65 and older as proposed by the Ketchum amendment passed by the House without my support. I strongly feel, as do several major senior citizen organizations, that eliminating the retirement test only benefits a small percentage of social security recipients while its multi-billion dollar annual cost to the trust funds hurts the chance for enactment of much needed general benefit increases for all recipients. I am pleased the conferees dropped this unwise part of the Ketchum amendment.

The conferees also agreed to include the Senate amendment repealing the earnings limitation for individuals 70 and older. Under present law, the earnings limitation does not apply to individuals 72 and older.

STUDY OF UNIVERSAL MANDATORY COVERAGE

The House-passed bill required joint studies by the Office of Management and Budget, the Civil Service Commission, the Department of the Treasury, and the Department of Health, Education, and Welfare of mandatory coverage for Federal and State and local employees with reports and recommendations to the President and Congress within 2 years of enactment. This provision was embodied in the Fisher amendment which overwhelmingly passed the House with my support as a substitute for going ahead with universal mandatory coverage beginning in 1982. The conference committee provision would combine the studies of mandatory coverage of employees of Federal, State, and local governments and nonprofit organizations. It would require the Secretary of Health, Education, and Welfare to conduct the study with appropriate consultation with Treasury, the Office of Management and Budget, and the Civil Service Commission.

The conferees anticipate that the study will include, in addition to the evaluation of alternative proposals, examination of the following specific items: First, analysis of any possible constitutional questions involved in extensions of coverage; second, review of the extent of State, local and nonprofit coverage under existing law; third, analysis of the economic impact on State and local governments of mandatory coverage extensions; and fourth, an analysis of the feasibility of developing a method of covering Federal employees without increasing their contributions or adversely affecting their benefit rights—except to the extent that any windfall benefit situations may be eliminated.

COVERAGE OF NONPROFIT ORGANIZATIONS

The conferees accepted a Senate amendment to: First, forgive through June 30, 1977, the social security tax liability of nonprofit organizations that stopped paying social security taxes before October 19, 1976, because they had not filed the proper certificate with the Internal Revenue Service to cover their employees under social security; second, extend the deadline for filing waiver certificates for organizations that obtained refunds prior to September 9, 1976; third, permit nonprofit organizations that paid social security taxes while waiting for the Internal Revenue Service to approve their request for tax-exempt status to receive a refund of those taxes in spite of Public Law 94-563 under which the taxes and social security coverage that resulted were validated; and fourth, not require nonprofit organizations that received a refund of social security taxes for the April-June 1973, to bring their employees under social security coverage.

REDUCED BENEFITS FOR SPOUSES RECEIVING GOVERNMENT PENSIONS

The Senate-passed bill provided that social security benefits payable to spouses and surviving spouses would be reduced by the amount of any public—Federal, State, or local—retirement benefit payable to the spouse based on the spouse's own work in noncovered public employment. The provision would have been effective with respect to benefits payable for months beginning with the month of enactment, based on applications filed in or after the month of enactment.

The House bill contained no such provision.

The conferees agreed to the Senate provisions with an exception for certain people who are already receiving pensions based on noncovered public employment—or who would be eligible for such pension within 5 years of the month of enactment—and who could have expected to receive social security benefits as dependents or survivors under the social security law as in effect on January 1, 1977. The conferees were concerned that there may be large numbers of women, especially widows in their late fifties, who are already drawing pensions, or would be eligible to draw them within 5 years of the date of enactment of this bill, based on their noncovered work and whose retirement income was planned for on the assumption of the availability of full wife's or widow's benefits under social security. Inclusion of this exception to the applicability of the Senate provision, reinforces its prospective nature and avoids penalizing people who are already retired, or close to retirement, from public employment and who cannot be expected to readjust their retirement plans to take account of the "offset" provision that will apply in the future.

ELIMINATION OF MARRIAGE OR REMARRIAGE AS A FACTOR IN ENTITLEMENT TO, OR TERMINATION OR REDUCTION OF BENEFITS

The House-passed bill provided that marriage or remarriage would not bar or terminate entitlement to benefits as a divorced spouse, surviving spouse—including those caring for an entitled child—parent, or child, and remarriage would not cause any reduction in an aged widow's or widower's insurance benefits. Also, the dependent's benefits of a person married to a disabled worker or to an adult disabled since childhood would no longer be terminated when the disability ends.

The Senate bill did not include such a provision. Conferees agreed to retain only the part of the House-passed provision that would prevent reduction in benefits for widows and widowers who remarry after age 60.

DURATION-OF-MARRIAGE REQUIREMENT

The House-passed bill provided that the length of time a person must have been married to a worker in order for benefits to be payable to her as an aged divorced spouse or surviving divorced spouse would be reduced from 20 years to 5 years.

The Senate bill did not include such a provision.

Conferees agreed instead to establish a 10-year duration-of-marriage requirement for aged divorced spouses and surviving spouses.

EQUALIZATION TREATMENT OF MEN AND WOMEN UNDER THE PROGRAM

The House-passed bill contained a number of amendments that were designed to eliminate certain gender-based distinctions from the social security program, while the Senate did not include any such provisions. I regret to say the conferees agreed to drop the House provisions with the understanding that the entire question of such gender-based distinctions would be included in the 6-month study of proposals to eliminate dependency and sex discrimination provided by the bill.

NATIONAL COMMISSION ON SOCIAL SECURITY

The House had added an amendment to H.R. 9346 providing for a nine-member National Commission on the Social Security Program, appointed by the executive and legislative branches, to conduct a 2-year study including: The fiscal status and adequacy of the trust funds; the scope of coverage, adequacy of benefits, conditions of qualification for benefits—including inequities arising out of marital status, sex, or similar classifications of categories—and quality of administration; the impact of the programs on and relation to public assistance programs, nongovernmental pension insurance programs, other governmental retirement and annuity programs, medical service delivery systems and national employment practices; and alternatives to current programs including, phasing out payroll tax, using general revenues or other financing, mandatory participation in private insurance programs and choice of public or private programs or both. I voted for this amendment.

The Senate did not include a provision comparable to this in its bill.

The Senate conferees agreed to the House's Commission provision with the understanding that it would also study the need to develop a special CPI for the elderly for purposes of social security cost-of-living increases. As a long-time sponsor of such special CPI legislation, I am very pleased about this addition.

SEMIANNUAL COST-OF-LIVING INCREASES DROPPED

On a related matter which I have been advocating for years, the House conferees regretfully refused to agree to a Senate amendment providing for semiannual cost-of-living increases in social security and SSI benefits whenever the CPI increased by at least 4 percent over a specified 6-month measuring period—an annual rate of over 8 percent per year.

REPEAL OF WORKMEN'S COMPENSATION OFFSET

House conferees agreed to accept a Senate amendment repealing the provision in existing law which provides for a reduction in social security benefits for persons simultaneously entitled to workmen's compensation payments where the combined payments would otherwise exceed 80 percent of recent predisability earnings.

DISABILITY BENEFITS FOR BLIND PERSONS

The Senate-passed bill included an amendment providing for the payment of disability insurance benefits for blind people who have at least six quarters of social security coverage with the benefits paid regardless of the amount of a blind individual's earnings. This Senate provision also excluded blind persons from the requirements of present law that disability benefits be suspended for any months during which a beneficiary refuses to accept vocational rehabilitation services. The House bill contained no such provisions. As a cosponsor of legislation similar to this Senate amendment, I joined other concerned Members of the House in urging our conferees to accept this liberalization of the disability benefits law for blind persons. We feel blind persons experience greater ongoing financial problems in seeking permanent employment than other disabled individuals, which require special consideration.

The House conferees agreed to a compromise with the Senate on this matter. The conference committee bill provides that the amount of earnings under the test of substantial gainful activity (SGA) which would terminate a blind individual's benefits would be increased to the same exempt amounts as for persons 65 and over under the liberalized retirement test in another section of the conference committee bill.

EARLY DELIVERY OF BENEFIT CHECKS

House and Senate conferees agreed to a compromise provision requiring that whenever the delivery date for payment of either social security or supplemental security income checks falls on a Saturday, Sunday, or legal public holiday, the checks would be mailed on an earlier date. Also it provided that any overpayment that occurs as a direct result of the earlier delivery of checks would be waived and would not be subjected to recovery.

OTHER SOCIAL SECURITY PROVISIONS

The conference committee bill also limits payment of retroactive benefits to only those cases where the benefits are disability-related or where there was not early retirement.

The measure would require employers of workers receiving below the minimum wage plus tips to be taxed on the portion of tip income which when combined with the workers' salary equals the minimum wage. This employers' tax obligation on tip income would be regardless of the actual amount of tips the employee reports on his or her income tax form.

H.R. 9346 would change the basis for calculating cost-of-living increases for early retirees under social security to place them on the same footing as persons who retire at age 65 or later.

The conference committee bill contains the provisions in the House-passed bill which make further changes in the law with regard to annual wage reporting by employers as a substitute for quarterly reporting. Under these provisions, employers would no longer have to check off quarters of coverage or report quarterly wages on the W-2 forms. State and local employers would continue to report on a quarterly basis but wages would be converted to annual figures. This section excludes from the definition of wages certain employment wherein the pay is less than $100 in a calendar year. Also, it changes the "quarter of coverage" definition so that after 1977 all workers would receive a quarter of coverage for each $250 wages paid in a year—to a maximum of four quarters of coverage in a year. The amounts measuring a quarter of coverage would increase automatically each year as wages increase. Under present law, a worker receives credit for a quarter of coverage for a calendar quarter in which he received at least $50 in wages.

The conference measure would permit clergymen who previously did not elect social security coverage a second opportunity to come under the system as self-employed persons.

The legislation also authorizes the President to enter into bilateral agreements with foreign countries to provide limited coordination of social security systems. Each such agreement would have to be transmitted to Congress together with a report on estimated cost and number of individuals affected. It could not go into effect until 90 days after both Houses had been in session. During that period an agreement could be rejected by the action of either House.

WELFARE PROVISIONS

Finally, H.R. 9346 as reported by the House-Senate conference committee includes four of the five welfare provisions added by the Senate to the House-passed bill and agreed to in amended form by the House conferees.

The first provision is of particular concern to New York State. It is a scaled down version of the immediate welfare costs fiscal relief proposal the State and its representatives have been pressing for. The amount of this one-time payment to States would be $187 million, and States would be required to pass through an appropriate portion of this relief to the local governments who are responsible for meeting part of the costs of welfare. The $187 million represents half of the $374 million in fiscal relief previously approved by the Senate. There are strong indications that the remaining $187 million will be tacked on to a welfare bill, H.R. 7200, when it comes to the Senate floor next January and subsequently approved by the House. New York State's share of the $187 million in H.R. 9346 is estimated to be about $28.3 million with a substantial portion—about $18 million—to be passed through to New York City.

The other Senate welfare amendments agreed to by the conferees include: second, providing fiscal incentives for lowering aid to dependent children overpayment error rates below 4 percent by allowing States to keep part of the savings which would normally accrue to the Federal Government—New York State is not close enough to the 4-percent rate to qualify; third, allowing States access to wage information held by the Social Security Administration and State unemployment compensation offices on AFDC eligibles and recipients starting October 1979; and fourth, authorizing States for 2 years to conduct up to three AFDC welfare employment demonstration projects with voluntary participation by recipients and with the approval of the Secretary of HEW waiving certain statutory rules. A fifth Senate amendment tightening up the earned income disregard under the AFDC program was dropped by the conferees. The Carter administration and representatives from high cost-of-living States such as New York opposed the changes in the earned income disregard.

Taken as a whole, H.R. 9346 as crafted by the House and Senate conferees is an excellent bill. It has its shortcomings as I have indicated, but I strongly urge my colleagues to overlook them and vote in favor of legislation which this year will put the social security system back on a sound financial basis. We can delay such action no longer.

Mr. GIAIMO. Mr. Speaker, I rise in strong support of this conference agreement. The conferees from the Committee on Ways and Means have brought back to us an agreement which restores the financial solvency of the social security system and is consistent with the second budget resolution for fiscal year 1978.

That resolution assumed no social security tax increases in fiscal year 1978 beyond those scheduled under current law. The Budget Committees were concerned that a social security tax increase effective in fiscal year 1978 could retard the economic recovery. The conference agreement before us today delays the new tax increases until fiscal year 1979.

The second budget resolution assumed that outlay savings of $400 million could be achieved in fiscal year 1978 through social security benefit reforms. The conference agreement before us today exceeds that savings target by achieving total savings of $600 million, or $200 million more than the resolution target. I would note that the net savings will be about $400 million because the conferees accepted one-half of the State fiscal relief proposal for public assistance in the Senate bill. The cost of this provision is $187 million in budget authority and outlays.

Although I would have preferred that the conferees defer consideration of this fiscal relief proposal until the Congress considers welfare reform legislation, this appears to be a reasonable compromise. On the other hand, the Senate intends to add the other half of this fiscal relief proposal to the public assistance amendments (H.R. 7200) which the House approved earlier this year. I would warn my colleagues that we included in the second budget resolution the cost of the House-passed bill. While the delay in enactment will change the cost estimate on this bill, inclusion of the remaining fiscal relief funds could cause the cost of the public assistance amendments to exceed the resolution estimates unless savings are found elsewhere.

Over the next 5 years this conference agreement will have a significant impact on the economy. The total increase in revenue will be $52.1 billion. Outlays for social security will decline by a total of $6.5 billion. If tax reductions are not provided elsewhere, these social security tax increases could retard the economic recovery. The administration is cognizant of the potential fiscal drag from this legislation and I expect it to propose appropriate tax reductions next year and in subsequent years.

I urge support for this conference agreement.

Mr. MAZZOLI. Mr. Speaker, I rise in support of the conference report accompanying H.R. 9346, the Social Security Financing Amendments of 1977—though, I must admit, not without some misgiving.

The financial health of the social security system is of vital importance to millions of our Nation's retirees, for whom their social security check is the major source of income.

The need to overhaul and strengthen the social security system's financial structure must be met. It can no longer be delayed. So for these reasons, I support the conference report—albeit reluctantly.

I say reluctantly because I would have preferred to reform the system without relying so heavily on sharp increases in the most regressive of all taxes—the payroll tax.

For example, one sensible alternative would have been to allow the use of General Treasury revenues to shore up the social security trust fund. General revenues derive mostly from the income tax which is progressive and, therefore, is a more equitable means of raising funds.

A second alternative would be to bring Federal, State, and local government employees under social security. Such an effort was made when H.R. 9346 was before the House. It failed because a majority of the House felt this expansion must be preceded by a careful study of all facets of the question. Such a study is mandated by this measure we are voting on today.

Another alternative would have been to transfer certain health and maintenance programs from social security to other agencies of Government.

Mr. Speaker, I support the conference report. The need to insure the system's solvency for the next decade is desperate. Congress must take expeditious action.

President Carter, in his 1978 tax reform proposals, must offer a substantial tax cut to offset the tremendous payroll tax burden placed on middle-income Americans by this measure, however. This is essential.

Mr. MIKVA. Mr. Speaker, the two primary goals of government should be to guarantee the security of the Nation and to guarantee the security of those citizens who are unable to satisfy their own needs because they are too young or too old, dependent or disabled.

H.R. 9346 does not do anything to guarantee our national security, but it does a good deal to guarantee our citizens' security. Passage of this bill guarantees that for the next half century, benefits sufficient to maintain a standard of living that is decent will be provided for the 33 million people presently receiving social security, as well as for the 108 million people now contributing to the system.

In this day of million dollar baseball players and billion dollar bombers, it is sometimes difficult to appreciate the scope and importance of social security to the people of this country. Practically every American is either a beneficiary, a contributor building future protection, or is the dependent of a contributor. Today 93 percent of the people 65 and older are eligible for social security benefits. Ninety-five out of 100 young children and their mothers are protected by the life insurance features of social security, called survivors' insurance. And, four out of five people in the age group 21 through 64 have protection under social security against loss of income due to severe disability. For more than half of these people, the social security system is the only protection they have from retirement, death, or disability. And, even those with other plans could not survive on non-social security benefits alone.

Mr. Speaker, I think securing these benefits are important accomplishments. Today's retired people no longer need to worry that we are considering a return to the county poorhouse as the cornerstone of our senior citizen policy. Tomorrow's retired people can be confident that they will receive benefits at age 65 as they were promised, and that their retirement benefits will be commensurate with their earnings. To protect the fiscal integrity of the social security trust funds as well as the benefits of contributors, the House and Senate conferees have resisted many of the additional benefits sought by various interest groups, and pruned down certain benefits in the law which were going to people who had not contributed their fair share—notably through the elimination of coverage for limited partners and the reform of the minimum benefit structure.

But perhaps the greatest accomplishment of H.R. 9346, Mr. Speaker, is that it sets the stage for a thoughtful and thorough review of the basic social security financing system. Without this bill becoming law, the Disability Trust (DI) fund will run out in 12 to 18 months and the Old Age and Survivors Trust (OASI) shortly thereafter. If that occurred, thoughtful analysis would be impossible and panicky, shortsighted decisionmaking would be inevitable.

The taxes contained in H.R. 9346 have focused national attention on the undesirability of continuing to finance the entire social security system through payroll taxes. Payroll taxes are regressive—striking hardest at low and middle income wage earners while those with high salaries or investment earnings pay comparatively little. Moreover, the payroll tax is a tax on labor. At a time of continuing high unemployment, we cannot afford to increase the disincentives to hire new employees.

I feel strongly that the taxes imposed under H.R. 9346 are too high, and that ways of reducing the tax without postponing benefits or undermining the newfound financial soundness of the system must be explored. Early next year I intend to introduce a bill which will meet those objectives. The bill will remove the Health Insurance Trust fund (HI) which was added in the 1960's and the Disability Insurance Trust fund which was added in the 1950's from the system, and restore it to the single purpose retirement and survivor system created in the 1930's. This change will also mean a reduction in the payroll tax of about one-third for both employer and employee.

The purpose of such a bill would not be to abandon HI and DI, however, but to provide that the funds needed to carry on their functions be obtained from general tax revenues. We know that this is a workable financing system because under current law, nearly 40 percent of HI funds are derived from the treasury.

The key elements to a successful social security system are maintaining an adequate level of benefits, and maintaining the acceptance of those currently working who are paying the benefits of those currently retired. H.R. 9346 fulfills the first of those criteria. Unfortunately, acceptance of the taxes needed to insure adequate benefits is dwindling, as the one-time hidden payroll tax emerges as a regressive and antiemployment tax. In the long run, acceptance may be as crucial a factor in the life of the system as actuarial soundness. I urge my colleagues to vote for H.R. 9346 because it finances promised and well-deserved benefits for the next 50 years. But, I look upon our vote today as a prelude to the decisions we must make in the near future to reduce payroll taxes and restore the system's credibility. If we do not meet that challenge, then we run the risk of generational warfare which will ultimately destroy the system.

CALL OF THE HOUSE

Mr. WRIGHT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The call was taken by electronic device, and the following Members failed to respond:

The SPEAKER pro tempore. On this rollcall 317 Members have recorded their presence by electronic device, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

SOCIAL SECURITY AMENDMENTS OF 1977

The SPEAKER pro tempore. The Chair recognizes the gentleman from Oregon (Mr. ULLMAN).

Mr. ULLMAN. Mr. Speaker, to conclude debate, I yield the balance of the time to the distinguished Speaker of the House (Mr. O'NEILL).

Mr. O'NEILL. Mr. Speaker, how did this bill happen to come before the Congress this year? I want the Members to think about that. How did it come up?

I will tell the Members how it came up. It came up because the liberal lobby and those who are supporters of the Reagan group, the Right Wing of America, so mollified and so frightened the aged of America and the senior citizens, that each one of us who went to any meeting where the senior citizens were present were asked: Is the social security system going down the drain? Did they have something to fear? No. We assured them that they had nothing to fear. We said, "No, this Congress, the Congress of the United States, would never let the social security system go down the drain." Why, we would go into the general fund before we would ever allow that to happen.

I think we are the only Nation in the world that does not dip into the general fund. But, interestingly, the votes are not here for that purpose.

Mr. Speaker, I want to talk to the Democratic Members of this House; 1935 was the year that social security came into existence. Do the Members know what the vote was that day? There was a vote to recommit. And the vote was 97 Republicans voted to recommit, 1 voted for the legislation. And the interesting fact about it is that the philosophy has not changed on the Republican side since 1935.

What did the social security bill do at that particular time? There used to be in America what was called the poorfarm, the poorhouse, the almshouse; and those who had no insurance, no protection, went to the almshouse, to the poorhouse, to be fed and to be harbored. And when one walked by and he looked, he said to himself, "What a disgust to America that we have homes for the poor, the aged, those who have made America great. And what do we do? We put them in a poorhouse."

But we have changed. We came up with a philosophy which changed that. We came up with the philosophy of the Social Security Act.

Mr. Speaker, there are those who have gotten up and who have talked and who have said that the bill is repressive, there is too much tax.

There are those over here who are saying it is regressive, not enough tax, we are not taxing the right people.

Mr. Speaker, the philosophy of the Democratic party has always been to help the needy, to help the downtrodden.

Sure, I have had Members come up to me and say, concerning the social security bill, "Why, I could go to an insurance company and get a policy that would be so much more equitable, and when I reach the age of 65 I can receive so much more money than through social security." That is true. All of us, with our salary, could do that. But what about the unfortunate who cannot go out and get insurance? Who rely on social security as their sole source of retirement income? These people are the object of this legislation. They are the beneficiaries of social security.

I have heard all types of figures thrown around here today. But under the new law, if you earn $10,000 a year, 10 years from now, in 1987, you pay $59.58 more than you do under the present bill.

If you earn $20,000 a year in 1987, you pay $119 more a year in tax than you do under the present bill; if you earn $30,000 a year, you pay $178 more a year than you do now.

On the subject of this tax, let me remind the Members that there are 33 million people on social security—1 out of every 7.

We are leaving here. We are leaving here within a matter of minutes, and there are those of us who are going to go home and visit our clubs and attend Christmas parties; we are apt to have some fellow who makes $50,000 a year come up to us and say, "Thanks. You made my Christmas happy because I didn't get an added tax."

But there will be those of us who may happen to talk to a senior citizen. He or she is going to come up to you and say, "What about my social security? Is is going down the drain?"

If you voted against this, you are going to say, "Well, we are going to do something about this along the line." But what a miserable Christmas that senior citizen is going to have.

I say to the Members on the Democratic side of the aisle that if I have ever seen an issue that is a Democratic issue, it is this issue. This reverts right back to that day in 1935 when the party on the other side of the aisle voted against this issue by a vote of 97 to 1. The leopard does not change its spots.

Mr. Speaker, I ask for a aye vote for the conference report.

The SPEAKER pro tempore. Without objection, the previous question is ordered on the conference report.

The was no objection.

The SPEAKER pro tempore. The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. CONABLE. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 189, nays 163, answered "present" 1, not voting 81, as follows:

The Clerk announced the following pairs:

On this vote:

Mr. Hightower for, with Mr. Runnels against.

Mr. Le Fante for, with Mr. Pursell against.

Mr. Carney for, with Mr. Pike against.

Mr. Wolff for, with Mr. Cavanaugh against.

Mr. Metcalfe for, with Mr. Lundine against.

Mr. Neal for, with Mr. Santini against.

Mrs. Burke of California for, with Mr. Chappell against.

Mr. Baucus for, with Mr. Panetta against.

Mr. Traxler for, with Mr. Ginn against.

Mr. Risenhoover for, with Mr. Fuqua against.

Mr. Ford of Tennessee for, with Mr. Andrews of North Dakota against.

Mr. Conyers for, with Mr. Cederberg against.

Mr. Nix for, with Mr. Dickinson against.

Mr. Koch for, with Mr. Lent against.

Mr. Badillo for, with Mr. Marlenee against.

Mr. Meeds for, with Mr. McCloskey against.

Mr. Shipley for, with Mr. McEwen against.

Mr. Burleson of Texas for, with Mr. Ryan against.

Mr. Beilenson for, with Mr. Mollohan against.

Mr. Breaux for, with Mr. Symms against.

Mr. Moss for, with Mr. Wiggins against.

Mr. Fary for, with Mr. Winn against.

Until further notice:

Mr. Aspin with Mr. Gammage.

Mr. Bedell with Mr. Bob Wilson.

Mr. Bonker with Mr. Udall.

Mr. Burlison of Missouri with Mr. Rinaldo.

Mr. Fithian with Mr. Whalen.

Mr. Harkin with Mr. Dent.

Mr. Hefner with Mr. Harsha.

Mr. Krebs with Mr. Ichord.

Mr. Maguire with Mr. Long of Maryland.

Mr. Long of Louisiana with Mr. Lujan.

Mr. Smith of Iowa with Mr. Mathis.

Mr. Tsongas with Mr. Michael O. Myers.

Mr. Gaydos with Mr. Hall.

Mr. Sisk with Mr. Van Deerlin.

Mr. Yates with Mr. Armstrong.

Mr. Burke of Florida with Mr. Ruppe.

Mr. HIGHTOWER. Mr. Speaker, I have a live pair with the gentleman from New Mexico (Mr. RUNNELS). Had he been here, he would have voted "nay." I voted "yea." Therefore, I withdraw my "yea" and vote "present."

Mr. HIGHTOWER changed his vote from "yea" to "present."

So the conference report was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. ULLMAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks and include extraneous material on the conference report just agreed to.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed without amendment a bill and concurrent resolutions of the House of the following titles:

H.R. 8212. An act for the relief of Charles P. Bailey;

H. Con. Res. 443. Concurrent resolution requesting the President to return the enrolled bill (H.R. 7738) with respect to the powers of the President in time of war or national emergency, and providing for its reenrollment with technical corrections; and

H. Con. Res. 444. Concurrent resolution directing the Clerk to correct the enrollment of H.R. 3199.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 6666) entitled "An act to amend the Legal Services Corporation Act to provide authorization of appropriations for additional fiscal years, and for other purposes."

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 3199) entitled "An act to amend the Federal Water Pollution Control Act to provide for additional authorizations, and for other purposes."

The message also announced that the Senate agrees to the amendment of the House to a bill of the Senate of the following title:

S. 904. An act to provide for the efficient and regular distribution of current information on Federal domestic assistance programs.

The message also announced that the Senate agrees to the amendments of the House to a bill of the Senate of the following title:

S. 1063. An act to amend the District of Columbia Self-Government and Governmental Reorganization Act.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 2351. An act to name the new Veterans' Administration Hospital in Little Rock, Ark., the John L. McClellan Hospital; and

S. 2355. An act to extend the Emergency Natural Gas Act of 1977.

The message also announced that the Vice President, pursuant to Public Law 86-42, appointed Mr. HATHAWAY as chairman to the Canada-United States Interparliamentary Conference, to be held in New Orleans, La., February 9 to 13, 1978.

REQUEST FOR IMMEDIATE CONSIDERATION OF S. 2355 TO EXTEND THE EMERGENCY NATURAL GAS ACT OF 1977

Mr. BROWN of Ohio. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Senate bill (S. 2355) to extend the Emergency Natural Gas Act of 1977 until February 15, 1978.

The Clerk read the title of the Senate bill.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

Mr. DINGELL. Mr. Speaker, reserving the right to object, with the greatest affection and respect for my good friend, the gentlmean from Ohio, a most valuable and useful Member of this House and for whom I have the highest personal regard, I would like to ask him a couple of questions if I could. Is a copy of the bill over here at this time?

Mr. BROWN of Ohio. If the gentleman from Michigan will yield, the bill is here from the Senate. It passed the Senate this afternoon by unanimous consent.

The purpose of the bill is to cover the period between now and the date the Congress comes back on the 19th of January and up until the 15th of February, as we had last year. It would give the President of the United States the authority to allocate natural gas from gas-rich areas to gas-short areas should there be an emergency. It would also give companies the right to purchase natural gas from above the price ceiling in an emergency and also the right to shift gas supplies around to meet emergency needs.

The reason for the request for unanimous consent is that we cannot bring it through the Rules Committee. We do not have time. If we have unanimous consent, we could have an hour of debate on the bill. There seems to be no purpose for that, but the unanimous consent would put this in place and give the President the same right he had last year, shortly after he took office, to protect the country from the possibilities of gas shortages arising from our present gas-pricing policies.

Mr. DINGELL. Mr. Speaker, continuing to reserve the right to object, I did not receive a communication from the administration on this particular proposal.

I would observe further that we have been inquiring with some concern into the status of supplies of natural gas available to pipelines and the need for emergency legislation at this time. In this particular matter the natural gas supplies appear to be in pretty good shape.

Mr. BROWN of Ohio. Mr. Speaker, will the gentleman yield?

Mr. DINGELL. Mr. Speaker, continuing to reserve the right to object, yes, I yield to my good friend, the gentleman from Ohio.

Mr. BROWN of Ohio. Mr. Speaker, I can advise the gentleman that Senator GLENN received the support of the administration in the enactment of this legislation by the Senate.

As I am sure the gentleman knows, because the minority is aware of it, the Department of Energy has submitted a report of those pipelines which are better off than they were at this time last year and those that are worse off, and there are several that are worse off. Fortunately those in Ohio are somewhat better off. We have had a milder winter and the supplies are stronger and they have more storage in my particular State. But in some other parts of the country the pipelines that transmit natural gas from the South, from the producing States into the consuming States, do not have as much supply. They maybe are not quite as well off because of the weather circumstances. If we have bad weather under a normal winter they are not expected to curtail as much as last winter. If this winter is as severe as last winter, they would have to curtail further.

Mr. DINGELL. I thank the gentleman.

In the conference with respect to energy there is the question with reference to natural gas as between interstate and intrastate markets, and the question of extension of emergency sales authorities and so forth.

I also would observe that quite frankly the subcommittee which I have the honor to chair, to which this proposal would have been referred through the full Committee on Interstate and Foreign Commerce, has had no chance to make the necessary inquiries or to look into the considerations or inquire into the defects which might exist in the bill. And after this, given the fact that this administration has not communicated with me, and given regrettably the further circumstances that the administration is in favor of this proposal, I will be glad to yield further to the gentleman briefly.

Mr. BROWN of Ohio. Mr. Speaker, if the gentleman will yield further, let me say to the gentleman that this is the same bill that the gentleman and I combined to pass last year. As the gentleman so well knows, the language of the House version and the Senate version of the House-Senate conference is practically the same except for one small matter, and that is the House version under the emergency proposals invades the intrastate market, which this does not, but I understand in our negotiations in conference the other day the gentleman was willing to give up that point.

I also know the gentleman has been in negotiation all day with a group, which unfortunately does not include anybody from my side of the aisle and I hope that they will come up with an agreement we can support, so we can support the bill.

I read in the Post this morning about the problems of communicating with the administration. I sympathize with the gentleman. He will have to try to solve that. I just want to solve any shortage that might develop between now and the first of January.

Mr. DINGELL. Mr. Speaker, with the utmost esteem for my good friend from Ohio and with the deepest regret and with the understanding that the staff of the subcommittee will be watching this matter with great care and that this is now one of the matters that is in consideration in the conference between the House and the Senate on which negotiations are going forward in the further hope that we can satisfy my good friend from Ohio in getting a bill in which the gentleman will concur, I object.

The SPEAKER. Objection is heard.

Mr. BROWN of Ohio. Mr. Speaker, may I say to the gentleman from Michigan, have a white Christmas.

LEGISLATIVE PROGRAM

(Mr. WRIGHT asked and was given permission to address the House for 1 minute.)

Mr. WRIGHT. Mr. Speaker, I do this for the purpose of announcing the program for the week on our return. It is planned that we will return on Thursday, January 19. The House would convene at noon that day. We will have two bills, H.R. 2329, Fish and Wildlife Improvement Act of 1977, with an open rule and 1 hour of debate; and H.R. 7691, the Federal Grant and Cooperative Agreement Act, agreeing to Senate amendments.

It is anticipated that the President's state of the Union message would be delivered on that evening, the evening of Thursday, January 19.

Mr. Speaker, for the edification of the Members and their assistance in advanced planning, I ask unanimous consent to insert in the Record at this point a schedule of House activities for the ensuing year.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

House Schedule for 1978

Thursday, January 19. Congress convenes—State of the Union Address.

Monday, January 23. Receive President's Budget and Economic Report.

Friday, February 10 through Monday, February 13. Lincoln's Birthday District Work Period.

Monday, February 20. Washington's Birthday—Reading of Farewell Address only.

Wednesday, March 15. Committees submit reports to Budget Committee.

Thursday, March 23 through Sunday, April 2. Eastern District Work Period.

Saturday, April 15. Budget Committee reports First Budget Resolution.

Monday, May 15. First budget resolution to be completed and fiscal year 1979 authorization bills to be reported.

Saturday, May 27 through Tuesday, May 30. Memorial Day District Work Period.

Saturday, July 1 through Sunday, July 9. Independence Day District Work Period.

Friday, August 18 through Tuesday, September 5. August Recess District Work Period.

Monday, September 11. All spending measures completed.

Friday, September 15. Second Budget Resolution to be completed.

Monday, September 25. Reconciliation process to be completed.

Friday, September 29. Adjournment target.

Sunday, October 1. Fiscal Year 1979 begins.

RESPONSE TO ALLEGATIONS OF HON. JAMES COLLINS

(Mr. MOSS asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. MOSS. Mr. Speaker, I take this occasion in order to correct a record which has become clouded as the result of certain allegations by my good friend, the distinguished Member from the State of Texas, the Honorable James Collins. The gentleman from Texas serves as the ranking Republican on the Oversight and Investigations Subcommittee of the House Interstate and Foreign Commerce Committee which I have the privilege to chair.

The distinguished gentleman had a field day a week ago trying desperately to leave the impression that I am sitting on a report which if released would prove that his case on natural gas was supported. The gentleman has rarely been in grosser error. I might add that not only has the gentleman been in error but he succeeded in making a couple of rather anxious newspapers who should have known better to take up his cause editorially. I refer to the Wall Street Journal which probably did not know what the facts were and the Washington Star which most certainly should have known what the facts were.

The Washington Star quoted the gentleman from Texas as stating that the alleged subcommittee staff study would "greatly remove the cloud" over industry's natural gas reserve estimates.

Nothing, not a single staff study, or a compendium of studies, could dispel the cloud that has enveloped the industry's natural gas reserve estimates as demonstrated numerous times in studies and congressional hearings.[1] Indeed, the evidence on this point is so persuasive that the Members of this body, with but few exceptions, are agreed as to the need to terminate the oil and gas industry's near monopoly over reserve and other key energy data.

The item referred to by Mr. Collins is not a subcommittee staff study, nor is it even a memorandum from the staff to the chairman or to a member. Rather, it is a memorandum from one staff member to another, reviewing the status of a part of a larger investigation which is still underway, and which I might add, is awaiting a reply from the American Gas Association concerning its large downward revision of previous natural gas reserve estimates.

Notwithstanding, the May 1976 intrastaff memorandum which the Member from Texas wishes me to release provides cold comfort to those who would have us supinely accept industry reserve data as a basis for formulating energy policy.

The memorandum in question concludes and, I quote:

> AGA reserve estimates can only be properly compared with U.S. Geological Survey reserve estimates which constitute the only non-biased, non-industry reserve data available for comparison with AGA data.

The results of this comparison were presented by the staff of the subcommittee nearly 2 years ago in open session. Rather than supporting AGA reserve estimates, the comparison revealed AGA reserve estimates for 153 fields in the Gulf of Mexico to be 3.8 trillion cubic feet or 37.4 percent less than those determined by the USGS.

That being the case I am baffled by the gentleman's insistence that the staff memorandum in question be released, arguing as it does against the integrity of the AGA reserve reporting system which he has repeatedly endorsed.

One wonders why anyone would argue so vociferously for the release of a document that undermines his basic position. There is one possibility. This may be an attempt on the part of my colleague to establish a precedent for the premature release of staff memoranda and other investigatory materials in an effort to destroy the effectiveness of the subcommittee and to render it unable to discharge the responsibilities assigned to it by the House. I should note that the Member from Texas is not seeking access to subcommittee files, a right provided for under House Rules. Rather he asks—and I quote—that information in subcommittee files "be made public if a Member of Congress so requests." I know of nothing more likely to vitiate congressional oversight and investigations than for Members to be permitted to indiscriminately release committee and subcommittee investigatory materials.

But more likely, my colleague from Texas never dreamed that the memorandum would actually be released. That way, the gentleman could have his red herring and eat it too.

I was concerned enough about the House Rules to have recently asked the subcommittee staff to review the memorandum and the precedents of this House, with an eye to the narrow question of public disclosure of this particular memorandum. The staff advises me that the memorandum may be disclosed under our rules chiefly because it does not itself contain proprietary information received in executive session which identifies any one energy company.

Consequently, I am today releasing the memorandum whose disclosure is so eagerly sought by Mr. Collins. The release of this memorandum should in no way be interpreted as meaning that the subcommittee is prepared to accord Mr. Collins the right to unilaterally release subcommittee file material. The release of this document is being undertaken pursuant to established House procedures, to call my colleague's bluff and to dispel any notion that the subcommittee or myself is withholding information of relevance to the House in considering energy legislation.

I am also releasing today two subcommittee staff memoranda relating to this issue. The first reviews the House Rules and precedents applicable to the release of the memorandum sought by the gentleman from Texas. The second reviews the subcommittee's investigations of natural gas reserves, an investigation which to date has culminated in the subcommittee's disclosure of a major discrepancy between industry and previously unexamined geological survey reserve data. Upon obtaining and reviewing the data currently being sought from the American Gas Association you can be assured that we will release this information in an orderly, expeditious fashion.

---

[1] The Federal Power Commission, for example, on June 21, 1976, reported that of 29 fields discovered in 1971 and 1972, 5 had not been reported by the AGA at the end of 1974 and 4 fields reported by AGA as 1971–72 discoveries had actually been discovered in previous years, 1 as far back as 1965.

In January 1976 an AGA official in testimony before the Oversight and Investigations Subcommittee admitted not having reported a major new field discovery at the behest of Mobil Oil Corp. The failure to report this one discovery reduced AGA 1974 nonassociated new gas additions by 5.6 percent.

Memorandum

Subcommittee on Oversight and
Investigations of the Committee on Interstate and Foreign
Commerce,
Washington, D.C.

Date: December 12, 1977.

To: Chairman John E. Moss.

From: Tom Greene, Counsel to the Chairman, John Atkisson, Counsel to the Subcommittee Jim Nelligan, Operations Director, John Galloway, Energy Task Force Director.

Subject: Recommendation of the staff with respect to the release of a memorandum dated May 4, 1976 from John Galloway, Special Assistant, to Michael R. Lemov, Chief Counsel.

I. INTRODUCTION

This responds to your request for a review of the legality of releasing to the public a memorandum dated May 4, 1976 from John Galloway, the Special Assistant to Michael R. Lemov, then Chief Counsel, concerning the Subcommittee's natural gas reserve study. As you may be aware, the staff has been troubled by the characterization of this document as one that vindicates the oil and gas industry with respect to charges of reserves underreporting (Washington Star, December 6, 1977; Washington Post, December 7, 1977, p. A–7). In fact, the principal conclusion of this interim staff analysis was that the comparison of American Gas Association reserve estimates with those of company proved reserve ledgers is a "mostly pointless exercise." This conclusion was based upon definitional and other problems which militated against an accurate comparison of the two data series.

The staff understands your request for a review of the legality of releasing Subcommittee records to extend only to the Galloway memorandum. In the recent past, the requests of Mr. Collins have been substantially broader and would certainly involve the release of executive session materials. Additionally, the change in the House rules proposed by Mr. Collins on December 6, 1977 (Congressional Record, H 12727) addressed all non-classified materials within the custody of every committee and subcommittee of the House. While the press has characterized the recent controversy as relating solely to the Galloway memorandum, it was only in his Congressional Record statement of December 6, 1977 (H 12729) that Mr. Collins clearly confined his request to the May 4, 1976 memorandum.

Here we review the legal standard which is applicable to the release of documents such as the Galloway memorandum. It then turns to an application of this standard to the Galloway document. Our analysis concludes that you may employ the authorities delegated to you by the Subcommittee to release this document to the public.

II. THE STANDARD

The Rules of the House provide two principal limitations on the release of committee or subcommittee documents to the public. The first of these is contained in clause 2(e) (2) of Rule XI. This rule provides that committee records shall be "the property of the House and all Members of the House shall have access thereto". The precedents are clear that while a Member may have access to committee files, he may not make copies of such files (Speaker Rayburn, August 14, 1957, pp. 14737–39). Neither may a Member release such records to the public absent authorization by the affected committee or subcommittee (Speaker Rayburn, June 3, 1960, p. 11820). These limitations apply to all committee or subcommittee documents and records.

The second limitation on public release of committee or subcommittee documents applies only to a special category of documents or records, those received in executive session or as if in executive session. Clause (2) (k) (7) of Rule XI provides that "No evidence or testimony taken in executive session may be released or used in public session without the consent of the committee." Traditionally, the consent of the committee or subcommittee for the release of executive session materials is obtained through the vote of the affected committee or subcommittee.

In summary you may release the Galloway memorandum without a vote of the Subcommittee if it is determined that (i) the document does not contain material taken in executive session or as if in executive session and (ii) you have been authorized, as Chairman of the Subcommittee on Oversight and Investigations, to regulate on behalf of the Subcommittee the release of subcommittee records, other than executive session records.

III. APPLICATION OF THE STANDARD

A. Does the Galloway memorandum contain evidence or testimony taken in executive session?

After a careful review of the materials obtained by the Subcommittee pursuant to subpoenas voted in executive session on June 16, 1975, we conclude that the Galloway memorandum of May 4, 1976 does not contain information covered by clause 2.(k) (7) of Rule XI. The staff gave particular attention in its review of the Galloway memorandum to (i) the table which appears at page 1, and (ii) quotes from internal industry documents stating the benefits of reserve manipulation. With respect to the numbers which appear at page 1, the staff concluded that while based upon information obtained by subpoenas issued in executive session, specific information about particular energy companies is not newly presented. Use of aggregate figures assures that the House policies which animate the protection of executive session materials are not violated. Release of aggregate data would not "endanger the national security," Rule XI 2.(g) (2). Neither would release of aggregate numbers "tend to defame, degrade, or incriminate any person," Rule XI 2.(k) (5). It would not even offend the sensitivities of the oil companies involved, since no interested party can be identified within the four corners of the memorandum.

The staff was particularly concerned about quotes from two Union Oil Company memoranda which reflect the rationale and reality of industry manipulation of reserve figures. It has been determined that both of these memoranda were incorporated by the Subcommittee into the public record on June 9, 1975 during the Subcommittee's hearing on natural gas supply in the United States. Since these materials are already public, rerelease of them in the Galloway memorandum does not trigger the executive session rule.

B. If it is determined that the Galloway memorandum does not contain executive session information, are you as Chairman authorized by the Subcommittee to release ordinary Subcommittee records to the public?

Clause 2(e) (2) of Rule XI limits public release of subcommittee records absent the authorization of the subcommittee (Speaker Rayburn, June 3, 1960, p. 11820). The rule is silent as to a specific authorization procedure, or even how authorization is defined.

The consistent rule in this Subcommittee has been that you have the authority to release-ordinary subcommittee records. This is essential to the orderly management of the Subcommittee on a day-to-day basis.

This issue was considered under similar circumstances on September 29, 1975. On that occasion, Mr. Collins of Texas objected that you had released to the public a Getty Oil Company document which was a committee record but not one subject to the executive session rule. With a quorum present, the release by you of a document, not received in executive session or as if in executive session, was fully debated and not disapproved.

Based upon these authorities and precedents, the staff concludes that you have the authority to release a commitee record not covered by the executive session rule.

IV. CONCLUSION

Because (i) you have the authority to release the Galloway memorandum and (ii) it in no way prejudices the competitive position of the oil companies involved, we recommend release to the public.

Memorandum

Subcommittee on Oversight and
Investigations of the Committee on Interstate and Foreign
Commerce,
Washington, D.C.

Date December 12, 1977.

To Honorable John E. Moss, Chairman.

From John Atkisson, Counsel to the Subcommittee, J. Thomas Greene, Counsel to the Chairman, John R. Galloway, Energy Task Force Director, James L. Nelligan, Operations Director.

Subject March 4, 1976, Memorandum from Subcommittee, Special Assistant John Galloway to Subcommittee Chief Counsel Michael R. Lemov.

BACKGROUND

The Subcommittee on June 9, 1975, received testimony from Kenneth C. Anderson, Assistant Director, Bureau of Competition, Federal Trade Commission and Theodore Lytle, Jr., an attorney with the FTC's Bureau of Competition relative to the Bureau of Competition's three-year investigation of the American Gas Association's published reserve estimates.

The testimony of Messrs. Anderson and Lytle focused on a March 25, 1975, memorandum from five attorneys in the Bureau of Competition to the Commission recommending that a complaint be issued against the AGA and eleven oil companies for "concertedly maintaining a deficient natural gas reserve reporting program which influences the price at which producers sell natural gas to intersate pipeline companies."

The complaint recommended by the Bureau of Competition was based in large measure on a comparison of AGA reserve estimates for 20 natural gas fields in the Gulf of Mexico with reserve estimates included in the internal proved reserve ledgers of four companies—Gulf, Union, Continental and Pennzoil for the period 1966–1970.

From 1967 on the Bureau of Competition comparison showed AGA published reserve estimates to be less that those carried in the company books. For 1970 the comparison, for example, showed these AGA estimates to be 24 percent less than those included in the proved reserve estimates of the four companies involved.

On June 26, 1975, the Subcommittee heard testimony from Joseph Mulholland and Joanne Salop, economists with the FTC's Bureau of Economics. Mulholland and Salop took strong exception to the views previously expressed by the Bureau of Competition in faulting the Bureau of Competition's methodology and limited sample size.

In an effort to resolve the issue the Subcommittee subpoenaed certain AGA reserve records and the internal proved reserve estimates of seven natural gas producers who had previously failed to furnish this information to the FTC.

The material obtained by the Subcommittee pursuant to these subpoenas did not resolve the issue because of myriad technical difficulties involved in comparing AGA reserve records with internal company reserve estimates. Those difficulties involved primarily the various definitions employed by the individual companies and the AGA and the fact that whereas AGA estimates were computed on a field-by-field basis the companies computed their reserve estimates on a lease-by-lease basis.

During the process of reviewing the subpoenæd AGA and industry reserve estimates the Subcommittee obtained the previously unreleased U.S. Geological Survey reserve estimates for the entire Federal Gulf of Mexico which it compared with the AGA's estimates for this offshore area. Since both the AGA and the USGS has computed their reserve estimates on a field-by-field basis and since both estimates were relying on essentially the same definition this comparison involved none of the technical obstacles involved in the previously attempted AGA-company comparison.

The results of the staff's AGA-USGS comparison were presented to the Subcommittee in open session on January 21, 1976, by Subcommittee staff member Dr. John Galloway. His comparison disclosed the AGA's year-end 1973 proved reserve estimates for 153 fields in the Gulf of Mexico to be 8.8 trillion cubic feet, 37.4 less than those determined by the USGS.

On May 4, 1976, Dr. Galloway in a memorandum to Michael R. Lemov, Subcommittee Chief Counsel, summarized the results to date of the staff's attempted comparison of the company-AGA reserve estimates for some 39 fields. The memo set forth in considerable detail the difficulties involved in rendering an opinion as to the reliability of AGA reserve estimates based on a comparison with internal company reserve estimates.

The memo, contrary to recent assertions, did not "greatly remove the cloud" over the question of whether natural gas producers are deliberately under-reporting natural gas reserves. The memo rather described the attempted AGA-company reserve comparison as a "mostly pointless exercise", noting that "AGA reserve estimates can only be properly compared with USGS reserve estimates which constitute the only non-biased, non-industry reserve data available for comparison with AGA data."

In recommending against preparation of a report based on a limited comparison of AGA-company reserve data, the Galloway memorandum quoted various authorities on the methodological difficulties involved in making such a comparison. The Galloway memorandum also noted a series of Union Oil Company memoranda that explained how an oil company's tax liability could be reduced by underestimating reserves and noting how Union's tax liability had been reduced as a consequence of its having reduced various reserve estimates.

The Union Oil Company memoranda were a further factor therefore in persuading the staff to employ the USGS reserve estimates for 153 fields as a benchmark in measuring the reliability of AGA reserve estimates as opposed to the 39 field AGA-company comparison.

CONCLUSION

Contrary to the implication of recent allegations the Subcommittee staff did not surpress data that would tend to confirm the validity of AGA reserve estimates. The Subcommittee staff when confronted with its inability to use subpoenæd company reserve estimates as a basis for reviewing AGA reserve estimates completed its investigation on the basis of a comparison of AGA and USGS reserve estimates and reported those findings to the Members in open session nearly two years ago.

Put another way, the multi-use oil company reserve ledgers, dropped out of the equation as a meaningful component of the staff's analysis. We had found another and better way to approach the problem on the basis of the USGS reserve estimates.

MEMORANDUM

SUBCOMMITTEE ON OVERSIGHT AND INVESTIGATIONS OF THE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

Washington, D.C.

Date: May 4, 1976.

To: Michael R. Lemov, Chief Counsel, cc: Jim Nelligan, Operations Director.

From: John Galloway, Special Assistant.

Subject: Subcommittee Reserve Study.

The Subcommittee staff with the assistance of GAO personnel has completed two separate and distinct comparisons of natural gas reserve estimates. The first involved a comparison of American Gas Association (AGA) reserve estimates with reserve estimates included in the proved reserve ledgers (PRLs) of seven natural gas producers. This comparison shows the following:

	[Number of fields compared]
1967 Company estimates 34.8 percent higher than AGA	23
1968 Company estimates 17.9 percent higher than AGA	27
1969 Company estimates 5.2 percent higher than AGA	36
1970 Company estimates 1.9 percent higher than AGA	40
1971 Company estimates 0.01 percent lower than AGA	44
1972 Company estimates 3.6 percent lower than AGA	51
1973 Company estimates 0.3 percent higher than AGA	56
1974 Company estimates 0.6 percent higher than AGA	62

The second Subcommittee study compared USGS reserve estimates for 153 fields with AGA reserve estimates for the same 153 fields. Here the USGS estimates were found to be 37.5 percent higher than the AGA's.

At first glance there appears to be a conflict between the two studies. The PRL/AGA comparison appears to support the AGA except for the years 1967 and 1968. Neither the 1967 (34.8 percent) nor the 1968 (17.9 percent) difference is particularly significant, however. A 17.9 percent difference in two sets of reserve estimates is not to be unexpected, given the imprecise nature of petroleum reserve estimating techniques. Two series of reserve estimates can easily vary by plus or minus 10 percent. A 20 percent difference between two sets of estimates can result from one set of estimates being 10 percent too high and from the other being 10 percent too low.

The 1967 34.8 percent difference is similarly unspectacular for the following reasons:

(1) By all accounts reserve estimates for a single field (as opposed to a series of fields) prepared by equally competent persons, can vary by as much as 25 percent. Thus, it is necessary to compare a relatively large number of AGA field estimates in order to render a judgment as to the adequacy of the AGA estimates. A 23-field sample is probably not of sufficient size for purposes of rendering such a judgment.

(2) Prior to 1970, the AGA workpapers do not list all of the blocks in each field. Thus, the staff cannot be absolutely certain of the dimensions of the individual fields that were compared in 1967.

(3) One field accounts for over 50 percent of the difference between the AGA/PRL estimates for 1967.

On first glance, the AGA/PRL comparison suggests that AGA reserve estimates are amazingly accurate for the period 1969 to 1974 and only possibly inaccurate for 1967 and 1968.

PRL/AGA COMPARISON VERSUS USGS/AGA COMPARISON

The closeness of the company proved reserve ledger estimates and the AGA estimates as noted above does not undermine the credibility of the more liberal USGS reserve estimates, nor does it shed any light on the reasonableness of AGA reserve estimates. A comparison of company proved reserve ledger estimates with AGA reserve estimates is a mostly pointless exercise. A comparison of AGA reserve estimates with company proved reserve estimates takes for granted the accuracy of the company PRLs.[1]

The FTC's Bureau of Economics was correct in noting that, "In general, the company figures appear to be influenced by many non-geological factors such as tax laws, stock holder relations and executive egos" and that "it is invalid to utilize PRL estimates as a standard of accuracy with which to judge AGA figures." The Bureau of Economics went on to note that company proved reserve ledger estimates "can be expected to vary according to the importance of these non-geological influences both between companies and between years." One of the most significant places of evidence along these lines is included in a 1962 Union Oil Company memorandum that explains how proved reserve ledger estimates can influence company profitability. According to the memorandum:

> The magnitude of the reserve estimates determines the depreciation and depletion rates and thus directly affects profits, taxes, and cash flow.
>
> In any reserve estimate there is a range of values which is reasonable and either the maximum or the minimum can be supported. For the past several years there have been reasons to believe that some of the company reserves are near the maximum values.

The following tabulation shows a comparison of the different estimates and resulting depreciation and depletion rates, income tax liability and cash flow that could have been realized for the year 1960 if the reserves had been reduced to the lowest supportable number in the Coast Division.

The memorandum then gave an example of the savings that would have accrued to Union had a lower reserve figure been used. The memorandum did not recommend that a dual set of reserve estimates be established but it did urge that tax considerations be kept in mind in setting proved reserve ledger estimates. Significantly, a later Union Oil memorandum notes that "the 1962 memorandum [noted above] went into considerable detail of the tax consequences of the reserve estimate and that reserves in Guadeloupe were revised as a result of that analysis."

That is not to suggest, however, that company proved reserve ledger estimates are necessarily conservative. The point rather is that petroleum companies have ample incentive and opportunity to adjust their proved reserve ledger estimates to suit a variety of corporate purposes. As noted by the FTC's Bureau of Economics, "The multitude of uses to which the PRLs are used in calculating reserve totals suggests a variety of possible biases for this data series. While tax considerations suggest a conservative tilt, the use of PLRs for loans and stockholder reports indicates possible pressures for liberalizing the reserves."

---

[1] As Jim Nelligan pointed out early on in the study, such a comparison "puts us in the producer's ballpark. We've got to get out of there." Someone, not on the Subcommittee's staff and only slightly more cynical than Jim, told me that AGA and company ledger estimates are probably pretty close because the producers "are smart enough to tell the same lie to both the IRS and the AGA." Possibly that is what a Continental Oil Company attorney had in mind when he told an FTC staff member, according to the latter's sworn testimony, that although there might be evidence of underreporting that the FTC would not be able to prove it. That, of course, was before the Subcommittee staff learned of and obtained a copy of the USGS reserve study.

To summarize, one cannot judge the accuracy of AGA reserve estimates by reference to company proved reserve ledger estimates without tacitly accepting the validity of the company estimates. Professor Paul Root, a leading reserve authority, has criticized the FTC's Bureau of Competition Study for this very reason. According to Professor Root:

"If acceptance of reserve estimates without review of the underlying data is considered to be a questionable step in the AGA reporting procedures, it must be considered to be an equally questionable step in the FTC investigation . . . [A] critical infirmity in the FTC investigation is that the judgmental decisions made by industry personnel who prepared the reserve estimates have been untested or unchallenged. The FTC investigation might be characterized as involving the processing of 'paper reserves'."

Assuming arguendo that company reserve ledger estimates can be used to judge AGA reserve estimates, there are a number of technical problems that weigh against making an accurate comparison. Some of these technical problems included the following: [2]

(1) Form of estimates—AGA estimates were by field. Company estimates were either by lease or reservoir.

(2) Field definition—Staff had to rely on AGA field listings to determine which blocks and leases were in each field.

(3) Definitions of reserves—Reserve definitions vary among companies and between the companies and the AGA.

(4) Lack of data—The great majority of AGA Gulf of Mexico field estimates could not be compared with company reserve estimates since the staff had access to the reserve estimates of only seven companies.

(5) Conversions—The seven companies reported gas reserves at various pressure bases and on wet or dry basis which differs from the AGA.

(6) Field composition—Prior to 1970, the AGA did not list all the blocks in each field; therefore, if during these years a block were dropped or added to a field, we would not be able to correct the company estimates to match. We did do this for 1970–1974.

(7) Working-interest estimates—Most companies' estimates were in this form; if a company had a 50 percent working-interest in a lease, to get the estimate for the entire lease we doubled the company's 50 percent working estimate. In some instances it was not possible to determine the percentage of ownership for particular fields in certain years.

(8) Type of gas—One company did not differentiate between the various types of gas in its reserve ledger. The staff was thus forced to break out the non-associated gas on the basis of some possibly questionable assumptions.

RECOMMENDATION

The Subcommittee report on AGA natural gas reserve estimates should not present any data based on a comparison of company proved reserve ledger estimates with AGA reserve estimates. AGA reserve estimates can only be properly compared with USGS reserve estimates which constitute the only non-biased, non-industry reserve data available for comparison with AGA data. Such a comparison involves, moreover, none of the technical infirmities present in a company/AGA reserve comparison. The report will be so persuasive on this point that no one could possibly fault the Subcommittee for its exclusive reliance on USGS reserve data in making its comparison. As added insurance, however, I suggest sending a letter to the seven natural gas producers whose reserve records we have asking them whether their proved reserve ledger estimates are sufficiently comparable to AGA reserve estimates to permit a comparison between the two sets of reserve estimates. It is my guess the companies will present us with a great number of reasons why such a comparison is not feasible. Attached is a proposed copy of such a letter for Mr. Moss' signature.

If you and Mr. Moss agree with me on the need to limit our comparison to the USGS/AGA reserve estimates, I will proceed with an outline for such a report which can be completed fairly quickly. The bottom line of the report will be the 37.5 percent shortfall in AGA reserve estimates as compared with those of the USGS.

SUBCOMMITTEE ON OVERSIGHT AND INVESTIGATIONS OF THE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,

Washington, D.C.

PROPOSED LETTER TO PRESIDENTS OF SEVEN NATURAL GAS PRODUCERS

DEAR: The Subcommittee on Oversight and Investigations is in the process of completing a report on the adequacy of American Gas Association published reserve data.

Accordingly, the Subcommittee would appreciate the views of your company as to the comparability in terms of definitions, pressure base, etc., of your reserve ledger estimates as compared to those estimates provided by your company to the AGA, or as published by the AGA in its annual "Bluebook".

The Subcommittee is mindful of the criticisms that have been directed against the making of such comparisons in the past and will seriously review any factors which, in your view, should be taken into consideration in rendering such a comparison.

Thank you for your cooperation.

Sincerely,

JOHN E. MOSS,
Chairman, Oversight and Investigations Subcommittee.

FREE ENTERPRISE WEEK

(Mr. MOORE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MOORE. Mr. Speaker, each day we find individuals who inform us that the free enterprise system can no longer provide for the needs of our people. They say the system has failed; that the only answer to our Nation's problems is through more government regulation, more government intervention in our day-to-day lives, and more government management of our businesses.

They, and to a certain extent, the Federal Government, today are largely working under the assumption that competition is bad, profits are evil, and the producers of our society should be taxed and heavily regulated rather than rewarded. As a result our productive economy is becoming a stagnant economy. We have witnessed what the aggregate economic peril a government-managed economy has inflicted upon Great Britain. We are now witnessing the damage it is doing to our own.

All economic wisdom does not reside behind government doors, but I find many of our citizens simply do not know the relationship between economic health, their own high standard of living, and the free enterprise system which gave us both. I find people do not know how the free enterprise system functions and the opportunities available for each of us in it.

With this educational need in mind, I would like to inform the House that I have initiated a Free Enterprise Week in the Sixth District of Louisiana during the week of January 8–14, 1978. It is primarily an educational program that will offer a variety of points to inform and remind our neighbors of the advantages we all enjoy through our economic system. Seminars, civic club programs, essay contests in the schools, local government recognition, television and radio special programs, media advertising, a Free Enterpriser of the Year contest, and a banquet featuring former Secretary of HUD and OMB Director Jim Lynn are key features of Free Enterprise Week. It is a grassroots, neighbor-to-neighbor program to make each of us aware that there is no true freedom without economic freedom, and that the free enterprise system has given us the most goods and services at the lowest prices, the most rewarding job opportunities, and the highest standard of living the world has ever known.

I will report back to the House at the commencement of the second session on the success of the week.

QUESTIONS ABOUT THE SUGAR MESS

The SPEAKER. Under a previous order of the House, the gentleman from Illinois (Mr. MICHEL) is recognized for 15 minutes.

Mr. MICHEL. Mr. Speaker, in spite of all the talk about legislating in the sunshine, the key decisions surrounding the entire sugar episode this year have been made in secret, either in the White House, the Department of Agriculture, or in Democratic offices on Capitol Hill. It remains for the future to unfold the "by whom, why, and how" these decisions were made.

The salient fact remains, however, that a major sugar bill was enacted without a single public hearing and it is being implemented the same way.

Low prices to producers of sugar and corn, a high level of imports, an illegal payment program proposed by the administrator, a last-minute sugar amendment being added to the farm bill—no hearings being held by Congress on this amendment, multimillion-dollar payments to a handful of Hawaiian corporations, a major mistake in a Presidential proclamation, and failure to correct that error promptly—all add up to the biggest sugar mess in years.

Here, then, are 10 questions that I think the public should have some answers to:

First. Why did the President reject the International Trade Commission recommendation to set quotas at 4.2 to 4.4

---

[2] The FTC's Bureau of Competition's failure to recognize many of these technical problems, coupled with careless nature of their work product and their severely limited sample size, probably explains their coming up with radically different results in their company/AGA comparison than did the Subcommittee staff.

million tons after the Commission found that an expected level of 4.8 million tons would be harmful to the U.S. economy?

Second. Who conceived and was responsible for the illegal program which was stopped by my colleagues from Illinois, Mr. **Findley** and Mr. **Madigan**, the GAO, and the Justice Department?

Third. Why should a handful of large corporations in Hawaii receive a $50 million payment called "price support" when no sugar for which that price support is made even exists?

Fourth. Why did the administration withhold effective opposition to the de la Garza sugar amendment to the farm bill?

Fifth. Once the President signed the farm bill, why was there such a long delay—7 weeks—before implementing the new law?

Sixth. Who was responsible for all the "loopholes" in the President's proclamation of November 12, 1977?

Seventh. When the admitted mistakes were made public, why did the President unconscionably delay closing those loopholes?

Eighth. How much Cuban sugar has come into the United States duty-free under this loophole?

Ninth. How could nearly 7 million tons of sugar be imported into the United States in 1977 when the International Trade Commission found damage to the U.S. economy—balance of payments and U.S. sugar industry—at a 4.8 million-ton import level?

Tenth. Why has the Democratic leadership of this body been partners to the error, incompetence, and harm that the Carter administration has done to both the sugar and corn industries in 1977?

Since this mess was created by a Democratic administration and ratified by the Democratic leadership, it seems to me it should be cleaned up by them soon—or else the American people should get a Republican Congress in 1979 to do so.

Mr. Speaker, I believe this is a matter that merits investigation by the General Accounting Office and at this point in my remarks, I am inserting the text of a letter I sent to that Agency today, together with copies of an article from the November 17, 1977, edition of the Wall Street Journal and the December 5, 1977, issue of the Journal of Commerce relating to this sugar problem and its maladministration:

Washington, D.C., *December 15, 1977.*

Mr. Elmer B. Staats,
Comptroller General of the United States, General Accounting Office, Washington, D.C.

Dear Mr. Staats: On November 11, 1977, President Carter signed two Proclamations designed to protect the domestic price support loan program for sugar contained in the Food and Agriculture Act of 1977. These Proclamations imposed higher duties and fees on raw sugar imported into the United States.

In the past few weeks a disturbing circumstance has placed this price support program in jeopardy. A combination of administrative error and Administration delay appears to be thwarting the price support program of the Congress.

The President's Proclamation of increased fees failed to impose fees on sugar refined abroad and imported into the United States as finished, "white" sugar. It has recently come to light that large quantities of this sugar are being imported at prices well below both current market prices and price support loan levels mandated by law.

To date, the Administration has failed to correct this "oversight" in the fee Proclamation (see enclosed newspaper articles). I would appreciate your assistance in determining the effects of this lack of action by the Administration.

Specifically, I would like to know:

1. How much refined sugar has entered the United States since the date of the President's Proclamation, and how this figure compares with previous import levels of refined sugar;
2. What the source of the refined sugar is, and if possible the source of the raw sugar which was processed for import;
3. The expected effect on domestic sugar prices of these imports, both in the next two months and the next year;
4. The loss of the U.S. Treasury from import fees not collected on this sugar;
5. The expected cost to the Treasury in loans made to U.S. sugar processors under the 1977-crop sugar loan program because of depressed U.S. raw sugar prices; and
6. What U.S. industries have benefitted, and by how much, by the availability of large supplies of sugar unaffected by import fees.

I would appreciate your early attention to this request since it seems to me that this situation could have a serious, immediate and detrimental effect on the sugar price support program.

Sincerely,

Robert H. Michel,
Member of Congress.

[From the Wall Street Journal, Nov. 17, 1977]

Carter Proclamation on Sugar Tariff Turns Faces Red

(By Karen Elliott House)

Washington.—President Carter's proclamation imposing tariff increases on foreign sugar is causing a lot of administration faces to turn beetred.

The reason: The document he signed doesn't do what it's supposed to do.

Officials have discovered a gaping hole in the President's new program to protect domestic sugar growers by keeping cheap imported sugar out of the U.S. Unless the legal loophole is plugged, as much as two million tons of unwanted foreign sugar could flood into this country, driving down sugar prices and forcing the government to pay up to $540 million to U.S. sugar growers this year.

"It looks like a bad bust," says James Agnew, an Agriculture Department sugar expert who helped design the program.

"We're studying ways to close the loophole," says Lynn Daft, the White House staff adviser on agriculture, "but I'm not very happy and the President won't be either when he finds out."

This latest foul-up is especially embarrassing because it is the second time the White House has flubbed efforts to help financially ailing sugar growers. The President announced a program to subsidize growers' incomes last spring only to have it declared illegal a few months later. That program was scrapped.

But it won't be so easy to repair this mistake. Indeed, no one is yet certain how to close the loophole. Lawyers for the departments of State, Agriculture, and Justice, as well as attorneys in the Office of the Special Trade Representative, are all working overtime to try to figure out what to do.

"I'm confident the ingenuity of the American bureaucratic mind can come up with something," says one official.

Adds Mr. Daft, "We'll close the loophole. I just want to make sure we do it without causing new problems."

Officials are trying to find some way to patch things up short of asking the President to amend his proclamation. Because the tariff will be collected by the U.S. Customs Office, officials hope they can correct the problem by a directive to customs officials. But, if that doesn't work, Mr. Carter may have to sign another proclamation amending his earlier proclamation. "That won't please him," Mr. Daft said.

No one will publicly say who is to blame, but officials privately accuse the Agriculture Department of a colossal goof. "Agriculture should have caught it, no question" says one critic.

The President signed two proclamations. One, drafted by the Special Trade Representative's Office, imposed a duty of 2.81 cents a pound on imported sugar. The other, drafted by Agriculture Department officials, imposed an additional 3.3-cent-a-pound fee on imports. It is the later proclamation that contains the error.

Under the proclamation, imported raw sugar that costs 10 cents a pound or more would be exempt from the 3.3-cent fee. That's because officials assumed that the 2.81-cent duty, plus the cost of transportation, would be sufficient to raise the price of such sugar to 13.5 cents a pound, the price the administration is trying to achieve for raw sugar through its program. Refining that sugar would add another 3.5 cents to four cents a pound to its cost to a processor such as Coca Cola.

The loophole is that the proclamation doesn't distinguish between raw and refined sugar. So refined sugar also will be exempt from the 3.3-cent fee. This means that refined sugar that costs 10 cents a pound would increase to about 13.5 cents with the import duty and transportation cost. But because it wouldn't have to incur the cost increases of refining, it would cost 3.5 to four cents a pound less than domestic sugar or imported raw sugar that is refined here.

Because current quota limits will allow another two million tons of refined sugar to reach the U.S. without the added tariff, replacing a like amount of domestic sugar the government would have to buy for 13.5 cents a pound, the slip-up could prove very expensive.

So to keep it short and sweet, the government is going to have to find a way to refine the sugar tariff program.

[From the Journal of Commerce, Dec. 5, 1977]

USDA Officials Eying Options To Close Sugar Loopholes

Washington.—U.S. Department of Agriculture officials are eying three possible solutions to one of the recently-discovered loopholes in the administration's Nov. 12 proclamation on new import fees on imported sugar, CNS has learned.

The chief loophole being studied exempts refined sugar from the import fee. President Jimmy Carter's import fee proclamation called for a zero to 3.3 cents-a-pound import fee, in addition to a 2.81 cent tariff. But it did not define separate fees for raw and refined sugar.

Robert Stansberry, who heads USDA's Procurement and Sales Division, told CNS the options top USDA officials are studying as a means of closing the refined sugar gap include charging a flat import fee instead of imposing a variable fee, Mr. Stansberry said he prefers this method over the current variable fee, and said an example would be to charge a flat 50 per cent of value of cargo fee, which is allowed under current law.

Two other options, according to Mr. Stansberry, are imposing a 100.000 short-ton quota on refined sugar imports or adding the refiners' margin to the current import fee scale and then figuring the import fee from that starting point.

Under current import fee calculations, sugar valued at between 6 and 6.67 cents per pound is subject to a 50 per cent ad valorum import fee. However, sugar valued at more than 6.67 cents per pound is subject to a different scale. The import fee of the higher priced sugar is calculated on a 3.32 cents per pound base. For example, if sugar is valued at 8 cents per pound, that amount exceeds the 6.67 cents value by 1.33 cents. The 1.33 cents figure is then subtracted from the 3.32 cents base to arrive at a 1.99 cents import fee.

Deputy director of the USDA Procurement and Sales Division, James Agnew, said while imports of refined sugar now account for only about 2 percent of all U.S. sugar imports, the mere existence of the refined sugar loophole could create a problem, especially if refined sugar imports were increased as a means of circumventing the tariff.

The other loophole, which Mr. Agnew said has not yet commanded much attention at USDA, due to concentration on the refined sugar gap, involves products containing sugar. Mr. Agnew explained that products such as jellies and donut fillings containing large amounts of sugar are not covered under the proclamation's tariff scheme. Mr. Agnew said companies could use the second gap as another means of circumventing the law.

The circumventing could be accomplished, theoretically, by firms simply buying sugar outside the U.S. where it is not subject to import fees, manufacturing highly sugar-based products in a foreign country and shipping the products back into the U.S. Mr. Agnew speculated that the U.S. International Trade Commission (USITC) might be asked to look into this loophole after it investigates the gap on refined sugar.

The USITC is scheduled to look into the refined sugar gap in a series of hearings across the country, beginning Jan. 1-4 in New Orleans.

VERMONTERS GO BY BUS TO WORK—SAVE GAS

The SPEAKER. Under a previous order of the House, the gentleman from Vermont (Mr. JEFFORDS) is recognized for 10 minutes.

Mr. JEFFORDS. Mr. Speaker, we are all aware of the current energy situation. Even with the ongoing energy conference, there are many people across the country who doubt the validity of this urgent problem, and who, despite skyrocketing fuel costs, have yet to be convinced that a crisis does, in fact, exist.

Today I would like to recognize six people from my home State of Vermont who have displayed tremendous foresight and patriotism by organizing a transportation system to get themselves and 123 of their coworkers to their jobs. During the awful winter of 1973–74, when fuel was scarce and supplies were dwindling, Mr. Joseph D. Maietta of South Burlington, Vt., discovered that some 40 other people in his area would be willing to ride a bus to work, rather than travel in separate cars. There was no bus running this route at the time, and Mr. Maietta learned that if he could guarantee at least this minimum number of 40 people, the Chittendon County Transportation Authority would provide a special express-run bus to take these people to work. From this start, the transportation pool grew. Five more people followed Mr. Maietta's example, and volunteered to organize pools for their communities. I would like to recognize these people and their accomplishments as well.

Mr. Francis J. Lesperance and 15 other people come from Swanton, Mr. Joseph F. Belanger comes from St. Albans with 15 more, and Mr. Charles W. Pattee comes with 12 commuters from Enosburg. Each of these three groups leases a 15-passenger van to transport them to work in the morning, and home again in the evening.

Mr. Robert Jackman brings 21 people from Montpelier, and 25 people accompany Mr. Robert Sanders from Morrisville to the Essex Junction plant. These two groups have each formed a corporation, and for about $25 per month, they are able to rent a Winnebago bus to get themselves to work much more efficiently than if each traveled that distance alone.

Based on averages of a 250-day work-year and mileage rates of 17 miles per gallon at a cost of 64 cents per gallon of fuel, the totals for this fantastic energy-saving project are as follows: 3 vans, 2 Winnebagoes, and a commercial bus allow 123 people to save 1,824,750 miles of travel per year; 107,338 gallons of fuel per year; and $68,695 per year. Over the last 4 years, this amounts to quite a substantial savings.

Mr. Speaker, I am proud of what my fellow Vermonters have been able to accomplish for themselves and their country. Mr. Maietta's original effort has more than tripled since its birth 4 years ago, and it is continuing to grow. With individual Americans taking this kind of initiative and getting together to save fuel, I feel confident that conservation can make a dent in our ever-increasing gasoline consumption. At this time, I hope my colleagues will join me in congratulating these people for their fine effort, and in encouraging others to follow their remarkable and selfless example.

FARMER DOES NOT WANT SYMPATHY

The SPEAKER. Under a previous order of the House, the gentleman from Kansas (Mr. SEBELIUS) is recognized for 10 minutes.

Mr. SEBELIUS. Mr. Speaker, in his morning press conference today, President Carter addressed the problem of the economic crisis now taking place in farm country and his reaction to the farm strike now being conducted by the grass-roots American agriculture movement.

The President is reported to have said that the impetus for dissatisfaction throughout farm country comes not from farm legislation or the lack of it, but is due to adverse weather. He then went on to take credit for the 1977 Food and Agriculture Act as landmark legislation and said better prices will be forthcoming. In regard to the farm strike, he expressed sympathy.

Mr. Speaker, I find the President's remarks incredible and most distressing. I am concerned that President Carter has completely missed the purpose and message of the American agriculture movement. It is hard to tell if this is by intent or ignorance. The problems in farm country are so serious, however, that neither is excusable.

We have been in the midst of a farm price, credit and cash flow crisis for well over a year. The statement that most farmers are hard pressed and dissatisfied primarily due to weather conditions is unbelievable. The President states that exports are up. In fact, in terms of real dollars, they are down. He stated that his reserve program will be of help. In fact, farmers throughout the High Plains are not signing up for this money-losing proposition and a sophisticated form of price controls. He takes credit for a farm bill that represents a half a loaf to begin with, when in fact, the administration fought the bill, tooth and nail, every step of the way.

In addition, the administration has refused to use all of the authority in the farm bill that could be of immediate help to farmers. Worse, the Department of Agriculture proposed to run the farm program with a discriminatory and confusing set-aside program that makes no sense at all in wheat country. In fact, it was the set-aside program that provided the final straw that broke the farmer's long-standing patience and led to the strike movement. The administration is asking the farmer to reduce his income 20 percent in order to minimize his losses. That is not a farm program; that is minimum loss blackmail.

What we have left is sympathy. Mr. Speaker, if it is one thing the farmer is sick and tired of, it is sympathy. He cannot take sympathy to the bank.

Last March, in remarks before this body, I warned my colleagues and the administration that farmers in the High Plains were in the midst of a severe price, credit and cash flow crisis. At that time, I said we had two problems: One, to write a good, long-term farm bill; and two, to quickly enact several emergency measures to provide immediate cash flow assistance.

While I was joined by a number of far-sighted colleagues on both sides of the political aisle, unfortunately our efforts proved fruitless. Consideration of these emergency measures was refused and 9 months later a new farm bill still did not meet short-term cash flow needs. As a result, current farm policy has left hard-pressed farmers little alternative but to consider drastic action.

Yesterday, December 14, thousands of farmers who are part of a growing grass-roots organization called American Agriculture began participating in a nationwide strike to dramatize their plight.

One of the primary goals of the American Agriculture Organization has been to attract national attention to the farmer's plight. To some extent, this goal has been reached. The "farm strike" has caught the attention of the columnists, pundits, and media commentators. They have publicized the fact that farmers are in the midst of the worst economic crisis since the "Great Depression." As a matter of fact, no one seems to question the plight of the farmer or his value to our country.

Reporters and broadcasters travel many miles to the high plains to get the story first hand, "way out there." The man whose job it is to produce food and fiber for this country is pictured in almost quaint fashion. The observation has been made over and over again that while official Washington and the news media sympathize with the farmer, the strike will simply not work.

Mr. Speaker, I repeat again that the American farmer is sick and tired of sympathy. The farmer is sick and tired of being sick and tired.

Now, it is true that supermarkets throughout the eastern seaboard and our major metropolitan centers have yet and may not feel the effects of this farm strike. I submit to my colleagues that it is not the issue. I can assure you the effects of this desperate action on the part of farmers is being felt, not in our cities, but in their home communities.

Yesterday my office was in touch with communities throughout my 57-county district. Livestock is not being delivered to the community sale barns. Farmers have parked their tractors on Main Street. Some local merchants are open for business but few, if any, farmers bought merchandise other than family essentials. The strike is having an effect all right; we stand to lose a generation of young farmers and we are experiencing an agri-tragedy in farm country.

No one at this juncture can say for sure what kind of success or failure the American agriculture movement will have. But, what we are seeing take place is an honest, legitimate last-ditch effort on the part of taxpaying citizens, who have given much to this country, to try to stay in business and hold on to their personal lives and wellbeing.

The measure of success farmers have had in the past has many times depended upon how he used adversity to his own advantage. My view is that the President and this administration had better express more than sympathy in regard to this movement. I say this not because of the strike or what its effect may be, but because of the economic and the social consequences that are taking place and are the prime reasons behind this movement.

The message coming from the High Plains for over a year is that our plight is real. The message is that we must inspire a farm policy that is fair with the farmer and that will increase farm income as quickly as possible.

The objectives of those within the American agriculture movement are threefold: equal rights for farmers, human dignity for farm families, and economic justice for the man who has been asked to produce food for this country and for a troubled and hungry world.

I stand in full support of these goals. I think it is important to stress many farm organizations, individual farmers, farm wives and public officials have been working hard for the farmer for many years. However, this American agriculture movement is unique from the standpoint it has been a true grassroots organization. It did not exist 90 days ago. It has involved many folks never before involved in the fight to make Government more responsive.

Last week, I finished a listening tour of my 57-county district traveling approximately 3,200 miles over wheat, feed grains and cattle country. I personally visited with over 4,000 citizens. In courthouse after courthouse, hundreds of citizens took time to express concern, frustration, and anger. Over and over again came the question: "Keith, what does Washington think about this farm strike? Are they paying attention to what we are trying to tell them?" In my view, these folks are not asking for special treatment or making unreasonable demands. They do not want sympathy. What they want is a fair shake from their Government and to be on a par with the rest of society.

Mr. Speaker, several weeks ago, I introduced House Concurrent Resolution 423 to inspire the President to be of assistance to farmers. While the goal of the American agriculture movement is parity prices for farm products, I wish to emphasize that the 1977 Food and Agriculture Act that President Carter signed into law contains discretionary authority for the President and Secretary Bergland to significantly help farmers through this crisis period. All that must be done is to act. I do not consider that too much to expect in the face of the crisis American agriculture faces today.

Today I am reintroducing House Concurrent Resolution 423.

BETTER CONSERVATION, MANAGEMENT AND DEVELOPMENT OF NATION'S WATER RESOURCES IS NEXT MAJOR CHALLENGE FOR CONGRESS

The SPEAKER. Under a previous order of the House, the gentleman from California (Mr. Don H. Clausen) is recognized for 60 minutes.

Mr. DON H. CLAUSEN. Mr. Speaker, one of the lessons of 1977 is that there is a finite limit to our resources. This was a drought year for most of the West, and water conservation measures were resolutely observed in many areas. But most of us recall, not too many years ago, when floods were the problem. And today this body has considered a very comprehensive clean water bill which contains proposals submitted by me to provide incentives for the use of innovative technologies in the treatment of waste water.

So, Mr. Speaker, when we discuss water resources, we have to consider all aspects of that vital resource. We need to consider total water management, taking into account all the requirements and assurances needed to maintain and advance our quality of life.

Now that our "clean water" legislative effort is "wrapped up" for this Congress, I want to serve notice to my colleagues that our next major challenge will be in the area of better conservation, management and development of our Nation's water resources.

This must become a matter of national priority. In order to place in perspective what I mean, I am bringing to the attention of you, my colleagues in the Congress two speeches, which relate to what we are doing in my congressional district in California to move toward this concept of river basin watershed conservancy and management:

Remarks of Congressman Don H. Clausen to the North Coastal Counties Supervisors Association at the 57th Annual Redwood Empire Association Convention, Fort Bragg, Calif.

Today I want to share with you my thoughts on a subject that is vital to all of us—water resource management—and how an approach I am advocating could do more than anything else I can conceive of to make our area of the State of California a much better place in which to live.

I hope to cover a lot of ground with you in what will be something of a departure from the standpoint of an elected officeholder, suggesting not what I can do for you, but something of much greater value: What you can do, and I hope will do, for yourselves and our North Coast Constituency.

What I hope will emerge from this discussion is a multicounty, coordinated approach to the total complex of problems associated with water, our most precious resource.

I envision an arrangement whereby, formally and officially, through a joint exercise of powers agreement, the counties of Humboldt, Mendocino, Lake and Sonoma would address in a comprehensive manner our total needs in terms of ground and surface water, and their management in terms of supply, quality and flood control.

This would represent a continuing exercise in identifying the problems involved, their relationship to each other, and devising solutions to those problems on a joint basis. I think this can be done and must be done.

We have a need and a responsibility to address the flood problem, erosion potential and the low-flow augmentation requirements of the "killer eel."

Memories are short on these issues. We cannot afford to forget 1964 when a 56 foot wall of water—780,000 cubic feet per second—went boiling out to sea at the mouth of the river.

Similarly, we cannot afford to forget the record drought we are now facing in 1977.

I really want to talk today about total water management.

You know my position of long standing. The rivers of the North Coast should be divided into two categories—the Natural River System and the Managed River System.

As I view it, all of our rivers on the North Coast should be designed as the Natural River System category and remain as they are today except the Mad, Eel, and Russian Rivers.

These three rivers have fundamental problems that need to be addressed. They should not be placed in the wild river status and the Mad and Russian already have structures on them. Also, the Eel has the very serious flood, erosion, and low stream flow problems that may require structures.

What I hope to do today is ask you to walk through with what has indeed happened since the big flood of 1964, and hopefully get across to you two basic conclusions: one, the need for such a comprehensive approach is even greater today.

Even more than that, awareness of what is needed and what is really possible and the public understanding essential to political support is incomparably greater. Why? The two extremes of devastating floods and frightening prospects of droughts are fresh in our minds.

Now why do I think this is a pragmatic, realistic assessment today? What's different now? Why wouldn't we just be spinning our wheels?

Well, I mentioned the greater need today, and an improvement at least in our potential ability to get things done. We can dispose pretty quickly of the question of need. The Eel River basin is still subject to flooding. We haven't had anything like the catastrophic flood of 1964 but that doesn't make me complacent. We could have a recurrence. That aside, the lesser levels of flooding we have experienced since and will continue to experience are unacceptable.

I have lived with flooding here in this part of California all my life and I can tell you this: You don't get innured to or blase about the spectacle of nature rampaging out of control particularly when your Congressman as a youngster of 14, in the Eel delta, wallowed in the slit and mud in '37, and observed it again in '55, '64 and '74. It leaves a profound impression—one which none of us should ever forget.

Now, having experienced the major flood of record as recently as 1964, we have run through the worst drought of record.

There's another need or challenge I want to talk about, of a different kind. This one is man-made. The State of California is coming up with a statewide water plan and we have got to make sure our interests are protected. Not narrow, parochial, them-versus-us interests, but the legitimate interest in seeing that we have a say in what affects our communities—and our North Coast. Presumably everybody agrees with that in principle at least.

But none of our counties or municipalities has the political muscle when acting alone to protect those interests. Sure, I'm talking about voting blocs. But more than that, I'm talking about the fact that we can compound that muscle by leadership, putting together a model structure, a working arrangement, a focal point for local leadership to identify problems and propose workable solutions and then—and only then—make the best use of the outside resources that the state or the federal government can make available to us. That we do not have, and that we do need for sure.

Before I get into specific pieces of legislation, though, I want to say that there is an important change in thinking taking place. For example, we're beginning to break out of a lot of boxes at the federal level, seeing problems in their real dimensions and trying to make our legislation broader and get away from the piecemeal approach. Take water resources.

So, a lot of good things are happening, and the whole is greater than the sum of its parts and is a reflection of where we can go from here.

The watershed conservancy program I mentioned could be roughly modeled after an approach adopted in the State of Ohio in the Muskingum and Miami River programs. The structure and details would be worked out by a task force I am recommending that you establish as a one-stop coordinating mechanism with decision-making power on behalf of the jurisdictions you represent. We are blessed with a strong tradition of local government and home rule here in California as you know, and you know I share your feelings concerning the advantages of having the county as the basic unit of general purpose local government. Believe me, the supporting and coordinating role you are uniquely and legally qualified to perform makes us a whole lot better off than states where local government is fragmented into a multiplicity of municipalities and the county serves as little more than an administrative unit.

Of course each of our counties would be responsible for coordinating the input on water problems and needs from the cities, communities, and other political subdivisions of the county, as well as from the unincorporated areas.

With our cities and counties working together, under formal agreements, pooling your resources and your talents, you can strengthen local government, which I consider far preferable to creating a new unit of another level of government. I recommend your structuring a joint exercise of powers agreement on a multi-county basis with each county and their legal staff participating in the drafting of the agreement.

We are all sensitive to the phenomenon whereby an increase in water supply, for example, can lead to development which creates demand eventually exceeding the supply. There is no great mystery about that: We see it in other areas such as highway construction, where an increase in capacity to eliminate congestion serves as a magnet for further congestion, and so on.

A great advantage of the approach I am suggesting would be its tendency to tie in much more tightly the issues of water resource development with others under local government control, but on a basin-wide scale comparable to the scope of the problem.

Just how you would go about the task, once organized, would be your decision. I will offer, though, to put you in touch with any source of information and guidance at the federal level; I know all the players and I have discussed this approach with representatives of all federal agencies involved.

I have also discussed it with the colleges and universities in our district and they have indicated there willingness to cooperate in any fashion possible. For example, Dr. McCrone of Humboldt State University and I have discussed the need for the involvement of faculty and students—particularly of departments like Forestry, Fish and Wildlife—in this effort. I've talked with leaders in community colleges about involving their biology departments. Dr. Diamondopolus of Sonoma State has indicated that their Ecology Department might also be involved. And officials at the University of California at Davis have also expressed a willingness to participate.

In addition officials of relevant federal and state agencies are also excited about the prospects. Some that might make a unique contribution are the Forest Service, Bureau of Land Management, Corps of Engineers, Bureau of Reclamation, the Soil Conservation Service, and the many water resource agencies at the state level, to include the state Fish and Game personnel.

As to what you do, again I won't say specifically. But I will recommend an approach. Use the analogy of the energy situation. We have come to recognize that energy—which really is nothing but another resource, like water—can't be approached by a meat-axe strategy. We waste energy in many ways, and so must conserve in many ways.

In the area of watershed management, any number of programs and approaches can be brought to bear; seeding, sodding and intensified reforestation for erosion control, for example. The list is long and I'm sure you are aware of many of them.

The need is for water to serve the multiplicity of uses in sufficient volume—but not in excess at any one place and time; that's a long way to say "flood"—and it's got to be clean water. So we have had water resource projects, flood control projects, clean water projects. Now we're beginning to merge our efforts. For example, a water pollution control bill that we're in conference with the Senate on gives much greater emphasis to water conservation. You might want to quarrel about the details, the way they go about it, but the trend in thinking itself is constructive. It's healthy.

Several years ago, we incorporated a provision into law to require the executive agencies to take a new look at the methodology for evaluating water projects.

You've heard me say many times that the benefit-cost ratio formula as it is now applied is archaic in the sense that it does not reflect the benefits of projects fully and accurately nor does it even consider benefits the public fully supports. The report we required of the federal agencies is in its final draft form and will be submitted to our Water Resources Subcommittee shortly.

Maybe we can resume a more orderly discussion between the Congress and the Administration on the subject of project selection criteria, and as a result of this effort we may see a possible change to federal law which might be particularly applicable to the Eel River basin. We've been after this for years—a change of methodology and benefit to cost criterion in evaluating projects. I've asked the chairman to schedule hearings on this subject and they're going to be held before the year is out. I think the climate is right.

In the past we have tended to think of all-or-nothing, total solutions, going one way or the other. Big dams, on the one hand, or the totally preservationist approach of wild rivers, on the other. But in my view there can and must be a merging of more than one approach between the two extremes. As I've said before, we have new legislative tools to work with and the Corps of Engineers is in the process of putting them to work.

In 1974, in the Water Resources Development Act of that year, we made it mandatory to consider non-structural alternatives in flood control, and made it possible to pursue such alternatives as an eligible project cost.

This could include as an example floodproofing and a possible relocation of structures in the flood plain area. In addition, it makes it possible to acquire upstream marshland, preserve it from development, and thus preserve its natural capacity to absorb stormwater. Or it can be applied in combination, making it possible to scale down the size of the structure needed so as to minimize its impact on the affected area.

In this connection, the survey resolutions approved by the Public Works Committee at my request authorize the Corps to make a comprehensive analysis of all the flood, land and water-related resource problems in both the Russian and Eel River Basins, which should provide the informational data base for local officials, like yourselves, to consider nonstructural as well as structural flood control alternatives.

While I'm on the subject of legislation, we also have the Water Resources Planning Act of 1974, adopted by my Public Works Committee with its requirements for more refined economic and environmental assessment of projects. We also passed the Water Pollution Control Act Amendments of 1972, the big Clean Water Act which addressed conservation needs to some extent and now may be amended to give this area increased emphasis. We have the Streambank Erosion Control Program, for which an application for a demonstration project for the Eel River is under active consideration in Washington.

In 1976, we made it possible for the Corps of Engineers to create new wetlands in connection with its conventional projects. I can tell you that it would not have been possible for those of us working directly on these problems to get the legislation enacted without support around the country from concerned individuals and organizations like you.

The purpose of the Miami River Basin I have used as an example is a simple one—it is a vehicle through which several county governments have joined together through a joint exercise of powers agreement to make the necessary decisions to manage the water and land resources of the Basin.

The structure of the program is very similar to most American governmental bodies.

Legislative policy making is done by the associated counties acting as a group.

Day-to-day implementation is handled by a staff headed by an executive director who can call upon in-house expertise in various related fields as well as contract with outside experts when additional data or expertise is necessary or desirable.

The Miami Program also includes a judicial component, called a court of common pleas, which functions as a means to resolve controversies, which may arise as well as to oversee the administration of the program in a legal sense.

The Miami approach is beneficial and successful because it does not limit its planning to water and water-related resources for water problems nor to land and land-related resources when it comes to land problems. In the Miami Valley, decisions are made in a comprehensive fashion taking all possible solutions into consideration.

The Redwood Region is rich in brain power and research capabilities. This is particularly true in the various disciplines related to natural resources and it may well be that no similar area can match our own.

The noted expertise in our academic institutions in the fields of watershed management, hydrology, forestry, fisheries, wildlife management, geology and many others is well-known here as well as nationally. We have a vast reservoir of talent to draw upon.

But let's not overlook the similar talent and data we can get from the private and governmental sectors in our own region. From the oceanographic expertise needed to deal with the estuarine areas at the river mouth to the geological skills needed at the uppermost reaches of the basin—we've got what it takes.

As I see it, our only difficult task is to assemble together the best of these minds; allow them to build the most complete and accurate data base on the resources of the basin; and, provide a coordinated planning framework in which they can give us the basis for making wise, farsighted water resource planning, conservation, management and development decisions based upon the most up-to-date information as well as careful understanding of all the competing and compatible goals, interests and needs.

I would like to mention, though, another way in which our conservancy program would be physically as well as philosophically akin to the Miami and Muskingum River Basins approach. That is, in the area of flood control, use of dry dams which might be an appropriate option for the Eel River. A dry dam is just that, a dam with an aperture permitting normal stream flow to proceed unimpeded. There is no impoundment, no mud flats during low flow. They needn't be unsightly. Yet at flood stage, they serve to hold back the surplus water.

The area around the dam, particularly on the upstream side, is maintained in existing ownership and existing land use—agricultural for the most part. Alternatively, and this would be a local decision, it coud be acquired for recreation, open space, park land.

This was done in the Miami River Valley, and with nonfederal funds. I think that might well be considered for federal funding, as are other projects, which would require legislation.

In conclusion, I want to go back to a somber fact, the fact of flooding that has plagued our area from time to time, succeeded at the moment by catastrophic drought. Whatever the problem, whatever form it takes, these will be with us for the foreseeable future. If history teaches us anything, we will continue to have these cycles. When they strike, they are a tragedy. It is difficult to ameliorate the tragedy. But one thing is within the power of you people in this room and myself as your representative in Congress. We need not compound it. We need not add to the tragedy by forfeiting the opportunity to head off more of the same in the future, but rather take advantage of the current public awareness of water management needs and move forward together in a positive and comprehensive manner to address these challenging water problems. Let's move now. Let's get in gear—establish the structure and the relationships. Start building momentum. Give us at the federal level a vehicle to work with and maybe we can supply some of the fuel. But you, the elected representatives of the North Coast will be in the driver's seat.

How about it?

Remarks by Jared Carter

I greatly appreciate the opportunity to discuss with you today the utility of a joint powers agreement as the vehicle by which the North Coast Counties might develop and articulate common policies on water rights issues of significance to the counties represented here. I understand your next item of business is to consider the creation of such an agency. I believe I can best contribute to your deliberations by mentioning the most important water issues I think confront this area, listing some of the considerations I believe must be taken into account in resolving these issues, and outlining what I think are some of the strengths and weaknesses of a joint powers agency as a means of coping with them.

The basic points I want to make can be simply stated:

First: In the very near future California's demand for water will exceed available supply. Most people believe the only reasonable accessible additional supply available to meet San Joaquin Valley and Southern California demands exists in the wild and scenic rivers of the North Coast Counties.

Second: The Governor's Commission to review California Water Rights Law, appointed this last May, will consider whether to recommend repeal of the California Wild and Scenic Rivers legislation as one step necessary to alleviate the foreseeable imbalance in California's water supply and demand.

Third: The North Coast Counties have not actively participated in the work of the Governor's Commission; and they do not have representation on that Commission commensurate with their interest in its possible recommendations.

Fourth: The North Coast Counties are also vitally affected by the regional questions of whether, when, and how the Warm Springs Dam will be built and operated. If the dam is promptly built the counties presently concerned could, by means of a pooling agreement, provide for their respective water demands for at least the intermediate future. If this project is not completed I think it is doubtful that the conflicting interests of Sonoma, Mendocino, and Humboldt Counties in the water supply available from Lake Pillsbury and the Coyote Dam project can be amicably, promptly and inexpensively resolved.

Fifth: A Joint Powers Agency is probably the best available mechanism by which the North Coast Counties can develop and articulate policies relevant to state-wide water issues and work with this area's elected representatives toward acceptance of our policies. A joint powers agency could also work with other local and state agencies and with the Corps of Engineers on such regional issues as the Warm Springs Dam.

Sixth: My last general point is that creation and effective operation of a Joint Powers Agency will not be free from difficulties. The agency will not have any real power to affect the issues it considers, because counties, as such, have almost no power in the field of water rights. Moreover, honest men can differ over the state and regional issues to be considered by the agency and great care must be taken to establish procedures and lines of communication that will assure the agency obtains and retains the respect of its constituency.

Let me briefly elaborate these points:

California Supply and Demand. Almost all state and federal experts agree that California now consumptively uses approximately 31 million acre feet of water annually and that by the year 2000 this amount will increase by 5 or 6 million acre feet per annum. The experts also agree upon a couple of other relevant facts: ground water supplies are being mined—that is, being pumped at a rate that exceeds recharge of underground acquifers—by approximately 1 million acre feet per year in parts of the San Joaquin Valley, and the total supply of water available for consumptive use in California will diminish by approximately 1 million acre feet per year when other Colorado River Basin states fully utilize the Colorado River waters to which they are entitled. These general figures are reflected in reports by the National Water Commission, issued in 1973, the Department of Interior, issued in 1975, and current studies of the State Water Resources Department.

There is an apparent consensus among those in the water business—that is, the state and federal agencies who construct major water development projects and the large distributors and consumers of water—that substantial actions must be taken relatively quickly to alleviate the obvious supply/demand problem that these figures present.

The Governor's Water Rights Commission. In May of this year Governor Brown appointed a commission to review California Water Rights Law. The commission's charge is to evaluate proposals for change in the existing law and to recommend appropriate legislation to the Governor by December 31, 1978. The commission has initially decided to review intensively six topics: appropriative rights to surface water, ground water rights, the legal aspects of water conservation, riparian rights, transfer of water rights and the legal aspects of instream uses.

The commission's recommendations on these topics, whatever they may be, are likely to be controversial for the simple reason that they will deal with issues that have received little recent attention by the California Legislature, while other western states and the National Water Commission have made and recommended rather substantial changes in basic water rights law. Some of the questions that will receive attention are whether to extend the state's control to ground water as well as surface water, what should be the permissible scope of mandatory conservation measures and what enforcement mechanisms are appropriate, what is the proper approach to encourage conjunctive use of surface and ground water, and under what standards, if any, should water rights be separable from land and transferrable to another area of the state.

These issues, and others, will be important to the North Coast. But they do not include the issue likely to be of most interest to us.

On November 10, 1977, at a meeting of the Governor's Commission in Chico, Judge James A. Cobey, a member of the Commission, publicly raised the possibility of amending California's Wild and Scenic Rivers legislation to facilitate the planning and implementation of one or more projects to take North Coast Counties water to the San Joaquin Valley and Southern California. Butte County's Board of Supervisors supported this position. It is my understanding that this approach has substantial support on the Commission and among water users outside our area. S. 346, Senator Ayala's bill, presently pending in the California legislature, would delete that provision of the Wild and Scenic Rivers legislation which prohibits the planning of any Eel River Project for at least 12 years—that is until 1984—and instead would mandate:

"It is the intent of the Legislature . . . that on or before January 1, 1980, the Department of Water Resources should report to the Legislature as to the need for water supply and flood control projects on the Eel River. . . ."

Undoubtedly, proposals for large and expensive projects to transport North Coast water to other parts of the state will be resisted by many on environmental grounds. Perhaps they will be rejected for budgetary reasons at the state or federal level. But they will also receive sympathetic consideration from many responsible people who believe increased water use in California is inevitable and the North Coast affords the only available source of new water.

I don't intend to express a position on that issue. The point I want to stress to this group is that the issue will be considered at the state and probably the federal level with or without our input. We do not have a political or other veto. If the North Coast Counties expect to influence the ultimate decisions on this and other issues I believe we must develop reasonable positions and present them effectively in close coordination with our elected representatives at the state and federal level.

The issues involved are political in the sense that they must be resolved within the governmental process but I do not believe they are partisan in the sense that Democrats and Republicans should approach them differently. Clearly, these matters are of such importance that not every citizen or elected representative will view them alike, but it is reasonable to hope and expect that the North Coast Counties' elected representatives will work constructively together on these matters without regard to their political affiliations.

North Coast Representation on the Governor's Commission. However, development of a North Coast position is not sufficient. The position must be presented to others at every reasonable opportunity. In this regard we have a problem with the Governor's Commission. It does not include a North Coast representative. I think a very strong case could be made for a representative from the North Coast Counties joint powers agency if you create it. I know that Don Clausen and Barry Keene would assist your efforts to have such a representative appointed.

Warm Springs Dam. Let me now turn briefly to a regional issue that might benefit from attention within a joint powers agency—namely, the Warm Springs Project. Warm Springs appears to be progressing as well as can be expected. Road work at the dam site is proceeding. $12 million were provided for this project in the 1978 Corps of Engineers appropriation, even though many federal water projects were rejected by the Carter administration. Only recently the 9th Circuit Court of Appeals refused an injunction pending appeal from the District Court's finding that the revised environmental impact statement is adequate. I understand that the Corps of Engineers is completing its final design and intends soon to request bids and to award a contract for construction of the main dam by April of next year. This would provide a completion date for this 220 million dollar project of 1982 or possibly 1983.

It is really an aside from the subject of my talk, but I want to bring to your attention that the project is not out of the woods. The Warm Springs Dam Task Force, represented here today by Iva Warner, continues to oppose the project. I understand that the Task Force will meet with Huey Johnson, the new Secretary of the Department of Resources, on the 14th of this month in an effort to convince him that the State of California should oppose Warm Springs. If the letter of November 21, 1977 from Assistant Secretary L. Frank Goodson of the Resources Agency to Colonel Adsit of the Corps of Engineers is reflective of state policy, it is possible that the Task Force will have a responsive audience for their December 14th meeting.

In his letter of November 21, 1977 Assistant Secretary Goodson requested the Corps to not solicit bids for dam construction until the state has evaluated anew some seismic and geologic data pertaining to safety of the dam's design. By letter of November 29, 1977 Colonel Adsit has responded to Secretary Goodson to the effect that independent experts have given more than adequate consideration to the points raised by Secretary Goodson and concluded that the dam's design is overly conservative. The Corps requested all of the states' information underlying its newly expressed concern and requested a meeting between state and Corps representatives at 9 A.M. on 9 December at the Warm Springs Dam site to consider the states' points.

The Colonel's letter also says, and I quote:

"In view of the high escalation cost which would result from further delays of the project, the substantial investment to date of approximately 50 million dollars by the federal government on this California project, and the water supply contract with its respective obligations between the Sonoma Water Agency and the federal government which includes a repayment obligation of a portion of the final cost by Sonoma County Water Agency, it is in the best interest of all parties to expeditiously resolve the matters refered to in your letter."

In the recent past Congressman Clausen, Assemblyman Keene and most of the Boards represented here have communicated their support for Warm Springs to the Department of Resources and other state officials. Representative Warnham has recently come out in favor of this project. Renewed expressions of support from the relevant Boards of Supervisors to the new Secretary of Resources could possibly be beneficial in view of the upcoming meetings between state representatives and the Corps.

Such expressions obviously should not await creation of a joint powers agency. Nor am I suggesting that such an agency would have a significant role in developing policy vis-a-vis Warm Springs.

I do think, however, that the agency might assist in the negotiation of a pooling agreement under which the concerned counties can share both the water and the expenses created by both Warm Springs and Coyote Dam.

I have not thought through just what role the agency might play in this regard, particularly if water agencies—and particularly the Sonoma County Agency—are not parties to the joint powers agreement. The water agencies in Sonoma and Mendocino Counties, not the counties, have water rights from Coyote; and it is the Sonoma County Water Agency that has water rights to Warm Springs. Moreover, significant cooperation has already been exhibited between all concerned county and water agency representatives on the preliminary phases of negotiating a pooling agreement.

On the other hand, if a joint powers agency is to be effective in maximizing the common elements of the North Coast counties' positions on significant water issues. I think it has to be at least knowledgeable about the details of the most immediately significant issue confronting our area.

Joint Powers Agency. Let me turn now to the considerations surrounding a joint powers agreement. Under Government Code Section 6500 and following, "public agencies", which includes counties, cities and public districts, can agree to exercise jointly any powers common to them by creation of a separate governmental agency called a joint powers agency. The obvious strength of this approach is that it allows a regional problem to be dealt with regionally without the necessity of further states legislation. The most obvious weakness is that the agency being created cannot be given greater powers than commonly possessed by the agencies creating it. Thus any joint powers agency created by some or all of the counties represented here would have no actual legislative or executive authority to substantially affect the water rights issues confronting the North Coast region.

What the agency could do, however, is serve as a forum for the development of region-wide policy on state-wide water issues affecting the region and make or at least help coordinate input into the state and federal decision making processes concerning these issues. An agency could hire necessary staff and consultants to achieve these purposes and thereby minimize the cost to each of the individual counties. As I have mentioned the agency might also serve as an effective forum for negotiating a pooling arrangement between the counties and agencies directly interested in the Warm Springs project. It could also serve as a source of information and policy formation concerning other water quantity and quality issues that will undoubtedly affect the North Coast region for many years to come.

To me the strongest argument for creating such an agency is that several very important water issues affecting these counties are likely to be decided at the state level whether we like it or not. A joint powers agency appears to be the most readily available and least expensive means of allowing North Coast elected representatives to have an informed input into the decision making process. In the absence of such an agency it is unlikely that the separate Boards of Supervisors will devote a sufficient amount of their time and their counties' staff and money to develop informed positions, with the result that various organized groups that may or may not represent a broad consensus will be left to speak for our area.

Difficulties to be Confronted by a Joint Powers Agency. It is important to understand, however, that creation and operation of an effective joint powers agency will not be easy. The water rights issues that confront this state are issues of great importance about which honest and reasonable men will differ.

It is likely that each of the Board of Supervisors represented here have members with different views on this subject. It is equally clear that the counties to be represented will have interests that vary in certain respects. Moreover, your constituents now have or will have strongly held and varied views on these matters over the next several years, and the balance of opinion may switch from time to time. Some of the obvious questions you must answer in creating such an agency are the following:

Who will be contracting parties to the agency? Only interested counties, or should water agencies as well as counties be parties?

If water agencies are not parties how can their expertise and resources be employed to assist the joint powers agency?

Who should be on the governing board of the agency? Elected supervisors from each of the participating counties, or supervisors plus other selected representatives?

Where should the agency be headquartered? If at one of the county seats, which one? And how should the choice be made?

How should the agency be staffed? Should it hire permanent employees? Should it contract consultants? Should much of its administrative support be provided by one of the existing counties or by employees on temporary assignment?

How should the agency get its money? Only by direct appropriation by each party or should it seek state, federal or other grants?

How should key employees and consultants be selected to assure that no participating county's interests are prejudiced and that conflicts of interest are avoided?

In what manner and how often should the agency report to the public and to the Boards of Supervisors of its constituent counties to assure the broad acceptability of the policies it develops?

I have not thought it appropriate to propose answers to all these issues; however, I would like to leave you with some thoughts.

In my view a joint powers agency can effectively serve the North Coast region in the water rights area only if it acts primarily to assemble all data reasonably relevant to the important water issues confronting this state and this region, solicits and considers all relevant points of view within the North Coast region and develops clear and concise policies to be expressed not only by representatives of the agency but, and more importantly, also by the representatives who are elected from the North Coast region to represent us in the state and federal legislatures. The views of the agency or its staff will not be significant if they differ markedly from those of its constituent Boards of Supervisors or its state and federal representatives. In other words, the agency should primarily perform staff functions for the area's elected representatives at the county, state and national level.

I think the agency will be effective only if it is perceived by all concerned to be competent and fair in the performance of this function. It should not seek "lowest common denominator" positions. Because the agency will have no real power, it must depend for its effectiveness upon the good sense of the positions it evolves and the effectiveness with which it educates and assists the elected representatives of the area.

I think the details of the agency's charter are much less important than the people who comprise it. Its governing board should reflect the significant points of view that are known to exist in the area and should, to the extent possible, be comprised of persons with knowledge of and interest in these subjects.

I've enjoyed speaking to you. Thank you for the opportunity.

SOCIAL SECURITY FINANCING AMENDMENTS OF 1977

The SPEAKER. Under a previous order of the House, the gentleman from Ohio (Mr. WHALEN) is recognized for 5 minutes.

Mr. WHALEN. Mr. Speaker, I would like to commend the conferees and to express my support for H.R. 9346, the Social Security Financing Amendments of 1977.

In addition to restoring public confidence that the system will be sound when present contributors become eligible for benefits, the measure shores up the underpinings of the system in ways which are compatible to the spirit of social security as envisioned by the statesmen who established the system more than 40 years ago.

Specifically, the conferees have resisted the temptation to shift funds from general revenues into social security at this time or to establish disproportionate rates for contributions from employee and employer. The bill's three-pronged approach toward insuring adequate funds for the system should bring an immediate reversal in the downward trend and result in a gradual rebuilding of the trust funds. Too, should the funds be restored to an adequate level before 1990 when the last payroll tax under this legislation is scheduled—a jump to 7.67 percent each for employers and employees—that increase could possibly be eliminated or reduced.

In addition to adjusting income to the trust funds through the direct payroll tax, the measure makes two significant changes in the operation of the system.

DECOUPLING

First, H.R. 9346 includes a "decoupling" provision to correct an overadjustment for inflation which Congress enacted in the Social Security Amendments of 1972. Under the 1972 law, automatic cost-of-living adjustments for retirees based on rises in the Consumer Price Index were also reflected in the formula for future benefits. Within a few years, this provision will result in workers drawing benefits in excess of their wages at the time of retirement. I have been concerned with the faulty "coupled" benefit formula for some time, and introduced legislation along the lines of the bill before us today. While my bill would keep retirement benefit levels at today's average replacement ratio of approximately 44 percent of wages before retirement, H.R. 9346 provides a slightly lower average replacement level of 41 percent of wages before retirement.

TAXABLE WAGE BASE FOR CONTRIBUTIONS

Second, the Social Security Financing Amendments of 1977 specify an increase in the taxable wage base for contributions—the amount of earnings subject to social security taxes. Providing for upward adjustments over a 3-year period commencing in 1979, H.R. 9346 restores to the original 1936 levels the percentage of workers who will pay social security payroll taxes on all of their earnings. This provision is almost identical to legislation I introduced in both the 94th and 95th Congresses.

LIBERALIZATION OF EARNINGS LIMIT

An especially notable improvement over present law concerns liberalization in the outside earnings limit for persons aged 65 and older—known as the "retirement test." Today retired persons up to age 72 may earn up to $3,000 in wages or self-employment, above which they lose $1 of social security pensions for each $2 earned, with no limit for those 72 and over.

The bill raises the limit to $4,000 next year and by gradual steps to $6,000 in 1982, after which the limit continues to rise with inflation. Those over age 70 will not be subject to a limit. I sponsored legislation to increase the limit to $10,000 this year, but nonetheless welcome this slight increase.

OFFSET PROVISION

My only reservation about the measure before us today concerns acceptance of the Senate's "offset provision" under which retired Federal, State, and local government workers married to persons covered by social security will have their dependent or survivors social security benefits reduced dollar-for-dollar by the amount of their government pension.

My concern is two-fold: First, while the amendment may eventually prove to be equitable and only deprive persons from receiving social security who can afford the loss, I believe this matter should have been subject to thorough study before becoming law, and I regret it did not follow the normal committee and floor consideration in the House; second, in "grandfathering in" this provision, the conferees exempted for the next 5 years all persons who will become eligible for social security benefits if they could qualify for benefits as of January 1, 1977. Thus, widowers who, until the Supreme Court ruled otherwise this spring, formerly had to prove dependency in order to qualify for survivors benefits will again be discriminated against. Mr. Speaker, I fear this provision will bring us grief.

Mr. Speaker, I doubt that any Member of the House or Senate completely supports every detail of this measure. In my view, H.R. 9346 represents a responsible compromise which will serve well the majority of Americans whose lives at one time or another are touched by the social security system. Again, I commend the House and Senate conferees for bringing out the bill in a timely fashion while surmounting the vast ideological and political disparities which arise whenever social security is considered.

FDA—EPILEPSY

The SPEAKER. Under a previous order of the House, the gentleman from Texas (Mr. COLLINS) is recognized for 60 minutes.

Mr. COLLINS of Texas. Mr. Speaker, today I have called on the chairman of the Oversight and Investigations Subcommittee of the Commerce Committee to review procedures within FDA. I have asked our chairman, JOHN MOSS, if we could specifically review the procedures utilized by FDA in releasing drugs for citizens who want to utilize them. I have become keenly interested in a new drug, sodium valproate, which is being successfully used throughout the world for epilepsy. I do not understand the time consuming procedures within FDA. I realize that by the nature of their work, FDA is always in a controversial position. A few months ago we were concerned with why FDA wanted to take saccharin off the market. Now I am keenly interested in why they will not let a new drug, sodium valproate, on the market for epilepsy for those who request it.

Here are the basic facts on this situation. Sodium valproate was first approved for use in France in 1967. It is now being used by more than 120,000 patients daily in 14 other countries, including England, the European country with the strictest drug laws. There have also been 230 studies and published articles on the drug's effectiveness, but sodium valproate has not been approved for use in the United States.

In 1974, after a year of negotiations with the French company distributing the drug, the U.S. drug company Abbott

Laboratories filed an investigational new drug application with the Food and Drug Administration and has been testing the drug during this 3-year period. On April 15, 1977, at a hearing in Washington before the U.S. Commission on the Control of Epilepsy, physicians, consumers, the drug industry and the Food and Drug Administration testified that sodium valproate is a necessary drug for the treatment of epilepsy and that it has benefited many patients outside of this country for the past 10 years. The decision was reached at this hearing that the only reason sodium valproate was not available in the United States was that Abbott Laboratories had not presented proof of its safety and effectiveness to the Food and Drug Administration.

Following the hearing, Dr. Donald Kennedy, FDA Commissioner, stated in an NBC interview on July 18 that "everything I know derives from the experience of people who are clinically competent and for whom I have great scientific respect, and everything that they tell me suggests that sodium valproate is an excellent drug." At the same time, the FDA requested Abbott Laboratories to submit all available data on sodium valproate to FDA for evaluation of the drug's safe and efficacy by an independent panel of experts, FDA's Neurologic Drugs Advisory Committee.

Abbott Laboratories then presented the additional data and received FDA approval for an expanded study. However, due to the expense of producing and monitoring sodium valproate, the drug company also requested and received permission for a limited study restricting applications for the drug to two patients per neurologist. The drug applications specify restrictions as to age, concurrent therapy and seizure type and are limited as well to those patients who are suffering severe side effects from other drugs or who have attained no point of seizure control with other drugs.

These restrictions place a severe burden on doctors who have a sincere desire to treat their patients with the drug, but are reluctant to apply for it because they do not want to show favoritism for only two epileptic cases of the hundreds they may be treating. Another complication the doctors are unwilling to undertake are the lengthy, time-consuming forms, which include an informed consent to be signed by the patient and his parents, four FDA forms and seven forms for the drug company investigation.

Additional data and a new drug application was submitted to the FDA by Abbott Laboratories on September 22, 1977. The FDA legally has 180 days to approve or disapprove this application. After reviewing the additional data supplied by Abbott, the FDA's Neurologic Drugs Advisory Committee unanimously recommended on October 12, 1977, that FDA approve sodium valproate for marketing in the United States. However, instead of following its usual policy of accepting the advice of its advisory committee, the FDA has failed to act on this unanimous scientific recommendation. Rather, it has asked Abbott to furnish more data.

In the meantime, each day's delay in the release of sodium valproate has denied a very necessary, safe and effective treatment to 2 million Americans with epilepsy, and seizures that could be controlled are going uncontrolled for longer periods of time. The FDA delayed approval of this drug is causing parents of epileptics and their physicians severe anxiety in anticipation of a release date, and many epileptics are going out of the country to obtain sodium valproate. Although Dr. Kennedy has stated his approval and scientific data has been evaluated by FDA's own independent experts who unanimously recommended that the drug be approved, the FDA has not done so. Instead, the Agency has requested more scientific data, a bureaucratic delay in the marketing of a drug which promises hope for epileptics in this country.

HUMAN RIGHTS DAY

The SPEAKER. Under the previous order of the House, the gentleman from New Jersey (Mr. HOLLENBECK) is recognized for 5 minutes.

Mr. HOLLENBECK. Mr. Speaker, when the new Constitution was being debated in 1787, Thomas Jefferson was one of those to express grave misgivings about the absence of a specific listing of the rights guaranteed to American citizens. In a letter to James Madison, Jefferson wrote: "Let me add that a bill of rights is what the people are entitled to against every government on earth, general or particular; and what no just government should refuse, or rest on inferences." Madison became convinced of the need for a Bill of Rights, and the authorship of this great national document of freedom has traditionally been attributed to him. In the first Congress, he argued for the necessity of the Bill of Rights by saying:

> If they are incorporated into the constitution, independent tribunals of justice will consider themselves in a peculiar manner the guardians of those rights; they will be an impenetrable bulwark against every assumption of power in the legislative or executive.

Madison was indeed prescient in forecasting what has since become our national heritage. Conceptions of the meaning and coverage of the Bill of Rights have expanded dramatically since their ratification on this day in 1791. Debate over the application and definition of these guaranteed rights is as intense today as ever before. However, our national commitment to these principles as ideals has never been stronger. As Madison himself declared in his response to Jefferson:

> The political truths declared in that solemn manner acquire by degrees the character of fundamental maxims of free government, and as they become incorporated with the National sentiment, counteract the impulses of interest and passion.

December 10 marked the 29th anniversary of the adoption of the Universal Declaration of Human Rights and thus the beginning of Human Rights Week in the United States. Today we observe the 186th anniversary of our own Bill of Rights. Therefore, it is fitting and appropriate that this day has also been designated as Human Rights Day.

In our life as a nation we have come to acknowledge and respect such basic documents as the Bill of Rights, the Declaration of Independence, and the Constitution as comprising the essential and "fundamental maxims" of our country on the equality, dignity, and basic rights of all men and women.

In the international community, the Universal Declaration of Human Rights serves as this standard. Unfortunately, many governments, instead of accepting the Declaration as fundamental maxim, continually deny or violate the rights which it guarantees to all people. It is tragic that, as we observe the anniversaries of the Universal Declaration and our own Bill of Rights, many throughout the world are being denied the basic human rights which have become commonplace to us. The violation of these rights throughout the Soviet Union, Cuba, Eastern Europe, Southeast Asia, and most of Africa is as prevalent as our own dedication to them is in this country.

For two centuries, the United States has served as a symbol of freedom and democracy. Because of this position, many people in these oppressed nations depend on us for our support and encouragement in their pursuit of these principles. Frequently they suffer punishment because of their enunciation and defense of rights which have traditionally been considered "inalienable" in the United States.

As we observe Human Rights Day, we have the responsibility of reaffirming our dedication to basic human rights and freedoms throughout the world.

SALUTE TO PENINSULA SHIPBUILDERS' ASSOCIATION

The SPEAKER. Under a previous order of the House, the gentleman from Virginia (Mr. TRIBLE) is recognized for 10 minutes.

Mr. TRIBLE. Mr. Speaker, last Saturday I had the opportunity to participate in the dedication of the Peninsula Shipbuilders' Association new national headquarters in Newport News, Va.

The PSA represents approximately 19,000 production workers at Newport News Shipbuilding. The men and women of Newport News Shipbuilding have written an impressive record through the years as the principal builders of our Navy's ships and as a leader in merchant ship construction.

The Peninsula Shipbuilders' Association is a model of how an independent union can operate and flourish. The union provides sound and responsible leadership and has done an outstanding job of representing its members.

The purchase and dedication of this new national headquarters will allow the PSA to substantially expand the important services the union provides to its members. Certainly a union can do more for its members than just represent them at the bargaining table, and the PSA has taken the lead in providing greater services to the people.

I also think it is significant that the PSA headquarters has a prayer room and a distinguished chaplain, Rev. J. C. Fauntleroy. How many unions or corporations in the country have reserved a space for their members or employees to pause and speak to God? The example set by the PSA should remind us all that faith in God has given this Nation strength and purpose and must always remain an essential part of our national existence.

In conclusion I want to express my best wishes to Elmer Back, Bob Bryant, Andrew Harris, and the men and women of PSA for continued success, and congratulations for a job well done.

SOCIAL SECURITY REFORM?

The SPEAKER. Under a previous order of the House, the gentleman from Connecticut (Mr. McKinney) is recognized for 5 minutes.

Mr. McKINNEY. I am deeply disturbed by the way in which the conferees, over the past several weeks, have hastily reviewed H.R. 9346, the Social Security Financing Amendments of 1977. In my opinion, the legislation still fails to remedy the long-term financial problems confronting the social security program. It does not contain any of the structural reforms that we know must be forthcoming, as politically unpopular as they may be. Rather, the legislation takes a band-aid approach to the system's difficulties and will not resolve the long-range solvency problems of the social security program.

As has been repeatedly pointed out, and as I have consistently maintained, the social security system is essentially dependent upon the economic growth of our Nation. To raise the marginal tax rates of all Americans by $227 billion over the next decade can only discourage workers and savers and incite taxpayer resistance to the program. In addition, increasing the wage base gives the illusion of trust fund wealth. Certainly more money is pumped into the funds immediately, but revenues generated through wage-base increases must be paid out in later years in the form of higher benefits. Therefore, there is no longrun gain to the social security system. It is my view, that the conference bill cannot help but fuel inflation, stymie capital formation efforts, and prove a dampening effect on employment at a time when the jobless rate is already 7 percent.

Yesterday, I was pleased to learn that the controversial $250 annual college tuition tax credit had been dropped from the social security bill. The impact of H.R. 9346—to practically double the payroll tax, dramatically broaden the taxable wage base, raise the allowable income for retirees and permit automatic loans to the social security trust fund from general revenues—is more than enough to digest in any one piece of legislation. Added to all this, the consideration of a $250-tax credit seemed to be overburdening an already saturated and nonacquiescent social security conference. The tax credit, an amendment introduced by Senator William V. Roth, Jr., is a valid idea and desperately needed by many Americans, but unfortunately, it came at a time and place when it was both inappropriate and mistreated. Perhaps, now, in a more expedient manner, the House Ways and Means Committee and the Senate Finance Committee will give this long-recommended proposal the attention it deserves free of the political constraints of social security reform.

Essentially, H.R. 9346 does not provide the long-range, comprehensive reforms that are needed to restore overall soundness to the social security system and which adequately reflect today's social and economic conditions. Indeed, we are told that the remaining long-range deficit (predicted at $880 billion) will be dealt with when economic and demographic factors affecting the system are better understood. But we know the trends which have placed the current system in jeopardy and which will continue to undermine the program: high rates of inflation and unemployment and the demographic trends of a falling birth rate and increasing longevity. The trends are clear. What is not clear is how long before a comprehensive congressional review is made of the social security program.

Following the stance that additional study of the social security system is required, I joined with my colleagues in deleting the Ways and Means Committee amendment, section 302 of H.R. 8346 and replaced the provision with the Fisher amendment. Section 302 required 6 to 7 million Federal, State, and local government employees plus employees of nonprofit organizations to be covered by social security. The Fisher amendment, offered by Congressman Joseph Fisher, of Virginia, in addition to striking universal coverage, requires a complete and thorough study to be jointly undertaken by the Departments of Treasury, Health, Education, and Welfare, and the Office of Management and Budget on the feasibility and logistics of coordinating social security with existing retirement programs. It should be stressed that the coordination must come about in such a way as not to compromise vested pension rights accrued in other programs.

As originally conceived in 1935, the social security system was intended to be an insurance program for the elderly. Today the system provides a wide range of benefits including, survivor's, disability, hospital, and education payments. While it is apparent that the current structure of the social security system can adequately support the income security programs for the retired and most of the survivors' benefits, it is equally clear that the fund cannot continue to support nonretirement programs. This is not to deny the value of these programs nor the fact that they should be supported by Government funding. However, it is absolutely essential that we examine the entire program to decide whether what was created in the thirties and haphazardly expanded over the years will serve the needs of Americans in the years to come. Or do we need a radically different type of system, one that reflects a less obtrusive role for Government and anticipates reform in welfare, tax, and income policies, and one which anticipates the changing working patterns in our society?

THE FUTURE OF NUCLEAR WASTES

The SPEAKER. Under a previous order of the House, the gentleman from Illinois (Mr. Corcoran) is recognized for 5 minutes.

Mr. CORCORAN of Illinois. Mr. Speaker, today I have introduced legislation which addresses the crucial issue of adequate nuclear waste disposal. Entitled the "Spent Nuclear Fuel Storage Act of 1978," this measure is intended to provide impetus for the formulation of a long overdue national policy for the disposal of spent fuel taken from nuclear reactors and other high- and low-level radioactive wastes which are byproducts of nuclear fission.

After over 30 years of involvement with nuclear power, the United States has yet to come to grips with the problem of what to do with the materials which result from nuclear reactions. The most immediate problem today is the lack of a storage capability for spent fuel which is removed from the reactor after its energy potential, for the purposes of producing electricity, is depleted.

The President's decision early this year not to reprocess this spent fuel has increased the severity of the dilemma in terms of time, because the reactors around the country—which now number in the sixties—continue to produce this byproduct without sufficient onsite storage facilities. The only offsite spent fuel storage facility operating today is in my congressional district—in Morris, Ill. It is estimated that this facility will be filled to capacity sometime early in the next decade. The storage facilities on the individual reactor sites face similar storage problems in the near future.

The other part of the issue involves the temporary and permanent storage of nuclear wastes other than spent fuel. These byproducts must eventually be dealt with on a permanent basis, regardless of whether or not spent fuel will be reprocessed in the future.

My bill would expedite decisions concerning the temporary storage of spent fuel and the permanent storage of spent fuel and other radioactive wastes, including the selection of sites for storage facilities, the determination of whether the Federal Government should take title to such fuel and such waste, and the amount of storage fees which should be charged. This measure directs the Secretary of Energy, in consultation with the Director of the Environmental Protection Agency, the Director of the Council on Environmental Quality, the Director of the U.S. Geological Survey, and the Nuclear Regulatory Commission, and other appropriate agencies to conduct a study to determine the solutions to the aforementioned problems. The Secretary would be required to submit a preliminary report on the interim storage of spent fuel within 6 months after the enactment of the bill, and a preliminary report on the permanent storage of spent fuel and other high- and low-level radioactive wastes within 2 years after enactment.

Mr. Speaker, the issues of interim storage and permanent disposal of nuclear wastes are, literally, growing problems in America. The legislation which I introduced today provides the needed vehicle for Congress to push for a national policy to cope with the environmental ramifications of nuclear power in the years to come.

DEBIT CARD LOSS LIMITATION IMPERATIVE

The SPEAKER. Under a previous order of the House, the gentleman from Illinois (Mr. ANNUNZIO) is recognized for 5 minutes.

Mr. ANNUNZIO. Mr. Speaker, consumer financial tragedies may result if recently proposed legislation is not adopted. Today a consumer using a debit card (a card in which funds are transferred electronically) could lose his life savings if a bank employee debited all the funds from his account or if some other unauthorized access to his accounts occurred. Unlike credit cards, there is no $50 limit on a consumer's liability for losses. Since debit transaction receipts have no signatures, proof that the funds have been stolen is extremely difficult for consumers. Financial institutions have the ability to establish secure computer systems. So far they do not appear to be doing so.

The October issue of the Federal Home Loan Bank Board Journal 77 contains an article reviewing the latest FBI report on crimes against federally insured financial institutions. The article notes that in the category of fraud and embezzlement, there were 4,420 reported violations during the 6 months ending in June 1977, or 65 percent of all types of crimes against insured financial institutions. The article further states:

> However, in recent 6 month periods, total losses from this category of crime have averaged just above $100,000,00 per period, exceeding losses due to robberies, burglaries, and larcenies some 7.7 times.

Bank fraud and embezzlement are one of the ways by which consumers using debit cards could lose their funds.

Another study, a U.S. Department of Commerce report entitled "Crime in Service Industries," indicates that in fiscal year 1976 there were 11,071 incidents of bank fraud or embezzlement resulting in net losses of $175.8 million.

I believe the use of computers in financial institutions contributes significantly to the large increases in fraud and embezzlement, yet computers are essential to electronic banking. Now some financial institutions portray debit card losses occurring only as a result of consumer negligence, yet in discussing computer vulnerability the "Crime in Service Industries" report notes:

> The computer operation of a facility is the area with the greatest crime potential, in dollar terms . . . According to some industry experts, a major share of computer abuse results from carelessness. Employee dishonesty is the second major cause. Remote terminal manipulation is currently a lesser cause, but has the greatest potential.

The report's statistics on computer crimes are frightening when one considers the potential losses to consumers. For instance, the report states:

> Although few cases of computer crimes are documented, it is estimated that for every detected computer crime there are 100 undetected crimes in progress. Furthermore, another estimate indicates that for every five computer related crimes detected, four go unreported. The annual data loss attributed to computer-assisted crime is therefore difficult to ascertain with accuracy. It has been estimated, however, that the loss resulting from average computer-assisted embezzlement is ten times higher than the average $100,000 loss from traditional embezzlement. Dollar loss for one incident has been as high as $5 million, as reported by the U.S. Chamber of Commerce.

Consumers must be protected from the consequences of computer crime. That is why I introduced H.R. 8753, the Consumer Credit Protection Act Amendments of 1977, which provides the first comprehensive consumer protections for electronic funds transfer (EFT) payment systems. One of the most important provisions would limit the loss a consumer could sustain to $50 if unauthorized use of his funds transfer card occurred. This legislation's limitation on liability for losses would protect consumers and provide financial institutions the needed incentive to make their computer systems secure.

COMMENTS ON SELF-INSURANCE FOR PROFESSIONAL LIABILITY

The SPEAKER. Under a previous order of the House, the gentleman from Ohio (Mr. PEASE) is recognized for 5 minutes.

Mr. PEASE. Mr. Speaker, the issue of product liability insurance costs and availability has been attracting an increasing amount of attention here in the Congress. A related, and similarly vexing, problem is that of professional liability insurance carried by doctors, lawyers, architects, engineers, and others who offer personal services.

One of the problems affecting both the product and professional liability insurance markets is the fact that the Federal Tax Code currently precludes the establishment of self-insurance reserve funds. Thus, a person or company that cannot afford or cannot obtain commercial insurance coverage is also penalized by tax laws that virtually close off the self-insurance option.

This is a problem not only for those who must "go bare," without any commercial insurance coverage, but also for those who must take policies with high deductible provisions. In the case of many private practitioners, it is now quite difficult to build up enough of a reserve to cover the deductible portion of a future claim.

In order to facilitate the use of self-insurance reserve funds, as one approach to alleviating the present product/professional insurance crisis, I coauthored the Product Liability Insurance Tax Equity Act, H.R. 7711.

On June 14, the bill's chief author, CHUCK WHALEN, placed a statement in the CONGRESSIONAL RECORD, explaining how the bill would help those with professional liability insurance problems. He noted that a Rand Corp. study estimated that between 19 and 25 percent of all physicians practicing in southern California in 1976 did so without any commercial insurance coverage. The best estimate available was that between 10 and 15 percent of all doctors in the country had "gone bare."

He also observed that the cost of endorsed insurance policies for architects and engineers had doubled in 1975. An estimated 25 percent of the architects enrolled in the insurance program dropped out as a result and are presumed to have gone bare.

In the 6 months since H.R. 7711 was introduced, many national trade and professional associations have endorsed the bill, as have hundreds of individuals. Many of the organizations' statements have been placed in the RECORD, including those from the Federation of American Hospitals, the National Society of Professional Engineers, the American Institute of Architects, and the American Consulting Engineers Council.

Today, I wish to call to my colleagues' attention an article that appears in this month's issue of Private Practice magazine. That publication has as its principal audience family practice physicians and other doctors who work on their own or in a noncorporate environment.

The author of the article on self-insurance for malpractice risk is John H. Tovey. He has graduate degrees in law and medicine and has taught tort law, all of which qualifies him as a learned commentator on this subject, in my opinion.

The text of the article follows:

[From Private Practice magazine, December 1977]

PARTIAL RELIEF FROM THE MALPRACTICE CRISIS? IS SELF-INSURANCE A WAY OUT?

(By John H. Tovey, JD, LLM)

Readers of this magazine do not have to be told that there is a malpractice insurance crisis.

The primary solutions for the physician have been put forward in the past: the first has been to transfer all of your property to somebody else, usually a wife, a child, a parent, or a close relative. It is a dangerous solution because it would not work unless both legal and beneficial ownership of the property were vested in the other person completely. This could cause serious financial problems in the event of a divorce. It could also cause similar problems in the event of dishonesty, imprudence, or legal senility. No competent lawyer that I know would suggest it.

The second solution is "going bare" on the theory that lawyers will not sue practitioners who are uninsured. In 20 years of dealing with physicians' legal problems, I have never found this assumption to be valid. Uninsured physicians have been sued and have had judgments recovered against them. The loss has been considerable because the result has usually been to strip the doctor of assets he was accumulating for retirement, protection against inflation, or college expenses. In short, it is economic disaster for all but the very few who are wealthy enough to withstand a large verdict. And experience teaches us that there may be more than one large verdict in one year, let alone in a professional career.

Another problem with going bare is the increasing costs of legal defense which the uninsured doctor must pay himself. These can be very high when you consider that many malpractice trials last for two to four weeks when the injuries are serious. Even a trial of one week can be expensive.

All of which points out a gross injustice: the physician who can get malpractice insurance may take a current income tax deduction for the premiums he pays. This is fine if the insurance is available but it doesn't do him much good if it is not. He can also take a current income tax deduction for settlements, judgments, or legal fees he pays. But this is not worth much if he cannot afford to pay them. What has been needed for a long time is a remedy that would put the uninsured doctor on a par with those able to get insurance.

Realizing this, Congressman Charles W. Whalen, Jr. (Democrat, Ohio) has introduced HR 7711. The bill, the Product Liability Insurance Tax Equity Act of 1977, is currently before the Committee on Ways and Means. Mr. Whalen is pressing for early hearings and for more co-sponsors.

The bill provides that each professional may establish his own personal malpractice liability trust. It also extends the same right to businessmen for product liability claims. And it provides that those who do may take a deduction for Federal income tax purposes for money paid into this trust to pay the cost of legal defense, settlements, or judgments. In other words, it allows the same income tax deduction you would get if you paid for malpractice insurance.

HR 7711 also provides that any income from the trust is also exempt from the income tax. As such, it can grow, tax free, not only by the contributions of the physician but also by any income earned by the trust whether it be in the form of interest or capital gains. And this is important.

But there is a limitation on the tax deduction. It may not exceed the reasonable cost of malpractice in the area where the physician practices. An orthopedist in California might be allowed a deduction of $20,000 or more per year. A similar specialist in Iowa would probably be allowed less. The rationale is the difference in rates, and risks, in the two areas. But this is no more than a reflection of the premiums that people in the two states would pay—if they could find carriers to accept their payments.

What happens if the trust is not depleted by malpractice problems? The funds may be withdrawn, but they are taxable at ordinary income rates in the year of withdrawal. The theory here is that since the physician got an ordinary income tax deduction for his payments, he should be subject to ordinary income tax rates if he recovers his contributions.

Of course, the bill would impose no tax consequences until the surplus funds were withdrawn. The death of the doctor would not trigger any tax consequences. This is important. If a physician dies, his estate remains subject to malpractice claims. But the fund would be there to protect his family and his assets during the limtations prescribed by state law. The exact time varies, but it should be noted that periods of limitations govern the filing of a suit and not the date when the suit is resolved. As such, it is possible for a malpractice trial to be held years after the death of the physican, and many years after the date of the therapy.

As written, the bill is commendable, but it does leave some unanswered questions. Some of these may be resolved by the time it gets to the full House and to the Senate.

The bill provides, in effect, that deductions shall be governed by regulations issued by the IRS. Since the IRS will not issue regulations until the bill is passed, nobody can tell exactly how it will apply.

The bill does not state how the reasonable value of the malpractice insurance shall be determined. This is a real problem in a state where, for example, no anesthesiologists have been able to get insurance for several years. Suppose someone in this specialty could get 100/300 coverage in 1975 for a premium of $10,000 a year. A deduction of $10,000 in 1975 would be reasonable. But how would you measure what would be reasonable in 1978 if no carrier was willing to write any coverage for that year?

The bill does not prescribe how the IRS would differentiate among practitioners who might want different limits of coverage. A young surgeon with few assets and a lot of debts might be content with coverage of $100,000. Another young anesthesiologist in the same situation who expected to inherit money from his parents might feel he needs more. A neurosurgeon with a large family and substantial assets could believe that he needs very high limits which would have a great cost in premiums. What standards would a bureaucrat apply?

The bill allows a practitioner to set up a personal trust. Fine! But it bothers me that there are no guidelines to bar the IRS from setting out arbitrary standards of how these trust funds may be invested. Suppose the IRS decided that they should be invested in government bonds? A physician might feel that these would not offer him adequate protection against the inflation that he knows is going to continue. He might want to invest his trust funds in common stocks, and real estate, or gold and silver among other things. And he'd be right.

The bill does not limit the power of the IRS to mandate reporting requirements. This is significant because the power to mandate unrestricted paper work is the power to destroy a trust. As OSHA and the FDA among others, have proven, the bureaucrats can and do impose excessive paperwork on just about everyone.

A further danger is that some bureaucrat might decide to allow tax-free payments from these trusts only if the payments were reasonable as determined by themselves. They might also decide that a reasonable payment could be made only if the defendant physician or surgeon had followed the type of therapy—including the prescription of drugs—as laid out by a national formulary system.

There are other problems, of course, but I believe that the ones I have outlined deserve the most serious consideration now.

The bill does have weaknesses as it is presently constituted. But I think it deserves support with pressure for some amendments, Mr. Whalen has taken a giant step toward providing some relief. For that, he deserves the thanks of all of us.

JAPAN NOT BEING A "GOOD BUDDY" IN CB RADIO TRADE

The SPEAKER. Under a previous order of the House, the gentleman from Ohio (Mr. VANIK) is recognized for 5 minutes.

Mr. VANIK. Mr. Speaker, in recent weeks, there have been numerous articles about the efforts of the administration to work with Japan in reducing that country's balance-of-trade surplus by importing more goods from other nations. I strongly support these efforts, since I believe that the current Japanese trade surpluses are creating major disturbances in the world economy.

I would like to explore for a few minutes just one example of how the Japanese economy is geared toward export—and prevents the importation of manufactured goods from other nations. The example is oneof the hottest consumer fad items in recent years, the citizen band radio.

The International Trade Commission is currently considering a petition by American CB transceiver producers for relief from the flood of imports which has hit their market in recent years. I am seriously concerned that these imports may represent perhaps the most blatant attempt yet by a foreign producer to corner our market while denying our industries access to theirs.

Television commercials and newspaper advertisements recently have been filled with offers of CB's at rockbottom prices. Fed by a continuous stream of imports, supply has considerably outpaced demand, and inventories are accumulating at a rapid rate. A few statistics submitted by CB producers to the ITC dramatically illustrate their plight: During the first half of 1977, capacity utilization in the industry stood at an average of 21 percet, down from 55 percent for the same period in 1976. The industry as a whole experienced a meager net profit before taxes of 3.2 percent of sales in the first half of 1976, and then plummeted to a net loss of 38.2 percent in 1977. Finally, employment in the industry has declined by 56 percent over the same 1-year interval.

While the domestic industry is suffering, imports—primarily from Japan—are claiming the lion's share of our market, close to 90 percent according to recent estimates. The volume of imports has increased from about 3 million units in 1972 to 17 million in 1976. Foreign producers as a whole have built up a production capacity which would allow them to supply an estimated three times the world demand for CB's. Morever, there is no question for whom this barrage is intended: The United States is the only market which can absorb large numbers of CB's, accounting for 95 percent of the world market.

Mr. Speaker, what I find most disturbing about this situation is that the Japanese, who produce most of the CB transceivers, prohibit their use within their own country. This effectively shuts off any potential export market for our producers, while our market remains wide open to imports from any direction. It also means that the Japanese have built a massive CB industry for the sole purpose of satisfying demand in the United States. It would be almost impossible to determine whether there has been dumping—since there is no home market price!

I would emphasize that we are not dealing here with the diversion of some modest amount of production for export at competitive prices; virtually all of the resources and production of the Japanese CB industry are aimed squarely at the American market. It is clear that in a case like this, foreign producers must sell at any price, however low and whatever the consequences for American producers.

Mr. Speaker, I submit that any impartial observer would be hard-pressed to characterize these as fair-trading practices. More important, these efforts at any price make a balanced trade policy impossible, and contribute to pressures for restrictionist measures. Trade must be a two-way arrangement; if we open up our markets to foreign producers, we have a right to expect that theirs will be open to us.

I hope that those nations which today are complaining about American pressure to restraint imports will reexamine their own import and export policies before castigating us for taking steps to protect our industries.

THE CLEAN WATER ACT OF 1977, H.R. 3199

The SPEAKER. Under a previous order of the House, the gentleman from Ohio (Mr. CARNEY) is recognized for 5 minutes.

Mr. CARNEY. Mr. Speaker, when the Congressional Steel Caucus was formed in September, the members acknowledged that the caucus would have to deal with a broad range of problems facing the steel industry, including economic and environmental.

Today we are considering the conference report on H.R. 3199, the Clean Water Act of 1977. This is important legislation to assure continued progress in cleaning and maintaining our Nation's water supply. However, as chairman of the Steel Caucus in the House of Representatives, I feel compelled to point out that some provisions of this legislation might create serious problems for the steel industry. More restrictive regulations could add to the costs of an already cost-burdened industry.

Some of the more significant problem areas are:

1977 Best Practicable Technology (BPT) Deadline—The conference report does not address the steel industry's problem, namely the inability to achieve BPT for several years. Testimony before the House Committee on Public Works and Transportation showed that the problems of the steel industry are quite comparable to those of municipal plants; their costs are as great and time schedules for their solutions are equally long. In spite of steel industry investments of over $3 billion to date for pollution control facilities, and in spite of the steel industry spending over $500 million per year to operate and maintain those facilities, the steel industry might still be unable to complete the tasks assigned to it in the time allotted by the conference report. Municipalities are provided extensions until 1982 or 1983, but the conference report provides no comparable time extension for the steel industry to achieve BPT.

1983 Best Attainable Technology (BAT) Deadline—The conference report extends for 1 year, from 1983 to 1984, the deadline for attaining BAT, and provides limited waivers for "conventional" pollutants. It quite properly emphasizes future controls on toxic pollutants. However, the inclusion of the new listing of substances as "toxic", and the denial of any waiver with respect to these materials, poses an additional burden on the steel industry which was not previously contemplated.

Pretreatment—The conference report provides, as we had recommended, that the treatment capability of the publicly-owned treatment plant be considered in pretreatment requirements. The inclusion of requirements relative to the "toxic" pollutants might take away any incentive or advantage from pretreatment.

Best Management Practices—Inclusion of practices required as best management practices in national pollutant discharge elimination system (NPDES) permits, and the requirement that they include consideration of the list of "toxics," could greatly complicate the permit process and monitoring requirement.

Mr. Speaker, in light of these problems which can affect the steel industry and other industries as well, the implementation of the Clean Water Act of 1977 is a cause for concern in the steel-producing regions of this country.

The recent report on the domestic steel industry from Under Secretary of the Treasury Anthony M. Solomon mentions that the Environmental Protection Agency will conduct a regulatory review to determine the possibility of achieving our goals for a cleaner environment at a reduced economic cost if there are certain changes in the regulatory process. As chairman of the congressional steel caucus, I urge that this study be completed within 6 months, and that it pay particular attention to the economic impact on the steel industry of the new regulations stemming from H.R. 3199.

Mr. Speaker, the congressional steel caucus will continue to examine all regulations issued by the Environmental Protection Agency to make certain that these regulations do not impose an unnecessary or unreasonable burden on the Nation's hard-pressed steel industry.

Mr. BUCHANAN. Mr. Speaker, as I indicated in my floor remarks when the conference report on H.R. 3199 was being considered, I am very concerned about the effects of this bill on the steel industry and, therefore, as vice chairman of the steel caucus, join its distinguished chairman in expressing these concerns. The steel industry by its nature has pollution control problems. Realizing this fact, they have expended over $3 billion for environmental control facilities.

Despite these efforts, the steel industry will be unable to meet the April 1, 1979 deadline for using the best practical technology for industrial concerns.

While the bill provides for deadline extensions on a case-by-case basis for municipalities, I feel that some provisions must be made for the steel industry whose costs are as great and time scheduled for their solutions are equally as long as municipalities. The conference report includes no clear means of providing the comparable time required for steel to achieve BPT.

The committee may have to use future legislative relief for the steel industry, so long as they are making a good faith effort to comply, to provide for rational enforcement of the clean water laws.

I hope that both EPA and the committee will keep this in mind as they monitor the effect of H.R. 3199 during the coming months.

Mr. WALGREN. Mr. Speaker, as one concerned with the future of the American steel industry, I want to express my reservations about the lack of a flexible approach to the steel industry's water pollution problems in the conference report on H.R. 3199, the Clean Water Act of 1977.

As reported from conference, the bill imposes an absolute deadline of April 1, 1979, for steel industry compliance with best practicable technology for effluent control, with no provision for an extension of deadlines by the Environmental Protection Agency—even on a case-by-case basis.

This is in direct contrast to the treatment of municipal water pollution facilities where, recognizing the financial limitation of local government, EPA is authorized to extend deadlines through 1983 if justified on a case-by-case basis. The act provides no similar recognition of the financial limitation of the steel industry.

Failure to provide for a flexible approach to water pollution deadlines makes it inevitable that jobs will be eliminated by arbitrary standards set without consideration of the steel industry's financial ability to meet environmental requirements.

The April 1, 1979, deadline is impossible for many American steel facilities to meet. Even if the capital were available, the 15 months remaining is not enough time to engineer and construct such facilities.

And the steel industry is now in a capital crunch. The low cash flow caused by foreign imports and expenditure of capital on environmental controls over the past decade have resulted in an industry that must modernize its basic plants to stay alive—and one that has great difficulty raising capital in view of the limited return on investment because of foreign competition.

Many of the Representatives expressing their concern will vote for the water pollution control bill because of the importance of many of its provisions. I want to be clear, however, that I do not believe in the inflexible, statutory deadline as it applies to the steel industry. I would urge the EPA and any other enforcement agency to adopt a flexible, case-by-case approach to the water pollution problems of this industry.

It is not my intent and, I hope, not the intent of the conferees or this Congress to compel the closing of steel facilities which, despite good faith efforts, are unable to meet the inflexible, statutory deadline.

FEDERAL BUREAU OF INVESTIGATION ACT OF 1978

The SPEAKER. Under a previous order of the House, the gentleman from California (Mr. EDWARDS) is recognized for 5 minutes.

Mr. EDWARDS of California. Mr. Speaker, today I am introducing the Federal Bureau of Investigation Act of 1978, a legislative charter for the Nation's most important law enforcement agency. Ever since the first revelations of FBI domestic intelligence abuses before the Judiciary Committee Subcommittee on Civil and Constitutional Rights several years ago, the call for such a charter has been growing. Now not only the Congress, but the Department of Justice and the FBI, are asking that the FBI be given a legislative statement of policy direction to enable it to undertake essential, publicly recognized and agreed upon functions—nothing more and nothing less.

There are a number of different groups and entities working on similar legislation—the House and Senate Committees on Intelligence are said to be engaged in the process of drafting a charter for all the intelligence agencies in the United States. The Department of Justice has been working on a legislative mandate for the Bureau for some time. And, of course, several bills dealing with reorganization of the Nation's intelligence community already have been introduced and referred to my subcommittee.

But I think this bill serves a special and much needed purpose: It establishes a starting point for discussion of the proper role of Federal law enforcement in this country. This bill starts with the premise that the FBI must be guided at all times by strict adherence to a criminal standard for initiating its investigative efforts. The Department of Justice and the FBI—and others—may feel the FBI cannot carry out its legitimate law enforcement functions on that basis alone. If so, they will have a heavy—and perhaps insurmountable—burden in persuading the American people that departure from that standard is justified. Moreover, to the extent that there are other necessary but noncriminal investigative functions performed by the FBI which are not covered by this bill, we will have to be persuaded of the need for the FBI to perform those functions; appropriate enabling legislation will have to be suggested.

I believe my approach in this bill—a simple statement of the Bureau's authority, with a means for enforcing those limitations—is preferable to the approach taken in previously introduced charters, that is, laundry lists of prohibited activities. The latter will not only be exceedingly difficult to administer but their chance of enactment will be severely lessened by the fact that such bills have been referred to a multitude of committees. Simplicity and a positive approach may be the best and most workable solution.

In any event, I hope from this starting point to work toward the eventual enactment of legislation with which all of us—law enforcement officials, civil libertarians, Members of Congress and, most important, the public—can live. If introducing the bill and holding hearings—which I plan to do in early February—can serve to begin a general public examination and debate on the FBI charter, then I will have accomplished a substantial portion of my goal in drafting this legislation.

The bill follows:

H.R. —

A bill to define the investigative authority of the Federal Bureau of Investigation, to rights under color of Federal law, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Bureau of Investigation Act of 1978".

DEFINITION OF INVESTIGATIVE AUTHORITY OF FBI

SEC. 2. (a) The Federal Bureau of Investigation shall have the authority to investigate all acts or omissions that violate Federal criminal law, except as expressly provided by Act of Congress; such investigations shall be initiated only upon a reasonable suspicion, based on specific and articulate facts and rational inference from such facts, that the subject of the investigation has committed, or is committing, a specific act or omission in violation of a Federal criminal law.

(b) The Federal Bureau of Investigation shall have no other authority to investigate or to engage in law enforcement activities except as expressly provided by act of Congress.

CREATION OF CIVIL REMEDIES FOR VIOLATIONS OF RIGHTS UNDER COLOR OF FEDERAL LAW

SEC. 3. (a) Whoever, under color of Federal law subjects any person to the deprivation of any right, privilege, or immunity secured by the Constitution of the United States, or violates section 2 of this Act, shall be liable to the person aggrieved by such deprivation or violation in a civil action for appropriate legal, equitable, and other relief. Such relief shall include money damages at a liquidated rate of $250 a day for each day such deprivation or violation continues, or $2,500, whichever is greater, punitive damages in appropriate cases, and reasonable attorney fees and other litigation costs reasonably incurred.

(b) A person that may recover relief under subsection (a) of this section may also recover that relief in a civil action against the United States, and the liability of the United States shall be joint and several with any persons who are liable under subsection (a) of this section.

REPEAL OF CERTAIN LAWS TO ELIMINATE COLOR OF AUTHORITY

SEC. 4. (a) Chapter 102 (relating to riots) of title 18 of the United States Code is repealed.

(b) Sections 2384 (relating to seditious conspiracy), 2385 (relating to advocating the overthrow of Government), 2386, relating to registration of certain organizations), 2387 (relating to peacetime interference with loyalty, morale, or discipline of military forces), and 2391 (relating to temporary extension of wartime penalty for interference with loyalty, morale, or discipline of military forces) of such title 18 are all repealed.

(c) The tables of chapters for such title 18 and for part I of such title 18 are each amended by striking out the item relating to chapter 102.

(d) The table of sections for chapter 115 of such title 18 is amended by striking out the items relating to section 2384, section 2385, section 2386, section 2387, and section 2391.

(e) (1) Section 2516 of such title 18 is amended—

(A) by striking out "or chapter 102 (relating to riots)"; and

(B) by inserting "or" before "chapter 105".

(2) Section 14(a) of such title 18 is amended by striking out "2384, 2385, 2387,".

(3) Section 241(a) (17) of the Immigration and Nationality Act (8 U.S.C. 1251(a) (17)) is amended by striking out "section 2384 of title 18;".

(4) Section 349(a) (9) of the Immigration and Nationality Act (8 U.S.C. 1481(a) (9)) is amended by striking out "or willfully performing any act in violation of section 2385" and all that follows through "levy war against them,".

(5) Section 8312(b) (1) (C) of title 5 of the United States Code is amended by striking out "2384 (seditious conspiracy)" and all that follows through "2387 (activities affecting armed forces generally),".

(6) Section 3505 of title 38 of the United States Code is amended by striking out "2385, 2387,".

BILL OF RIGHTS DAY, DECEMBER 15, 1977

The SPEAKER. Under a previous order of the House, the gentleman from Texas (Mr. MATTOX) is recognized for 5 minutes.

Mr. MATTOX. Mr. Speaker, among the great documents of Western civilization is one which stands alone in its powerful evocation of individual freedoms and its unalterable guarantees of liberty and justice—the Bill of Rights.

This document, conceived during an era of turmoil and stress and born this day, 186 years ago, has through the centuries proven itself to be a birthright to the free and an inspiration for the oppressed.

The President has proclaimed today, December 15, to be Bill of Rights Day, and I join with him in saluting its authors—those extraordinary men who possessed the insight to articulate what they felt were "inalienable rights"—ones that would not merely survive, but nourish the new republic from its formative years on up to this very day.

Treaties, governments, and politicians have come and gone these last few hundred years, and even the Constitution has been amended dozens of times. Yet through all this, the first 10 amendments to that Constitution have remained unaltered, with nary a comma nor an apostrophe removed.

Is this so remarkable? It seems so in this age of planned obsolescence, of constant change. But the Bill of Rights embodies those qualities of humanity that are eternal, that give substance to the term "human being." It is in this sense that the Bill of Rights is a living thing on its own. Its sturdiness lies in its capacity to grow, to adapt, and in its ability to be interpreted and applied to a wide range of human activity.

Often these constructions generate controversy, particularly at a time when the Federal Government tends to encroach upon the functions of our States and into the lives of our citizens. Nevertheless, through this constant evolution, the Bill of Rights represents the final, impenetrable bulwark against big government and against totalitarianism. Thank God our forefathers were endowed with the ability to be succinct and exact in their expression of these rights—I am afraid to think of what our present-day bureaucrats, with their "newspeak" and legalese, would come up with given the task of writing such a document as the Bill of Rights.

Where else in the world have nations explicitly quaranteed their citizens such power? Where else have governments possessed the confidence in the people necessary to make them masters of their own destiny?

The freedoms of speech, press, religion; the right to keep and bear arms, to be protected from cruel and unusual punishment. Together they represent dignity for all our people. Without them there is no democracy. They need to be protected, cherished and preserved. Because, Mr. Speaker, the day one of these rights is rescinded, that is the moment we are no longer free.

POPULAR BANKER SURVIVES FORCED RETIREMENT WITHIN COMMUNITY HE SERVES

The SPEAKER. Under a previous order of the House, the gentleman from Florida (Mr. PEPPER) is recognized for 5 minutes.

Mr. PEPPER. Mr. Speaker, I thank you for this opportunity to address the House and my distinguished colleagues on a subject of special and ever-present interest to me, namely the deplorable condition of our senior citizens in this country, especially visible when, as frequently occurs, with the full range of their capabilities and experience still intact and useful to our society, they are summarily discharged from their jobs and livelihood, given a pretty trinket to satisfy their colleagues' esteem, and then sent home to a life of social security, loneliness in many cases, neglect and daily struggle to escape starvation, or merely the death of boredom that comes with having to sit around just waiting for death.

As you are aware, the House has recently acted in regard to this important subject of human waste by passing the Mandatory Retirement Act, which I introduced, and which would seek to alleviate some of these injustices and current oversights.

While we await the passage of this important act into law, I am certainly encouraged by those American employers who have taken the lead in offering their employees the protection from mandatory retirement based on age alone.

A poignant example of an employer's understanding that retirement need no longer be age based was brought to my attention recently and I would like to share it with you at this time.

Mr. William J. Schusel, a very knowledgeable and experienced banker of the Miami community has been the victim of forced retirement on two separate occasions. Mr. Schusel was first forced to retire at the age of 67 from a bank in New York. This was not due to any decline in the performance of his important duties but was due to his having reached a certain place on the calendar. Following that retirement, Mr. Schusel made his way to Florida, where many of this Nation's retirees go. Mr. Schusel knew that he was not yet ripe for old age so he took a responsible job with a bank of my area, which made him a vice president. Here Mr. Schusel worked for 10 years more, until, again, at age 77, he was thought to old to continue in spite of the testimony given by his high level of performance. Thus, Mr. Schusel was retired for the second time, yet did not agree with the judgment of his youngers that he should give up the fight to stay active.

Mr. Schusel's proven stamina and intellect, as well as the foresight of the Jefferson National Bank of Miami Beach and its president, Barton Goldberg, he was able to secure another career for himself. Today, at the age of 77, Mr. Schusel is employed as vice president for community relations at the Jefferson National Bank.

So, once again Mr. Schusel's determination and abilities, and not his age, have enabled him to again find employment as a high official of a bank.

The Jefferson National Bank of Miami Beach, and its president and my personal friend, Mr. Barton S. Goldberg, are to be commended for their foresight in offering employment opportunities to individuals on the basis of their capabilities, their experience, and their performance rather than on the basis of their age.

I am proud to be able to insert the following news item, about Mr. Schusel's election to his new post this year, at this point in the RECORD:

SCHUSEL ELECTED

William J. Schusel has been elected Vice President of Jefferson National Bank of Miami Beach. He will be working in Community Relations.

Schusel began his 35 years of banking experience at Chase Manhattan Bank of New York City where, as a Branch Manager, took full responsibility of the entire staff. Prior to his retirement from Chase Manhattan, he was offered a position as Vice President of the Carner Bank of Miami Beach as an Operations Officer. During his ten years there, he organized a Business Development Department increasing customers through his efforts.

Schusel is deeply involved in community activities throughout the area. He is presently serving a two-year term as President of the Biscayne Democratic Club of Miami. He is also a Past President of the Miami Beach Optimist Club and is a recipient of over 40 plaques and citations including the "Good Citizen of the Week" award.

Schusel and his wife, Ruth, reside at the Burleigh House in Miami Beach.

PERSONAL EXPLANATION

The SPEAKER. Under a previous order of the House, the gentleman from Texas (Mr. WHITE) is recognized for 5 minutes.

Mr. WHITE. Mr. Speaker, I was unable to be present last week when the House convened as I was obligated to attend to official business in the 16th District of Texas. I would like to take this opportunity to record how I would have voted on the legislative measures which came before the House during my absence. The rollcall votes I have not included in my summary were calls of the House. I appreciate your attention to this personal matter.

On rollcall No. 747 (November 29, 1977), adoption of the conference report on H.R. 7, to authorize a career education program for elementary. secondary and postsecondary schools for fiscal years 1979 through 1983, I would have voted "yes."

On rollcall No. 748 (November 29, 1977), motion that the House resolve itself into the Committee of the Whole for the consideration of the resolution, H. Res. 827, to disapprove Reorganization Plan Numbered 2 of 1977, I would have voted "yes."

On rollcall No. 749 (November 29, 1977), adoption of the resolution, H. Res. 827, to disapprove Reorganization Plan Numbered 2 of 1977, I would have voted "no."

On rollcall No. 751 (November 29, 1977), preferential motion that the House concur in the amendment of the Senate to the amendment of the House to the amendment numbered 82 to H.R. 7555, the bill making appropriations to the Departments of Labor and Health, Education, and Welfare, and related agencies for the fiscal year ending September 30, 1978, I would have voted "no."

On rollcall No. 753 (November 30, 1977), motion on ordering the previous question on the motion to recommit the conference report on H.R. 9375 to the committee of the conference, with instructions to the managers on the part of the House to increase Amtrak funds to $11.5 million, I would have voted "no."

On rollcall No. 754 (November 30, 1977), amendment to the motion to recommit H.R. 9375 to the committee of the conference with instructions to managers on the part of the House to increase Amtrak funds to $18 million, I would have voted "yes."

On rollcall No. 755 (November 30, 1977), motion to recommit the conference report on H.R. 9375 to the committee of the conference with instruction to managers on the part of the House to increase Amtrak funds to $18 million, I would have voted "yes."

On rollcall No. 756 (November 30, 1977), motion to order the previous question on the motion to instruct House conferees on H.R. 9346, the Social Security Financing Amendments of 1977, I would have voted "no."

On rollcall No. 757 (November 30, 1977), preferential motion that the managers on the part of the House at the conference on H.R. 9346 be instructed to insist on section 501 of the bill as adopted by the House, to provide for the liberalization and eventual repeal of the earnings test for individuals age 65 and over under the old-age survivors and disability program of the Social Security Act, I would have voted "yes."

On rollcall No. 759 (December 1, 1977), adoption of resolution authorizing funds for the investigation of Korean-American relations being conducted by the Subcommittee on International Organizations of the Committee on International Relations, I would have voted "yes."

CAPTIVE NATIONS WEEK—1977 HONOR ROLL

The SPEAKER. Under a previous order of the House, the gentleman from Pennsylvania (Mr. FLOOD) is recognized for 5 minutes.

Mr. FLOOD. Mr. Speaker, at the close of each year the National Captive Nations Committee compiles an honor roll listing of those American leaders, institutions, and media that contributed to the success of the annual Captive Nations Week, as provided for in Public Law 86–90. It is my privilege to submit for the RECORD the honor roll for the 1977 Captive Nations Week. In addition, with an eye to the 20th Captive Nations Week observance next July, I submit also the commentary in the International Digest on "Americans Demand More Support for Captive Nations":

CAPTIVE NATIONS WEEK—1977 HONOR ROLL

PRESIDENT OF THE UNITED STATES

Jimmy Carter.

U.S. SENATE

Robert Dole, John Heinz, Thomas J. McIntyre, Charles H. Percy, Harrison (Jack) Schmitt, Harrison A. Williams, Jr.

HOUSE OF REPRESENTATIVES

Joseph P. Addabbo, Glenn M. Anderson, Frank Annunzio, John M. Ashbrook, Mario Biaggi, William S. Broomfield, J. Herbert Burke, James C. Cleveland, Barber B. Conable, Jr., Silvio O. Conte.

R. Lawrence Coughlin, Philip M. Crane, James J. Delaney, Edward J. Derwinski, John D. Dingell, Joshua Eilberg, Millicent Fenwick, Daniel J. Flood, Louis Frey, Jr., Benjamin Gilman.

Marjorie Holt, Frank Horton, Henry J. Hyde, Jack Kemp, Edward I. Koch, Peter H. Kostmayer, Joseph A. Le Fante, Norman F. Lent, Robert McClory, Joseph M. McDade.

Lawrence P. McDonald, Marc L. Marks, Morgan F. Murphy, Henry J. Nowak, Mary Rose Oakar, Richard L. Ottinger, Claude Pepper, John J. Rhodes, Peter W. Rodino, Jr., John H. Rousselot.

Eldon Rudd, Ronald A. Sarasin, Newton I. Steers, Jr., Samuel Stratton, Larry Winn, Jr., Lester L. Wolff, John W. Wydler, C. W. Young, Clement J. Zablocki.

GOVERNORS

Connectiut, Ella Grasso.
Illinois, James R. Thompson.

[From the International Digest, August-September 1977]

AMERICANS DEMAND MORE SUPPORT FOR CAPTIVE NATIONS

President Jimmy Carter, who has made human rights a centerpiece of U.S. foreign policy, almost became the first president since 1959 and the enactment of Public Law 86–90 not to support the human rights of 1.5 billion people in the 30 captive nations.

Signed by President Dwight D. Eisenhower on July 17, 1959, the law states that "the President of the United States is authorized and requested to issue a proclamation designating the third week in July 1959 as 'Captive Nations Week'."

The law further states that the President is "authorized and requested" to issue similar proclamations each year "until such time as freedom and independence shall have been achieved for all the captive nations of the world."

But, unlike the five past presidents—Dwight D. Eisenhower, John F. Kennedy, Lyndon B. Johnson, Richard M. Nixon, and Gerald R. Ford—President Jimmy Carter did not issue a Captive Nations proclamation until he came under so much political and public pressure that he *had* to do it.

CURIOUS INACTION

In May of this year, ACWF President Dr. Lev Dobriansky, chairman of the National Captive Nations Committee (NCNC), wrote to the President, reminding him of Captive Nations Week in July, and stressing its fundamental compatibility with human rights.

For the next two months, Dr. Dobriansky was in contact with various representatives of the Carter administration and at no time received any inkling that there would not be a presidential proclamation.

In the meantime, many members of Congress called attention to the importance of the 19th Captive Nations Week observance. "The importance of this observance," Rep. Edward J. Derwinski (R-Ill.) said on July 12, "is that it places emphasis on the denial of freedom and human rights to over 100 million non-Russians held captive within the U.S.S.R."

On July 14, Rep. Daniel J. Flood (D-Pa.) told the House that "the captive nations concept and the human rights one are supremely intertwined." He added, "July 17–23, Captive Nations Week, provides us with the forum to discuss human rights, especially while the Belgrade conference on the Helsinki accords remains underway."

On July 15, two days before Captive Nations Week was to begin, Dr. Dobriansky had to leave Washington, D.C. to fly to Cleveland to participate in a panel on detente. He asked NCNC executive director Lee Edwards to follow through on what he believed to be a pro forma statement.

"At approximately 4:30 p.m.," Edwards reported, "the Committee's executive director got through to Greg Treverton, a staff member of the National Security Council, who calmly revealed that there would be no presidential proclamation in 1977. . . .

"The NCNC director protested. He predicted there would be wide-spread disappointment over the President's inaction. Treverton responded that the non-proclamation should not be interpreted as a retreat by the President on human rights or national self-determination. The Captive Nations representative assured Treverton that failure to issue a proclamation would be seen as just that. . . ."

Since 1959 and through 10 Congresses, not only Presidents, but governors, mayors, state legislatures have issued Captive Nations Week proclamations. American organizations and citizens concerned about national security and cognizant of the Communist thrust toward world domination, remember the third week of July in their cities. Clergy observes the week in religious services. Internationally, Captive Nations Week is observed by many free nations.

SUDDEN REVERSAL BY PRESIDENT CARTER

At the midpoint of Captive Nations Week, opposition to the President's inaction mounted in Congress and throughout the nation.

In a sharply-worded letter to the President, NCNC chairman Dr. Dobriansky wrote:

"Your failure to proclaim Captive Nations Week is a source of grave disappointment to millions of Americans and our allies abroad. Those in the Kremlin and other communist totalitarian centers are doubtlessly happy and delighted by this generous inaction and certainly will weigh it accordingly.

"For one who is supposedly committed to human rights globally we expected from you the strongest proclamation yet. Instead, for the first time since 1959 and in strange contrast to your five predecessors you chose to ignore this traditional annual observance of Captive Nations Week that has consistently given coherent expression to human rights on the scale of over 27 nations held in communist captivity.

"Your indifference to this concrete issue reflects not only poor judgment but also casts heavy clouds of doubt over the substance and directions of your human rights advocacy. We are appalled by this indifference. On record, it may be a cosmetic 'first,' but it is also a new low in this basic barometer of our foreign policy course toward the imperio-totalitarian part of the world."

On July 18, Sen. Thomas J. McIntyre (D-N.H.) stated that "we cannot ignore the plight of those formerly free nations now dominated by the Soviet Union." Sen. H. John Heinz III (R-Pa.) told his colleagues that "'it is fitting that we in the Senate should observe Captive Nations Week.

"It is fitting," he said, "because imperialism and colonialism still exist, . . . because despite our own freedom, there are millions of people in Europe, Asia and Africa oppressed by Communist regimes."

Sen. Robert Dole (R-Kan.) sent a telegram to President Carter "urging him to follow the lead of his distinguished predecessors." He said that the "oversight on the part of the White House has grieved thousands of Americans of East European ancestry . . ." "This oversight," he added, "if not corrected, will take on overtones which could seriously undermine the President's credibility in the human rights arena."

Andrew Valuchek, director of minority divisions at the Democratic National Committee, was reportedly among those who issued a special plea to the White House to come forth with a proclamation.

House members, in honor of Captive Nations Week, scheduled a special order July 20 which would have discussed President Carter's refusal to issue a statement.

Finally, at 11:30 a.m., July 20, about one hour before the House began the discussion, and four days into the Week itself, President Carter reversed his decision. A tardy and weakly worded proclamation was issued, designating July 17–23 as Captive Nations Week.

BIGGEST RETREAT SINCE NAPOLEON

To the surprise of American and foreign observers, the statement made no mention of communism, the Soviet Union, Communist China, Communist Cuba, or any of the 30 nations now under communism. It did not even contain the word "totalitarian," a well-known reference to the Soviet Union.

NCNC executive director Edwards called the statement "innocuous, bland, political boilerplate."

In a statement, Dr. Dobriansky said:

"We note that this deplorable misreading of the cause of captive nations follows closely the formation of the inter-agency committee on U.S.-U.S.S.R. relations—the first such governmental agency of its kind.

"We feel compelled to ask: Which is more important to this administration—human rights or relations with the Soviet Union.

"We will be watching very carefully the administration and the White House to determine the answer and how President Carter develops what he himself has called his 'crusade for human rights.'

"His near disastrous inaction on Captive Nations Week suggests that his commitment to his human rights crusade is growing lukewarm if not cold.

"If so, that is tragic news for the hundreds of millions living under communism who look to the U.S. and its leaders for encouragement, inspiration and hope for their individual freedom and national independence."

The Rising Tide wrote that the President's handling of the Captive Nations Week proclamation lends further evidence that his administration is doing everything to assuage the Soviet Union.

The Washington Star said that the President's statement marking the observance was "bland and devoid of allusions to Communist enslavement." "If," it wrote, "the Soviet leaders nurse genuine doubts about Carter's aim in regard to human rights, they should gain confidence from his statement on Captive Nations Week."

Human Events wrote, "This Carter effort to appease Moscow follows a series of other major accommodation moves, including cancellation of the B–1, the scrapping of the production of the Minuteman III missile, the elimination of an upgraded guidance system for the Minuteman II, the end to the hardline Foreign Intelligence Advisory Board, and a move to end the Jackson-Vanik amendment limiting trade with the Soviet Union."

The conservative weekly called President Carter's failure to proclaim Captive Nations Week "the biggest retreat before the Russians since Napoleon's army escaped Moscow in the winter of 1812."

TARNISHED OBSERVANCE

Rep. John M. Ashbrook (R-Ohio) said, "Unfortunately, President Carter's proclamation is weak, vague and useless." He recalled that in his 1959 declaration President Eisenhower "pointed the finger at 'Soviet Communism' as the tyrant."

Calling attention to reports that "the Carter administration might be abandoning free China in order to get closer relations with the oppressors of 800 million people on the Chinese mainland," Rep. Ashbrook said "this would be another setback for the hopes of all peoples throughout the world who love freedom."

Rep. Philip M. Crane (R-Ill.) said, "The 19th observance of Captive Nations Week has been tarnished this year by the very man who has attempted to identify himself with the issues of human rights and dignity."

Rep. Edward J. Derwinski (R-Ill.) stated, "Even though the liberal establishment looked down on Captive Nations Week observances as being obsolete, the facts of life are that there is not any subject that so directly affects world political, geopolitical, and military relations than the issue of the captive peoples and the totalitarian regimes which oppress them."

Rep. Mario Biaggi (D-N.Y.) noted that President Carter's "belated issuance" of a Captive Nations Week statement "represented a significant step backward" in "his announced campaign for human rights." He told the House that "many marches and observances have been conducted around the nation in honor of Captive Nations Week."

Sen. Dole said, "It is somewhat disappointing that the proclamation text was not more affirmative in its reference to the plight of Communist dominated nations. President Carter's proclamation, which appeared to be issued more or less as an afterthought, was much more terse and reserved in tone than those issued in previous years."

CONGRESSIONAL HOMAGE TO CAPTIVE NATIONS

Rep. Lester L. Wolff (D-N.Y.) stated in a House speech, "Let us commemorate Captive Nations Week by saluting the determined peoples of the captive nations in their struggle to obtain the human rights guaranteed to them by the Helsinki accords and international law, and let us spare no effort in assisting those peoples to live once more in freedom."

Rep. Benjamin A. Gilman (R-N.Y.) said that "only by seeking full implementation of . . . the Helsinki accords, and by consistent articulation of this Nation's commitment to the realization by all peoples of their human rights, can we advance the cause of those ideals outlined in our observance of Captive Nations Week."

Rep. Marjorie S. Holt (R-Md.) cautioned against "indulging in an exercise in futility," saying that "as we mark Captive Nations Week . . . let us conduct a self-examination to evaluate whether we are effectively responding to the threat of a totalitarian force that seeks control of the world."

Rep. Larry Winn, Jr. (R-Kan.) said that "by acknowledging Captive Nations Week we are reminding Soviet-dominated Eastern Europeans that we have not forgotten them."

Rep. Peter W. Rodino (D-N.J.) noted that "we cannot forget our commitment to the goal of securing the fundamental rights of all individuals," and that "now we must emphasize the cause of freedom in our relations with other nations until all the peoples of the world may celebrate their successful quest for human dignity and freedom."

Rep. James C. Cleveland (R-N.H) said that "it is very disheartening that the roster of nations under Communist domination grows longer with each passing year." "I am alarmed," he added, "by recent overtures made to several Communist governments, especially the proposals to assume diplomatic relations with Cuba, and to withdraw American troops from South Korea."

Rep. John H. Rousselot (R-Calif.) said that "it is truly unfortunate that America's current foreign policy seems to conflict with our respect for the human rights of the captive nations."

Rep. Millicent Fenwick (R-N.J.) drew the attention of her colleagues to "the tragic situation in the Baltic countries, the Ukraine, other captive nations in Eastern Europe, and in the world," and especially "the plight of the world's latest refugees, the Vietnamese, Cambodians and Laotians."

Rep. Morgan F. Murphy (D-Ill.) said that "the purpose of our Captive Nations Week observance is to express support for all nations held in subjection by the Soviet Union."

Rep. Henry J. Hyde (R-Ill.) suggested that "we should monitor closely the Soviets' compliance with the Helsinki accords."

Rep. Clement J. Zablocki (D-Wis.), chairman of the Committee on International Relations, while supporting efforts toward easing up tensions asserted that "our commitment to these goals does not mean that we accept or condone Soviet oppression over its own minorities or over the peoples of Eastern Europe . . ."

Rep. Peter H. Kostmayer (D-Pa.) said that "we must not limit our words to a single week." "We must," he added, "continue to raise our voices each day on behalf of those who still suffer."

Rep. Richard L. Ottinger (D-N.Y.) said that "extending our deepest sympathy to those oppressed peoples behind the Iron Curtain is only part of our responsibility."

Rep. Eldon Rudd (R-Ariz.) stated that in the spirit of Captive Nations Week, Secretary of State Cyrus Vance should do nothing "to interfere with or weaken in any way . . . our solemn commitment to the people of the Republic of China."

Rep. Ronald A. Sarasin (R-Conn.) reminded the House of a resolution he introduced on March 24, 1977, urging the U.S. not to recognize "the Soviet Union's unlawful annexation of Lithuania, Latvia and Estonia."

Rep. Jack F. Kemp (R-N.Y.) introduced a resolution outlining a "strategy for freedom." This resolution was first suggested, he said, by Russian dissident Vladimir Bukovsky and on behalf of thousands of people "whose courage is unequaled in standing up to the whole totalitarian machinery of the Communist world." In announcing the resolution, Rep. Kemp paid tribute to Dr. Lev Dobriansky, "whose help and leadership" on the Captive Nations issue is "deeply appreciated."

The strategy for freedom includes eight following points:

(1) Make U.S. trade with and economic aid to the Soviet Union dependent on Soviet observance of civil rights agreements;

(2) Demand that Soviet leaders admit observers to their prisons, prison camps, psychiatric hospitals and trials;

(3) Investigate infringement of civil freedom in the Soviet Union;

(4) Obtain free contact between Western groups which seek to bolster the Helsinki accords and similar groups which have spontaneously sprung up behind the Iron Curtain;

(5) Appeal to Moscow at the Belgrade conference as a signatory to the Genocide Convention, for the restoration of Ukraine's Orthodox and Catholic Churches;

(6) Urge the direct signations of Ukraine and Byelorussia, which are members of the United Nations, to the Helsinki accords while advancing the idea of direct diplomatic relations with these non-Russian republics;

(7) Advance the human rights issue by openly exposing all the accumulated cases of Moscow's continuing violation and deprivation of these rights within the USSR; and

(8) Press for accountability in terms of the U.N. Charter, the Declaration of Human Rights, and other legal instruments upholding human rights.

NATIONAL SALUTES TO CAPTIVE NATIONS WEEK

In his Captive Nations Week statement, AFL–CIO President George Meany was critical of "self-delusion," and the West's "blindness or indifference" to captive nations, saying that "there is no more important and burning issue today than that of human rights." He issued "calls for renewed and much stronger advocacy and action for human freedom."

Gov. William G. Milliken of Michigan said that captive peoples in the world "look to the U.S. as the vanguard of human freedom." Gov. Meldrim Thomson, Jr., of New Hampshire, urged "our citizens to observe Captive Nations Week with appropriate ceremonies and activities including strong opposition to the continuation of detente with Communist Russia and Red China."

Gov. Raul Castro of Arizona condemned "the imperialistic policies of Russian Communists," and called upon the American people "to offer prayers and dedicate their efforts for the peaceful liberation of the captive nations."

Vincent A. Cianci, Jr., Mayor of the City of Providence (R.I.), emphasized in his statement the fact that "all the personal freedom that we enjoy is still being denied many of our fellow human beings throughout the world."

THE FEDERAL RESERVE BOARD SELECTION REFORM ACT

The SPEAKER. Under a previous order of the House, the gentleman from Massachusetts (Mr. Drinan) is recognized for 10 minutes.

Mr. DRINAN. Mr. Speaker, when President Carter makes his decision in the coming months on the appointment or reappointment of a Chairman of the Federal Reserve Board for the next 4 years, it is important that his decision be based on the merits of each candidate for the position. However, under present Federal law, the President's decision may have to be based on where individual candidates live, rather than on how qualified they are to guide domestic monetary policy and make informed judgments about inflation and unemployment.

As my colleagues know, the Board of the "Fed" is composed of seven Governors, not more than one of whom may be from any 1 of the 12 Federal Reserve Districts. The term of office for the Governors is 14 years, with one person's term expiring every other year. The Chairman is designated by the President every 4 years. Thus, Arthur Burns' second term as Chairman expires next year, pending a decision by the President, but Mr. Burns' term as a Governor will continue until 1984.

The statutory problem facing President Carter is very simple. Should he decide to appoint a new Federal Reserve Chairman from outside the existing Board, he must restrict his choice to individuals from only 6 of the 12 Fed Districts. Under the current situation, an individual from Boise or Sante Fe is eligible for the chairmanship, while an individual from New York or Dallas is not.

While the geographic restriction may help assure diversity on the seven-member Board as a whole, there is no justification for arbitrarily restricting the President's ability to choose the best individual for the job of Chairman.

In 1952, Federal Reserve Chairman William McChesney Martin, who held that post from 1951 until 1970, called for the repeal of the provision that no more than one Governor be appointed from any one district. During that same year, the Joint Committee on the Economic Report, the predecessor of today's Joint Economic Committee, noted:

> If there were a member of the Board from Los Angeles, California, it would not be possible to appoint another member from Seattle, Washington, nearly 1,400 miles away. The removal of the limitation on the appointment of more than one member from any Federal Reserve District would permit more flexibility and make possible meritorious appointments in situations of this kind.

The legislation I am introducing today constitutes a narrower change than what was endorsed by the Joint Economic Report Committee and Federal Reserve Chairman Martin more than 25 years ago. It waives the "geographic rule" only as it applies to prospective Chairmen of the Fed, and continues to assure regional diversity on the Board itself. My bill will simply give President Carter—and all future Presidents—the flexibility they need to choose the most qualified person to chair the Federal Reserve Board.

Given the extremely important role the Federal Reserve Board plays in the formulation and implementation of our Nation's economic policy, it is incumbent upon us to correct any structural deficiencies in the Federal Reserve System. The Federal Reserve Board Selection Reform Act, which I am introducing today, represents a significant and timely improvement in the process of selecting a man or woman who will make critical decisions on matters affecting the American economy.

For the convenience of my colleagues, a text of this legislation follows:

H.R. 10309

A bill to amend the Federal Reserve Act to allow the President to appoint an individual to serve on the Federal Reserve Board whom he intends to designate as chairman who is from the same Federal Reserve district as a current member of the Board

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Reserve Board Selection Reform Act."

SEC. 2. (a) The second sentence of the first paragraph of section 10 of the Federal Reserve Act (12 U.S.C. 241) is amended by striking out "In" and inserting in lieu thereof "Except as hereafter provided, in".

(b) The first paragraph of section 10 of the Federal Reserve Act (12 U.S.C. 241) is amended by inserting immediately after the second sentence thereof the following: "Whenever the President appoints an individual to serve as a member of the Board whom he intends to designate as chairman, then such individual may be selected from any Federal Reserve district.

HUMAN RIGHTS AT BELGRADE

The SPEAKER. Under a previous order of the House, the gentleman from Florida (Mr. Fascell) is recognized for 10 minutes.

Mr. FASCELL. Mr. Speaker, while the United States has been observing the anniversary of the 1948 Universal Declaration of Human Rights this week at home, the American delegation to the Belgrade Conference has been pressing the cause of human rights abroad. That Conference—the first gathering of the 35 Helsinki signatory states to review the implementation of their 1975 accord—has been engaged for the last month in considering proposals to strengthen and speed the process of compliance. More than 80 proposals, of varying degrees of seriousness and specificity, have been offered. The ideas deal with everything from improving the opportunities for small firms to engage in East-West trade to speeding the time and lowering the cost of obtaining permission for the reunification of divided families.

This week, appropriately, the discussion in committee turned to proposals—made by Eastern as well as Western delegations—dealing with the human rights pledges of the signatories. Our European allies are seeking special recognition and respect for the work of individuals, such as the valiant members of the Soviet Helsinki Watch, in promoting implementation of the accord. The Vatican has offered special language to assure the free exercise of religious belief. And the U.S. delegation, ably headed by Ambassador Arthur Goldberg, has put forward a proposed reaffirmation of the importance of the fundamental Helsinki principle on human rights, including the freedom of thought, conscience, religion, or belief.

That U.S. proposal was formally offered by Ambassador Goldberg earlier this month. Monday, December 12, R.

Spencer Oliver—a member of the delegation and staff director of the Commission on Security and Cooperation in Europe—presented it and the reasoning behind it in a thoughtful statement of U.S. human rights concerns. Mr. Oliver also responded ably to some of the Eastern proposals on human rights, noting that a Hungarian proposal on the right to work could be strengthened by incorporating the recognition that—

> No person should be denied a job or fired from a job because he chooses to exercise rights guaranteed by provisions of the Final Act or other international agreements. We are particularly concerned when citizens of any participating State are dismissed from their jobs simply because they applied to emigrate, or because they practiced their religion, or because they exercised simple freedom of speech or assembly.

Such penalties have been imposed on people in Czechoslovakia, Romania, and the Soviet Union, and Mr. Oliver noted that the United States has "taken note of this regrettable practice and protested against it in many other forums, including this one."

But the bulk of his address was devoted to arguing the need for a fresh pledge by the Helsinki signatories to put their original human rights promise into practice. Citing, in particular, the harsh jail sentences given to two Ukrainian Helsinki monitors this year—Mikola Rudenko and Oleksei Tykhy—he pointed out that violations of human rights have preoccupied U.S. policymakers since Secretary of State George Marshall told the United Nations nearly 30 years ago:

> Governments which systematically disregard the rights of their own people are not likely to respect the rights of other nations and other people.

Excerpts from Mr. Oliver's address follow. They are an appropriate reminder of the work the U.S. delegation is engaged in at Belgrade and of the concrete way in which our Nation commemorates Human Rights Week:

EXCERPTS FROM REMARKS OF R. SPENCER OLIVER, FOR THE U.S. DELEGATION AT THE BELGRADE CONFERENCE

We believe that this renewed commitment is necessary and appropriate, especially since so much attention here and in other forums has been devoted to the discussion of implementation—or lack of implementation, of the important promises made in Principle Seven. As President Carter, in his report to the Commission on Security and Cooperation in Europe, said a few days ago "The broad principles of Basket One concerning relations among states continue to be better respected than those principles concerning relations between states and their peoples, though genuine security in Europe requires removal of the threat of arbitrary arrest or persecution no less than removal of the threat of war."

We are concerned, therefore, when we observe repeated violations of human rights in certain countries, violations which directly contradict the promises which were made in Helsinki more than two years ago. We are also concerned when some signatory states, whose record on human rights is particularly poor, refuse to even discuss these matters in this important forum. We cannot help but notice the inconsistency of these positions when, for instance, one country two days ago celebrated human rights day by unleashing a barrage of criticism against my country and other Western nations through their official media and propaganda organs, while at the same time holding under house arrest those citizens who wanted to merely assembly peacefully to silently join their friends and colleagues in observance of this important day.

And, Mr. Chairman, we are gravely concerned about the fate of those men and women who have been subjected to harassment, arrest, imprisonment, and exile because they did nothing more than to take seriously the promises made by all of us in Helsinki.

My delegation has mentioned the names of some of these people in the Plenary and in Basket III. As the chairman of our delegation has said, we do not mention names to be confrontational, but merely to illustrate our concerns over lack of implementation of the human rights provisions of the Final Act by certain countries. We have expressed our specific concern for the members of the Helsinki Monitoring Groups because we feel that the treatment they have received should be of direct concern to this Belgrade meeting. We have spoken forthrightly of our concern for the fate of those who sit today in prisons without contact with their families or lawyers, without charges formally against them, in violation not only of the Helsinki Final Act, the Universal Declaration and the Covenants on Civil and Political Rights, but also in violation of rights supposedly guaranteed by their own laws.

There are others, like Mykola Rudenko and Oleksei Tykhy, founders of the Ukrainian Group to Promote Observance of the Helsinki Accord in the USSR, who were given maximum sentences—12 and 15 years loss of freedom, respectively—for merely exercising the rights which Principle Seven guarantees. We could go on and mention other names, other denials of fundamental human rights, including the names of political prisoners, of people who are in prison or exile because they merely sought to practice their religion or to express their opinions or thoughts, or follow the dictates of their conscience. It is sufficient, at this time, however, to say only, as Vice President Mondale said a few days ago when he spoke on behalf of human rights activists, that their lives "are a testament to moral courage like few we will see in our time, and because of their courage . . . because of their unyielding commitment to liberty . . . those who enter the moral conflict . . . all those struggling to be free . . . have companions in every corner of the world today."

HELPING URBAN CONSUMERS UNDER THE PROBLEMS OF OUR NATION'S FARMERS

The SPEAKER. Under a previous order of the House, the gentlewoman from Kansas (Mrs. KEYS) is recognized for 5 minutes.

Mrs. KEYS. Mr. Speaker, on Wednesday, December 14, 1977, the first day of the agriculture strike, I sent letters to the editors of more than 100 of America's largest newspapers explaining why I think the Nation's farmers deserve higher prices for their products. It is my firm belief that one of the main benefits of the strike has been the publicity it has created for the farmers' problems.

The farmers' message is being heard. It has caught the attention of Members of Congress. Equally important is that the message should be heard and understood by urban consumers who buy groceries but have had little knowledge of the farm situation until the national media coverage being given to the current strike and last weekend's farm rallies. I have tried to carry the farmers' message back to Washington to my fellow Members of Congress and to Agriculture Secretary Bob Bergland. It is my hope that the letters to the editors will help carry the message of Kansas farmers to urban residents as well. The text of the letter follows:

WASHINGTON, D.C.,
December 14, 1977.

DEAR EDITOR: As a Member of Congress from Kansas, I would like to share a few observations that may help urban consumers understand the nation's farmers as they make a dramatic plea for help.

Agriculture is unique as a business. Individual families put up the hundreds of thousands of dollars to buy land, combines, tractors, discs, irrigation systems, and truck to farm—all equipment necessary to grow wheat, corn, soybeans, milo, oats and barley which become the food on the shelves in grocery stores across the country. The collective results of these thousands of family farmers add up to one of the biggest industries in this country—greater in capital investment and greater in cash receipts from sales than General Motors, for example.

But it is an industry on the brink of bankruptcy. The gravity of the situation was pointed out in the results of a recent survey of more than 300 Kansas bankers. Those bankers reported that at least 55 percent of their farmer customers lost money last year; 9 percent are in grave financial trouble; and 35 percent required refinancing of their land or other assets to service their loans. The farmer is having to borrow even more money to continue operating today while he hopes for better years in the future. He is the eternal optimist. But that optimism is costing him an overwhelming amount in interest payments on his loans.

If improvement in economic conditions on the farm is not realized soon, the character of American agriculture will change from a family-based operation to a corporate-dominated enterprise. This will be detrimental to the interests of both individual farmers and urban consumers.

The farmer has been caught in the impossible spiral of inflation in producing crops and pulled at the same time by the downdraft of lower prices in the marketplace as he sells his produce.

It is obvious that grocery prices have gone up along with everything else in these inflationary times. It costs $18 for the same bag of groceries that $10 would buy in 1967. But that is not because of the price the farmer is getting. This year the prices received by farmers for their products compared to the prices they must pay for goods they buy reached a 44-year low and the farmer's share of the food dollar has dropped to 38 cents.

Farmers must have a fair return for their investment and labor. We cannot continue to ask the American farmers to carry the whole burden of the risks taken in producing food and fiber for this country and the world. The farmer is the most efficient food producer in the world. He stands ready to produce enough food to feed a hungry world, but we must all share the cost of doing that.

We can no longer take the family farmer for granted. He is becoming an extinct species. The average age of the farmer today is more than 50 years old. Young people who want to farm are unable to because they don't have the hundreds of thousands of dollars to buy machinery and land.

As a country, we have made a commitment to preserve the family farmer because he gives us the most efficient way to produce food. The family farm prevents a large corporation, either domestic or foreign, from controlling food production; and it preserves a rewarding and satisfying way of life.

But the economic trend is working against him. And the consumer will feel the impact eventually if we do not work together to provide a better price for farm products and support a system which preserves the small family farmer.

The farm strike cuts across partisan politics. The plight of farmers has bound them together in an unprecedented attempt to organize to protest their dire economic circumstances. I hope it will also provide the communication and awareness to build a bridge between farmers and consumers. It's a fact—if the family farmer wins, the consumer also wins; if the farmer loses, the consumer also loses.

Sincerely,

Martha Keys,
Member of Congress.

LEGISLATION TO REVISE QUOTAS ON BEEF AND OTHER MEAT IMPORTS

The SPEAKER. Under a previous order of the House, the gentleman from Arkansas (Mr. Alexander) is recognized for 30 minutes.

Mr. ALEXANDER. Mr. Speaker, the nationwide farmers' strike that began this week clearly demonstrates the seething discontent among farmers all across the country. Outnumbered better than 20 to 1 by other consumers, the producing farmers have now joined the ranks of vocal minorities that are dissatisfied with the manner in which they are treated by the majority. The farmers' strike has gained the attention of the urban majority. At this point, one might ask, What do we do now? There is no single, simplistic solution to alter the economic decline of the American farmer. On the contrary, a number of remedies will be necessary in order to provide the American farmer with a fair return on his investment.

One place to start is with the beef producer. I am introducing legislation today which will revise quotas on beef and other meat imports. I am convinced that depressed domestic cattle prices are directly traceable to both the amount of meat coming in and the way it can come into the United States.

A new Government program is not necessary for profit, but an opportunity for domestic beef producers to compete is needed.

My bill makes three major changes in the Meat Import Quota Act of 1964. First, the bill amends the definition of that meat which falls under the act to include all imports, no matter how processed. Second, the bill reduces the "trigger" for imposition of quotas from 110 to 100 percent of the imports in the 1964 act. This change will remove the heretofore routine allowance of an extra 10 percent of imported beef flooding in each year.

Third, the act currently allows the President to suspend quotas and allow increased import levels if he deems it in the national interest. My bill would allow the President to suspend quotas and decrease import levels if he deemed it to be in the national interest.

I believe this legislation will best serve both the consumer and the producer of beef as it will let the law of supply and demand restore stability to the domestic beef market.

The text of my proposal follows:

H.R. 10367

A bill to amend the provisions of Public Law 88-482 relating to the imposition of quotas on certain meat and meat products

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 2 of the Act entitled "An Act to provide for the free importation of certain wild animals, and to provide for the imposition of quotas on certain meat and meat products" (Public Law 88-482; 78 Stat. 594) is amended—

(1) by striking out subsection (a) and inserting in lieu thereof the following:

"(a) It is the policy of the Congress that the aggregate quantity of the meat of cattle, goats, and sheep (except lambs), whether fresh, frozen, chilled, cooked, canned or otherwise processed, which may be imported into the United States in any calendar year beginning after December 31, 1978, shall not exceed an amount which bears the same relation to the domestic commercial production of such meat in such year, as the imports into the United States of such meat bore to the domestic commercial production of such meat during the years 1959 through 1963, inclusive.";

(2) in subsection (c) by striking out "110 percent of" each place it appears in paragraphs (1) and (2);

(3) in subsection (d)—

(A) by inserting "(1)" after "(d)";

(B) by redesignating paragraphs (1), (2), and (3) as subparagraphs (A), (B), and (C), respectively; and

(C) by striking out the last sentence and inserting in lieu thereof the following:

"(2) The President may suspend any proclamation under subsection (c), or decrease the total quantity proclaimed under such subsection, if he determines and proclaims that the domestic supply of articles described in subsection (a) will be in excess of the amount necessary to meet domestic demand at prices at least equal to the average national cost of production of such articles.

"(3) Any suspension under paargraph (2) or (3) shall be for such period, and any increase or decrease under such paragraphs shall be in such amount, as the President determines and proclaims to be necessary to carry out the purposes of this subsection.".

ANNOUNCEMENT AS TO VOTES

The SPEAKER. Under a previous order of the House, the gentleman from California (Mr. Danielson) is recognized for 5 minutes.

Mr. DANIELSON. Mr. Speaker, due to official business of the Committee on the Judiciary, I was compelled to be absent from five rollcall votes on Tuesday, December 6, 1977, and from nine rollcall votes on Wednesday, December 7, 1977. I would like to announce how I would have voted had I been present.

TUESDAY, DECEMBER 6, 1977

Rollcall No. 761. The House agreed to House Concurrent Resolution 432, to assure quality health care for populations in rural areas. I would have voted "yea."

Rollcall No. 762. The House adopted House Resolution 917, the rule under which House Joint Resolution 662—making further continuing appropriations for fiscal year 1978—was considered. I would have voted "yea."

Rollcall No. 763. The House rejected an amendment to the previous amendment to House Joint Resolution 662—providing continuing appropriations for the Department of Labor and Health, Education, and Welfare—that sought to add compromise abortion language to the amendment. I would have voted "yea."

Rollcall No. 764. The House agreed to a preferential motion to recede and concur in Senate amendments Nos. 2, 5, 8, 10, 15, 25, 29, 31, 32, 35, 44, 48, 49-51, and 53, to H.R. 9375—making supplemental appropriations for fiscal 1978. I would have voted "yea."

Rollcall No. 765. The House insisted on its disagreement to Senate amendment No. 43 to H.R. 9375; clearing the measure for Senate action. I would have voted "nay."

WEDNESDAY, DECEMBER 7, 1977

Rollcall No. 767. The House agreed to the conference report on H.R. 9418, to amend the Public Health Service Act to require increases in the enrollment of third-year medical students as a condition to medical schools' receiving capitation grants under such Act—clearing the measure for the President. I would have voted "yea."

Rollcall No. 768. The House agreed to the conference report in H.R. 6666, Legal Services Corporation Amendments of 1977. I would have voted "yea."

Rollcall No. 769. The House agreed to consider House Resolution 928, the rule providing for the consideration of the Senate amendments to House Joint Resolution 662, making further continuing appropriations for the fiscal year 1978. I would have voted "yea."

Rollcall No. 770. The House rejected a motion to concur in the Senate amendments to House Joint Resolution 662. I would have voted "yea."

Rollcall No. 771. The House agreed to House Resolution 916, the rule providing for the consideration of S. 1340, to authorize appropriations to the Energy Research and Development Administration for energy research, development, demonstration, and related programs in accordance with section 305 of the Energy Reorganization Act of 1974, and section 16 of the Federal Nonnuclear Energy Research and Development Act of 1974, as amended. I would have voted "yea."

Rollcall No. 772. The House agreed to the conference report on H.R. 3722, authorizing appropriations for the Securities and Exchange Commission for fiscal year 1978—clearing the measure for the President. I would have voted "yea."

Rollcall No. 773. The House agreed to the conference report on S. 305, to amend the Securities Exchange Act of 1934 to require issuers of securities registered pursuant to section 12 of such act to maintain accurate records and to prohibit bribes—clearing the measure for the President. I would have voted "yea."

Rollcall No. 774. The House agreed to consider House Resolution 929, the rule providing for the consideration of the Senate amendments to House Joint Resolution 662—making further continuing appropriations for the fiscal year 1978. I would have voted "yea."

Rollcall No. 775. The House agreed, with an amendment, to Senate amendment No. 2 to House Joint Resolution 662, concerning conditions under which there may be Federal funding for purposes of performing abortions; returning the measure to the Senate for further action. I would have voted "yea."

REFLECTIONS UPON THE RETIREMENT OF CONGRESSWOMAN BARBARA JORDAN

The SPEAKER. Under a previous order of the House, the gentleman from Texas (Mr. ROBERTS) is recognized for 5 minutes.

Mr. ROBERTS. Mr. Speaker, I listened with deep regret to the statement by my colleague, BARBARA JORDAN, when she anounced that she did not intend to seek reelection to Congress.

Ms. JORDAN has served her congressional district, the State of Texas, and this Nation with strength, integrity and distinction. Her way was the quiet way. She gained converts for her points of view through persuasion, not harangue. Some of her colleagues did not realize her gentle manner disguised a steel-trap mind and they made the mistake of challenging her. Inevitably, she prevailed. Those who opposed her came to love her.

With her gift of oratory, she could have risen to great heights of power if she had chosen the way of the demagog. She must have had temptations for she cared deeply about the plight of the poor, the jobless, the underprivileged. Their aspirations were her aspirations.

Mr. Speaker, I respect Ms. JORDAN's wish to define her goals and seek new directions. She stands in the first rank of this Nation's leadership, but it is a measure of her greatness that she is stepping back from all that and asking guidance.

Knowing her as I do, Mr. Speaker, I know she will acquit herself with distinction in any endeavor she undertakes. It is my hope, however, that her public service is not at an end. Texas, the Nation and, indeed, the world cries out for the leadership she can give us.

I fervently hope the future finds her back in public service once again. The Nation needs her.

YET ANOTHER U.N. CONDEMNATION OF ISRAEL

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. SCHEUER) is recognized for 5 minutes.

Mr. SCHEUER. Mr. Speaker, yesterday, the United Nations adopted 14 anti-South African resolutions including one censuring Israel for its economic relations with South Africa. Many commentators on the Mideast scene have observed that the anti-Israel resolution is just another example of the hypocrisy of the U.N. General Assembly.

Rather than add words of rhetoric to this newest of U.N. controversies, I would like to provide my colleagues with an impartial sampling of some of the facts and statistics I have come across in my scrutiny of this issue.

For starters, an examination of South African trade figures is in order. In 1975, the last year for which complete figures are available, South Africa had $14.5 billion in exports and imports. Israel was involved in two-fifths of 1 percent of all of this trade or about $50 million. The South African Foreign Trade Organization in Johannesburg estimates that South Africa's dealings with black Africa total a billion dollars in exports and half a billion dollars in imports annually—about 30 times Israel's trade with South Africa.

The aggregate investment figures do not paint too different a picture. Of more than $19 billion of foreign capital invested in South Africa, only 0.005 percent was invested by Israel. However, the rest of Africa invested more than $400 million in South Africa or almost 500 times the Israeli investment.

It has been suggested that these high trade figures between South Africa and the rest of black Africa are phenomena of the past when the other African nations were under imperial control. However, juxtaposition of the 1975 data against available 1976 data suggests that the economic ties between South Africa and black Africa are growing. In the first 5 months of 1975 South African trade with black Africa was just over $300 million. In the first 5 months of 1976 that figure had grown to almost $400 million.

Data for individual African countries is hard to come by; in fact, the Congressional Research Service, the State Department, the Commerce Department, the World Bank, and the International Monetary Fund all inform me that they have never seen individual African country breakdowns.

However, I have been able to develop a list of 19 black African nations with formal trading relationships with South Africa. It is only logical to assume that the countries with the formal trading relationships with South Africa are the very same countries trading with South Africa.

The following countries all voted yes in yesterday's U.N. resolution despite the fact that they all have formal trading relationships with South Africa: Angola, Botswana, Chad, Congo, Gabon, Ghana, Lesotho, Malagasy, Maurtius, Mozambique, Nigeria, Senegal, and Zambia. Additionally, the following countries either abstained or were absent despite the fact that they, too, have formal trading relations with South Africa: Central African Empire, Ivory Coast, Liberia, Malawi, Swaziland, and Zaire.

The statistics paint an all too clear picture: The very group of countries which voted in favor of a resolution indicting Israel for having economic relations with South Africa actually has far more significant economic ties with South Africa than Israel herself.

There are also several other facts which further document the significance of the economic ties of both black Africa and the Soviet Union, a leading sponsor of the anti-Israel resolution:

There is a joint venture between South African Airways and Air Botswana to charter planes to fly freight between South Africa, Zambia, the Central African Empire, Gabon, the Ivory Coast, and Kenya.

The South African regime is the second largest customer for Mozambique's exports in the world.

Roughly 35 percent of Malawi's imports come from South Africa.

Ten Lockheed Hercules freighters make regular trips from South Africa to both Malawi and the Congo with loads of fresh fruit and maize.

A major industrial company in South Africa has just signed a $2 to $3 million contract with Nigerian interests to set up an engineering firm in Nigeria.

South African engineers are involved in repairing and otherwise supporting black African railroads for such diverse nations as Mozambique, Swaziland, Zambia, and Zaire. Further, airplanes owned by Mozambique and Malawi are serviced in South Africa.

One-third of the entire world's gold supply in 1976, mostly from South Africa, went to the oil-rich Middle East. Countries receiving significant quantities of the 500 tons of gold included Saudi Arabia, Iraq, the Gulf States, and Iran. All of them either voted in favor of or abstained from voting on the anti-Israel resolution.

CBS news and the Washington Post both reported that more than half of South Africa's imports of arms for private sale come from the Soviet Union. In fact, the Post reported that—

> It is estimated that the (Soviet) bloc supplies up to half of South Africa's private weapons, such as Soviet made Baikal shotguns and Czech Brno automatic rifles. They are displayed in arms shops next to American made Colt pistols.

Finally, according to testimony before the Fourth Committee of the U.N. General Assembly, the five major sellers of oil to South Africa—Shell, Mobil, Caltex, Total, and British Petroleum—actually sell OPEC oil to South Africa which South Africa in turn sells to Rhodesia.

Mr. Speaker, the ironies in this recitation are many and obvious, and the bottom line is undeniable. Israel's economic relationship with South Africa is miniscule in comparison with the economic relationships between the black African nations, the oil-rich Middle Eastern nations, the Soviet-bloc countries, and the South Africans.

THE BALANCE(S) OF POWER SERIES: BOOK I—CONCLUSION

The SPEAKER. Under a previous order of the House, the gentleman from Kentucky (Mr. BRECKINRIDGE) is recognized for 5 minutes.

Mr. BRECKINRIDGE. Mr. Speaker, during the last session of Congress, I was privileged to insert a series of articles in the CONGRESSIONAL RECORD, detailing in part the major shift in "The Balance(s) of Power" underway between the Soviet Union and the United States.

The purpose of the Balance(s) of Power series is to present to the administration, the Congress, and to the American people through the libraries across the nation containing the CONGRESSIONAL RECORD, a carefully documented, discussion-provoking set of views prepared by current leading thinkers in the field of national defense, so designed as to stimulate thinking about military trends and where we are headed if the Congress, the administration and the American people do not take the necessary steps to turn us around.

The first insertion in my Balance(s) of Power series appeared in the March 17, 1976, issue of the CONGRESSIONAL RECORD—pages 6980 and 6981. I detailed in that issue my plans to publish a variety of subject areas relating to the U.S.-U.S.S.R. military balance. Today, Mr. Speaker, marks the conclusion of book I of this ongoing and continuing series. Included within this part can be found articles relating to seven broad areas: First, U.S. Strategic Situation; Second, A Panoramic Perspective; Third, Strategic Offensive Balance; Fourth, Strategic Defensive Balance; Fifth, Armed Forces Balance; Sixth, Naval Forces Balance; and Seventh, Tac Air Balance. A list of these articles from March 17, 1976, to November 4, 1977, detailing the number, author, date and subject matter is provided at the conclusion of those remarks.

At this time, I wish to express my deep appreciation to John M. Collins, senior specialist in national defense for the Library of Congress, and to Douglas Mitchell, Mr. Collins' research assistant, for their guidance, assistance and advice in the preparation of selections for the series for the 94th and 95th Congresses. I also want to say that I look forward to continuing to work with them to the extent that their demanding schedules and important duties permit, including preparation of a 1978 U.S.-U.S.S.R. military balance study to update previous reports prepared by Mr. Collins.

The Balance(s) of Power series will continue in the next session, Mr. Speaker, and will concentrate, in book II, on including a look into the balance(s) of the Soviets and the United States in the area of geographic factors, budget, scientific and technological advances, agriculture and industrialization, and the broader perspectives of the balances in Europe, East Asia, Middle East, Indian Ocean, Africa, and Latin America. In each case, the series will relate coverage to the crucial U.S. security interest of survival, physical security, peace, national credibility and freedom of action.

Mr. Speaker, during the course of the series, we have examined many facets of the national defense debate. There is no doubt in my mind that the balance of United States and Soviet military strength is clearly shifting across the board in the Kremlin's favor. That is not an inflammatory statement. It is a straight-forward fact.

In my first CONGRESSIONAL RECORD selection of March 17, 1976, I declared that—

> In the early 1960's, this country still occupied the pinnacle of world power, secure at home and strong overseas . . .
>
> Thereafter, some U.S. Armed Forces improved technologically, but a relative decline in combat power characterizes many others in comparison with the Soviets . . .
>
> For the first time since the American Revolution a competitor has the capability to destroy this Nation if it cares to run the risk . . .

I propose herein to examine each of the subparts contained within the Balance(s) of Power series to elict the salient facts and critical comments made by the authors of the articles.

INTRODUCTION

The enjoyment of enduring freedoms demand the continued strength to uphold them. That strength can take any number of forms, such as the strength of tradition, the commitment to certain ideals, the belief in values which transcend the individual, and the will and determination of a people to prevail. Or strength may be found in more tangible forms, such as productivity, economic growth, or relative stability. A critical area of national strength—and one which lends itself comparatively well to measurement—is military strength. As Adm. Stansfield Turner, presently Director of Central Intelligence, has written in a selection appearing in my balance of power series, the evaluation of military strength—and especially of opposing military strengths—is more than a "numbers game." But let us not therefore turn to the other extreme and disregard the quantitative realities entirely. Numbers can be very revealing of some basic conditions, and even some stark realities:

Is our military power in measurable terms keeping pace with the interests we may be called upon to defend?

Is our military strength sufficiently recognizable to deter potential aggressors?

Are our military capabilities equal to the challenge of any potential adversary?

And are those capabilities in relative growth or decline?

Clearly, there are pitfalls to a side-by-side comparison of weapons inventories, force levels, shipping tonnage, or what-have-you. A rational assessment of the military balance must be based on a look at opposing forces and opposing capabilities. Even that approach must be conditioned by qualitative variations and differences in the respective cultural characteristics and national needs which create military missions of a different profile from one country to another. But qualitative considerations and inherent asymmetries among nations do not obscure and cannot negate the realities of the military balance measurable in terms of usable destructive or combat power.

In my military balance series, several authors have urged caution in the use of unqualified data; and certainly static "snapshots" of the balance of forces can be misleading. But especially if the focus of our attention is on the trends which such figures outline—as my series has attempted, the conclusions reached warrant very careful consideration. On the basis of facts which clearly stand out through all the caveats, I have been forced to conclude that all the people of this country should be as concerned as I am about the ongoing shift in the military balance.

The challenges to the free societies and open governments of this world are many. There are some dangers against which we can only partly guard ourselves; some would, therefore, despair of any hope for exercising control over our destiny. I would argue just the opposite: that it is all the more reason to take those prudent steps which are effective and which do assure our survival as a vital, leading, democratic nation. By this I mean such steps as may contribute to our ability to encourage peace, protect the security of the American people, and maintain American freedom of action in pursuit of our legitimate goals.

SOVIET SUPERIORITY

A clear danger today is the achievement by the USSR of military preponderance. It has been my purpose over the last 2 years, in my balance of power series—as it is the purpose of my remarks today—to present the facts of this emerging imbalance of power which threatens vital U.S. interests.

Over the past years, the Soviet Union has been making steady gains:

First, nuclear weapons and ICBM's designed to attack this country, and in a manner which suggests that such an attack, to them, is anything by "unthinkable."

In strategic missile submarines, where older models nevertheless have a 58 to 41 advantage over the U.S. Fleet.

In its expanding fleet of naval vessels well-armed to challenge American freedom of movement on the high seas as well as in strategic waterways—a freedom of movement, by the way, which we have come to take too much for granted.

In their attack submarines, where 254, many armed with antiship missiles for which we have no counterpart, critically outnumber our 74.

In their new and expanding bomber fleet, featuring the Backfire bombers, which presents an immediate improvement in Soviet Antisubmarine warfare capabilities, and potentially a long-range bombing threat against the continental United States such as has never before existed.

In an ever-growing air force whose ability to intercept penetrating aircraft makes a mockery of our air defenses.

In their mobile missile systems designed to launch a nuclear attack on our NATO allies, who stand undefended against such aggression.

And in their inventory of increasingly modern and capable tanks, now outnumbering U.S. tanks by a ratio of 7 to 1.

During the same time, the number of deployable ground forces in the Soviet Army has grown from a numerical advantage of 2 to 1 over our troops to a present advantage of over 3 to 1.

What all these figures have in common is that the gap in measurable military capabilities is being widened not by Soviet expansion alone but by concurrent U.S. reductions as well.

All these Soviet gains would be cause for concern in any event, because in today's volatile world, any such escalation in armed power adds to our self-destruction potential, contributes to international tension, and creates undesirable pressures on those nations least able to withstand them. But the recent Soviet gains are especially unsettling because they have resulted in some cases in outright Soviet superiority over U.S. forces, and in other cases, in a level of military strength which rivals ours as never before. The net effect is that the Soviet military machine is now in a position to mount a credible threat to U.S. interests in many places and in many ways around the world.

This has become possible, of course, because generous U.S. commitments have been made to friends around the globe; and conversely, because the Soviet methods of encroachment have historically permitted them the advantage of interior lines of communication and the economical role of spoiler.

It is with an eye to just that past pattern that we must now recognize how Soviet capabilities have outgrown the past methods of indirect confrontation. The full potential for Soviet challenge to U.S. security is being realized only now—with the steady and dramatic growth in Soviet military might. More important, especially for those who would see fit to act, is the fact that this growth is going unmatched by the United States; and in some cases, incredibly enough, this growth is going ahead with the explicit blessings of the United States. We are allowing ourselves to be overtaken; and our actions even seem to encourage it.

ARMS CONTROL

Anyone concerned about the escalation of armed power around the world of course must give reasonable attention to the possibility that international stability in general and U.S. security in particular can best be assured by instituting a controlled military relationship between the two superpowers: a relationship in which neither the United States nor the U.S.S.R. could achieve an exploitable margin of armed advantage over the other.

The humane hope for the workability of this arms control solution has very likely contributed to the reticence of responsible American leaders to close the door on further Soviet advances. In the self-evaluation after Vietnam, Americans have become so self-conscious about the possibility of our provocativeness that we have not taken sufficient notice to be provoked ourselves.

There comes a time when the American people must hold their leaders accountable for the results of their experiments with history. That time is now, and the results of the policies known as "essential equivalence" or "parity" must be recognized as unacceptable.

Former Secretary of Defense, Donald Rumsfeld, declared in our February 9, 1977, selection entitled "U.S. Army Force Design," that—

> If the trends of the past 5 or 10 or 15 years—of Soviet military expansion and U.S. contraction—are permitted to continue, we would clearly arrive, at some point, where we could not say that we had sufficiency or rough equivalance. The long and the short of it is that, unless we act now to arrest those trends, the United States would move into a position of inferiority to the Soviet military capabilities.

STRATEGIC OFFENSIVE

In strategic offensive weapons, where the terms have their origins, the Soviet Union has indeed been doing a great deal of "catching up." Since 1972, the nuclear arsenals of the United States and the Soviet Union have been developed within the guidelines of strategic arms limitations which were intended to reduce the threat of nuclear war. In that time, the number of U.S. missiles—including all ICBM's and submarine-launched missiles—has remained constant at 1,610. Corresponding Soviet missiles have increased from 2,024—already then outnumbering ours—to 2,391.

By incorporating the technology known as MIRV (multiple, independently-targetable reentry vericles), the United States gradually improved its nuclear deterrent without building additional missiles. The number of warheads that could be directed to a target grew from 3,858 in 1972 to 6,842 this year. The combined power of those weapons is today over 1,400 megatons.

The Soviets, on the other hand, not only took advantage of a much higher numerical limit on their missile forces, but made modifications to existing facilities and installed modern, large replacements for smaller missiles. Their actions were clear violations of the spirit of the SALT agreement, if not the letter of the agreement as manipulated by Soviet semanticists. The larger size, rocket thrust, and throw-weight of the new Soviet missiles thus acquired have paved the way for them to use the same MIRV technology to deploy as many as 3,475 warheads but now with the explosive power of over 7,200 megatons.

Land-based ICBM's are not the only areas of concern. In submarine-launched ballistic missile, where the Soviet Union and the United States stood at equal numbers at the beginning of the decade, the Soviets now outnumber us by 36 submarines, giving them close to 200 more ballistic missiles than we have for deployment underwater. Soviet gains are continuing not only in number, but in the quality of their systems as well.

These numbers are all too meaningful: The game of catchup has long ended; to maintain otherwise is to delude ourselves.

The numbers reveal not only the growing size of the Soviet threat, but the direct character of that threat. Unlike U.S. strategic offensive forces, structured to prevent aggression, the Soviet missile forces are being designed with the added capability to attack U.S. missiles directly. Although we pray that we will never know from experience, experts in this country are increasingly expressing their convictions that the Soviet missile forces being built today could succeed in nullifying the retaliatory power of U.S. ICBM's.

SOVIET INTENT

These numbers are critical for two more reasons. First, they show that the Soviets reject the idea of equality with the United States as a satisfactory goal. Unless the United States responds with assurance, the Soviet actions will lead them to strategic primacy.

Second, they show that the concepts of mutual deterrence around which our plans for strategic forces and our hopes for arms control were based are not mutually shared by the Soviet Union. Not content just to catch up, the Soviets have been catching up for a reason: to get ahead.

This second conclusion is further supported—and made all the more disturbing by the notable efforts being made by the Soviets in the field of strategic defense: An area of concern virtually abandoned in this country, and considered frivously when considered at all.

The strategy of deterrence which we have embraced, and about which we are supposedly "educating" the Soviets, is based on the idea of mutual vulnerability: "I can make you hurt just as badly as you can hurt me." The name often given to this policy, mutual assured destruction, refers to the assumption that neither side will initiate a nuclear attack on the other so long as he is faced with the high probability of a retaliatory nuclear strike of devastating effect.

As hardened missile silos, quick-reaction bombers, underwater submarines, and now perhaps mobile missiles have decreased the vulnerability of the Soviet means to wage war, the weapons of deterrence have been trained on the will to wage war. The threat of assured destruction, in other words, is against the people and their means of support.

By the ABM treaty of 1972, the United States and U.S.S.R. have agreed for all practical purposes not to use antiballistic missile systems to defend against nuclear attacks.

This means that the populations of our two countries for quite a few years now have been held as hostages, in effect, by the other country, as guarantees against all but the most suicidal of nuclear attacks.

But a change is taking place: Some protection from the effects of nuclear attack is offered by passive defense; and Soviet activities in that area have opened up an important gap in United States/Soviet defensive balance: A "vulnerability gap." By undertaking blast shelter construction, stressing the dispersal and protected construction of industrial plants, and by introducing evacuation plans for city populations, the Soviets are succeeding in making their population and production base much less of a hostage than ours is. Consequently, for the Soviet Union—and only for the Soviet Union—the launching of a nuclear attack is beginning to look less and less suicidal.

STRATEGIC DEFENSE

Among others, 40,000 regular civil defense troops and millions involved in paramilitary programs are working alongside universal training programs to prepare for massive civil defense measures should they be ordered. By making war survival a goal, the Soviets are showing their disdain for mutual assured destruction. Although hard data about Soviet civil defense protection is scarce, shelter and evacuation programs show that the Soviets are doing their best to put disdain into action and make mutual deterrence far from mutual. Leon Goure, of the Center for Advanced International Studies, wrote in our July 28, 1976 article entitled "War Survival in Soviet Strategy," that the Soviet civil defense structure stresses:

> Preservation of industrial production capacities . . . Civil Defense has now become very much a part of the Soviet life, involving all segments of State activities . . .

In fact, we now know that Colonel-General Altunin, Chief of the U.S.S.R. civil defense program, was appointed a Deputy U.S.S.R. Minister of Defense on a par with the other services of the Soviet Armed Forces. The United States has no such counterpart.

The United States, with half its population concentrated in 140 relatively unprotected cities, remains fully vulnerable to a nuclear strike against urban areas. The Soviets, as above points out, project their ability to keep urban losses from nuclear retaliation to a number lower than their casualties suffered during World War II.

Even if Soviet city-dwellers were caught unevacuated in a nuclear showdown, their more even distribution and their smaller proportion of the total population demand a greater number of U.S. nuclear weapons to mount a threat equal to the Soviets' threat against us. Here again, numbers provide an important measure of comparative military strength; and the United States is losing its edge.

AIR DEFENSE

Air defense was an important concern for the United States until 1966, when Soviet reliance on missiles as strategic delivery systems became clear. At that point, we had deployed 67 active and 55 national guard squadrons of interceptor aircraft, and 228 active and 52 national guard batteries of surface to-air missiles.

In keeping with the policy of assured destruction, reflected in the 1972 ABM Treaty, air defenses have since gone into drastic decline, shown by John Collins. Six squadrons each of active and national guard interceptors and a handful of air defense missile batteries stationed in Florida and Alaska now serve only to protect U.S. peacetime air space.

The Soviets by contrast, have reduced only marginally the total number of interceptors, and over the years they have substantially upgraded the quality of their aircraft. The equivalent of 225 squadrons are now available for air-defense missions.

If greater Soviet concern over air defense is to be attributed to the fact that even today, over half the U.S. deliverable magatonnage is accounted for by our aging fleet of B-52's, then we might well ask what equivalent defenses do we have against the building fleet of new Soviet Backfire bombers. Although the Backfire has been defined as nonstrategic in the context of arms limitation negotiations, the capability nevertheless exisits for this "intermediate-range" bomber to strike targets in the United States. The present inventory of over 100 is expected to reach 400 by 1980, thus preventing another threat to U.S. security for which we have apparently chosen not to develop a credible defense. John Collins declared in our September 23, 1976 selection entitled, "United States/Soviet City Defense," that—

> Picket ships, Texas Towers, gap filler radars and the Mid-Canada line line have completely disappeared.
>
> Surveillance still in existence displays technology that, in the main, dates back two decades or more . . .Cutbacks accelerated sharply after ABM was dropped. Present programs will eliminate six ANG F-101 squadrons by the end of FY 1977, reducing interceptor strength to six F-106 squadrons in the Air National Guard and six more on active rolls. All 48 Nike-Hercules batteries assigned to Army Air Defense Command (ARADCOM) were inactivated in FY 1974.

CONVENTIONAL FORCES

In conventional forces, the imbalance between the United States and the Soviet Union continues to grow. Several areas are crucial.

GROUND FORCES

In the wake of Vietnam, deployable U.S. ground forces have declined in number to 575,000, the lowest number of personnel on active duty since the dark, prewar days of 1940. Although it is not foreseen that these forces would be called upon to fight on home soil, as might Soviet counterparts, they are clearly outnumbered for whatever purposes by 1,725,000 Soviet ready ground troop. Over recent years, the Soviets have persisted in building an increasingly large armed force, despite decreasing numbers of conscription-age men. The numbers included in the U.S. Military Establishment as a whole—including active duty, all reserves and national guard, and civilian defense employees—still total less than the active Soviet military services alone.

Because of differences in geographical size and system of government, the discrepancy in manpower levels does not translate directly into competing capabilities; however, by adding to this picture the firepower which has been placed in the hands of the two military forces, we have a clearer indication of the superior power of Soviet ground forces.

Soviet armor, for example, has built up from its 41,000 tanks deployed in 1970 to 45,000 today, including the new and much-touted T-72 medium tank. The United States has responded to this threat by multiplying its inventory of antitank guided missiles, as discussed by Phil Karber in the course of the series. But here again, a potential U.S. gain is lost because, where mobility is needed for ground forces to be employed so that their firepower can be brought to bear, Soviet armored fighting vehicles and personnel carriers outnumber ours almost by 4 to 1.

In artillery also, the disparity between United States and Soviet firepower has been growing to the point that some 5,000 U.S. artillery pieces now compare with about 19,000 Soviet weapons. And these figures do not take into account Soviet multiple rocket launchers and 10,000 additional Soviet heavy mortars, for which the U.S. forces have no counterparts.

Once again, Soviet gains have been matched only by reductions in the U.S. side, so that the flexibility demanded of U.S. forces, whose deployment must meet a variety of contingencies worldwide, is being lost just as much by forfeit as by Soviet ambition. In addition, qualitative improvements in the weapons and training of the Soviet forces are eroding the qualitative edge by which the U.S. forces in the past maintained a credible posture in the face of such numerical odds. This is an intolerable situation, but it is one over which we must reassert control.

NATO

Today 168 Soviet divisions face out against a world which includes only 28 American divisions, including 9 in the reserves and National Guard. Nowhere are those opposing forces in more direct confrontation than in Western Europe, where 24 NATO divisions in the central sector face 51 Warsaw Pact divisions. Of those forces, 27—or over half—are Soviet divisions, so that Soviet forces alone outnumber NATO totals. On the NATO side, the United States contributes five divisions.

For several clear reasons, it is easier for the Soviet Union to dedicate such a number of forces to satellite countries and to maintain them there. But the issue is not ease; it is strength of position, and ultimately survival. If we wish to maintain our commitment to the security of Europe as a vital element of our own security, the shifting military balance is a development which must be recognized and dealt with.

U.S. and NATO strategy in Europe is based on the idea of forward defense. As stated in the series article by our former Secretary Rumsfeld, the success of this strategy depends upon our ability to rapidly reinforce the units already in position in Europe—this same condition, in fact, holds true anywhere we might be called upon to respond militarily in great strength. Therefore, not only is the strength of our reinforcement forces an important factor, but equally so is our ability to transport them to the theater concerned with timeliness. This is a function of our mobility forces—both airlift and sealift—which are superior to Soviet counterparts in most respects. The number of sorties and crossings necessary to effect a reinforcement to NATO, however, raises a serious question about our ability to respond in sufficient time and force. The United States counts 11 divisions available to meet contingencies worldwide. For the Soviets, earmarked for reinforcement in the central sector of Europe alone, and located in geographically contiguous areas, are 21 ready divisions. This imbalance places NATO forces in a much poorer position to absorb attritional losses, which could be the decisive factor in the outcome of a conflict.

NAVAL FORCES

Developments in the balance of naval forces also contribute to a growing shift away from the United States. This is an area where U.S. dominance existed for so long that freedom of movement on the seas became a matter to be taken almost for granted. This is no longer the case.

The carriers around which U.S. naval strike forces were built have become potential targets for Soviet antiship missiles, against which we have little defense and for which we have no equivalent. Soviet attack submarines, although of poorer quality and more vulnerable to detection than U.S. subs, outnumber ours by 180. That is an ample margin to absorb submarine losses, inflict similar losses—which, for us, would be crippling, and leave our fleets increasingly vulnerable, and missing a critical leg of our antisubmarine warfare capabilities.

Soviet shipbuilding over the 12-year period beginning in 1962 produced 1,323 ships of all classes for the Soviet Navy, compared with 302 produced for the U.S. Navy. Consequently, not only submarines, but Soviet surface combatants have come to outnumber U.S. ships, giving the U.S.S.R. a real "blue-water" navy, and an increasing ability to challenge U.S. naval operations worldwide.

Over the long term, for a nation dependent as we are on two great oceans, this shift in the military balance may well be the most ominous.

Adm. Stansfield Turner, Director of the CIA, wrote in our June 9, 1977, selection entitled "The Naval Balance":

> . . . In the past decade the number of U.S. destroyers has dwindled from 205 to 69, carriers from 15 to 13, and antisubmarine aircraft from about 428 to 132. While from numbers alone it might seem that the Soviet submarine fleet that these forces must counter has also weakened—it has shrunk from 370 in 1966 to about 335 today—Soviet nuclear-propelled submarines have increased by 250 percent, from 40 to 140. Also, the number of Soviet submarines equipped with cruise missiles has more than doubled, from 29 to 66. . . .

It is revealing to note, Mr. Speaker, the words of the "father of the modern Soviet Navy," Fleet Adm. Sergey G. Gorshgon, who discussed Soviet naval strategy in our September 27, 1977, selection entitled "Sea Power of the State," and said:

> At present our (Soviet) navy, in its operations against land targets, possesses the capability not only to carry out tasks aimed at effecting territorial changes, but to affect directly the course of the war and even to determine its outcome.

Another Balance(s) author, James Hessman, of the Congressional Budget Office, summed up the options facing Congress on naval strategy in our July 29, 1977, article entitled "Sea Control or Power Projection" that—

> The real option which Congress faces is not between sea control or power projection forces for the Navy. It is between facing reality, or playing politics. If Congress faces up to the facts of the awesome Soviet conventional purpose forces buildup so well documented on page after page of the CBO study, it will have no choice but to fund the Navy for both major missions.

Reevaluation of the doctrine which governs the employment and structure of our naval forces is a constant necessity, but when numerical imbalances reduce U.S. flexibility and limit U.S. options, our highest priority must be to redress that imbalance.

TACTICAL AIR FORCES

Last, in the area of tactical air forces, we find another case in which the measure of Soviet numerical superiority has grown to twice the U.S. force strength, accompanied by qualitative improvements to make Soviet pilots more competitive with Americans.

Soviet active fighter aircraft now number over 3,350, while the U.S. total is less than 2,000. Soviet frontal aviation in the Warsaw Pact countries confront U.S. forward-based units with 1,825 combat aircraft, easily reinforced by 2,000 more in European Russia. As stressed by Colin Gray in the series, these aircraft are no longer deployed simply to defend local airspace, but are being designed for aggressive use in combination with ground forces; to challenge NATO's air superiority; and to penetrate our weaker defenses and attack ground forces and other targets in Western Europe.

The momentum of technological improvements in Soviet aircraft promises a rude awakening to the loss of our well-assured ability to defend and support our ground forces from the air or to mount a successful air attack against critical targets in the European theater.

CONCLUSION

This last example points up again the risks which are building as a consequence of the shift in the military balance: a shift about which I am very concerned, and on the subject of which I will be continuing to introduce important writings. U.S. capabilities can no longer be taken for granted; and to rest on past margins today will have sad consequences tomorrow. Already, our flexiblity is sorely limited by force imbalances and by decisions which have limited the use of those forces.

As both the Warsaw Pact forces and the Soviet Navy, for example, depart from their past defensive postures and acquire increasingly offensive capabilities, the United States is abandoning its only strategic bomber program—the B–1—and is placing its hopes on a weapons system still in development—the cruise missile, whose employment in the strategic or tactical role has barely progressed beyond the conceptual stage.

With the Soviets today taking every opportunity to foreclose further options for us, it is incumbent upon us to do what we can to keep open those options remaining.

Mr. Speaker, these are just some of the facts behind our balance of power with the Soviet Union. The trends are alarming:

Item: We disband armed forces after every war. The Kremlin continues its buildup.

Item: We stress quality at the expense of quantity, while the Soviets strive for both.

Item: We feature firepower instead of manpower. The Soviets feature both.

America's security is now at a crucial crossroad as a direct result of those and similar and dubious policies. We have the potential to turn trends around if the administration, the Congress, and the American people recognize the issues at stake.

Just as numbers alone do not tell the full story, neither will budgetary remedies alone solve our national defense malady. In fact, official U.S. estimates over the past several years have suggested that Soviet outlays for defense equaled a steady 6–8 percent of that country's gross national product (GNP). Recently revised evaluations by CIA, based on better measurement data, now indicate that the share is twice that amount, or 11–13 percent, compared with a projected 5.1 percent for the United States in fiscal year 1977. Other authorities place the Soviet proportion as high as 20 percent.

Mr. Barry Blechman, of the Brookings Institution, pointed out in our April 28, 1976, selection, entitled "Are the Soviets Ahead?"

> . . . there is no doubt about the direction of the trend: the United States is spending less, and the Soviet Union is spending more: and that has been going on for about a dozen years . . . Soviet military capabilities, relative to those of the United States, have improved markedly . . .

But while alternative strategies are being debated, let us get on with positive steps to turn the tide in the shifting balance of power.

John Collins accurately summarized the global strategic situation by stating that America:

> . . . is losing, or has lost, its ability to promote strategic stability, discourage nuclear adventurism, extend a nuclear umbrella over friends and allies, influence foreign perceptions favorably, repress nuclear proliferation, suppress the offensive arms race, and curb financial costs.
>
> If a nuclear war should erupt, concerted efforts to the contrary, we lack credible means to contain the conflict quickly, control escalation, protect our population and production base, or facilitate a salutary settlement.

I could not agree more, Mr. Speaker, and I urge my fellow colleagues, the administration, and the American public to review the complete Balance(s) of Power series as it appears in the CONGRESSIONAL RECORD. In conclusion I should like to present a listing of each selection in our series with the title, author, and date of insertion. This list should make an easy reference tool for the first part of the series. The list follows:

TABLE OF CONTENTS: PART I—STRATEGIC AND CONVENTIONAL FORCES

Subparts: Number and date, title, and author.

Pt. I. Mar. 17, 1976, U.S. Strategic Situation, John Breckinridge.

Pt. II(a). Mar. 31, 1976, A Panoramic Perspective, John Breckinridge.

Pt. II(b). Apr. 7, 1976, Are We Now Engaged in World War II, Sir Robert Thompson.

Pt. II(c). Apr. 28, 1976, Are the Soviets Ahead? Barry Blechman.

Pt. II(d). May 5, 1976. Rumsfeld Interview, Donald Rumsfeld.

Pt. III(a). May 12, 1976, Strategic Offensive Balance, John Breckinridge.

Pt. III(b). May 20, 1976, Counterforce and Countervalue Differentiated, John Collins.

Pt. III(c). June 2, 1976, Counterforce, Robert Sherman.

Pt. III(d). June 17, 1976, the Case Against Counterforce, Amoretta & Francis Hoeber.

Pt. III(e). June 23, 1976, the Case Against Counterforce, Amoretta & Francis Hoeber.

Pt. IV(a). July 28, 1976, War Survival in Soviet Strategy, Leon Goure.

Pt. IV(b). Aug. 5, 1976, War Survival in Soviet Strategy, Leon Goure.

Pt. IV(c). Aug. 24, 1976, Civil Defense in Limited War, Sidney D. Drell.

Pt. IV(d). Aug. 31, 1976, Civil Defense in Limited War—A Debate, Arthur Broyles & Eugene Wigner.

Pt. IV(e). Sept. 8, 1976, Civil Defense Letter, Ruby Thurmer.

Pt. IV(f). Sept. 10, 1976, Soviet Civil Defense, John L. Frisbee.

Pt. IV(g). Sept. 14, 1976, Strategic Warning, Edgar Elsamer.

Pt. IV(h), Sept. 20, 1976, The Merits of a Limited Ballistic Missile Defense, Patrick Friel.

Pt. IV(i). Sept. 21, 1976, The Merits of a Limited Ballistic Missile Defense, Patrick Friel.

Pt. IV(j). Sept. 23, 1976, U.S./Soviet City Defense, John Collins.

Pt. IV(k). Sept. 27, 1976, SALT II, John Collins.

Pt. IV(l). Sept. 29, 1976, SALT II, John Collins.

Pt. IV(m). Oct. 1, 1976, U.S./Soviet City Defense, John Collins.

Introduction to 95th Congress. Jan. 11, 1977, John Breckinridge.

Pt. IV(n). Jan. 17, 1977, U.S. Strategic Concepts, Henry Bradsher.

Pt. IV(o). Jan. 19, 1977, U.S. Strategic Concepts, Henry Bradsher.

Pt. V(a). Feb. 9, 1977, U.S. Army Force Design, Donald Rumsfeld.

Pt. V(b). Mar. 14, 1977, U.S. Army Total Force Overview, John Sitterson.

Pt. V(c). Mar. 23, 1977, Soviet Military Manpower, William F. Scott.

Pt. V(d). May 18, 1977, Soviet Anti-Tank Debate, Phillip Karber.

Pt. VI(a). June 9, 1977, Naval Balance, Admiral Turner.

Pt. VI(b). June 16, 1977, Naval Balance, Admiral Turner.

Pt. VI(c), June 23, 1977, American Maritime Strategy, J. W. Middendorf, II.

Pt. VI(d), July 14, 1977, The Chokepoint War, Lawrence Griswold.

Pt. VI(e), July 29, 1977, Sea Control or Power Projection? James Hessman.

Pt. VI(f), Aug. 2, 1977, U.S. Naval Strategy, Admiral Moorer.

Dangerous Tilt to Strategic Balance—Sept. 26, 1977, John Collins.

Pt. VI(g), Sept. 27, 1977, Sea Power of the State, S. G. Gorshkov.

Conclusion—Part One—1977, John Breckinridge.

CITY OF EVANSVILLE, IND., SUFFERS TRAGIC LOSS

The SPEAKER. Under a previous order of the House, the gentleman from Indiana (Mr. CORNWELL) is recognized for 5 minutes.

Mr. CORNWELL. Mr. Speaker, on Tuesday evening, December 13, the University of Evansville basketball team lifted off from Dress Regional Airport in Evansville, Ind., in a charter aircraft. They were en route to Tennessee, but they were never to arrive. All of southwestern Indiana and the Nation were stunned when the news of the tragic crash was released.

Young men, coaches, and members of the media will be gravely missed by friends, relatives, and classmates. Many questions have surfaced now, even before the final report by the FAA has been released. In my mind, there is much to be studied in order to make the most convenient and the most used mode of transportation the safest mode of transportation, as well. Tragedies such as this only highlight the need for continued study into public and private air safety awareness. It is my hope that the House Subcommittee on Aviation, and Investigations and Review of the House Committee on Public Works will closely scrutinize existing FAA rules and regulations covering private and charter air service to assure the American public that all that can be done will be done to promulgate legislation to avert more of these unnecessary tragedies. I eagerly await the final FAA findings on this most unfortunate accident.

I join with my constituents from Evansville, Ind., in offering my most heartfelt condolences to the parents, friends, and relatives of those who are no longer with us, but who will live with us forever. It is a grim reminder of what steps must be taken in public and in private to insure that future air transportation tragedies will not take place.

And to the University of Evansville, its president, Dr. Wallace Graves, and its president of the student body, Christopher Weaver, I offer my condolences and all services that I might be able to lend from my office. May God be with each and every person, victim, family, and friend. Your presence will be forever missed.

A list of the casualties of charter plane crash, Evansville, December 13, 1971, follows:

Coach Bobby Watson, Newburgh; Assistant Athletic Director Bob Hudson, Evansville; Sports Information Director Greg Knipping, Evansville; Trainer Mark Kneise, Evansville; Student Manager Jeff Bohnert, Evansville; Student Manager Mark Kirkpatrick, Evansville; University Comptroller Charles Shike, Evansville; Maurice King, Evansville; WUEV sportscaster Marv Bates; Charles Goad, Evansville; Players Warren Alston, Goldsboro, N.C., Ray Comandella, Munster, Ind., Kraig Heckendorn, Cincinnati, Ohio, Mike Duff, Eldorado, Ill., Mike Joyner, Terre Haute, Ind., Kevin Kingston, Eldorado, Ill., Barney Lewis, Goldsboro, N.C., Steve Miller, New Albany, Ind., Keith Moon, Kettering, Ohio, Mark Seigel, Indianapolis, Ind., Greg Smith, Frankfort, Ill., Bryan Taylor, Tell City, Ind., John Ed Washington, Indianapolis, Ind., and Marion A. Winburn, Jeffersonville, Ind.; crew members James Stewart, Bill Hartford, Ty Van Pham, Pamela Smith and, Gaston Ruiz.

CIGARETTE BOOTLEGGING—BIG BUSINESS FOR ORGANIZED CRIME

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. PATTISON) is recognized for 5 minutes.

Mr. PATTISON of New York. Mr. Speaker, on October 21, I introduced H.R. 9667, a bill to eliminate cigarette boolegging by eliminating the tax differential between the States. On November 8, I joined with Congressman BOB DRINAN to introduce H.R. 10066, a related measure.

Both bills grow out of our concern about the problem of State cigarette taxes being illegally avoided by persons who buy cigarettes legally in low-tax States and then sell them illegally in high-tax States. It is estimated that the tax revenue lost each year now totals around $400 million.

On its face, cigarette bootlegging does not sound like a terribly serious offense. But we must not be deceived by first impressions.

In recent years, at least a dozen homicides have been directly related to cigarette bootlegging. Hundreds of honest businessmen have been forced out of the cigarette trade by illegal traffickers. And wage earners and property owners have had to pay higher taxes in order to compensate for the lost revenue.

Perhaps most ominous of all, however, is the fact that a very substantial portion of the cigarette bootlegging business is now controlled by organized crime. The substantial profits made by so-called buttleggers is being reinvested in loan sharking, narcotics, pornography and other enterprises controlled by the mobs.

Of course, almost by definition, discussions of underworld activities must necessarily be somewhat murky. And previous statements I have made, attempting to explain my reasons for concern about cigarette bootlegging, may have reflected this difficulty. However, the cover story in the December 15 issue of Forbes magazine helps bring the issue into very clear focus.

For the information of my colleagues and the public, I wish to insert in the RECORD the full text of James Cook's article on cigarette bootlegging. I think this article does an outstanding public service by showing in easily understood terms just how serious is the threat of organized crimes' involvement in cigarette bootlegging.

As I noted in a statement in the RECORD on October 25, I believe that the only effective way to end this problem is by ending the tax differentials that lead to bootlegging. Increased law enforcement activity will merely weed out the less resourceful criminals, it will not eliminate the very great financial inducements that now lead to bootlegging. This theory is upheld by the evidence presented in the Cook article.

The text of the article follows. After the article, there are two shorter items that appeared as sidebars to the main story:

CIGARETTE BOOTLEGGING: WHO SAYS CRIME DOESN'T PAY?

(By James Cook)

It was late, and he had tickets for the world series that night, so instead of circling around and coming into the city from the north, over the Tappan Zee Bridge, Dave Tobin turned his 1978 Ford Econoline van onto the Goethals Bridge and headed home, for Sunnyside, Queens, by way of Staten Island and the Verrazano Bridge. It was 6:15 p.m. when he stopped at the Verrazano toll plaza. There investigators of the Special Investigations Bureau of the New York State Department of Taxation and Finance flagged him down, opened the back of his van, and found 2,550 cartons of cigarettes Tobin had bought in North Carolina. "If I hadn't been late for that ball game," Tobin told the investigators, "you guys'd never have got me."

At 22, Dave Tobin had been arrested twice for smuggling cigarettes out of North Carolina. This time he'd borrowed a van from a friend, so the state probably couldn't hold on to that, but it did confiscate the entire 2,550-carton shipment that had cost Tobin close to $8,000 in cash. If found guilty he faces a fine and a sentence of as much as four years.

As a three-time offender he would stand a good chance of going to jail, but even if he did, he might well feel it had been worth the risk. He didn't have a job—the SIB men were unable to find that he'd ever worked anywhere—but he could probably have sold those cigarettes for between $4.50 and $5.00 a carton, depending on whether he peddled them himself or sold them to a group of runners for distribution to bars, beauty shops, bowling alleys, office and apartment buildings throughout the city. At such prices he'd have earned maybe $3,000, a return of roughly 40 percent on his $8,000 investment, and you couldn't knock that. Within a few hours, Tobin was free on $350 bail, in time to catch at least part of that game.

For Dave Tobin, and hundreds, even thousands of men like him, crime not only pays, it pays extraordinarily well. Transporting cigarettes from one tax jurisdiction and selling them in another where the tax is higher may not seem like much of a way to earn a living, but when the tax differential goes as high as 21 cents a pack, there is big money to be made. The bulk of it goes not to the Dave Tobins of this world, but to those large, rather amorphous criminal enterprises known as organized crime—the Mafia, the Syndicate, Cosa Nostra.

"Cigarette bootlegging," says Herman Lisnow, deputy controller of Texas, "is probably the most lucrative crime in America today." Its practitioners, both amateur and professional, may have grossed as much as $1.5 billion last year. After deducting the expenses that even criminal enterprises are subject to, they probably netted close to $600 million free and clear. That's nearly as much as Dow Chemical earned last year and two-thirds as much as the six big tobacco companies netted on cigarettes last year.

That $600 million isn't just the lost taxes that the bootleggers pocketed instead of the tax collector. It also includes the normal profit from the legitimate business activities—wholesalers, retailers, vending machine companies, truckers and so on—taken over by organized crime in its pursuit of higher and higher cigarette profits. Legitimate businesses in criminal hands are, of course, often more profitable than they are in legitimate ones; organized crime, for example, does not pay union wages. The proceeds of bootlegged cigarettes are seed money for further criminal investment.

Bootlegging is often dismissed as a crime that affects only small business interests, mainly the wholesalers and retailers. That is the case, thus far, but few experts think its influence will stop there. Once it wins control of the industry's principal markets—and it's well on the way—it will almost certainly turn upon the six giant manufacturing companies that make up the industry: R.J. Reynolds Industries, Inc., Brown & Williamson, Loews Corp., Liggett Group, American Brands and Philip Morris.

Cigarette bootlegging is often dismissed, too, as a victimless crime, only slightly more reprehensible than fishing for dimes in the telephone coin return. In fact, it's anything but. The cost can be reckoned in several ways. Money? The U.S. Advisory Commission on Intergovernmental Relations conservatively estimates that bootlegging cost the American Taxpayer $390 million in 1975 in lost tax revenues—including $72 million in New York, $43 million in Texas, $36 million each in Pennsylvania and Florida. Blood? At least 12 homicides and countless beatings, hijackings and robberies have been associated with bootleg cigarette traffic over the last few years.

Victimized, too, of course, are legitimate business interests. How can a taxpaying businessman compete with a competitor whose costs run 50 percent—and in the case of hijacked cigarettes—even 100 percent lower? He can't, and in New York City, where the bootleggers have already taken over much of the tobacco industry, he hasn't. Over the past decade, half of the tobacco wholesalers in the city and more than a quarter of the licensed retailers—7,000 altogether—have gone out of business. Teamsters Union locals there have lost nearly half of their tobacco and vending-machine membership. All told, more than 2,000 of the industry's 3,200 drivers, salesmen, clerks and warehousemen lost their jobs.

Cigarette bootlegging was once concentrated in New York and the heavily populated states of the Northeast and the Midwest. But no more. It now flourishes wherever there is a significant difference between the tax levels of one state or city and another. The ACIR figures it is a major problem in no fewer than 14 states—those with 50 percent of the total U.S. population, as it happens—and at least a moderate problem in eight others. In states like Washington, Alabama and Arizona, the problem is not organized crime, but tax-exempt military and Indian reservation sales which divert large volumes of otherwise taxable sales from the legitimate market. In other states, the problem is mail order or leakage across state lines into lower-tax areas.

The big tobacco-producing states—North Carolina, Virginia and Kentucky—keep their taxes low to encourage consumption. North Carolina levies only 2 cents per pack. Most of the others have been raising them higher and higher—to discourage smoking and to raise revenue. New York City piles 8 cents on the 15 cents already imposed by the state. Thus, the spread between North Carolina and New York City is 21 cents per pack, the biggest differential in the U.S. In Massachusetts, Connecticut and Florida the spread is almost as big—19 cents. But the bootlegger can prosper on far narrower margins—on the 9 cents that separate Massachusetts from New Hampshire, on the 5 cents that until recently separated Florida and Alabama. There's money to be made and lots of it, and more of it in high-tax states like Massachusetts or Florida than in more moderate ones like Tennessee or Delaware, but for bootleggers as for businessmen, as long as there's some margin somebody's likely to want it.

Precise measures of any one market are impossible. Take New York, the biggest cigarette market in the country. The ACIR study projects bootleg consumption at around 480 million packs annually. Morris Weintraub, publisher of Vending Times, head of the Council Against Cigarette Bootlegging and the U.S.' leading authority on the subject, thinks 554 million packs is more like it. Still another group, the Citizens Campaign, representing all phases of the industry, settled on 750 million.

Until the mid-Sixties, when rising tax rates began to scramble the market, the big urban states consistently consumed more cigarettes, the more rural states consistently fewer than the national average. Since then, the pattern has reversed itself, according to tax records. In 1976, when the national consumption averaged 145.3 tax-paid packs per person, North Carolinians consumed no fewer than 230.2 packs, New Yorkers a mere 124.6, down from 138.5 in 1965. Had New Yorkers gotten religion in the interim? Maybe. It was far more likely, however, that they had begun getting bootleg cigarettes—one out of every four smoked in the state, one out of every two in the city. Nationwide, such "underconsumption" came to 3.7 billion packs last year, equal to 13% of the industry's state-taxed sales.

Experts agree that the cigarette-bootlegging business got going in earnest only 12 years ago, when the state of New York doubled its cigarette tax from 5 cents to 10 cents a pack and set a pattern that revenue-hungry legislators have followed ever since. As the tax went up and the differential between other states and North Carolina, Kentucky and Virginia widened, bootlegging boomed. Ken Ball, assistant chief of law enforcement for the state of Florida, says smuggling in Florida steadily increased as the state tax went from 8 cents to 15 cents to 17 cents, and it increased again when it went up to 21 cents last July. "The profit potential is there," say Ball. "We don't see how they can pass it by."

Bootlegging started with ordinary people on their way back from a Florida vacation picking up a dozen or more cartons in North Carolina to give to their friends. According to Morris Weintraub, of Vending Times, such bootlegging still accounts for some 20 percent of the total volume. The more entrepreneurial amateurs began making regular trips into the South and distributing bootleg cigarettes to a widening circle of customers.

But as the profit grew, the little guy—the semiprofessional—began to be squeezed out. "I was going to get out of this business anyway," one bootlegger who operated out of his bread route told the cops. "A couple of guys stopped me the other day and said, 'Whatever cigarettes you've got, get rid of them, and after that knock it off. This is our territory.' "

As the business grew, cigarettes began moving, not by car, but by trailer truck—as many as 60,000 cartons at a time—on a fairly regular basis up the 500-mile stretch of Interstate 95 between North Carolina and New York. That inevitably brought organized crime into the picture. Fifteen hundred cartons in the back of a car represent an investment of maybe $4,500. But tractor-trailer loads can involve investments of $90,000 apiece and more, and the wholesalers in North Carolina don't sell on credit. They demand cash on the barrelhead, and they get it.

"The average guy hasn't got that kind of money," says Edward Lorch, detective in the Intelligence Division of the New York City Police Department. "So you have to go to the people who have it—the big guys in organized crime. But the big guy is just an investor. It's not like you were getting a loan from the bank. The money just funnels down to somebody else who is running the business, and he won't necessarily be an organized-crime type. He hangs out with all the local wise guys, but he never has direct contact with organized-crime figures. If you're an organized-crime figure, it's very easy to insulate yourself. You supply the money, give it to somebody you trust, and they run the business for you." No strings attached, no papers to sign, but an obligation to pay and repay far more binding than any bank loan or legal contract.

Cigarette bootlegging was in many ways ideally suited to the business talents organized crime had honed over the years moving liquor and narcotics and disposing of stolen goods. Although the distribution channels were different with cigarettes, the basic techniques were the same. In less than a decade, according to Leonard Schwartz, head of New

York's Wholesale Tobacco Distributors, 500 bootleg distribution routes were set up in the city, duplicating the legitimate ones.

What is most remarkable is that it is all done without the support systems legitimate business would consider essential. Even the biggest operations, according to police sources, don't use controllers or computers, and they don't keep inventories. "You'd be surprised at how much people can keep in their heads, or in little black books," says Lorch. "And all the book has in it is 'Joe, 6, Harry, 12.' Never any addresses, last names or phone numbers."

As police surveillance has increased, bootleggers have devised logistical systems with a skill, flexibility and improvisational brilliance few corporate managers could match. When enforcement people began intercepting too many trailer-truck loads on the New Jersey Turnpike, for example, the bootleggers began to break down their shipments in New Jersey and Pennsylvania, in effect warehousing them outside the New York metropolitan area just as the legitimate industry did, and dispersing a shipment among a half dozen cars or vans in 4,000-carton lots into New York's tunnels and bridges within a few hours. "If you lose one of those trailers," says Bev Starkey, chief of the New York City Finance Department's Special Investigations Bureau, "you've lost a huge investment. So you put it in smaller vehicles."

Forthright cartelists that they are, the organized-crime groups attempted to eliminate competition among themselves, dividing the market and conspiring to act jointly to meet their legitimate competition. "There can only be a limited number of operations," says Lorch, "so the market has to be split up—so much is mine, so much is yours. So the large profits come from certain areas to certain people." And those people tend to come from the same crime families that turn up in other criminal activities: Giancana in Chicago, Patriarca in Providence, Bruno in Philadelphia, DeCavalcante in New Jersey, Gambino, Genovese, Lucchese, Colombo in New York.

"When a few businessmen sit down and discuss the problems facing the industry," says Morris Weintraub, "they get indicted for antitrust. When crime families sit down, nothing happens."

"In many cases, they simply impose a tithe," says Ralph Salerno, one of the U.S. leading crime experts and a former New York City cop. "We want a quarter a carton so you can operate here."

These days, Angelo Bruno, named by police sources as the crime boss of the Philadelphia and south Jersey region, is also a cigarette wholesaler (John's Wholesale Distributors) and vending-machine operator (AVM Corp.). He gets 2 cents a carton "commission" on all cigarettes sold by John's and 3 cents a pack on all vending-machine locations controlled by AVM. Thanks to Bruno's salesmanship, according to Pennsylvania's Bureau of Cigarette and Beverage Taxes, John's volume has gone from 40,000 to 230,000 cartons a month in the past 18 months.

The acknowledged pioneer in large-scale cigarette bootlegging was Anthony Granata, now 39, a member of the Colombo crime family. According to a 1972 New York State Investigation Commission report, Granata got into the business with the backing of Vincent and Mario Gigante, of the Genovese crime family. In his heyday, in the late Sixties and early Seventies, Granata ran a $20-million-a-year business. He employed over 30 men, ran a fleet of 16 trucks back and forth into the South on a six-day-a-week basis, and brought 100,000 cartons of cigarettes a week into the New York market. In those days, Granata even had his own "traffic manager" posted on the premises of a major North Carolina wholesaler, Mack Judge's in Weldon. Granata paid his men $100 a trip, plus $95 in expenses, provided false drivers' licenses and plates, and took care of their legal costs if the cops picked them up.

When New York City and State filed for $2.4 million in back cigarette taxes, Granata moved to New Jersey, leaving Joseph Pontillo, now 43, to run the operation in Brooklyn for him. According to the Commission report, Granata and Pontillo jointly financed bootleg shipments and so shared the risks. Pontillo may have tried to take more than his share: Three years ago he was found shot in Brooklyn. Granata is now in jail, not for bootlegging, but for trying to bribe an officer.

No profit-oriented organization—and organized crime is nothing if not that—could fail to realize, of course, that the cigarette bootlegging business could be a lot more lucrative if it could move its illegitimate product into legitimate, higher-priced distribution channels. On a $3.20-carton of North Carolina cigarettes, a bootlegger can easily make as much as $1 a carton in the informal New York market, depending on how many times the cigarettes change hands in moving from wholesaler to consumer. But in the legitimate market, where cigarettes go for anywhere from $5.50 a carton (at discount) to $6.90 (in normal retail outlets,) the same bootleg carton could yield upward of $1.50 in profit.

In legitimate retail stores or vending machines, cigarettes pretty much have to bear New York State tax stamps or reasonable facsimiles thereof. Some of the biggest bootleggers, therefore, have integrated forward into counterfeiting.[1] It's an added cost—another 25 cents or so a carton, according to Morris Weintraub. And counterfeiting is a felony not a misdemeanor, so the risks are greater, but the rewards are greater still. In the legitimate, market, that 30% return on bootleg cigarettes rises to 50%. "We used to think counterfeiting accounted for only 5% of the bootleg cigarette traffic," says the head of the New York State Department of Taxation and Finance, James H. Tully Jr. "But now it looks more like 20%." His staff has found evidence of counterfeiting in 40 states.

The same impulse that led organized crime into counterfeiting would logically lead it to integrate forward into retailing and backward into wholesaling. No surprise, then, that rumors have persisted for years that the bootleggers have taken over the wholesalers in North Carolina. However, they remain rumors. North Carolina's most celebrated dealer, Mack Judge of Weldon, N.C., does a big business in cigarettes—at one time around 8 million cartons a year. Authorities say flatly that Mack Judge, a slim, frail, 55-year-old Tarheel, sells to most of the big organized-crime groups in the country. But is Mack Judge thereby owned or controlled by the mob? Why should he be? Ed Lorch asks. "These wholesalers cooperate with them anyway." But J. Robert Murphy, New Jersey's Deputy Director, Division of Taxation, and former president of the National Tobacco Tax Association, disagree. "They're going to move in and take over," he says, "whether they move in under their own name, or in the name of a nominee."

On their own or through front men, the presence of big-time bootleggers and counterfeiters in the wholesale business has led to a new phenomenon in cigarette distribution, subjobbers, whose numbers doubled in a decade. Traditionally, jobbers were customers of the wholesalers themselves and had tended to concentrate on the smaller, less profitable accounts. Suddenly, they were undercutting the wholesalers' price and stealing their customers. The use of jobbers with bootleg sources has driven many legitimate wholesalers out of business, and confronts those who hang on with a terrible choice: Stay honest and go broke, or stay solvent and join the mob.

"Let's assume as a wholesaler I have to get $5.30 a carton to cover my overhead, taxes, insurance and so on," says the head of one of New York's leading wholesalers. "A jobber [supplied by bootlegging wholesalers] will go to mom-and-pop store and say: 'I have better management, I have better control, I have a cheaper operation. I can get you cigarettes for $5.17.' As a wholesaler I can't live with that price, so they're putting my back to the wall. All right. I meet the jobber's price to hold onto my volume, but I'm not making money. So it comes to a point, when you're not making money and you're weak, they'll either come in and make you an offer you can't refuse and you'll sell. Or you'll join them. Or you'll get out."

A decade ago a wholesaler could count on making 3 cents a carton. Now he is lucky to make a penny. And most wholesalers now sell at the manufacturer's price; they stay alive on the 3.25 percent discounts offered by the manufacturers for prompt payment of bills.

Moving in on the wholesalers is only half of the criminal cigarette game today. The vending-machine business, dominated by organized crime for decades, has enabled bootleggers to leverage their profits even higher. A carton of cigarettes that costs $3.20 in North Carolina, for example, yields an average of $8 a carton in a New York City vending machine. That's the average; some machines in the Big Apple eat dollar bills and give no change. Even deducting the 75 cents a carton in transportation, counterfeiting and distribution expenses involved, the bootleggers end up with a profit of around $4 a carton. If 17% of New York's bootleg consumption goes into vending machines, as it does nationally, the resulting 13 million cartons would yield $50 million annually to organized crime—from vending alone.

This is one reason New York State's tax department has lost its enthusiasm for tax reduction as a means of discouraging rampant bootlegging in New York City. It may be true that bootlegging did not become economic until the tax differential widened to 12 cents in the mid-Sixties. But after a decade of steadily widening profit margins—by counterfeiting, by vending, by the economies of scale—a good many observers fear a tax reduction would serve mainly to encourage organized criminals to expand into other tax jurisdictions: upstate New York and high-tax adjoining states.

As it is, organized crime has already become a major factor in the Midwest and it is gradually becoming so in places like Texas and Florida. The carnage among the wholesalers in Chicago, where there are now only 12 distributors, vs. 54 two decades ago, is even worse than it is in New York. "Within a couple of years," says George Stewart, head of a Midwest tax enforcement group, the Interstate Research Center, "they are pretty well going to control most of the major markets."

So far, none of this turmoil seems to have touched the six giant corporations that make up the U.S. cigarette industry. Their combined domestic tobacco sales were something like $9 billion last year, their net profit around $950 million. Their margins are affected only by the cost of their materials and their competitors' strategies, not by what goes on elsewhere in the distribution system. After all, why should it matter to them who moves their product to market? They still get $2.87 a carton—the price for standard brands to all comers.

---

[1] Three companies, Pitney-Bowes, American Decal and Meyercord, dominate the tax stamping machine market. It's maybe a $50-million-a-year business. Their position in the market rests in large part on the presumed foolproof security of their various systems for applying tax indicia. But that presumption is no longer widely shared—not since 1975, when police raided a Bronx warehouse and found 30,000 counterfeit cartons.

Even so, organized crime once tried to force the Great Atlantic & Pacific Tea Co. to sell mob-backed detergent in its New York stores, and racketeers at present have discouraged Kraft from making its own mozzarella cheese for sale to supermarkets.[2] In such a time, the tobacco industry can hardly rest easy at the prospect that one day organized crime may not only control the distribution in its major markets but also begin to move in on the manufacturers themselves.

The big companies are vulnerable to attack in several ways—not least to infiltration from within. Enough uncertainties already exist about the flow of cigarette traffic to cause some law enforcement authorities to wonder whether substantial quantities are not already being diverted into illegitimate channels. For years there have seemed to be more cigarettes in the market than anyone can account for, and any statistician can demonstrate that the three producing states fall well short of supplying the underconsumption of the five big northeastern states, never mind all those other big markets in the Midwest. And if those cigarettes are not flowing in from those other states that consume in excess of the national average—a suggestion that makes nonsense of the economics most experts postulated for the bootleggers—where are they coming from?

Tobacco men like to explain how carefully cigarettes are controlled as they move from manufacturer to market by the controls mandated by federal and state taxation. But the truth is, not all cigarettes are subject to federal taxes, and not all federally taxed cigarettes are subject to state and local taxes. In these facts lie opportunities for massive leakage into illegitimate channels for anybody skillful enough—or highly motivated enough—to attempt it.

There is, for instance, an 8 percent gap—2.6 billion packs—between the number of cigarettes the states impose taxes on and the number the federal government does. The Bureau of Alcohol, Tobacco & Firearms assumes that the difference is "probably" accounted for by sales on military posts and Indian reservations, which are taxed by the feds but are exempted from state and local taxes. But 2.6 billion packs? As many as the entire state of New York, with a population of 18 million, consumes in a year?

The other gap, between cigarette production and cigarette shipments on which federal taxes are paid is even larger: 3.5 billion packs, 10 percent of total production. Most of that supposedly goes into the export market, but the Bureau of Alcohol, Tobacco & Firearms now admits that its export controls are not really adequate. It is currently changing the regulations for its duty-free export warehouses on the Mexican border in an effort to end a $7-million loss in federal taxes on export cigarettes that somehow ended up in the U.S. market anyway. At 8 cents a pack, $7 million comes to 88 million packs, almost as much as the state of Montana consumes annually. Is the Mexican border indicative of what is going on elsewhere in the U.S.? Department of Agriculture officials concede that similar leaks are not at all unlikely along the Canadian border as well.

Are cigarettes, then, being diverted to underworld distributors from stocks that escape the state and federal tax net—cigarettes intended for Indian and military reservations, for export, even for manufacturers' inventories? "We don't rule out the possibility that a scheme could be devised that would encompass that object," says ATF's tax expert Melvin Bruce, "but it would almost certainly require some sort of collusion cn the part of the manufacturer."

But would it? Cigarette inventories are controlled and accounted for at almost every step from production line to market by computers, and these days, when computer criminals can create the most deceptive of corporate illusions—witness Equity Funding—anything seems possible.

An inference is not evidence, and so the case cannot be made that organized crime has already succeeding in finding ways to divert, for its own purposes, substantial quantities of tax-exempt cigarettes. The point is that organized crime has already discovered that cigarettes are one of the most profitable criminal enterprises around. Given that discovery, it can hardly be expected not to try to realize the full profit potential of that business. Inevitably, that would seem to signal a clear and present danger for the manufacturers who control the purse strings of the industry.

One Wins, the Other Doesn't

Robert Satiacum, a strapping 48-year-old Puyallup Indian, is giving the Washington State revenuers fits these days. Satiacum's four smoke shops in Tacoma sell about 1.5 million cartons of cigarettes a year, $6 million worth, and the state isn't collecting a cent on them. Not the 16-cents-a-pack cigarette tax, not even the 5.1 percent sales tax it collects everywhere. It can't. Satiacum, like the operators of some 85 other Indian smoke shops, runs his business on reservation land. Though most of Satiacum's customers are non-Indians, the courts still haven't resolved the taxable status of merchandise sold to non-Indians on Indian lands, so Satiacum prospers.

Satiacum opened his first store in 1971, about the time other Indian tribes began challenging in court the state's right to collect taxes on Indian sales. Satiacum located his stores strategically on reservation land throughout Tacoma, putting the largest downtown, a stone's throw from an off-ramp of the state's principal freeway, Interstate 5. So his customers come onto the reservation for the cheapest cigarettes around.

Satiacum's cigarettes sell for $4 a carton. This saves his customers a dollar or more over what they'd pay elsewhere. "As far as the public is concerned," Satiacum says, "they're not losing money. Since they're the state themselves anyway, they're saving money." That price also gives Satiacum a whopping profit—close to a dollar a carton. Multiply that by 1.5 million cartons a year, and it's clear cigarettes have made him wealthy.

"With my militant attitude," Satiacum deadpans, "I think I'm worth $1 billion." Locally, he is as well known for his activism in Indian affairs as for his business acumen. He has run three times for state office and lost. "I'm an Indian," he says cynically.

Satiacum not only refuses to collect state taxes, he claims he doesn't pay any federal income tax. "The land and resources we gave to the United States was enough to pay for all time," he says. He believes the state cigarette and liquor taxes are unfair and punishing, but as a businessman he wouldn't complain if the cigarette tax went up. "I'd prefer the tax go up to 25 percent," he says.—Ellen Melton.

Manhattan Retailer: Edward H. Snyder

Edward H. Snyder, 74, recently retired after 46 years in the retail cigarette business. Here's why, in his own words: "I had a very fine stand in the office building at 43rd and Fifth Avenue, where the old Brass Rail used to be. The finest customers you could want. We sold cigarettes, cigars, candy and, of course, sundries—razor blades, lighters and things of that sort. Three or four years ago we began to notice a big drop in our sales. At first we thought we'd lost business to Jersey, where the tax was lower. Then we got reports that on Thursdays a panel truck would back up near the building and deliver I-don't-know-how-many cases. Bootleg stuff, they weren't tax-marked.

"Regular customers of mine who had come to my counters for years walked out of the lobby passing me by. It was hard to take. My barber in the building who I went to for I-don't-know-how-many years, he apologized—'Eddie, I can get them cheaper elsewhere.' It's only natural—10 cents a pack, that's 70 cents a week, and more. They couldn't make a profit on it if it was legitimate merchandise because they were selling below cost. The only thing we increased was giving away matches because bootleggers never do that. It's frustrating to give matches for somebody else's cigarettes.

"We started to lose more and more customers. And honestly, it's true: Traffic is our lifeblood. Without it, we lose not only cigarette sales, which constitute 60 percent of our volume, but we lose out in cigars, candy and sundry sales. It wasn't a question of profit margins. You weren't getting somebody buying something to make a profit on. When a person came in for cigarettes, he picked up a piece of candy, some Kleenex. They just didn't come in for anything any more.

"It's the illegitimate places that set the pace. They surround us and undersell us by 85 and 90 cents a carton. There was one man in my building; he brings cigarettes in for the whole office. I supplied matches for them.

"I sold out two years ago for half, maybe two-thirds, of what my business was worth five years ago. After 46 years I couldn't make a decent living out of it anymore."

PEACEMAKER IN FLORIDA'S LAST FRONTIER

(Mr. SIKES asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. SIKES. Mr. Speaker, Maj. Tom Garrison of the Florida Game and Fresh Water Fish Commission has long been recognized as one of the leading figures in the game and fish conservation program in Florida's first and finest district. His years of service to the commission have resulted in outstanding achievements by that body and in growing recognition of his own capabilities by the sportsmen of Florida. His activities are well outlined in a column by Colin Moore which appeared in the Pensacola Journal of Wednesday, November 23. I submit it for the Record:

Peacemaker in Florida's Last Frontier

(By Colin Moore)

If the Florida Game and Fresh Water Fish Commission chose regional managers because of their imposing features, one would have to consider Maj. Tom Garrison a wise choice.

The manager of the commission's Northwest Region, Garrison appears to be a human reflection of the rugged country he manages.

Perhaps, the sportsmen, who attend the public meetings he chairs throughout the Panhandle, don't miss the comparison.

He's 6-foot-4 and weighs 250 pounds. His frame is still solid, for a man in his 50s, and his gravelly voice commands attention when he speaks. It's a voice which can and, often does, cut through arguments and brings an intermission to disputes between hunters or fishermen at odds with each others' ideas. His hands match his size and they are often clasped together as he leans over his desk and listens to what sportsmen have to say. He has the look of a somebody.

---

[2] Or so an FBI man told a Wall Street Journal reporter last spring. Says a Kraft spokesman: "The story is unverifiable." The A&P case grabbed headlines in the late 1960s.

For 11 years, he has epitomized the commission's presence in the Panhandle. He has won battles for commission positions and given in to public opinion at times when there was room for compromise. It is said of him that he is content with the status quo and he understands his position well: He is not a crusader for change or causes, but a manager of fish and wildlife resources as dictated by the policies of the commission. It is also said Garrison stays out of business which doesn't concern him or his employes directly and avoids controversy whenever possible.

However, although the Panhandle leads the state in the number of hunting licenses sold each year and is third in the number of fishing licenses sold annually, Garrison doesn't do his job in an area that breeds dissidence.

Of the five regions in the state, the Northwest Region is the least affected by the encroachment of industrialization or mass immigration. Consequently, the problems, which are present in the other four regions—problems of pollution and overcrowding—aren't substantial.

"It's been said before, by many others, but the Northwest Region is the last frontier in Florida and it will probably be that way for a long time," says Garrison, a native of Pinellas County who joined the commission in 1959 as a wildlife officer.

"We enjoy the last of the wide-open country and the most valuable part of the state as far as having the quietness and space and clean water for wildlife and fish to fluorish. We owe a lot of gratitude to the timber companies, which open hundreds of thousands of acres to hunters each year and the federal and state governments, which provide additional multiple use recreational areas such as Eglin Air Force Reservation, Tyndall Air Force Base, the Apalachicola National Forest and the Blackwater River State Forest. When it comes right down to it, the value of timberlands in this part of the state has been the salvation of sportsmen and there's no reason to expect the situation to change."

Garrison's assessment of the type of outdoorsmen who inhabit the North Florida area probably is similar to another Florida regional manager's composite.

"We have our communities in which the general philosophy of how to utilize fish and wildlife is better than average," says Garrison. "At the other extreme, we have communities in which the attitudes are very bad and the atmosphere is not favorable to sound conservation practices.

"'Overall, we don't have many major problems with our people. The percentile of law violations is similar to other regions." Garrison worked in the commission's fisheries division before becoming regional manager.

"Last week, I attended a meeting in Pensacola that concerned rebuilding the deer herd in the Escambia River valley," said Garrison. "I think I shocked some folks when I said, 'People are selfish.' Sometimes they'll obey one regulation if it is convenient for them and turn around and disobey another regulation because it suits them to do so at the time. No two people have the same sense of values. Some uphold one rule and then put down another, disregarding the fact that the rule was made for a very good reason.

"That's the dangerous kind of thinking I often witness in this region and it's the kind of thinking that's going to keep the area from reaching its full potential.

"Northwest Florida is dog hunting country. Coon hunters, fox hunters and deer hunters often run their hounds in the same specific areas. Their activities affect bow hunters and gun-toting still hunters and even squirrel hunters and turkey hunters. One of Garrison's main tasks is keeping the various groups out of each others' way as much as possible.

"The bickering between fox hunters and deer hunter, especially, is becoming the predominant controversy in this region," says Garrison. "From time to time, I'm accused of being against hunting with hounds, but I'm not. I am, however, realistic about it. When you have a certain amount of space to use and a certain amount of people using it without interfering with each other, there's no problems. But we're getting more people in the woods every hunting season and there's bound to be trouble sooner or later.

"We'll have more and more areas closed to multiple use simply because of sheer numbers of hunters. My concern is seeing that every group of sportsmen gets treated as fairly as possible.

"Another concern I have is with the landowners. They don't like to be involved in arguments and the simplest way they can avoid them is to close their land to everyone. Hunters have to remember that, most of the time, they're borrowing the land they're hunting on and, if they don't treat it respectfully and don't try to get along with each other, they're going to lose it.

"I don't think we're saturated with dogs, yet, and we won't outlaw dog hunting for a number of years. What will make or break dog hunting is how the hunters themselves react to changing circumstances."

For Garrison, his challenge is leading the region's hunters down the bumpy road ahead.

DISASTER MAY FOLLOW B-1 SCRAPPING

(Mr. SIKES asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SIKES. Mr. Speaker, for many years the leading authority on naval weapons and ships worldwide has been Jane's Fighting Ships. In more recent years, the same reputation has extended to Jane's projections on aircraft. The careful analysis given by this outstanding organization to weapons systems and expertise continues to justify the confidence which they have long held among the world's policymakers on defense.

The new edition of Jane's "All the World's Aircraft," contains the dramatic statement:

> The fragile coexistence, maintained for a generation by balanced East-West military power, is being allowed to slip, inch by inch, from our grasp.

It is from the pen of John W. R. Taylor, Jane's editor. Mr. Taylor is a noted British aviation writer.

President Carter's decision to scrap the B-1 bomber may have given the Soviets a potentially disastrous lead in air power and sown the "seeds of defeat" for the West, the authoritative survey said, and that the West's edge in aircraft and missiles is being eroded rapidly by new Soviet technology.

"If our planet is subjected one day to the unimaginable horrors of a third world war,'" it said in a foreword to its 1977-78 edition, "1977 might be recorded as the year in which the seeds of defeat for the Western powers were sown."

In an unusually harsh comparison, Jane's said Carter's decision to scrap production of the B-1 bomber in favor of developing the cruise missile was similar to Adolf Hitler's emphasis on V-1 "buzz bombs" in World War II.

"Only one military leader has previously put massive faith in such missiles," Jane's said, "and Britain, in a far from technologically advanced age, had little difficulty in coping with Adolf Hitler's V-1 flying bombs.

"Can we be confident that modern cruise missiles, flying at subsonic speed, lacking the discrimination of human control and short of effective countermeasures at this stage of their evolution, would prove immensely more successful?"

Jane's said if the Soviets had staged one of their old-style Aviation Day air shows last July "it would have proved a shattering experience for Western observers."

"Such a sight," Jane's said, "could well have made the United States regret it had been hasty in canceling B-1 production, which is one good reason why it did not happen."

It said the Soviets are developing a small new lightweight fighter specifically as a defense against the cruise missile.

Jane's called it "small, lightweight and extremely maneuverable." It said it is designed to "provide a defense against cruise missiles and low-flying Western attack planes by employing a combination of AWACS (Airborne Warning and Control System), look-down radar and snap-down air-to-air missiles."

It also said two other types of major new Soviet combat planes had been developed. One is a relatively slow but heavily armored plane and the third is a strategic bomber.

Among new Soviet airborne missiles, according to Jane's, are the so-called "Kitchen" air-to-surface weapon with an estimated range of 180 miles and the "Kingfish" with a 135-mile range.

PERSONAL EXPLANATION

(Mr. KASTEN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KASTEN. Mr. Speaker, last week I missed three rollcall votes because my plane from Wisconsin was late in arriving. I wish to state, therefore, for the record, how I would have voted had I been present.

"Yea" on the conference report to accompany H.R. 9418, the Health Professions Education Amendments.

"Nay" on the conference report to accompany H.R. 6666, the Legal Services Corporation amendments.

"Nay" on the vote to consider the rule relating to the continuing resolution.

FBI STILL THE BEST

(Mr. DEVINE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. DEVINE. Mr. Speaker, the Freedom of Information Act has created serious problems for the American intelligence community, and it has become necessary to divert the attention of thousands of personnel to answer inquiries, most of them from just nosy busybodies, relative to information contained in the files.

Nevertheless the revelation of the contents of some 40,000 pages of FBI records demonstrated that the FBI is, indeed, the best law enforcement-intelligence agency in the world, and it revealed how thoroughly the Bureau, under the guidance of Director J. Edgar Hoover, continuously acted in a manner serving the public interest, as well as the national security of our country.

The Columbus Dispatch in a recent editorial, December 9, 1977, recognized the full professional nature of the Bureau, and I am quoting the editorial, in full, for the benefit of all of our Members, both skeptics and supporters of our intelligence agencies:

[From the Dispatch, Dec. 9, 1977]

FBI INVESTIGATION FULL, PROFESSIONAL

Release of 40,001 pages of FBI records on the assassination of President John F. Kennedy will not quiet all suspicions but it does reveal much about the quality and scope of the government investigation.

A century from now those who want to find a sinister conspiracy behind the tragic killing will no doubt debate the evidence as vigorously as some historians still argue about aspects of President Abraham Lincoln's murder in 1865.

Because time has elapsed and both Lee Harvey Oswald and Jack Ruby are dead, the public is not likely to find out why the president and Oswald both were killed in Dallas. These issues of motivation are critical to the investigation.

What emerges clearly from the declassified FBI documents are several important themes.

First, the agency and its Director J. Edgar Hoover pursued an intense, professional investigation of unprecedented magnitude.

Agents pursued thousands of leads—most of them false—and collected a great variety of information. While most of the data proved unproductive, the FBI had an obligation to pursue every possible lead—and it apparently did.

Second, the FBI documents show occasional spats with other agencies and individuals also pursuing their own investigations.

That the investigators sometimes competed and disputed each other's conclusions should not surprise those familiar with government bureaucracies. Inevitably interagency rivalries and personality conflicts influence the evolution of government policy and programs.

Rather, this competition was healthy. The adversary process ensured that the investigators questioned evidence and their conclusions passed the test of time.

Within two hours of the president's assassination the records show Mr. Hoover believed Oswald committed the crime, and months of checking led the Warren Commission inexorably to the same result.

Release of the FBI documents seems certain to bolster public confidence in that agency's professional approach to criminal investigations.

THE B-1 BOMBER IS NECESSARY, MR. PRESIDENT

(Mr. DEVINE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. DEVINE. Mr. Speaker, time and again, the House has expressed itself in a manner that should at least suggest to the President that he was in error when he accepted the advice of those urging phasing out of the B-1 bomber. It is not necessary to repeat all of the facts outlined in the frequent debates here in the House, and I would hope that the President will not follow the route of a "substitute manned bomber," just because it might make him look bad to reverse himself for his error on the B-1.

The Columbus Dispatch in a fine editorial on December 13, 1977, quoted the latest edition of the respected "Jane's," and I am attaching this editorial for the benefit of both the proponents and opponents of the critical B-1 program. It concludes that—

> Next year Congress would be wise to review thoroughly the state of our strategic defenses and, if necessary, resurrect the B-1 project.

[From the Dispatch, Dec. 13, 1977]

BOMBER DECISION DESERVES REVIEW

Foreign criticisms of President Carter's decision to scrap the B-1 bomber deserve careful consideration in the U.S.

The latest edition of "Jane's All The World's Aircraft," which is a respected British survey of armaments, asserts the White House decision may have given the Soviets a potentially disastrous lead in air power and sown the "seeds of defeat" for the West. It says:

"If our planet is subjected one day to the unimaginable horrors of a third world war, 1977 might be recorded as the year in which the seeds of defeat for the Western powers were sown."

President Carter's cancellation of the B-1 bomber in favor of developing the cruise missile, a relatively untried weapon, was similar to Adolf Hitler's unwise emphasis on V-1 "buzz bombs" in World War II, the military survey says.

These comments, unusually harsh in tone, warrant serious evaluation in Congress and the Executive Department where officials have the responsibility for developing weapons systems to maintain American security.

Frankly, we had doubts when Mr. Carter abruptly abandoned the B-1 program in June without at least using the weapons system as a bargaining chip in negotiations with the Kremlin on strategic arms limitations.

And subsequent congressional debate has done nothing to allay the concern that reliance on the subsonic cruiser is an inadequate substitute for the more expensive manned bomber capable of actually penetrating Soviet air space.

The existing B-52, which first flew in 1954, is vulnerable to Soviet air defenses and it cannot deliver the cruise attack missiles as effectively as the B-1 or some other technologically-advanced bomber.

But the strongest argument for a new manned bomber rests on the need to provide insurance against technological breakthroughs which could expose our submarine-launched missiles to a Soviet first strike.

Next year Congress would be wise to review thoroughly the state of our strategic defenses and, if necessary, resurrect the B-1 project.

PALM OIL RESTRICTION THWARTED BY WORLD BANK

(Mr. MOORE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MOORE. Mr. Speaker, on November 15, 1977, the World Bank approved a $65 million loan to Indonesia, approximately $15 million of which will be used to finance increased palm oil production. On October 3, 1977, President Carter signed Public Law 95-118, legislation authorizing funds for the World Bank and others, but also containing section 901 language which I authored in the House version prohibiting U.S. support for any loan for palm oil production, if it was to be exported and would compete with similar U.S. products, such as soybean oil. President Carter has also stated his intention to instruct U.S. representatives to these banks to oppose such assistance for palm oil production.

I was shocked to learn this loan received the support and vote of the U.S. Executive Director, in defiance of this law and the President's instructions as well. I have protested this vote to the President, and the U.S. Executive Director as being illogical, illegal, and totally unacceptable.

The Department of the Treasury issued a report dated November 15, 1977, used by the Executive Director to rationalize his vote that, in my opinion, draws two ridiculous conclusions. First, that the increased production will be only for Indonesia's domestic consumption, or not for export, and second, that any increased exports will not have any effect on American agriculture. Besides contradictions in the Treasury report itself, USDA figures 3 weeks after the loan was approved concluded that increased palm oil production in Indonesia was designed to increase exports. Indonesia now or in the foreseeable future will consume nowhere near all the palm oil produced. Therefore, any increase in production in Indonesia will mean more palm oil for export, and any additional exports adversely affect American vegetable oil production.

Mr. Speaker, not only is this action deplorable in the sense that it flies in the face of the law and congressional intent, but it also will be perceived by farmers, many of whom are at this moment demanding 100-percent price support for crops competing with palm oil, as an instance where their Government is not adequately considering their interests and thereby justifying their demands. We must strongly protest this occurrence and demand that it not happen again in the future, in order to preserve our free market agricultural system.

PERSONAL EXPLANATION

(Mr. SEBELIUS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SEBELIUS. Mr. Speaker, each year, I make it a practice to conduct a summer listening tour of my 57-county First Congressional District of Kansas. However, the tour was delayed this year in order that I not be absent during consideration of the Food and Agriculture Act of 1977, legislation of the utmost importance to the people of the "Big First" District.

Our annual 3,200-mile listening tour covers 60 percent of Kansas and an area larger than the State of Ohio or Pennsylvania. Rescheduling of the tour during these past months was difficult due to the uncertain schedule of the Congress and resulted in my being absent from the December 6 and 7 sessions. Had I been able to be here, I would have cast my votes in the following manner:

H. Con. Res. 432, health planning. Vote "yea."

H.J. Res. 622, fiscal 1978 continuing resolution. Vote "yea."

H.J. Res. 622, fiscal 1978 continuing resolution, Michel amendment to the Mahon amendment. Vote "nay."

H.R. 9375, fiscal 1978 supplemental appropriations, Addabbo motion. Vote "nay."

H.R. 9375, fiscal 1978 supplemental appropriations, Mahon motion. Vote "nay."

H.R. 9418, foreign medical students, adoption of the conference report. Vote "yea."

H.R. 6666, Legal Services Corporation, adoption of the conference report. Vote "nay."

H.J. Res. 662, fiscal 1978 continuing resolution, adoption of the rule. Vote "yea."

H.J. Res. 662, fiscal 1978 continuing resolution, Mahon motion. Vote "nay."

S. 1340, energy research authorization, adoption of the rule. Vote "yea."

H.R. 3722, Securities and Exchange Commission authorization, adoption of the conference report. Vote "yea."

S. 305, unlawful corporate payments, adoption of the conference report. Vote "yea."

H.J. Res. 662, fiscal 1978 continuing resolution, adoption of the rule. Vote "nay."

H.J. Res. 662, fiscal 1978 continuing resolution, Michel motion. Vote "nay."

CONSERVING THE AMERICAN PEOPLE'S HERITAGE IN ALASKA

(Mr. SEIBERLING asked and was given permission to extend his remarks at this point in the RECORD.).

Mr. SEIBERLING. Mr. Speaker, the Alaska Native Claims Settlement Act of 1971 did more than settle the longstanding aboriginal claims of Alaskan Native peoples. It also set in motion a sequence of events which, if carried through by this Congress, may well constitute the most significant single land conservation action in the history of our country.

The 1971 act directed the Secretary of the Interior to withdraw from all other forms of appropriation up to 80 million acres of Federal lands in Alaska—lands owned by all of the American people—and to report to the Congress his recommendations for protecting them as units of the National Park, National Forest, National Wildlife Refuge, and National Wild and Scenic Rivers Systems. In 1973, former Interior Secretary Rogers Morton recommended that some 83 million acres be so designated. These lands are often referred to as the "D-2" lands after section 17(d)(2) of the 1971 act, which is the section authorizing the Secretary's action.

The 1971 act also set a practical deadline of December 1978, for Congress to act on these lands by providing that any of these lands which Congress has not by then chosen for special legislative protection will revert to ordinary public lands status, open to mineral entry and other forms of commercial development.

Congress, of course, has the ultimate responsibility for disposition of the public lands. The Secretary's recommendations, while helpful, are merely guides which Congress may modify. H.R. 39, introduced in January 1977, by the distinguished chairman of the Committee on Interior and Insular Affairs, Mr. UDALL, and cosponsored by myself and some 75 other House Members, enlarged upon Secretary Morton's recommendations, as do the recommendations of the Carter administration which were presented to the Committee by Secretary of the Interior Cecil Andrus in mid-September.

Unlike the lower 48 States, where land use and ownership patterns are already set, Alaska represents an opportunity to protect immense tracts of unspoiled, pristine wilderness of great beauty and variety. There we can create a system of national parks, wildlife refuges, forests, wild and scenic rivers and wilderness areas whose boundaries are not dictated by urban sprawl or the expense of repurchasing former Federal land but by ecological wholeness.

Such action would come just in time. The tide of modern technological development is about to sweep over Alaska. Indeed, H.R. 39 will virtually complete the land allocation process in Alaska which began with the Statehood Act in 1959. The Statehood Act granted the State of Alaska the right to select over 104 million acres of public land (an acreage equal in size to the State of California). This land disposal process was continued by the Alaska Native Claims Settlement Act, which granted Native corporations the right to select about 44 million acres of public land (equal to the size of the State of New York). H.R. 39 would complete this process by setting aside for the future enjoyment of the American people an amount of land equivalent to the total granted to the State and the Alaskan Natives.

Mr. Speaker, I would like to present at this time a status report on the actions taken thus far by the Interior Committee's Subcommittee on General Oversight and Alaska lands in dealing with this monumental legislation. Newly formed in this Congress, the subcommittee, which I chair, has been delegated the task of considering H.R. 39 and other bills related to the Alaska public lands question.

PUBLIC HEARINGS

Mr. Speaker, H.R. 39 deals with important and complicated issues which involve huge land areas, interests of the State, of Native groups and of the entire Nation. The bill deals with the national needs for energy, timber, and minerals, as well as the less easily quantifiable but no less important needs for preserving the majesty of undeveloped lands and magnificent wildlife populations and for developed outdoor recreational space.

In order to meet our responsibility and to assess the public feeling toward these matters, the subcommittee embarked on an extensive series of public hearings. These hearings, designed to permit the widest possible public input, were held in the Nation's Capital and in several major cities in the Lower 48 and in Alaska. Hearings were held in Washington, D.C. (April 21, 22, 25, 28, 29, and May 2 and 3); Chicago, Ill. (May 7); Atlanta, Ga. (May 14); Denver, Colo. (June 4); Seattle, Wash. (June 20); Sitka, Alaska (July 5); Juneau, Alaska (July 7); Ketchikan, Alaska (July 9); Anchorage, Alaska (August 12); and Fairbanks, Alaska (August 20).

In addition, 19 "town meeting" sessions were held in Alaska so that rural Alaskans would have a better chance to present their views. Special briefings were given to the subcommittee by the U.S. Geological Survey and the Bureau of Mines (June 23) and the U.S. Forest Service (July 19), and special hearings were held on the status of land transfers to Alaskan Natives under the Alaska Native Claims Settlement Act (July 21, 22, and September 12).

Mr. Speaker, section 17(d)(2) of the Alaska Native Claims Settlement Act is referred to as the "national interest" provision of the Act, since the establishment of new national parks, national wildlife refuges, national forests, national wild and scenic rivers and national wilderness areas in Alaska will truly benefit the entire Nation. Moreover, since the land is already owned by the Federal Government, it can be done without any initial outlay of money.

The public hearings have demonstrated a broad national interest and concern in the fate of Alaska's public lands and have been exceptionally informative and thought provoking. More than 2,300 witnesses, from 40 States, testified. Many traveled hundreds of miles at their own expense to do so. The witnesses reflected a broad cross section of America. In Alaska itself, well over 1,000 Alaskans testified at the public hearings and town meetings.

A total of 15 members of the Interior Committee—nearly a third of its membership—attended some part of our field trips and field hearings; 14 members went to Alaska.

Our last hearing was held here in Washington on September 15 when the Secretary of the Interior Cecil Andrus and Assistant Secretary of Agriculture Rupert Cutler presented President Carter's recommendations on the bills before us. It was gratifying to receive the administrations' support for the overall thrust and concept of H.R. 39. To quote Mr. Andrus:

> The President and I are totally committed to the early passage of a strong d-2 legislative package.

He further stated that—

> Except for a variation in overall acreage and wilderness acreage recommendations and other more minor amendments, I believe H.R. 39 is in basic agreement with our proposals on the broader issues which we face in this legislative issue.

The administration's recommendations are the culmination of many years of study and research in Alaska by the

Department of the Interior, and demonstrate careful efforts to accommodate private, local, and State concerns and, in Mr. Andrus's words "sensitivity to the resource needs of Alaska and America both now and for the coming years."

Since the end of the hearings, the subcommittee staff, under my direction and in close consultation with majority members of the subcommittee, have assimilated what we have learned and have prepared recommendations for a new text of H.R. 39. These recommendations have been incorporated in Subcommittee Print No. 2, which has been adopted by the subcommittee for the purposes of markup, now scheduled to commence on January 11.

OUTLINE OF MAJOR ISSUES

Mr. Speaker, for those unfamiliar with the Alaska "d–2" lands question, it will be useful to outline the general issues which have been addressed repeatedly throughout our hearing process and the particular issues which we have tried to address in our consideration of H.R. 39 and the preparation of the subcommittee print.

In the meantime, the subcommittee staff and I are continuing to work with Secretary Andrus and Bergland, the State of Alaska's administration and legislative council, national and Alaskan conservation groups, representatives of organized labor and industry, and representatives of Alaskan Natives, to perfect the bill and resolve remaining differences.

CONSERVATION

As those who visited Alaska have seen, wilderness on a vast scale is the singular distinguishing characteristic of the public lands in Alaska. It presents an unrivaled opportunity for experiencing vast areas of land scarcely altered by man's activities. It is this aspect of Alaska's national interest lands which has captured the minds and imaginations of countless Americans. Many may never go to Alaska, but, as many of our witnesses said, they "know it is there"—for themselves and their children. The wilderness character of Alaska's public lands is viewed by many Americans as the last remnant of a national heritage which has all but vanished in the lower 48. As our final frontier, the public lands in Alaska, if protected, would continue to offer Americans the kind of experiences many so vividly described at the hearings. As one New Yorker wrote of a recent visit there—

> Nothing can replace that rare sense of exhilaration: Not profit, not power, not development. . . . There is a place for wonder, imagination, vitality and wild beauty in our lives. For Americans that place is Alaska, both symbolically and in fact.

From the hundreds who testified across the lower 48, it became abundantly clear that there is great concern that some significant part of the scenic, wildlife, scientific, and recreational values that these lands now embody be protected in a way that will assure their availability in a similar condition for generations to come. The overwhelming majority of the witnesses supported H.R. 39.

Alaskan residents, testifying before us, displayed a keen awareness of, and appreciation for, the role these natural resources play in shaping the Alaskan lifestyle. Of the total number of Alaskan residents who testified at the public hearings opinions were divided about evenly on the basic thrust of H.R. 39.

For many, these lands are the drawing card and the justification for remaining in Alaska, despite the higher cost of living, the ofttimes remoteness of their homes, and the severe weather they face. And although there was disagreement on the specifics of the legislation, there was, throughout Alaska, near unanimity on the importance of preserving Alaska's grandeur and undeveloped beauty. Hence the basic issue is not whether those public lands should be protected, but how extensive the protected areas should be, where they should be, and how they should be managed.

SUBSISTENCE USES

It became clear early in our hearings that the subsistence life-style—one dependent on nature for supplying food, clothing and shelter—still plays a large role in the lives of many Alaskans, both Natives and non-Natives. Subsistence uses of renewable resources on the public lands in Alaska represent an integral part of the Native culture and an important source in whole or in part of food, clothing, and shelter for many residents. Moreover, the Congress, in the 1971 Alaska Native Claims Settlement Act, recognized the obligation of both the Federal and State Governments to protect the subsistence lifestyle of the Alaskan Natives.

The subcommittee print would implement that commitment by giving subsistence uses priority and establishing suitable administrative arrangements. Moreover, by protecting and preserving the subsistence resource base in the conservation system units, the subcommittee print would maximize the possibilities for continuation of the option for a subsistence lifestyle for as long as persons engaged in supporting themselves and their families in this fashion continue to choose to do so.

We are aware that the public lands in Alaska have a finite carrying capacity—that their resources cannot support an unlimited number of hunters and other users of wildlife resources. The subcommittee print recognizes the need to prevent overuse of the subsistence resources on public lands.

Clearly connected with these issues is the need to determine which agency should regulate the taking of the wildlife and fish on public lands in Alaska. We heard strong and diverse opinions on this question from the people of Alaska. Some Native groups believe that Federal management is essential if subsistence uses are to be adequately protected. Other witnesses testified that the Alaska State Fish and Game Commission should be responsible. However, a recent decision by a lower State court raises questions about the State's legal ability to protect subsistence uses. Governor Hammond has, however, indicated his administration's power and ability to assume this responsibility.

Two points seem clear: That regulation of hunting and fishing needs to be on a statewide basis, and that the Federal Government has the right to require that management of wildlife resources on Federal lands follow guidelines designed to protect subsistence users, as well as the national interest. The subcommittee print would expressly authorize the State to regulate hunting and fishing on the public lands in Alaska, so long as the State's program for so doing meets certain specified requirements designed to meet the State and Federal Government's responsibilities to protect the rights of subsistence users. Of course, ultimate responsibility over administration of the Federal lands rests with the Federal Government, and our draft language so provides.

SPORT HUNTING AND FISHING

We recognize the great importance in Alaska of hunting and fishing for other than subsistence purposes. This is certainly an important part of the Alaskan lifestyle. Our subcommittee print recognizes this, and in fact goes far to assure the continuation of these activities. By the creation of national wildlife refuges, themselves normally open to sports hunting and fishing, and national parks which are generally open to sports fishing, we not only are protecting the species whose continued viability is essential to the future of wildlife-oriented recreation, but we are also assuring that there will be places where that recreation can take place. Moreover, the subcommittee print expressly authorizes sport hunting and fishing in national park preserves and national forest wilderness areas.

MINERALS DEVELOPMENT

On the question of developing Alaska's mineral potential many persons who testified raised questions as to the effect on our future national security and economic well-being of placing Federal lands in the conservation systems. Somewhere between industry's desire to locate and develop all mineral resources which can be produced profitably and the desire of conservationists to preserve pristine areas of our country, there must be a balance. In seeking that balance, the subcommittee print authorizes a continuing ongoing minerals assessment program on Federal lands, including those within the conservation systems. It draws boundaries of the proposed conservation system units to exclude most of the areas considered to have high mineral potential. And it proposes a clearly defined procedure for determining whether to permit exploration and development of one or more resources on a large portion of the conservation system lands when the national interest so requires.

In fact, this proposal would fill a serious gap in our national minerals policy by providing for an orderly, forward-looking assessment of our national minerals needs and supplies.

Mineral developers naturally would

like to keep all their options open. However, as Secretary Andrus said in his testimony on the administration's proposed amendments to the original bill:

> Why—with all of the area we are leaving open to potential development—should we also invite development and risk the destruction of areas which are important for their beauty, their wildlife, or their ecological and cultural significance? . . . If we err in this decision and exclude some precious and delicate areas from the four systems, these areas could be lost forever . . . But if we err by conserving too much, this can always be changed in the future.

Moreover, the State has already selected under the Statehood Act, or identified for possible selection, lands which it considers to have the greatest oil, gas and mineral potential. Thus the State acquired the Prudhoe Bay oil fields. The Native Regional Corporations, in choosing lands under the Alaska Native Claims Settlement Act, have made selections for similar reasons. In addition to State and Native lands, which will amount to 148 million acres, if the subcommittee print were enacted as is, 82 million acres of public lands would still remain open for multiple uses, including potential mineral development. This means that 230 million acres, nearly two-thirds of Alaska, would be open to multiple uses, and in addition some 55 million additional acres would be open to mineral development to meet clear national needs.

Thus, we can act with some confidence that the future national interest in exploring for and developing oil, gas and other minerals will be adequately served by setting aside appropriate areas for protection until and unless the future national interest in exploring their mineral potential is determined to outweigh their value as wilderness.

In addition, the subcommittee print expressly protects the rights of all owners of valid mining claims, wherever located, including the right to have the access necessary to extract the minerals.

PUBLIC ACCESS

Mr. Speaker, a concern repeatedly expressed to us—especially in Alaska—was the importance of assuring that the lands we set aside for the public not block further transportation between different parts of the State or access by private owners to their lands or prevent the kind of access people in Alaska have enjoyed in the past.

Alaska is unique in its size, in the scarcity of roads, in the ruggedness of its geography, and in its climate. These conditions mean that the traditional use of vehicles such as snowmachines for transportation and subsistence uses and continued access by airplanes and motorboats (already permitted by the Wilderness Act itself) should be permitted to continue where they are already established. The subcommittee print authorizes the continuation of these traditional forms of travel in all areas where they are currently authorized, subject to reasonable regulation to prevent damage to the area.

The subcommittee print expressly protects the rights of the State, Native corporations and private landowners to have rights to cross Federal land as necessary to reach their land. It also authorizes the Secretaries of Interior and Agriculture to allow rights-of-way or similar permits for minor transportation or transmission systems. Finally, it would establish an orderly procedure for determining whether to permit a major transportation system, or hydropower or other generating facility, or for a major utility transmission system, whether needed to meet the needs of Federal, State, or local governments or of private landowners.

IMPACT ON EMPLOYMENT

One concern raised in several hearings, particularly in southeast Alaska, was whether designation of wilderness areas in existing national forests would lead to the loss of jobs in the timber and pulp industries.

After our return from southeast Alaska, we asked the U.S. Forest Service to provide an authoritative statement of the likely effect of wilderness designations upon employment in these industries in Alaska. On July 19, the Forest Service testified that "enactment of H.R. 39 by itself would not likely have a significant negative effect on the current level of employment and income" in southeast Alaska. That is still their opinion.

In fact, all the information available thus far indicates that H.R. 39 allows room for significant expansion of the timber products industries in southeast Alaska. Nevertheless, there still remains in the minds of some a question on the effect of H.R. 39 on the forest products industry in southeast Alaska. Therefore, I have asked the Forest Service to provide us with more detailed information and a report on the effects, if any, the subcommittee print would have on this vital industry. The Forest Service has informed me that it will have this information available by January.

During the hearings in southeast Alaska, I made the statement that I would not support any bill that reduced employment by even a single job in southeast Alaska. That is still my position, and while I do not expect the picture will be changed by the more detailed information, if it is, I will be the first to recommend reductions in the total wilderness acreage proposed for the Tongass National Forest if necessary to assure a supply of timber adequate to support the existing timber and pulp industry.

Many fishermen testified in favor of wilderness designation in southeast Alaska as a way to protect fishery resources, especially salmon spawning grounds which they feel may be degraded through logging or mineral developments. I have been told that 6,400 people are directly employed by the southeast Alaska fishing industry, which in recent years has accounted for 40 percent or more of the total weight of salmon caught in Alaska. Thus certain wilderness designations in southeast Alaska could contribute to protecting jobs in the largest industry in that part of Alaska.

STATE AND NATIVE LAND TRANSFERS

Mr. Speaker, another recurrent theme which we heard in Alaska was the feeling that the Congress and the Federal Government have failed to live up to previous commitments to expeditiously transfer to the State and Natives public lands they have a right to receive under the Alaska Native Claims Settlement Act and the Alaska Statehood Act. Both the State administration and the Native groups urged us to use H.R. 39 as the vehicle to legislatively transfer to them the title to lands which they have selected under these acts.

Interior Department witnesses demonstrated that they are keenly aware of the need for top-level attention to this matter, and for a greatly increased administrative effort directed to carrying out the requirements of the Native Claims Settlement Act. They reported to us that a review of the Department of the Interior's past programs, policies, and actions is well underway, and that they intend to institute an improved and accelerated program of land transfers.

While I have confidence in the good intentions of the administration in this regard, what we on the subcommittee saw and heard in Alaska convinced me that the time has come for Congress to redeem the promises of the Alaska Native Claims Settlement Act and to do so as part of the legislation which will be coming out of our subcommittee.

As to the State of Alaska's entitlements under the Statehood Act, I believe it is accurate to report that many members of our subcommittee agree with me that the time is ripe for transferring those lands which the State has already indicated it wishes to select and to which it is entitled under the Statehood Act.

Accordingly, the subcommittee print contains provisions to transfer title of all validly selected lands to the State and the Native corporations without delay.

Mr. Speaker, the principal forces opposing this legislation are oil companies, who wish to get their hands on the Arctic National Wildlife Range, and mining companies, who are not satisfied that 90 percent of the State's most promising mineralized zones are excluded from the areas covered by the subcommittee print. They want it all. So they have charged that H.R. 39 would "lock up" Alaska's resources.

The fact is that H.R. 39 as revised by subcommittee print No. 2, is an "unlock" bill. By ending the uncertainty as to the status of Federal lands in Alaska and the delays in transferring millions of acres of Federal land to the State and its Native inhabitants, the bill will eliminate three of the greatest roadblocks to Alaska's economic progress.

Under this bill, 75 percent of the land in Alaska can be opened to mineral development, 80 percent of its commercial timber can be made available for logging, 60 percent of the land can be open for sport hunting—and possibly more if the Natives will allow sport hunting on their lands. Moreover, the foundation will be laid for a fantastic increase in Alaska's tourist industry—presently the lowest of any State in the Union.

Mr. Speaker, recorded in the conservation annals of our great country are many outstanding accomplishments which at the time of their inception were not without controversy. Establishment of Yellowstone Park in 1870, the first national park in the world, was not easy. Nor has the creation of the other major park system units been easy. President Theodore Roosevelt was attacked when he created by Executive withdrawal the bulk of our great national forests and similar actions which resulted in establishment of the nucleus of our National Wildlife Refuge and National Park Systems. Yet today these places are visited annually by millions of Americans and treasured by the entire Nation as part of our national heritage. The same holds true for the Alaska lands.

Each generation has its own rendezvous with the land. What we accomplish in this process not only will be a measure of what we Americans are as a people, but will assure to those who follow us on this planet a conservation legacy of permanent and lasting value.

We have taken the administration's recommendation and blended it with the knowledge we gained during our hearings, field trips, town meetings, and discussions in Alaska and the Lower 48 States to develop Subcommittee Print No. 2, and we are working on further refinements to it. We have redrawn boundaries of the conservation systems to protect whole ecosystems while excluding certain known and valuable mineral areas. We have drafted a procedure to open additional areas to mineral development should it be in the national interest as well as procedures to provide both public and private access through conservation areas. We have drafted language to expedite conveyance of lands to the State and Natives. And we have done all this in a way that will preserve the natural treasures of Alaska for ourselves and our descendents.

Following these remarks is an article which appeared in the Anchorage Daily News of August 29, 1977, and which describes the subcommittee's hearing in Anchorage as one Alaskan viewed it.

THE OTHER SIDE OF THE D-2 COIN

(By Mark Hickok)

Don Young sent out a d-2 letter to Alaskans. He wrote, "Your view must be heard . . . I would like to again emphasize the necessity of Alaskans presenting their views during the hearings in the state."

And Alaskans are doing that. Some 300 witnesses spoke before the Congress of the U.S. House Subcommittee on General Oversight and Alaska Lands in Anchorage on Aug. 12.

It brought out the fact, as earlier hearings in the state have, that not all Alaskans oppose H.R. 39, Rep. Morris Udall's bill to create national parks, wildlife refuges, and wild and scenic rivers in Alaska. So far, there has been no clear majority speaking for or against the bill.

In Anchorage, despite the opponents of the Udall bill putting on an expensive media show over a prolonged period, and despite the Anchorage Times news and editorial bias, the little people did not come out in droves to oppose H.R. 39. Perhaps the only thing the opponents of H.R. 39 have done was to create the unnecessary polarization of people involved in what Lydia Selkregg referred to as "due process," the democratic process of making laws.

The halls and hearing rooms of East High School were crowded with far more people than the some 300 witnesses who spoke. There was an atmosphere of enthusiastic anticipation by the participants, both the subcommittee members and the audience.

Considering the pre-hearing statements of Don Young, the state administration, and the Alaska Legislature that no Alaskans would support the Udall bill because H.R. 39 would "lock up" the state, only the anticipation of a good representation was realized by the conservation community.

Certainly, the subcommittee's anticipation of hearing the long promised out-pouring of sentiment opposing H.R. 39 did not occur, nor did the H.R. 39 opponents anticipation of drowning out the conservation voices occur.

The testimony of the elected officials of the state was entirely anti-H.R. 39. One politician, in private conversation, commented that no one in public office would dare testify in favor of H.R. 39 or any major conservation issue, as their constituents would not support them in the next election. The politicians testified in favor of the state's and the Land Use Planning Commission's fifth system plan, which could indicate the suspicion heard by conservationists that the fifth system is a cover for development may have some validity.

Among the elected officials testifying, George Sullivan and Lydia Selkregg requested the Seiberling Committee to redirect its thinking along lines of creating urban recreation areas. Udall suggested that urban recreation responsibilities also rest with the state and municipalities and that the state should consider selecting such lands as well as lands for development. Young claimed the state already had some five million acres of state park land, but the records show he has over-estimated the amount by some three and a half million.

In testimony before the committee, state officials who had vigorously opposed the creation of state parks as a waste of resources, now used those very parks as examples of how capable the state is to properly plan for balanced land uses. Many officials also spoke of the need for a new joint federal-state commission with authority to dispose of federal lands. Seiberling commented, "No way will Congress create a commission to mandate how federal lands will be dispersed. It is a decision of Congress."

In a discussion of wild and scenic rivers, two homesteaders informed the committee that there are people living on some of the proposed wild and scenic rivers. They had no objections to H.R. 39 but requested the committee consider how to deal with those residents who wish to remain on their lands. They are living a subsistance lifestyle, according to the men testifying, and are not interested in additional developments in their area. Udall commented it was not necessarily a problem and could be worked out. He also suggested the state might wish to establish wild and scenic rivers on its own lands as part of its balanced land planning.

Many of the people who testified against H.R. 39 said the parks weren't needed, were too large, too inaccessible, and too expensive to reach. Seiberling responded by asking about Yellowstone in 1872. "It was less accessible then the Gates of the Arctic is now, but last year Yellowstone had two and a half million visitors. Do we know all the resources in the United States now? Should we have held up creating any parks or refuges in the nation until we knew?"

Those testifying for H.R. 39, as did Peter Martin, said no generation has ever criticized a previous generation for setting aside national parks and refuges, or wild and scenic rivers. Ted Burton pointed out that even if all the 114 million acres were placed in the federal systems the rest of the state would still be larger than Texas.

Subsistence again and again was the point of testimony, with conservation witnesses continuously making the plea that those who chose a subsistance life should be offered the opportunity to continue it. The committee members demonstrated great sensitivity to the subject and Seiberling remarked, "The subsistance life-style is the foundation of the villages." He further commented that the intent of Congress in the passage of the Alaska Native Claims Settlement Act had made a commitment to the subsistence lifestyle.

The Seiberling committee is continuing its search for the views of Alaskans. This hearing record closes in 30 days, so anyone who did not have the opportunity to testify in person may mail in their statement. The committee is finding many Alaskans are in favor of H.R. 39, and would like some choices of land use left to future generations.

INTRODUCING LEGISLATION ENABLING THE COAST GUARD TO ONCE AGAIN ASSUME LEAD AGENCY RESPONSIBILITY FOR INTERDICTING SEABORNE DRUGS ON THE HIGH SEAS

(Mr. BIAGGI asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. BIAGGI. Mr. Speaker, 1 year ago today the tanker *Argo Merchant* was aground and spewing oil into the Georges Bank fishing grounds off Cape Cod, Mass. This morning's Washington Post recalls vividly those events. The Subcommittee on Coast Guard and Navigation responded by authorizing additional funds for Coast Guard pollution research, prevention, and response. Later the subcommittee reported and the House passed the Comprehensive Oil Pollution Liability and Compensation Act of 1977. Further action on the bill is awaited by the Senate. The subcommittee later journeyed to Cape Cod to observe firsthand the lessons learned in the wake of the *Argo Merchant*.

The subcommittee similarly traveled recently to Florida and the gulf region to investigate the dramatic rise in drug smuggling by vessels from South America, both United States and foreign, including commercial and fishing vessels, recreational craft, and most recently through the use of mother ships lying off our coasts. These frequently fly the Panamanian, Colombian, Honduran, or Bahamian flags or no flag at all. Whatever nationality they claim, they should be denied diplomatic protection as their activities contravene the law of nations. As many as 32 mother ships have been sighted by the Coast Guard this year from Maine to the western Gulf of Mexico. Total pounds of contraband seized may exceed 1 million pounds for this year alone. The principle illegal cargoes carried in their holds include marihuana, hashish, and cocaine.

The ominous portent of this increase in seaborne drug interdiction is significant for several reasons. This subcommittee has investigated possible links between yacht hijacking and boat theft, their interstate and international transportation, reregistration abroad and their subsequent use in the international drug trade. A potential threat is thus posed to the 10 million recreational boat owners in the United States, who may be victimized by organized and amateur thieves participating in these high payoff/low risk ventures. The Drug Enforcement Administration has evidenced a distinct rise in total volume and average seizure of drugs carried by vessels, reflecting a shift from other modes and methods of transport. The resulting high products may be channelled through criminal organizations into other illegal activities such as child pornography, prostitution, automobile and boat theft.

The subcommittee also investigated organized boat theft and marine insurance fraud as part of its overall inquiry into the Coast Guard's role in maritime criminal law enforcement. Annual thefts of private boats have been estimated to exceed $60 million. Law enforcement capability in this area parallels that of automobile theft 20 years ago.

Today I embark on a significant first leg in steering the National Drug Enforcement effort in the direction of seaborne drug interdiction. I am introducing legislation, which for the first time since 1970, will provide criminal penalties for the possession, with intent to distribute, of heroin, cocaine, or marihuana, in the United States, by a U.S. national on board a U.S. or foreign vessel beyond the present customs enforcement zone of 12 miles. These "mother ship" transfer operations frequently occur from 50 to 100 miles offshore, offloading to fast (50 knot) supply boats, which sprint to shore with their illicit cargo.

Case after case has either not been prosecuted or has been dismissed by Federal judges as a result of this glaring loophole in the law.

I move today to fill that void. I am compelled to take this action in light of my life-long devotion to law enforcement, my membership on the Select Committee on Narcotics Abuse and Control and my chairmanship of the Subcommittee on Coast Guard and Navigation. With the successful passage of this legislation the Coast Guard can once again assume lead agency responsibility for interdicting seaborne drugs on the high seas.

HOUSE DELEGATION VISITS IBERIAN PENINSULA AND MIDEAST

(Mr. SKUBITZ asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. SKUBITZ. Mr. Speaker, last month Majority Leader Wright led a House leadership delegation of 15 Members to the Iberian Peninsula and Middle East in order to keep the Congress informed of important events in those areas of the world and to demonstrate our country's interest in democracy and world peace.

It was a bipartisan group in every respect. I was pleased to have been a member of that delegation and I would like to commend the distinguished majority leader for the statesmanship and exemplary manner he displayed in heading our delegation. Our trip was historic in many respects. It was during our meeting with President Sadat that he announced his acceptance of the Israeli invitation to speak before the Knesset in Jerusalem. Similarly, Prime Minister Begin announced the date and details of Sadat's visit while we were meeting with him in Israel. Prime Minister Begin also personally requested the delegation to extend its stay in Jerusalem 1 additional day in order to be his guests in the Knesset when President Sadat gave his speech. Our presence on that historic occasion symbolized American dedication to peace and our vital role in working for a settlement in the Middle East.

Members of the delegation, with appropriate assistance from Embassy staff and Department of State personnel, developed this report. We would like to thank Dennis J. Taylor, who is legislative counsel to the House minority leader and accompanied us on the trip, for his assistance in helping the delegation compile and prepare this report.

Because of the importance of our conversations and their timeliness, I would like to insert the report in the Record on behalf of all the members of the delegation. I urge all my colleagues to read it carefuly:

ARAB REPUBLIC OF EGYPT

U.S. AMBASSADOR EILTS—BRIEFING

In November 1973, the U.S. resumed relations with Egypt after a break of some eight years. Relations have steadily improved, and Sadat has warmly received 319 of the 320 visiting Members of Congress who have come to Egypt over the past four years. The only reason he missed one was because he was in bed with an illness. Sadat's personal warmth and efforts indicate the change in Egypt's attitude toward the U.S. No longer are they making our relations an "either us or them" proposition on Israel. As a result the climate is more conducive to improving relations and trust.

Ambassador Eilts indicated there were three elements to our relationship with Egypt: the political, the economic, and the cultural.

Political

The major part of our political relations with Egypt concerns our peace efforts. The Middle East needs peace, and Sadat seems sincerely dedicated to achieve it. As a result Sadat has received some severe criticism from other Arab states—especially for signing Sinai II. Sadat wants to get to Geneva and has repeatedly expressed his willingness to cut through procedural red tape bogging everything down in order to get to the substantive peace issues at the negotiating table. Syria is the most reluctant holdout on the peace talks, and Sadat is scheduled to go there November 16 for a day of talks with President Assad. Reportedly he wants to press Syria to support movement toward the Geneva Conference.

By way of background to the longstanding differences which exist among the various Arab states, Ambassador Eilts explained that in spite of its "Arabization" since World War II, Egypt traces its own history and independent identity back thousands of years B.C. Egyptians are not shy in letting it be known they consider themselves different from other Arabs. This attitude has become mutual, accounting for some of the differences and tension between Egypt and other Arab states.

In addition, the Ambassador expressed Egypt's concern over the level of U.S. military aid to Israel.

Economic

There are three basic aspects of our economic ties to Egypt. The first is aid. Egypt is one of the largest single recipients of U.S. economic assistance. In each of the last two fiscal years, Egypt has received nearly $1 billion—$750 million a year in economic aid and $200 million a year in P.L. 480 assistance. We are trying to make our aid more effective for the Egyptian economy and needs, and are moving toward project assistance in addition to commodity import loans, P.L. 480 assistance, and other programs.

U.S. Business Investment: Since Nixon's visit Sadat instituted an "open door" policy to attract foreign capital. The People's Assembly enacted legislation in 1974 to aid foreign investment, but the law still needs improving. Egypt does not take a doctrinaire approach to the Arab boycott list: when it benefits Egypt, the boycott list is circumvented. Some "boycotted" companies are investing and doing business in Egypt. In the Ambassador's view, as long as there is a "state of war" in the Middle East, U.S. capital investments in Egypt will not be made in any significant amounts.

Trade: The trend is toward a steady increase with the U.S. Egypt's lack of foreign exchange currency puts it in a difficult position in international trade.

Cultural

Ties continue to improve. The King Tut exhibition was a major event in the U.S. The Fulbright exchange and scientific research programs are ongoing parts of our expanding cultural ties.

Military

Ambassador Eilts stated that Egypt would like U.S. military aid and arms sales. It has purchased some C–130 aircraft already, and an additional fourteen are expected. Egypt has not forgotten that the U.S. Navy cleared the Suez Canal, and two years ago Sadat agreed to allow our ships up to eight visitations per year in the port of Alexandria.

Soviet Relations

Relations between the countries have never been strong under Sadat. Apparently the Soviets had other leaders in mind after Nasser died, and the Ambassador indicated at least some of them are still in jail. Sadat kicked the Russians out of Egypt, and most recently put a moratorium on repaying Russian loans. In 1974 the Russians apparently thought they could bring Sadat to his knees after the war. Figuring that the U.S. could not step in, Russia stopped its military and economic aid. The times were difficult, but Sadat borrowed money from Arab states and did not give in. The lingering resentment against the Soviets is substantial.

Miscellaneous

Sadat is a strong leader, but he faces many tough internal problems. The Egyptian economy is in bad shape, and the country is facing a population crunch. There are 39 million inhabitants, with 1½ million births each year. Cairo was built for 2½ million people and now has an estimated population of 9 million with an additional 2 million workers who commute into the city each day.

The overcrowding is obvious, yet life bustles on for the Egyptians.

Cairo is in a bad state of physical decay and despair. This is due in part to the overcrowding, but also because about 34 percent of the nation's economic resources went for war and defense over the last twenty years.

An interesting phenomenon—born of necessity in the teeming city of Cairo—is the "City of the Dead." A veritable city within a city, the City of the Dead covers nearly one-half the area of present-day Cairo and is where the dead have been buried for the last thousand years. Just as the living are overcrowded, so the dead are jammed into every available space. The bodies are buried in the ground according to the Islamic faith, but in typical Moslem fashion there are mausoleums and various tombs above ground to house the returning spirits. These were built with narrow streets and resemble a town of small homes and walled courts. Tombstones cover every square foot of the courtyards. Due to the overcrowding in Cairo, the poor eventually became squatters in the tombs for lack of other space and the area became known as the "City of the Dead." There is virtually no plumbing, sewage, or electricity and the people survive amidst the worst conditions of squallor and poverty. Now people live and die there without ever really coming outside the countless square miles of the "lost" city, and it is impossible to know exactly how many people actually live there.

DEPUTY PRIME MINISTER KAISSOUNI AND ECONOMIC MINISTERS

Deputy Prime Minister Kaissouni was gracious in thanking our delegation for U.S. aid. He recognized that Egypt is the largest field mission the U.S. maintains (approximately eighty employees) to oversee its economic aid programs and to assist Egypt with its staggering task of economic development. He also noted that U.S. investments in Egypt were increasing and expressed the hope that they would continue to expand.

Congressman Wright indicated that the House is debating OPIC and the question of ensuring overseas investments by U.S. companies. The outcome is uncertain, but considerable sentiment exists to reduce or eliminate OPIC. Wright asked for the Egyptian views, but none were expressed directly. Kaissouni then responded to another question that Egypt would welcome, and indeed benefit from, specific commodity investments. The Egyptians made the point, however, that they welcome investments which not only help bolster their own internal economy, but those which would allow them to increase their exports in order to improve a serious balance of payments problem and lack of foreign exchange currency.

ANWAR SADAT, PRESIDENT

(NOTE: The press was invited, the entire session was filmed, and Sadat used the opportunity to make a major policy announcement.)

Sadat opened his remarks with a statement that he believed President Carter wanted peace and was a man of his word. He urged continued efforts, however, by the U.S. and all interested parties to get momentum back into the peace talks.

In an earlier speech Sadat told the Egyptian people that he would go anywhere in search of peace—even the Knesset. In subsequent interviews, Sadat indicated he might go to Israel if he received an official invitation. Congressman Wright said that he was informed that the American Ambassador in Israel had in his possession a written invitation from Prime Minister Begin to visit Israel and address the Knesset. Wright asked Sadat if he would accept the invitation to go to Israel. Sadat said, "Whenever the invitation arrives, I will be ready to go." (NOTE.—After the meeting Sadat responded to newsmen that he would go "as soon as possible" and would not delay.) Sadat characterized the Arab-Israeli conflict as "seventy percent a psychological problem and thirty percent substantive problem." For that reason, Sadat said he would go to Israel "in order to let us cut through the procedural problem to the substance." He also characterized his trip to Israel as a "holy mission" and did not fear for his safety.

Questions and Answers

Question: Congressman Quillen asked whether Sadat felt that Russia's presence in the Geneva talks would cause Egypt any problems.

Answer: Sadat candidly admitted a strained relationship with Russia, and said he hoped the Soviets would not adopt the same attitude with Egypt at the Geneva talks that they do in bilateral matters. He stated very strongly that he does not fear them and that Egypt will not yield to anything other than its national interest, and that "nothing will impede our moving toward a solution to the peace question."

Question: Is it possible to resolve the Palestine question at Geneva and have a separate Palestinian state?

Answer: There are two main parts to the Palestine question. First is the *political*. The Palestinians are recognized worldwide, even by the U.N. and President Carter. They are a recognized political unit and must have a homeland. Second is the *human* problem, and by that Sadat meant refugees. This great number of refugees must have a homeland. Sadat asked for our help and advice as to how the Palestinian aspirations could be fulfilled without giving them a homeland or state, particularly in light of the issues over the Gaza Strip and the West Bank.

Sadat strongly stated that he did not agree with Israel's position—which he feels they have exaggerated over the last thirty years—that a Palestinian state would be a threat to Israel. He indicated that three of the four Middle East wars have been Israel against *all* Arabs, so how could a small, new state be a threat to Israel? Israel is "armed to the teeth" Sadat said. In fact, he believes that Israel is a threat to all Arab states.

He announced he is going to the Knesset to tell them that he wants peace in the Middle East!

Question: In exchange for the creation of a Palestinian state, would Egypt give Israel the assurance of peace and secure borders?

Answer: Sadat made several points: (1) Israel has the land—it was created by the U.N. and it is now a fact which cannot be denied; (2) Palestinians have been denied land and everything for thirty years—even human rights; and (3) why not a *mutual* recognition in which all rights are secured for all parties—and "we are quite ready" to sign such a mutual agreement.

Question: What will you accomplish in your visit to Syria? Can you persuade the Syrians to negotiate peace in Geneva and to support your visit to Israel?

Answer: Sadat noted that the Arab summit meets once a year, that this a regular, routine meeting with the President of Syria which was scheduled before the question of the Knesset invitation arose and is not related to it. It is "quite natural that we sit together from time to time to discuss the general question" of peace in the Middle East. He said he had no conditions on his meeting in Syria, and that the two leaders "meet as brothers."

Question: Do you have full trust in President Carter and the policies of his Administration?

Answer: Sadat responded "yes." He expressed full confidence, but hoped that Prime Minister Begin has that same trust and confidence. Sadat stated that the Palestinians must be part of Geneva if it is to work. The Knesset talk would be a right step down the road to peace in Geneva and would convince the Israelis that Sadat is sincere. He said that a Palestinian state is not a precondition to the meeting, but there cannot be any real peace without a resolution of the issue because "Palestine is the core and crux of the whole problem." We are going to Geneva to establish a complete peace and we need *all* parties.

Question: Congressman Wright asked whether Palestinians could be present at Geneva as a part of an "inclusive" Arab delegation rather than as a separate unit or party, and particularly without any reference whatever to the P.L.O.

Answer: Sadat said "marvelous," and that he is interested in the approach. Initially he had said he opposed it, but he later agreed to the concept of a unified delegation and now believes it is a marvelous approach.

Question: Wright stressed the apprehensions of Israel over the creation of an autonomous state of Arab Palestinians on its border. Did Sadat see any way in which the aspirations of Palestinian Arabs could ever be accommodated in a way that would effectively guarantee Israel's security against attack from that source?

Answer: Sadat suggested the possibility of a Palestinian state "in federation or confederation with Jordan." But he discounted any reason for Israel to feel threatened, in view of what he called its overpowering military strength. "It is we who are threatened," he said.

Response: Wright observed that the Israelis do feel genuinely threatened and cannot understand why Arab nations regard them as an aggressive threat; while Arab states similarly feel threatened and apparently can't comprehend why Israel is apprehensive. Suggested that this is the ironic result of the long legacy of no direct conversations between the two and suggested that sitting down together calmly and discussing their mutual apprehensions will provide the only avenue to mutual reduction of tensions.

ISRAEL

Wednesday, November 16, 1977.

AMBASSADOR SAMUEL LEWIS

Briefing

Following our arrival in Jerusalem, the Ambassador briefed us in a hotel conference room. He described himself as the "Happy Postman" for the role he played in transmitting the letters between Israel and Egypt that led to this historic visit by Sadat. The main points of his briefing follow.

For 29 years Israeli Prime Ministers have tried to get Egypt to discuss peace. Now Sadat is not just talking about peace, but coming to Israel. The Israelis find it nearly incredible, but are willing to believe it and hope it produces something.

Sadat's visit was viewed as possibly the first break in the Arab/Israeli wall of suspicion and war. No Arab leader has ever been willing to say he will sit down and bargain at the peace table—perhaps they said it to the foreign press for posturing, but none ever said it with any seriousness to their own people. The Sadat visit will not bring peace overnight, but it will give the Israelis hope and show them that they can believe an Arab leader. In coming, Sadat has taken a risk in the Arab world, but so far in this diplomatic dialogue the principals on both sides are playing it very well.

The Knesset voted 83–3 to invite Sadat. This is considered an overwhelming vote—

the three nays were the Communists who oppose the government anyway and their nay votes were merely anti-government. The Knesset acted with a sense of history. Sadat is not just the Egyptian leader, he is an Arab world politician and his coming is "something else."

There are several important facts to understand about Israel. The first is size and scale: proximities and geography contribute a significant amount to the overall situation. Israel feels surrounded and small compared to the Arabs: 3 million against 22 million and the areas of the two sides are equally disparate. Second is the psyche involved, and one needs to understand why the Israelis feel as they do and what makes them tick. One of the major memorials in Jerusalem is Yad Vashem, established by act of the Knesset to remember the six million Jews killed in World War II. Israel retains a bitter and strong collective memory over that event. Also, war has played a strong part in their short national history—some four wars in twenty-nine years. The losses have touched almost every Israeli household, and they have a strong fear of attack. The last aspect is peace. Israel wants peace—a lasting one—not empty words. A call to discuss peace must be followed by sincere negotiations if it is to have any real purpose. Public posturing means nothing. One sign of peace is the change in Sadat's remarks. Last year he said that if one or two million Egyptians die getting their land back, and a million Israelis die, too, then it is worth it. Now he says the life of one Egyptian is not worth the land, and talks of coming to Israel in person!

The U.S. role in Israel is considered vital. Our military assistance is regarded as indispensible. The military support and support of our President—meaning Congress too—is essential. Because our support means so much, everything we do is magnified many times in Israeli minds. Even the slightest political action in the U.S. gets careful Israeli attention.

Israel trusts us and our President, and believes our words of support, but only so far as what we say does not conflict with our own self-interest. There have been times when the U.S. has not kept its word—and the Israelis can cite specific examples. They know that U.S. presidents change and so do conditions: they learned that political lesson. Americans tend to have short political memories, Israelis have long ones.

The Ambassador cited Begin's views—prior to the Sadat development—as believing that Israel should stop making proposals and instead react to Arab proposals.

Saturday, November 19, 1977.

TEDDY KOLLEK

Mayor of Jerusalem

We met the Mayor in the lobby and walked to the Jerusalem Music Center for a short meeting. Along the way the Mayor showed us several projects and explained how things were developing since the "green line" division of the city ended.

He made the point that Jerusalem was a very poor and bad city when it was divided. There was urban blight and decay of the worse sort, compounded by shooting, killing, and nearly all-out war. Under Israel they are trying to build a city of separate interests which lives individually in its own quarters but together in one city. A walk through the old city shows the extensive rebuilding and modernization going on. In addition, the streets are safe for a lone foreigner to walk at any hour of the night. Several members of the delegation staff wandered the streets of the old city on foot—either in small groups or singly—well after midnight with no incidents at all.

Thursday, November 17, 1977.

MOSHE DAYAN

Minister of Foreign Affairs

Following a short welcome, Congressman Wright gave Mr. Dayan a brief summary of the delegation's meeting with and impressions of President Sadat.

Palestinian State:

Mr. Wright asked whether there could be an independent Palestinian state which would not be considered a threat by Israel. Mr. Dayan's reply was extended.

He characterized the Palestinian attitude as "the West Banks is ours, give it back." As far as Israeli national security is concerned, Dayan did not feel they could give up their military facilities in the West Bank and leave themselves with only eight miles from Jordan to the Sea. In addition, it would mean giving up Hebrew University, hospitals, other institutions and important locations like the Mount of Olives and the Wailing Wall. Dayan thought it was "inconsiderable" that Israel hand back the old Jerusalem quarters. Dayan thought Israel should keep its West Bank military facilities—not in order to rule the Arabs there, but to defend Israel. That area does not allow an independent Arab state, and the Arabs should keep their ties to Jordan which have developed over the past few years.

Major issues related to the West Bank include: (1) the question of military installations—can Israel maintain its present facilities in the West Bank, and will Jordan be prohibited from militarizing it, and; (2) Israeli citizen rights on the West Bank, such as the right to buy land (not a taking, but a purchase) in the West Bank area, and have the same rights as in other areas without being treated as "foreigners" by the Palestinians or be required to have visas or be subject to other special conditions.

If the West Bank becomes an independent Arab state, over half the population of Israel and every plane which takes off in the upper half of Israel would be within range of artillery guns or rockets from there. Can anyone assure Israel as to whom will replace Hussein, Sadat or other world leaders? Israel must judge the character and attitude of a country's people as well as the leader. Leaders change, but longstanding attitudes remain an ever-present threat. So far there has been no assurance that the Arab states—or even a new Palestinian state—would not revert back to threat and aggression. Dayan said that these are some of their concepts and solutions, but it is not an ultimatum. Let's go to Geneva and talk about it—let's see if other proposals can be developed which may work. At any rate, let us discuss it and negotiate a settlement.

Dayan said what they want to do is sit down with the Arabs, study the situation and discuss it in order to try and work with them in finding a solution.

Afterthoughts by Dayan

Dayan does not think Jerusalem can be divided on any workable basis. Probably the best way is the way we have it now. There should be no lines or dividing of Jerusalem. Whatever the solution of the West Bank, it should not include a return of Arab refugees to the area.

Sadat's Visit

Congressman Quillen asked what Mr. Dayan thought of Sadat's scheduled visit. Dayan responded, "Great! That will be a very great day." Israel has been waiting for years for face-to-face contact, and now it welcomes the opportunity. Is it the first step toward peace, or just a gesture? We believe it must be more than a mere speech and will press for more substantive private talks and meetings during the visit, but we will not do anything to embarrass our guest.

Peace Prospects

Dayan was asked whether Sadat's visit will harm chances for talks with all Arab countries? He responded that he hoped Sadat would do more than address the Knesset, but would participate in some talks. A speech would not do Israel as much good—even though it is a great step—as some direct talks.

Our delegation pointed out that Sadat had no credentials to negotiate a peace for all Arabs, that he could not do that alone. In addition, the point was made that it would be a grievous mistake to isolate Egypt from the rest of the Arab world by forcing him to discuss peace bilaterally.

Dayan said he did not want to isolate Egypt, but at some point the leaders must talk about something other than the Knesset speech. Dayan said Israel should ask questions about Syria: will Egypt make peace without Syria? . . . because Syria will not make peace without Russia. Dayan stated that the Soviets do not want the West Bank a part of Jordan because they have no influence in Jordan, but on the other hand they would with the PLO.

Dayan believes Sadat wants peace.

IZHAK SHAMIR

Speaker of the Knesset

We paid a courtesy call on the Speaker in his office and were his guests at lunch. Following the meal, Speaker Shamir said that he looks forward to Sadat's visit as a breakthrough and hopes it will bring peace.

Members of the Knesset

The meeting began with mutual courtesies and then evolved into a lively discussion about how the two bodies operated. Our Members were particularly interested in Israel's new economic policy—that has for a main aim the goal of developing an independent economy with adequate growth in order to remove Israel's dependence on its generous supporters (the U.S. and others). Other topics involved salaries, the Communist Party and Geneva peace talks.

YIGAL ALLON

M.K. and Former Foreign Minister

Mr. Allon was extremely articulate and inspired our Members with his energy and dynamic speaking ability. He made the following points:

Due to its small size and population, Israel must have a strategy of strong offensive—even a counter-offensive. The policy is to strike an aggressor in its own land, create a stalemate and go for negotiations.

Israel is the only country which cannot afford to lose a single war. The minute it does, it is lost physically, psychologically and spiritually.

With regard to any future division of territory, Allon believes Israel must hold the high terrain (Golan Heights) which gives it relative security. In connection with the Palestinian issue, he asked pointedly if Sadat had mentioned the possibility of a "federation" within Jordan for Palestinians. He seemed assured by our affirmative reply. Allon believes a critical distinction exists between a "federation" and a "confederation."

"Peace can only come if it serves the best interest of both sides. It will only endure as long as it remains in the best interest of the two sides."

A solution to the peace problem is only found in compromise.

PRIME MINISTER MENAHEM BEGIN

Our meeting was covered by the press for the first few minutes. After arriving, Begin immediately announced that Sadat would come to Israel for his speech to the Knesset on Saturday, November 19, at about 7:30 p.m.

His speech would be Sunday evening, and that arrangements would be made for Sadat to worship at the Aksa Mosque, a sacred shrine of the Moslems. After dismissing the press, Begin retracted the steps which resulted in this historic occurrence.

Begin went out of his way to state clearly that he had *no* intent at all to separate Sadat from the other Arab nations in sending the invitation. To avoid that appearance, he said he had also invited the other Arab leaders. Begin also said he would go to Egypt and spoke as if he knew an invitation had been or would be made.

Congressman Jim Wright summarized our delegation's meeting with Sadat and discussed our impressions and understandings.

Begin said that "this is a very positive development" and we must go carefully and not exaggerate.

The Prime Minister spoke in a very soft voice, in a friendly, matter-of-fact manner, much as a favorite professor would. He got out hand-colored maps and proceeded to show why Israel could not withdraw to its original boundaries. Starting with the historical background, Begin ended with the points we had heard over and over: a sovereign Arab state on the West Bank would make Israel vulnerable to being cut in half by an aggressor, would allow Jordanian guns to threaten over half the Israel population, and give Soviet arms in the hands of South Lebanese terrorists a deeper window into Israel's heartland. This would place Israel in a "mortal danger" Begin said.

Criticizing a recent statement by Brzezinski that the U.S. would come to Israel's aid militarily if it were in mortal danger, Begin asked "Why should Israel have to place itself in a position of mortal danger again?" It already has been in mortal danger numerous times since World War II, and it lost six million people in that last World War. If we did get in mortal danger and war broke out, the U.S. would have to come to our aid. But we do not want the United States to have to fight our war. We want to handle our own battle and exist free from such mortal danger.

Begin recalled Hitler, citing how nothing was done when Hitler spoke his hatred and later nothing was said when the people saw his actions. With Israel's long experience, why shouldn't it take the PLO threats against its existence seriously?

The Sinai is not a big problem and can be negotiated. Begin repeated his hope to sit down with Sadat and talk about the West Bank. Israel will not give up its national security; therefore, it cannot give up the West Bank and let it be militarized.

ADDENDUM

Several members drove to the West Bank area and spoke to four Arab-Palestinian mayors. Contrary to the impressions we got from the Israelis—that everyone was happy—the mayors indicated that the Palestinians maintained a strong sentiment for getting the Israelis back to the pre-1967 borders. They had ancestors on that Israeli-occupied land for over 800 years, and wanted both their land back and a Palestinian state. Elias Freij, Mayor of Bethlehem, suggested the Palestinians could be content with a "demilitarized state"—one without any army or air force. But this question of a Palestinian "homeland" remains a highly emotional sticking point.

REPUBLIC OF PORTUGAL

AMBASSADOR FRANK CARLUCCI

Briefing

Our briefing took place at the Ambassador's residence. The Ambassador characterized the present situation as one of the most difficult periods of Portugal's democratic history.

It is considered a near miracle that Portugal has achieved what it has. In just two years it threw off a 48-year dictatorship, underwent traumatic decolonization and pulled back from the brink of communism. During all this time the army—which toppled the dictatorship—was kept in the barracks. The "transition" from dictatorship to democracy was without any real bloodshed, and free elections have already been held.

The Portuguese are nonviolent, hardworking and friendly people. By and large the population was unprepared for the sudden changes: illiteracy was 30–40 percent, productivity was low, per capita GNP was among the lowest in Europe, and public affairs were largely run by a small number of political leaders and very rich, powerful business interests.

The Angola war was the shock that brought about revolt and change. Young army officers saw more graphically the poor conditions of their country and wondered what they were fighting for abroad. In April, 1974 the army revolted. The young captains and majors had an idea about what they did not want, but no clear notion of what they had to do to improve things or how to do it.

A strong, Moscow-loyal Communist party had been developing. They proceeded to collect power in a very classic fashion: establishing labor union support and control, gaining control of key ministries and getting a hold of public relations divisions of the Government. Just when the Communists had nearly locked up Portugal, they made two fatal mistakes. First, they allowed the zeal of the ultra left to attack the Catholic Church, and they took over the Church's radio station. The Church is extremely important to the people at the grass roots level. Second, the Communists allowed free elections. The military had committed themselves to hold them during their rise to power, and it proved the Communists' undoing. After the elections the Communists were disappointed in the results and tried to annul them by simply ignoring them. There had been a 92 percent turnout for the elections, and there was growing pressure on the Communists from the people for them to turn over governmental control. Eventually attacks were made on regional Communist Party headquarters and the Communists began to give up control.

Following the revolt, the Portuguese turned to the West. U.S. economic aid has increased markedly—up from $15 million in FY 75 to a projected $395 million in FY 78. U.S. military aid has also increased. The Portuguese military was a rabble after ousting the Communists, but President Eanes has acted positively to rebuild it. By developing closer ties with NATO and the formation of a Portuguese brigade the military got a better sense of mission and order. There was also a simultaneous increase in their need for military assistance, both from the U.S. and other NATO allies.

The economy remains in deep trouble. The relative purchasing power of wages continues to decline as inflation and unemployment climb. A major problem was the influx of some 600,000 Angolan refugees—a serious adverse impact on a population of some eight million people. Some modest gains have been made: There has been a limitation placed on nationalization, productivity is increasing and it is now possible to fire workers or have collective layoffs. It is extremely difficult, however, for a minority government to impose an austerity program when the labor unions are controlled by the Communists.

Another major problem for the Government is getting the bureaucracy to function. At present it is virtually stagnant. Also gasoline is about $2.78 a gallon for "super", another difficulty for the economy. Portugal has applied for entry to the Common Market and has been accepted in principle. This is expected to help.

Because the Soares Government is a minority government (38 percent of the Assembly) it is being pressed to the wall by the other political parties who are seizing the opportunity. As a result there could be a parliamentary crisis at any moment. Due to politics and personalities the major "center" elected in the Assembly elections is in danger of leaning to the right and polarizing the political situation. This would happen if the Social Democrats continue to press the Government and seeks support from the far right. The Ambassador discussed these shifting power blocks in some detail.

VASCO DE GAMA FERNANDES

President of the Assembly

We paid a courtesty call on the President and were greeted with warm thanks and praise for the U.S. example and support during Portugal's difficult times.

President Fernandes described the 1975 revolution as one of flowers and songs. The economy, Angolan refugees and other problems persist, but that is normal after casting off a dictatorship of nearly 50 years. In spite of problems four separate free elections have been held.

President Fernandes explained the framework of his Government, and identified the following as the major problems: balance of payments, productivity and Angolan refugees. He ended by asking the Members, "Please don't forget this country—Portugal needs your friendship now.

PRESIDENT EANES

The Congressional members of the delegation met privately with the President in a 45-minute off-the-record briefing. President Eanes answered questions freely about the various options open to his Government and his own preferences under various contingencies. Matters covered in the conversation, relating to internal political maneuvering between Portugal's political parties, were obviously sensitive. Eanes did not hesitate to confide in the delegation certain internal political preferences of his own which he had not yet stated publicly in his own country.

SPANISH STATE

U.S. AMBASSADOR STABLER

Our meeting with Ambassador Stabler was informative and lasted longer than planned. A short synopsis of the Ambassador's briefing follows.

Spain is in a critical adjustment period. The death of Franco November 20, 1975, irrevocably changed the stability that he had imposed. The self-imposed task of moving toward a democracy lay ahead of the new King and leaders.

Initially, there was considerable debate and some differences among the various national factions. Some wanted to destroy the old system and start over, but the military structure which had supported Franco was still pretty much in place and the two largest political parties prevailed in building the "new" on top of, or intermingled with, the old order. In retrospect most veteran observers here are amazed that the Government has been able to achieve what it has in just under one year: national elections, legalization of political parties and new labor unions with the right to strike.

The new Prime Minister, Suarez, has kept the country moving steadily toward democracy. As mentioned, the results have been remarkable and the Spaniards now seem to expect obstacles to be overcome and democratization to proceed apace. In the recent national elections for the Cortes—or Congress—Suarez' photograph was out before the people, and even though he is appointed Prime Minister by the King he was running for a seat in the Cortes to bolster the moderates and it was well understood by the people that a vote for Suarez and his followers was a vote for continued democracy.

In legalizing political parties the new Government took a calculated risk when they also legalized the Communist Party. Ever since the civil war in 1936 the Communists had been the "enemy." It was a little difficult for the old line Army officers—which had been the basis of Franco's support—to accept the Communists as a legitimate and legal political party. The people had the same difficulty to face, but somehow it worked.

Now, as the adjustment or transition period toward democracy continues into its third year there are still some very real problems to face. The present Cortes was elected with a mandate to draw up a new Constitution. The exact relationship between the two Houses of the Cortes is unclear, as is the question of their relationship with the King and Prime Minister. The new Constitution is expected to formalize the relationship and prescribe the duties and powers of the various branches of Government. In the meantime the Cortes is trying to establish its own competence and influence within the governmental process. Governmental leaders are open in their admission that things are less than clear, but express the hope that it will all change under the new Constitution. When the draft is ready, it will be submitted to the people in a referendum.

Over the last several years economic progress has been marked, resulting in a growth of the middle class. Even though the middle class growth began under Franco, the new democracy has fostered it and a natural expansion has continued. The people enjoy their increasing prosperity and relative luxury, and the task of the new Government is not to lose ground, but to expand it further. In spite of the hopes of both the Government and the people, there are serious economic obstacles to continuing the upward trend: rampant inflation (over 30 percent), rising unemployment, and the oil crisis (gasoline is from $1.70 to over $2.00 a gallon). The major labor unions have agreed with the Government to a policy of wage constraint (a 22 percent wage increase instead of over 30 percent) to slow down inflation. Serious economic problems persist and improvement will not be easy. A primary obstacle has been coping with the large oil imports and the reluctance of the Government to pass these increased costs on to the consumers.

The United States has a nearly $1 billion a year trade surplus with Spain. In addition, U.S. companies have nearly $2 billion worth of investments in the country—primarily Ford (a new plant to produce Fiestas) and Dow Chemical.

Another lingering problem is the military. Franco never established a Minister of Defense because he did not want any rival or competition to his supreme command of the military. The Army was the basis of Franco's power, and he kept it under control—even to the extent of keeping the armed forces "lean" and not giving them a lot of equipment and weaponry. The new Government has established a Minister of Defense and is in the process of building it up. This involves giving the military a new, useful role, keeping it strictly out of politics and assuring civilian control.

Some look toward Spain's entry into NATO as the answer to the question of what the Army's new "useful" role should be, but this idea is the subject of considerable debate. Spain was neutral in both World Wars, but many observers do not see that role continuing and expect a shift to NATO. A related military issue is what Spain will do with U.S. military bases when the current treaties expire in 1981. Negotiations are expected to begin in 1980, and should include a discussion of our military assistance sales, science and technology assistance and other programs which total about $1 billion over the last 5 years.

FOREIGN MINISTER OREJA

We paid a protocol visit to the Foreign Ministry and were received by Foreign Minister Oreja. After an informal chat with Oreja, three of his deputies stayed with us for a short question and answer period.

FELIPE GONZALEZ

Secretary General, Spanish Socialist Worker's Party (PSOE)

We met with Mr. Gonzalez at the Ambassador's residence. He is a deputy in the Cortes and also heads the country's second largest party (118 of 350 seats in the Cortes). The meeting consisted of informal questions and answers through an interpreter. Gonzalez appeared young, dynamic and favorably impressed the Members of our Delegation. The following text summarizes the major points made.

Major Differences Between the PSOE and the Majority Party

The majority party—Union of the Democratic Center (UDC)—represents the moderate conservative option and the PSOE the moderate left option. In general, business and the upper classes are identified with the UDC while the PSOE draws support from urban laborers and rural day workers. Gonzalez indicated that the parties are not rigidly divided on a class basis because support for both parties comes from all sectors of society. In fact, he indicated that the middle and lower classes were the swing voters and could go to either party due to the lack of rigid identification or "belonging" exclusively to either party.

The extreme parties are not considered to be major factors because they only polled a collective 16 percent of the popular vote in the recent election.

Bipartisanship

The parties do rise above party on issues of general national interest. Gonzalez indicated his intent to operate that way and cited the Constitution as an example.

Reasons for Scheduled Gonzalez Trip to the United States

His scheduled trip (November-December, 1977) will be his first to America, and he hopes to accomplish quite a bit. First, he does not believe that the United States has any real conception as to just what his Socialist Party is and what the PSOE stands for. He hopes to inform American leaders and the people on the trip so they can make a more rational judgment in assessing his party's positions and actions.

There is an historic link between socialist parties and labor, but he hopes to meet with U.S. companies investing in Spain to remove any concerns or misapprehensions they may have about what his party might do with respect to business interests. His planned visit to Detroit is apparently aimed at meeting with union officials and auto manufacturers—since Ford has established a large facility to produce Fiestas. He also said that now labor unions will be free, and investing companies must realize that they may have to be more "flexible" in dealing with the demands of the unions.

Labor Elections

Gonzalez hopes the scheduled labor elections will break the traditional European labor model, wherein a strong socialist party has a weak labor base and the communist party has a strong labor base. He would hope Spanish unions would be more supportive of the PSOE and avoid strengthening the communist party.

Public Employee Strikes

Gonzalez said he sees a real distinction between strikes by private and public employees. Certainly it is an unclear area, but his remarks indicated a differentiation which would be restrictive of public employee strikes.

There is a current strike by Spanish air traffic controllers. Gonzalez—who was on his way to a meeting with the Prime Minister about it—said that it was a very complicated issue. Formerly the air controllers were under the military and the strike is part of the "adjustment" going on between the workers and their supervisors. He said it was costly and was caused more by the Government's handling of the situation than by wage demands or substantive issues.

Spain and NATO

The PSOE is opposed to Spain's entry into NATO. Gonzalez expressed the view that it would be contrary to their longstanding neutrality, and not in Spain's interest in developing its own defense capability.

HERNANDEZ GIL

President of the Cortes

President Gil received us in an elegant conference room in the Cortes building. Through an interpreter he spoke of the challenges facing the Cortes, and admitted that while he has had "difficult times," he has never had "disagreeable or unpleasant times." By this he meant the road to democracy was not easy or painless, but that it was a labor of love and all elements of Spanish politics were working toward a single goal.

He expressed the same view we heard in our other meetings with Spanish leaders. There is quite a bit of uncertainty about how the Cortes and other branches are to operate and their relationship with each other. This uncertainty is expected to be cleared up by the new Constitution. He indicated an appreciation for our great United States Constitution and the democratic model it represents. Even though Spain has not had any legislative experience in the past few decades, President Gil expressed the opinion that the "spark" still remained alive during that time and members of the Cortes are pursuing their legislative work as though they did have experience. He has obviously pleased with this circumstance and hoped it would continue as a strong basis for Spain's change to democracy.

At the end of the session President Gil had the archivist bring in the original copy of the Spanish Constitution of 1812. In addition to the rules of Spain, the document was signed by Governors of Spanish possessions throughout the New World. The Cortes intends to make a limited number of copies, and President Gil showed obvious pride in stating that one would go to the Library of Congress.

ALVAREZ MIRANDA

President of the Congresso

The name Cortes signifies the combined Spanish legislature, including the Senate and Congresso (or lower body) as two individual bodies. Both Houses have their own separate leadership with a President of the entire Cortes—Hernandez Gil—to preside over joint sessions and perform other duties. Miranda is President of the 350-member Congresso.

Our meeting was extremely brief and informal. We were received in his office, and through an interpreter Miranda praised our democratic example and legacy to the world, especially for the model it shows Spain at this critical time. His short remarks included a fairly strong statement in support of human rights with the implied pledge that he and Spain were fully committed to support those rights for all peoples.

ADOLFO SUAREZ

Prime Minister or President of Government

We met President Suarez in his working residence, a lovely palace on the outskirts of Madrid. Through an interpreter we had a brief opportunity to listen to his views. Suarz is a well groomed, strikingly handsome man and gives the appearance of a good mind and much charisma. The members of our delegation were impressed with him during the visit.

Suarez took considerable time trying to describe the major issues facing his country. He cited many problems, but ranked the economy, political issues, balance of payments and terrorism as among the most serious. He recognized substantial economic problems, such as high inflation and unemployment, unfavorable trade deficits and a lack of productivity.

In describing the transition/adjustment period that Spain is going through Suarez used a very interesting example. He said trying to build a new democratic state out of the old one—without doing any unnecessary violence to established order—was like rebuilding an old house. They want to build new walls, but without cutting off the electricity. They want to install new plumbing, but without cutting off the present water supply or blocking up the old pipes. They want to build a new roof, but without making it impossible for the people to keep living in it during the rebuilding. This was a very graphic way of describing the difficult task the Spanish Government faces: Building a new without completely demolishing the old and creating chaos amidst the rubble.

Suarez was very specific in pointing out that the Spanish people feel a part of this transition and have a real stake in its success. He said there are real problems and there are psychological problems—the real ones are much easier to overcome if the psychological problems are avoided. Involvement of all Spaniards in building the democracy is obviously an important part of the Government's game plan. Even the political parties are working together on national issues during the "pre-constitution" transition period.

In expressing this great collective hope toward solving Spain's problems, Suarez urged the U.S. and others not to do anything to cause harm to this critical mental attitude. Friends should keep a helpful, positive attitude, he urged.

Spain is a country of young people. Suarez said that 70 percent of the population is under 40. Later Embassy staff explained that the young age of the populace was due to the combination of three long standing conditions: (1) Catholic influence against birth control, (2) poverty and (3) poor health care.

GENERAL LEAVE

Mr. GEPHARDT. Mr. Speaker, I ask unanimous consent that all Members be permitted to extend their remarks and to include therein extraneous material on the subject of the special order speech today by the gentleman from Ohio, Mr. Carney.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. Pursell (at the request of Mr. Rhodes), for today, on account of illness—influenza.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. Michel, for 15 minutes, today, and to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. Miller of Ohio), to revise and extend their remarks, and to include extraneous matter:)

Mr. Jeffords, for 10 minutes, today.

Mr. Sarasin, for 10 minutes, today.

Mr. Sebelius, for 10 minutes, today.

Mr. Don H. Clausen, for 60 minutes, today.

Mr. Whalen, for 5 minutes, today.

Mr. Collins of Texas, for 60 minutes, today.

Mr. Hollenbeck, for 5 minutes, today.

Mr. Miller of Ohio, for 10 minutes, today.

Mr. Trible, for 10 minutes, today.

Mr. McKinney, for 5 minutes, today.

Mr. Corcoran of Illinois, for 5 minutes, today.

Mr. Kemp, for 10 minutes, today.

Mr. Skubitz, for 10 minutes, today.

(The following Members (at the request of Mr. Gephardt), to revise and extend their remarks, and to include extraneous matter:)

Mr. Annunzio, for 5 minutes, today.

Mr. Gonzalez, for 5 minutes, today.

Mr. Pease, for 5 minutes, today.

Mr. Vanik, for 5 minutes, today.

Mr. Carney, for 5 minutes, today.

Mr. Edwards of California, for 5 minutes, today.

Mr. Mattox, for 5 minutes, today.

Mr. Pepper, for 5 minutes, today.

Mr. White, for 5 minutes, today.

Mr. Flood, for 5 minutes, today.

Mr. Drinan, for 10 minutes, today.

Mr. Fascell, for 10 minutes, today.

Mrs. Keys, for 5 minutes, today.

Mr. Alexander, for 30 minutes, today.

Mr. LaFalce, for 5 minutes, today.

Mr. Danielson, for 5 minutes, today.

Mr. Breckinridge, for 5 minutes, today.

Mr. Cornwell, for 5 minutes, today.

Mr. Pattison of New York, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. Skubitz, and to include extraneous matter notwithstanding the fact that it exceeds two pages of the Congressional Record and is estimated by the Public Printer to cost $1,610.

Ms. Holtzman, to revise and extend her remarks on the debate on the bill regarding broadcasting of radio and television, to be inserted in the debate.

SENATE BILL REFERRED

A bill of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 2351. An act to name the new Veterans' Administration Hospital in Little Rock, Ark., the John L. McClellan Hospital; to the Committee on Veterans' Affairs.

ENROLLED BILL SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 3199. An act to amend the Federal Water Pollution Control Act to provide for additional authorizations, and for other purposes.

APPOINTMENT OF COMMITTEE OF TWO MEMBERS TO INFORM PRESIDENT THAT THE TWO HOUSES HAVE COMPLETED THEIR BUSINESS OF THE SESSION AND ARE READY TO ADJOURN

Mr. WRIGHT. Mr. Speaker, I send to the Clerk's desk House Resolution 938, appointing a committee of two Members to inform the President that the two Houses have completed their business of the session and are ready to adjourn, and ask unanimous consent for its immediate consideration.

The Clerk read the resolution, as follows:

H. Res. 938

Resolved, That a committee of two Members be appointed by the House to join a similar committee appointed by the Senate, to wait upon the President of the United States and inform him that the two Houses have completed their business of the session and are ready to adjourn, unless the President has some other communication to make to them.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

Mr. BAUMAN. Mr. Speaker, reserving the right to object, the gentleman from Texas, the distinguished majority leader, has been kind enough to insert in the Record a list of days we will not be working next year. I appreciate that, but I wonder if the gentleman can also insert in the Record the list of the 200 "must" bills that I understand the Speaker will present to the President tomorrow during a luncheon. I believe I heard something in the media about that. I think that would be a nice addition to our Christmas stocking if all of us could contemplate those 200 bills in the month that we will be away. It would be a magnificent Christmas undertaking.

Mr. WRIGHT. Mr. Speaker, if and when the majority leader receives a list of the 200 bills that would be considered "must" legislation, I would, acting under the leave previously granted, be happy to insert it in the Record. I really do not expect to be receiving such a list today.

Mr. BAUMAN. Perhaps the Speaker could tell the majority leader what is going on with respect to the 200 bills that I heard about on the media this morning. I would like to hear about them; but be that as it may, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The resolution was agreed to.

A motion to reconsider was laid on the table.

The SPEAKER. The Chair appoints as Members on the part of the House to notify the President the gentleman from

Texas (Mr. WRIGHT) and the gentleman from Arizona (Mr. RHODES).

HAPPY HOLIDAYS TO THE MEMBERS

The SPEAKER. The Chair would like to wish all Members and employees a Merry Christmas and a Happy New Year. We will be returning on January 19 of the new year, and I hope that we come back fit and ready for work. The Chair thanks you all.

REPORT OF THE COMMITTEE TO NOTIFY THE PRESIDENT

The SPEAKER. The Chair will receive a report.

Mr. WRIGHT. Mr. Speaker, your committee, appointed to join a committee of the Senate to inform the President that the Congress is ready to adjourn, and to ask him if he has any further communications to make to the Congress, has performed that duty. The President has directed us to say that he has no further communication to make to the Congress.

The SPEAKER. The Chair appreciates the expeditious manner in which the majority leader, the chairman of the committee, has performed his duties.

Does the minority leader, the gentleman from Arizona (Mr. RHODES), have anything to say at this particular time?

Mr. RHODES. Mr. Speaker, I just wish to say that the President also extended his thanks to the Members of the House and wished them all a Merry Christmas and a Happy New Year.

Mr. Speaker, I do the same, especially to my dear friend, the Speaker. I hope that your holidays are full of joy and gladness for you and Mrs. O'Neill, that you come back refreshed, and that we will be able to have a very fruitful 2d session of the 95th Congress under your esteemed and august leadership.

The SPEAKER. I am very grateful for the gentleman's remarks. May I extend my love to your beautiful wife Betty, and may you and your family have a Merry Christmas.

Mr. WRIGHT. I want to thank you for the beautiful job you have done, and I express to you and your wife a Merry Christmas and a Happy New Year.

SINE DIE ADJOURNMENT

Mr. GEPHARDT. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to.

The SPEAKER. In accordance with the provisions of House Concurrent Resolution 442, the Chair declares the 1st session of the 95th Congress adjourned sine die.

Thereupon (at 4 o'clock and 39 minutes p.m.), pursuant to House Concurrent Resolution 442, the House adjourned sine die.

COMMUNICATION FROM THE CLERK

WASHINGTON, D.C.,
December 16, 1977.

Hon. THOMAS P. O'NEILL, Jr.,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: I have the honor to transmit herewith a sealed envelope from the White House, received in the Clerk's Office at 3:25 p.m. on Friday, December 16, 1977, and said to contain H.R. 7738, An Act with respect to the powers of the President in time of war or national emergency, which is being returned to the House of Representatives by the President in response to a request by House Concurrent Resolution 443.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr.,
Clerk, House of Representatives.

MESSAGE FROM THE PRESIDENT

To the House of Representatives:

Pursuant to House Concurrent Resolution 443, I am hereby returning the enrolled bill H.R. 7738, "An Act with respect to the powers of the President in time of war or national emergency," to the House of Representatives for the purpose of making a necessary technical correction.

JIMMY CARTER.

THE WHITE HOUSE, *December 16, 1977.*

SENATE ENROLLED BILLS SIGNED AFTER SINE DIE ADJOURNMENT

The SPEAKER announced his signature to enrolled bills of the Senate of the following titles:

S. 904. An act to provide for the efficient and regular distribution of current information on Federal domestic assistance programs; and

S. 1063. An act to amend the District of Columbia Self-Government and Governmental Reorganization Act with respect to the payment of certain revenue bonds issued by the Council of the District of Columbia.

ENROLLED BILLS AND A JOINT RESOLUTION SIGNED AFTER SINE DIE ADJOURNMENT

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills and a joint resolution of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 6666. An act to amend the Legal Services Corporation Act to provide authorization of appropriations for additional fiscal years, and for other purposes;

H.R. 7738. An act with respect to the powers of the President in time of war or national emergency;

H.R. 8212. An act for the relief of Charles P. Bailey;

H.R. 9346. An act to amend the Social Security Act and the Internal Revenue Code of 1954 to strengthen the financing of the social security system, and for other purposes;

H.R. 9794. An act to bring the governing international fishery agreement with Mexico within the purview of the Fishery Conservation Zone Transition Act; and

H.J. Res. 674. Joint resolution relative to the convening of the 2d session of the 95th Congress, and for other purposes.

BILLS AND A JOINT RESOLUTION PRESENTED TO THE PRESIDENT AFTER SINE DIE ADJOURNMENT

Mr. THOMPSON, from the Committee on House Administration, reported that that committee did December 16, 1977, present to the President, for his approval, a bill and joint and concurrent resolutions of the House of the following titles:

H.R. 3199. To amend the Federal Water Pollution Control Act to provide for additional authorizations, and for other purposes; and

H. Con. Res. 443. Requesting the President to return the enrolled bill (H.R. 7738) with respect to the powers of the President in time of war or national emergency, and providing for its reenrollment with technical corrections.

And on December 19, 1977:

H.J. Res. 674. Relative to the convening of the 2d session of the 95th Congress, and for other purposes;

H.R. 8212. For the relief of Charles P. Bailey;

H.R. 9794. To bring the governing international fishery agreement with Mexico within the purview of the Fishery Conservation Zone Transition Act;

H.R. 7738. With respect to the powers of the President in time of war or national emergency;

H.R. 6666. To amend the Legal Services Corporation Act to provide authorization of appropriations for additional fiscal years, and for other purposes; and

H.R. 9346. To amend the Social Security Act and the Internal Revenue Code of 1954 to strengthen the financing of the social security system, and for other purposes.

BILLS AND A JOINT RESOLUTION APPROVED AFTER SINE DIE ADJOURNMENT

The President, subsequent to the sine die adjournment of the Congress, notified the Clerk of the House that on the following dates he had approved and signed bills and a joint resolution of the House of the following titles:

On December 19, 1977:

H.R. 3722. An act to amend the Securities Exchange Act of 1934 to authorize appropriations for the Securities and Exchange Commission for fiscal year 1978;

H.R. 9378. An act to amend title IV of the Employee Retirement Income Security Act of 1974 to postpone, for 2 years, the date on which the corporation first begins paying benefits under terminated multiemployer plans; and

H.R. 9418. An act to amend the conditions for schools receiving capitation grants under section 770 of such act, and for other purposes.

On December 20, 1977:

H.R. 9346. An act to amend the Social Security Act and the Internal Revenue Code of 1954 to strengthen the financing of the social security system, and for other purposes.

On December 27, 1977:

H.R. 3199. An act to amend the Federal Water Pollution Control Act to provide for additional authorizations, and for other purposes.

On December 28, 1977:

H.J. Res. 674. Joint resolution relative to the convening of the 2d session of the 95th Congress, and for other purposes;

H.R. 6666. An act to amend the Legal Services Corporation Act to provide authorization of appropriations for additional fiscal years, and for other purposes;

H.R. 7738. An act with respect to the powers of the President in time of war or national emergency;

H.R. 8212. An act for the relief of Charles P. Bailey; and

H.R. 9794. An act to bring the governing international fishery agreement with Mexico within the purview of the Fishery Conservation Zone Transition Act.

FACTUAL DESCRIPTIONS OF BILLS AND RESOLUTIONS INTRODUCED

Prepared by the Congressional Research Service pursuant to clause 5(d) of House rule X. Previous listing appeared in the CONGRESSIONAL RECORD of December 12, 1977, page 38894.

H.R. 7601. June 3, 1977. Banking, Finance and Urban Affairs. Amends the Housing Act of 1949 to require the Secretary of Agriculture to provide for the establishment of escrow accounts for taxes and insurance by borrowers for farm housing.

H.R. 7602. June 3, 1977. Judiciary; Education and Labor. Prescribes exclusive standards and procedures to govern the award of injunctive and other equitable relief in school desegregation cases brought under Federal law.

Creates a national committee composed of citizens from various occupations and backgrounds, particularly individuals who have had experience in school desegregation activities, which is to provide assistance to communities engaged in school desegregation. Creates a Federal Community Assistance Coordinating Council composed of representatives from specified government agencies which shall assist communities engaged in school desegregation in obtaining Federal assistance for programs facilitating desegregation.

H.R. 7603. June 3, 1977. Banking, Finance and Urban Affairs. Amends the National Housing Act to permit the Secretary of Housing and Urban Development to insure mortgages and loans with varying rates of amortization corresponding to anticipated variations in family income on a regular basis.

Amends the Internal Revenue Code to establish tax-exempt savings accounts which would be available to first-time home buyers, known as individual housing accounts.

H.R. 7604. June 3, 1977. Judiciary. Conditionally admits a certain person to the United States for permanent residence.

H.R. 7605. June 6, 1977. Ways and Means. Amends the Internal Revenue Code to provide that income received from nonmember telephone companies shall not be used in determining whether mutual and cooperative telephone companies qualify as tax exempt organizations.

H.R. 7606. June 6, 1977. Interior and Insular Affairs. Authorizes the Secretary of Agriculture to permit general recreational access and geothermal explorations for six months within the Special Management Area of the Bull Run Reserve, Mount Hood National Forest, Oregon.

H.R. 7607. June 6, 1977. Education and Labor; Ways and Means. Provides, through the Department of Labor, specified adjustment assistance to certain workers adversely affected by the termination of a major government procurement program.

Establishes a Job and Retraining Information Service within the Department of Labor to facilitate the implementation and operation of such assistance program.

Amends the tax credit under the Internal Revenue Code for expenses of work incentive programs to permit a limited credit for wages paid to retrained defense workers.

H.R. 7608. June 6, 1977. Education and Labor. Amends the Emergency School Aid Act to make available certain funds for desegregation programs under such Act to certain territories and possessions of the United States.

H.R. 7609. June 6, 1977. Judiciary. Establishes a Virgin Islands Immigration Commission to review, on a case-by-case basis, the status, circumstances, and character of those aliens residing in the Virgin Islands of the United States who were admitted to the Virgin Islands as nonimmigrants on or before May 12, 1970 and to recommend to the Attorney General whether or not the status of such aliens should be adjusted to that of aliens lawfully admitted for permanent residence.

Directs the Attorney General to review the recommendations of the Commission and to adjust the status of such aliens if he determines that they are admissable.

H.R. 7610. June 6, 1977. Ways and Means. Amends the Internal Revenue Code to allow an income tax credit for 25 percent of the amount of rent paid by the taxpayer which is equal to the taxpayer's proportionate share of the local and State property taxes imposed on the land and building in which his dwelling is located.

H.R. 7611. June 6, 1977. Interstate and Foreign Commerce. Directs the Secretary of Health, Education, and Welfare to permit the marketing of saccharin and any food additive, drug, and cosmetic containing saccharin for 12 months.

H.R. 7612. June 6, 1977. Post Office and Civil Service. Prohibits the Postal Service from decreasing the frequency of mail delivery service below the frequency in effect for the calendar week beginning May 1, 1977.

H.R. 7613. June 6, 1977. Public Works and Transportation. Requires the preparation of written estimates for work to be performed on aircraft for which the customer is to be charged more than $100.

H.R. 7614. June 6, 1977. Armed Services. Amends the Federal Civil Defense Act of 1950 to authorize the use of Federal civil defense funds by local civil defense agencies for natural disaster or civil disturbance relief. Increases the Federal contribution for travel expenses and per diem allowances for students in civil defense training programs and increases the Federal financial contribution to States for civil defense personnel and administrative expenses. Increases the authorization for appropriations under such Act for travel expenses, personal equipment for State and local workers, and personnel and administrative expenses.

H.R. 7615. June 6, 1977. Post Office and Civil Service. Abolishes the Postal Rate Commission and stipulates that future postal rate increases be related to increases in the Consumer Price Index. Requires that proposed increases in postal rates which exceed the percentage increase in the Consumer Price Index be subject to congressional review.

Stipulates that changes in the mail classification schedule made by the Postal Service be subject to congressional review.

H.R. 7616. June 6, 1977. Judiciary. Establishes a Competition Review Commission to study the effect of certain laws, regulations, policies, governmental practices, and the competitive structure of major industries on employment, price levels, profit levels, efficiency, quality of goods and services, and the ability of domestic corporations to compete with foreign corporations. Directs the commission to recommend a program of legislative and executive action to the President and Congress which is designed to ameliorate anti-competitive conditions found to be detrimental to the public interest.

H.R. 7617. June 6, 1977. Judiciary. Establishes a Competition Review Commission to study the effect of certain laws, regulations, policies, governmental practices, and the competitive structure of major industries on employment, price levels, profit levels, efficiency, quality of goods and services, and the ability of domestic corporations to compete with foreign corporations. Directs the commission to recommend a program of legislative and executive action to the President and Congress which is designed to ameliorate anti-competitive conditions found to be detrimental to the public interest.

H.R. 7618. June 6, 1977. Merchant Marine and Fisheries. Directs the Secretary of the Interior to make a comprehensive study of the wolf for the purpose of developing adequate conservation measures.

Establishes a moratorium on all killing of wolves except as game in areas not protected under the Endangered Species Act, pending the results of such study.

H.R. 7619. June 6, 1977. House Administration; International Relations. Authorizes the Secretary of State to accept a statue or bust of George C. Marshall and place it in the Department of State.

Establishes a noncompensated Commission under the direction of the Secretary to select a sculptor and select the size, style, design, and material of such statue or bust.

H.R. 7620. June 6, 1977. House Administration; International Relations. Authorizes the Secretary of State to accept a statue or bust of George C. Marshall and place it in the Department of State.

Establishes a noncompensated Commission under the direction of the Secretary to select a sculptor and select the size, style, design, and material of such statue or bust.

H.R. 7621. June 6, 1977. Public Works and Transportation. Amends the Federal-Aid Highway Act of 1973 to increase the Federal share of the cost of specified railway highway crossing demonstration projects.

H.R. 7622. June 6, 1977. Interstate and Foreign Commerce. Amends the Railroad Retirement Act of 1974 to eliminate deductions from supplemental annuities payable under such Act on account of private pensions.

H.R. 7623. June 6, 1977. Interstate and Foreign Commerce. Repeals an act which declares that the regulation and taxation by the States of the business of insurance is in the public interest, and that silence on the part of Congress shall not be construed as a barrier to such regulation or taxation by the States.

H.R. 7624. June 6, 1977. Banking, Finance and Urban Affairs. Amends the United States Housing Act of 1937 to exclude from income Medicare taxes and premiums paid for hospital insurance benefits for individuals not eligible for Medicare insurance for purposes of determining eligibility for and the amount of assistance of any family under the low-income housing program.

H.R. 7625. June 6, 1977. Veterans' Affairs. Directs the Secretary of Defense to place a plaque and a permanent display of medals, ribbons, and tributes of the Vietnam era on the crypt at the National Cemetery at Arlington, Virginia, reserved for an unknown American serviceman who lost his life in Southeast Asia.

Directs the Secretary to perform the duties required by this Act even though the remains of such serviceman have not yet been placed in the crypt.

H.R. 7626. June 6, 1977. Education and Labor. Amends the Rehabilitation Act of 1973 to authorize appropriations to enforce the prohibition in that Act against discrimination toward qualified handicapped individuals under any program or activity receiving Federal financial assistance.

Stipulates that not less than a third of such authorized expenditures be used for educational purposes.

H.R. 7627. June 6, 1977. Interstate and Foreign Commerce. Amends the Railroad Retirement Act of 1974 to entitle certain disabled spouses of railroad employees to an annuity and to entitle certain spouses of disabled railroad employees to an annuity.

H.R. 7628. June 6, 1977. Interstate and Foreign Commerce. Amends the Railroad Retirement Act of 1974 to stipulate that the benefits payable to surviving parents of railroad employees shall not be less than those which the parent would have received under the Social Security Act.

H.R. 7629. June 6, 1977. Public Works and Transportation. Establishes a Federal photovoltaic energy utilization program to be administered by the Federal Energy Administrator, for the purpose of providing accelerated procurement of advanced photovoltaic solar electric systems for use by the Department of Defense.

H.R. 7630. June 6, 1977. Ways and Means. Amends the Internal Revenue Code to provide that the entire amount of the gain from certain involuntary conversions of the principal residences of individuals aged 65 or more shall be excluded from gross income.

H.R. 7631. June 6, 1977. Post Office and Civil Service. Changes the organizational structure of the United States Postal Service by: (1) transferring the authority of the Board of Governors to the Postmaster General; (2) revising the procedures for adjustment of rates and services; (3) creating a procedure for review of proposed capital investments; and (4) requiring the Postal Rate Commission to submit to the President a separate annual budget.

Prohibits a reduction in the frequency of mail delivery service below the frequency in effect on April 21, 1977.

H.R. 7632. June 6, 1977. Post Office and Civil Service. Makes air traffic controllers who are eligible for immediate retirement ineligible for full-time training on the basis of their inability to continue their work as controllers for physical or other specified reasons. Entitles to a civil service pension any employee who is an air traffic controller, who is engaged in providing preflight, inflight, or airport advisory service to aircraft operators, or is the immediate supervisor of such employee if such person is separated from the service after completing 25 years of service or after becoming 50 years of age and completing 20 years of service.

H.R. 7633. June 6, 1977. Judiciary. Directs the Attorney General to make grants to qualified State programs for the compensation of victims of crime.

Establishes an Advisory Committee on Victims of Crime to advise the Attorney General with respect to the administration of such grant program and to the compensation of victims of crime.

H.R. 7634. June 6, 1977. Judiciary. Declares three individuals lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 7635. June 6, 1977. Judiciary. Directs the Secretary of the Air Force to pay a certain individual retired pay as though he has been retired for physical disability in the grade of a colonel since 1954.

H.R. 7636. June 6, 1977. Makes appropriations for fiscal year 1978 to the Department of the Interior, Department of Agriculture, Department of Defense, Department of Health, Education, and Welfare, and related agencies.

H.R. 7637. June 7, 1977. Ways and Means. Amends the Internal Revenue Code to repeal the carryover basis provisions enacted by the Tax Reform Act which provide that beneficiaries receiving property from a decedent's estate will retain the decedent's basis in the property. Restores prior law which "stepped up" or "stepped down" the property's basis to its market value at the time of death without imposing tax consequences on the appreciation or depreciation the property underwent while held by the decedent.

H.R. 7638. June 7, 1977. Ways and Means; Interstate and Foreign Commerce. Requires every employer to offer qualified health care insurance to his employees and their families. Establishes a program of Federal participation to provide qualified health care insurance to low-income, nonemployed and self-employed individuals and their families. Requires the Secretary of Health, Education, and Welfare to pay the full premium for continuation of qualified health care insurance for individuals receiving State or Federal unemployment benefits.

H.R. 7639. June 7, 1977. Post Office and Civil Service. Repeals the prohibition of the use of recording clocks to record the time of an employee of an Executive department in the District of Columbia.

H.R. 7640. June 7, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to revise the eligibility requirements for disability insurance benefits for blind persons. Revises the method of computing the primary insurance amount for blind persons under such Act.

H.R. 7641. June 7, 1977. Banking, Finance, and Urban Affairs. Declares a national policy on investment in the private sector of the United States economy.

Requires the Council on Wage and Price Stability to deliver to Congress an annual Investment Policy Report which shall include information on levels of capital investment available, trends in such levels, and reviews of economic programs affecting capital investment. Requires the President to submit other recommendations for implementation of the national policy declared in this Act.

H.R. 7642. June 7, 1977. Banking, Finance and Urban Affairs. Establishes ten Regional Capital Development Banks vested with special authority to make loans to, and buy stock in, corporations with assets or given sales not in excess of $10,000,000.

Directs each bank to undertake research and to facilitate exchange of concepts and techniques relating to capital financing of business enterprises and economic development.

H.R. 7643. June 7, 1977. Veterans' Affairs. Provides that the income tax treatment of certain transportation expenses between the taxpayers' residence and place of work shall be determined without regard to Revenue Ruling 76–453 or any other ruling, regulation or decision reaching the same result.

H.R. 7644. June 7, 1977. Ways and Means. Amends the Internal Revenue Code to provide identical income tax rates for single persons and married couples filing joint returns. Limits the earned income that must be reported by a married person filing a separate return to the amount actually earned by that individual.

H.R. 7645. June 7, 1977. Interstate and Foreign Commerce; Public Works and Transportation. Amends the Interstate Commerce Act to establish time limitations during which common carriers by railroad, specified transportation companies, motor carriers, and freight forwarders are required to acknowledge receipt of, and dispose of, claims alleging loss or damage to property.

H.R. 7646. June 7, 1977. Banking, Finance and Urban Affairs. Amends the Federal Reserve Act to provide for Congressional review of the Federal Reserve's monetary policy.

Prohibits use of the Federal Reserve System's income for lobbying and participation of Federal Reserve System employees in specified activities which affect personal financial interests.

Directs the Comptroller General to audit the Federal Reserve Board, the Federal Open Market Committee, and all Federal Reserve banks.

H.R. 7647. June 7, 1977. Judiciary. Amends the Clayton Act to repeal the provision which renders a final judgment or decree in a criminal or civil action brought under this Act prima facie evidence against a defendant in a subsequent action brought by any other party, in order to permit the application of the doctrine of collateral estoppel to litigated antitrust judgments.

H.R. 7648. June 7, 1977. Ways and Means. Amends the Internal Revenue Code to allow individuals limited, alternative income tax deductions and credits for expenses incurred for the primary, secondary and higher education of themselves and their spouses and dependents.

H.R. 7649. June 7, 1977. Government Operations. Establishes the Federal Emergency Assistance and Preparedness Administration to to implement and coordinate all Federal disaster assistance and emergency preparedness programs and to collect data to be made available to the public, States and localities respecting the prediction and planning for emergencies and disasters. Extends the termination dates of specified provisions of the Federal Civil Defense Act to September 30, 1980.

H.R. 7650. June 7, 1977. Ways and Means; Interstate and Foreign Commerce. Creates a national system of health insurance. Establishes a Health Security Board in the Department of Health, Education, and Welfare to administer such health insurance program.

Repeals the Medicare provisions of the Social Security Act and all health benefit plans for employees of the Federal Government.

H.R. 7651. June 7, 1977. Ways and Means. Amends the Tariff Schedules of the United States to repeal the duty imposed on articles assembled abroad with components produced in the United States.

H.R. 7652. June 7, 1977. Judiciary. Deems a certain individual, for purposes of receiving a survivor annuity under the Civil Service retirement system, to have been married to a certain decedent for one year immediately prior to his death.

H.J. 7653. June 7, 1977. Judiciary. Authorizes classification of two individuals as children for purposes of the Immigration and Nationality Act.

H.R. 7654. June 7, 1977. Judiciary. Directs the Secretary of the Treasury to pay a certain sum to a certain corporation to defray the expenses incurred by such corporation in conducting a business administration program at Ft. Dix.

H.R. 7655. June 8, 1977. Public Works and Transportation. Directs the Architect of the Capitol to paint all exterior wood surfaces of the United States Capitol Building.

H.R. 7656. June 8, 1977. Agriculture. Establishes a Commission on the Humane Treatment of Animals to study the treatment of animals.

H.R. 7657. June 8, 1977. Government Operations; House Administration. Directs the installation of telecommunications devices which permit two-way communication of textual messages in alphanumeric form by telephone lines in specified Federal agencies to facilitate communication with such agencies by the deaf and provides assistance in such installations in State and local governmental offices. Permits the installation of such a device in the office of any Member of Congress who requests one. Provides for the installation of such devices throughout the United States for the use of deaf persons wishing to communicate with such government agencies or Members of Congress.

H.R. 7658. June 8, 1977. Veterans' Affairs. Authorizes the Administrator of Veterans' Affairs to assist in acquiring specially adapted housing for those veterans who have a permanent and total service-connected disability due to the loss, or loss of use, of one upper and one lower extremity, such as to preclude locomotion without the aid of braces, crutches, canes, or a wheelchair.

H.R. 7659. June 8, 1977. Veterans' Affairs. Authorizes the Administrator of Veterans' Affairs to assist in acquiring specially adapted housing for those veterans who have a permanent and total service-connected disability due to the loss, or loss of use, of one upper and one lower extremity, such as to preclude locomotion without the aid of braces, crutches, canes, or a wheelchair.

H.R. 7660. June 8, 1977. Ways and Means. Amends the Internal Revenue Code to allow limited, nonrefundable income tax credits for specified higher education expenses, including tuition, fees, books and supplies, incurred by the taxpayer for himself and any dependents.

H.R. 7661. June 8, 1977. Public Works and Transportation; Ways and Means. Authorizes the Secretary of Transportation to approve Federal participation in State projects to repair or replace unsafe highway bridges. Amends the Highway Revenue Act of 1956 to extend the appropriations authorized under such Act for the Highway Trust Fund through fiscal year 1990. Amends the Land and Water Conservation Fund Act to extend such fund through fiscal year 1977. Postpones specified excise tax reductions under the Internal Revenue Code of 1954.

H.R. 7662. June 8, 1977. Judiciary. Increases from $950,000 to $1,400,000 the authorizations of appropriations for fiscal years 1979–1981 for the Administrative Conference of the United States.

H.R. 7663. June 8, 1977. Interstate and Foreign Commerce. Directs the Institute of Medicine of the National Academy of Sciences to conduct a review of toxic and carcinogenic substances and to report its findings and advisory recommendations to the Congress and the Secretary of Health, Education, and Welfare within one year.

Authorizes the continued use of saccharin for 18 months. Prohibits the Secretary from taking any action under the Federal Food, Drug, and Cosmetic Act to prohibit or restrict the sale or distribution of saccharin.

H.R. 7664. June 8, 1977. Banking, Finance and Urban Affairs. Authorizes the Secretary of Housing and Urban Development, acting through the States, to make loans to homeowners to assist them in purchasing and installing qualified solar heating and cooling equipment.

Directs the Secretary to disseminate information concerning recommended standards and types of qualified solar heating or solar and cooling equipment appropriate for use in residential structures.

H.R. 7665. June 8, 1977. Veterans' Affairs. Extends from two to six months the hospitalization, institutional, or domiciliary care period required prior to reduction of the stipend of a pensioner who has no dependents.

H.R. 7666. June 8, 1977. Veterans' Affairs. Denies veterans' benefits to an individual whose discharge from military service during the Vietnam era under less than honorable conditions is administratively upgraded, under temporarily revised standards, to discharge under honorable conditions; but only when such veteran's claim for benefits is based solely on such upgraded discharge.

H.R. 7667. June 8, 1977. Judiciary. Amends the Immigration and Nationality Act to authorize the Attorney General to waive exclusion or deportation from the United States of an alien who has been convicted of distributing, selling, or possessing marihuana, or of conspiring to distribute, sell, or possess marihuana.

H.R. 7668. June 8, 1977. Veterans' Affairs. Directs the Secretary of Defense to place a plaque and a permanent display of medals, ribbons, and tributes of the Vietnam era on the crypt at the National Cemetery at Arlington, Virginia, reserved for an unknown American serviceman who lost his life in Southeast Asia.

Directs the Secretary to perform the duties required by this Act even though the remains of such serviceman have not yet been placed in the crypt.

H.R. 7669. June 8, 1977. Small Business. Amends the Small Business Investment Act to change the title of the Associate Administrator for Finance and Investment of the Small Business Administration to that of Associate Administrator for Investment. Changes the duties of such office.

H.R. 7670. June 8, 1977. Banking, Finance and Urban Affairs. Amends the National Flood Insurance Act to extend coverage under the flood insurance program to include losses from landslides.

H.R. 7671. June 8, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to modify the provisions which qualify an individual who becomes disabled before reaching age 31 for disability insurance benefits under such title.

H.R. 7672. June 8, 1977. Interstate and Foregn Commerce. Amends the Motor Vehicle Information and Cost Savings Act to require the Environmental Protection Agency to compute automobile fuel consumption rate statistics based on actual road tests. Requires that such fuel consumption rates, in addition to the presently required fuel economy label, be affixed in a prominent place on each automobile manufactured after 1976.

H.R. 7673. June 8, 1977. Ways and Means. Provides that the income tax treatment of certain transportation expenses between the taxpayer's residence and place of work shall be determined without regard to Revenue Ruling 76–453 or any other ruling, regulation or decision reaching the same result.

H.R. 7674. June 8, 1977. Public Works and Transportation. Designates the Federal Aviation Administration Aeronautical Center in Oklahoma as the "Mike Monroney Aeronautical Center."

H.R. 7675. June 8, 1977. Small Business. Authorizes the Small Business Administration to make grants to support the development and operation of small business development centers in order to provide small business with management development, technical information, product planning and development and international market development. Establishes a Small Business Management and Technical Assistance Division within the Small Business Administration to administer the Small Business Development Center program.

H.R. 7676. June 8, 1977. Veterans' Affairs. Permits the Administrator of Veterans' Affairs to discontinue educational assistance to an eligible veteran or survivor or dependent of a veteran if the Administrator finds that the institution of higher learning concerned has failed to enforce its regularly prescribed standards and practices as approved by the appropriate State approving agency with respect to such veteran or person.

Requires the Administrator to provide individual educational and career counseling and other appropriate services to facilitate the education of any veteran or person whose educational assistance has been discontinued under this Act

H.R. 7677. June 8, 1977. Interior and Insular Affairs. Designates the Indiana Dunes National Lakeshore as the "Paul H. Douglas Indiana Dunes National Lakeshore."

H.R. 7678. June 8, 1977. Veterans' Affairs. Stipulates that the recalling to duty and assignment on a full-time basis of any retired member of the armed forces to the American Battle Monuments Commission shall not be chargeable against the authorized end strengths and grade limitations of the Department of Defense or the military departments concerned nor to any administrative ceiling established by the Secretary of Defense.

H.R. 7679. June 8, 1977. Judiciary. Permits actions in Federal court against liability insurers of members of diplomatic missions and their families notwithstanding any defense that the insured is immune from liability, is an indispensible party, or absent certain circumstances, has violated a term of the contract.

H.R. 7680. June 8, 1977. Agriculture. Directs the Secretary of Agriculture to certify that imported honey originates from supplies which are pure and wholesome and that the foreign apiaries and plants in which it is produced comply with minimum standards of sanitation comparable to standards recommended by the Secretary for domestic honey. Directs the Secretary to inspect imported honey to the extent necessary to insure compliance with such standards. Requires that every container of any food product made in whole or in part of any imported honey be labeled as such.

H.R. 7681. June 8, 1977. Small Business. Amends the Small Business Act to direct the Small Business Administration to give special preference with respect to specified subcontracts and government sales and contracts to small business concerns with 100 or fewer full-time employees.

H.R. 7682. June 8, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to revise the eligibility requirements for disability insurance benefits for blind persons. Revises the method of computing the primary insurance amount for blind persons under such Act.

H.R. 7683. June 8, 1977. Judiciary. Disallows in aggregating member claims for jurisdictional amount purposes in class actions, claims of class members which do not exceed $10. Specifies new notice procedures for class actions.

Establishes, and sets forth procedures for, separate unfair practice class actions for consumer claims.

H.R. 7684. June 8, 1977. Interstate and Foreign Commerce; Banking, Finance and Urban Affairs. Amends the Flammable Fabrics Act to require the Secretary of Commerce to study the necessity and feasibility of establishing Federal standards relating to fire prevention and control.

H.R. 7685. June 8, 1977. Ways and Means. Amends the Internal Revenue Code to allow limited, nonrefundable income tax credits for individuals who: (1) install qualified insulation in their residences; (2) install qualified solar heating and cooling equipment in dwelling units used by them, or leased to others as residences; (3) replace the heating system in any dwelling with a reversible, compressible refrigerant system (i.e., a heat pump system); or (4) purchase personal or family electric highway vehicles between 1976 and 1982.

H.R. 7686. June 8, 1977. Ways and Means. Amends the Social Security Act with respect to Old-Age, Survivors, and Disability Insurance by directing the Secretary of Health, Education, and Welfare to establish procedures for expediting (1) replacement of lost, stolen or misdelivered benefit checks; (2) initial benefit payments; (3) hearings on eligibility; and (4) final determinations of eligibility.

H.R. 7687. June 8, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 7688. June 8, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 7689. June 9, 1977. Ways and Means. Amends the Internal Revenue Code to allow unmarried (currently, only married) heads of households to produce up to 200 gallons of wine annually without liability for the Federal excise tax.

H.R. 7690. June 9, 1977. Judiciary. Establishes within the judicial branch a United

States Commission on Sentencing to promulgate sentencing guidelines.

Specifies factors to be considered by a sentencing court in imposing a term of imprisonment.

Requires courts to disclose in open court and in the record reasons for imposing imprisonment.

Sets forth guidelines for court of appeals review of sentences.

H.R. 7691. June 9, 1977. Government Operations. Stipulates the circumstances under which executive agencies are to use procurement contracts, grant agreements and cooperative agreements to reflect a relationship between the Federal Government and a State or local government or other entity.

Directs the Office of Management and Budget to undertake a comprehensive study of alternative means of implementing Federal assistance programs and to determine the feasibility of developing a comprehensive system of guidance for such programs.

H.R. 7692. June 9, 1977. Judiciary. Waives the statute of limitations with regard to the tort claims of certain individuals against the United States arising out of the explosion of certain coal mines on a particular date.

H.R. 7693. June 9, 1977. Ways and Means. Amends the Tariff Schedules of the United States to exempt certain wearing apparel and footwear assembled with components made in the United States, from the reduced customs duties normally granted products made abroad from components made in the United States.

H.R. 7694. June 9, 1977. Judiciary. Limits the power of any United States court to issue school transportation orders based on race, color, or national origin.

Stipulates that only a three judge district court may issue a school assignment order based on race, color, or national origin.

Requires the holding of a special hearing where specific findings in relation to such a constitutional violation must be made before a school assignment order may issue.

Stays such school assignment orders until all appeals have been exhausted.

H.R. 7695. June 9, 1977. Ways and Means. Amends the Internal Revenue Code to allow individuals a limited income tax credit for the rent paid for their principal residence.

H.R. 7696. June 9, 1977. Education and Labor. Amends the Higher Education Act of 1965 to authorize appropriations for, and establish a program of grants to, urban universities for (1) development of urban-oriented educational, research, or service programs; and (2) assistance in carrying out such programs.

Establishes a five year comprehensive grant to a university qualifying as an "urban grant university" and establishes criteria for such designation.

Creates an Urban University Advisory Council to (1) review, along with the Commissioner of Education, "urban grant university" applications; (2) advise the Commissioner; and (3) make recommendations to the President and to the Congress.

H.R. 7697. June 9, 1977. Education and Labor. Amends the Higher Education Act of 1965 to authorize appropriations for, and establish a program of grants to, urban universities for (1) development of urban-oriented educational, research, or service programs; and (2) assistance in carrying out such programs.

Establishes a five year comprehensive grant to a university qualifying as an "urban grant university" and establishes criteria for such designation.

Creates an Urban University Advisory Council to (1) review, along with the Commissioner of Education, "urban grant university" applications; (2) advise the Commissioner; and (3) make recommendations to the President and to the Congress.

H.R. 7698. June 9, 1977. Education and Labor. Amends the Higher Education Act of 1965 to authorize appropriations for, and establish a program of grants to, urban universities for (1) development of urban-oriented educational, research, or service programs; and (2) assistance in carrying out such programs.

Establishes a five year comprehensive grant to a university qualifying as an "urban grant university" and establishes criteria for such designation.

Creates an Urban University Advisory Council to (1) review, along with the Commissioner of Education, "urban grant university" applications; (2) advise the Commissioner; and (3) make recommendations to the President and to the Congress.

H.R. 7699. June 9, 1977. Public Works and Transportation. Amends the Airport and Airway Development Act of 1970 to direct the Secretary of Transportation to obligate a certain portion of the funds authorized to be appropriated under such Act for improving air navigation facilities for the purpose of establishing no fewer than 45 automated flight service stations. Defines "flight service stations" as air navigation facilities used to assist pilots in the safe conduct of flight.

H.R. 7700. June 9, 1977. Post Office and Civil Service. Provides for congressional oversight of all rate, fee, and mail classification decisions made by the Postal Rate Commission. Sets maximum size and weight limits for all parcel mail. Abolishes the Board of Governors of the Postal Service and transfers its functions to the Postmaster General.

H.R. 7701. June 9, 1977. Ways and Means. Amends the Internal Revenue Code to allow a $200 income tax deduction for purchase and installation expenses for residential smoke detectors.

H.R. 7702. June 9, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to provide payment for optometric and medical vision care under the supplementary medical insurance program.

H.R. 7703. June 9, 1977. Ways and Means. Amends the Internal Revenue Code to repeal the special tax treatment provided under the credit for the elderly to individuals who have public retirement system income and who have not attained age 65.

H.R. 7704. June 9, 1977. Education and Labor. Prohibits the sexual exploitation of children by making it unlawful for any individual to (1) cause or permit a child to be photographed or filmed engaged in a sexual act prohibited under this Act; (2) photograph or film a prohibited sexual act; (3) knowingly transport a film or photograph depicting a prohibited sexual act; or (4) receive for sale or sell any such film or photograph, if such individual knows or should know such film or photograph has or may be transported in such a manner as to affect interstate or foreign commerce.

H.R. 7705. June 9, 1977. Interstate and Foreign Commerce. Requires that medical records maintained by programs assisted by the United States or insurance companies engaged in business in interstate commerce be kept confidential and be disclosed only according to this Act.

H.R. 7706. June 9, 1977. Interior and Insular Affairs. Authorizes the Secretary of the Interior to designate the sites of service of General Thaddeus Kosciuszko during the American Revolution as the "Kosciuszko Historic Route."

H.R. 7707. June 9, 1977. Interstate and Foreign Commerce. Directs the Secretary of Commerce to distribute to each food service operation instructions for removing food which has become lodged in a person's throat.

H.R. 7708. June 9, 1977. Interstate and Foreign Commerce; Ways and Means. Amends Title XIX (Medicaid) of the Social Security Act to make children over 18 of parents receiving nursing and home health care assistance under the Medicaid program liable for a specified portion of the expenses of such assistance.

Amends the Internal Revenue Code of 1954 to allow a deduction for payment of any liability for such medical assistance.

H.R. 7709. June 9, 1977. Education and Labor. Amends the Older Americans Act of 1965 to establish a program for the elderly which would provide one hot balanced home-delivered meal five days a week. Provides for a needs assessment of individuals receiving aid under such a program. Directs the Commissioner of the Administration on Aging to develop minimum efficiency standards for furnishing home-delivered meal services.

Limits the amount that may be spent on administration of a State plan for a nutrition program for the elderly to five percent of the funds allotted.

H.R. 7710. June 9, 1977. Ways and Means. Provides that the income tax treatment of certain transportation expenses between the taxpayer's residence and place of work shall be determined without regard to Revenue Ruling 76-453 or any other ruling, regulation or decision reaching the same result.

H.R. 7711. June 9, 1977. Ways and Means. Amends the Internal Revenue Code to qualify trusts established for the payment of product liability claims as tax exempt organizations. Allows taxpayers a business income tax deduction for contributions to such trusts only to the extent they exceed the reasonable costs of product liability insurance for the deducting taxpayer.

H.R. 7712. June 9, 1977. Ways and Means. Amends the Tariff Schedules of the United States to exempt from customs duties products of the insular possessions of the United States if not more than 70 percent of the products' value is attributable to foreign materials.

H.R. 7713. June 9, 1977. Judiciary. Makes it a Federal crime to willfully injure or destroy, or to attempt to injure or destroy, the trans-Alaska pipeline system.

H.R. 7714. June 10, 1977. Veterans' Affairs. Extends the delimiting period for completing a veteran's education program until such time as the veteran completes or ends the program, if at the close of the ordinary 10-year delimiting period the veteran is enrolled in a program.

H.R. 7715. June 10, 1977. Interstate and Foreign Commerce. Amends the Department of Transportation Act and the Regional Rail Reorganization Act to revise the time periods during which Federal financial assistance shall be available for rail service assistance programs under such acts.

H.R. 7716. June 10, 1977. Veterans' Affairs. Provides that recipients of veterans' pensions and compensation will not have the amount of such pension or compensation reduced because of increases in social security benefits.

H.R. 7717. June 10, 1977. Ways and Means. Increases to $5,004 the amount of outside earnings which is permitted an individual each year without any deduction from benefits under Title II (Old-Age, Survivors and Disability Insurance Benefits) of the Social Security Act.

H.R. 7718. June 10, 1977. Ways and Means. Amends the Internal Revenue Code to provide a $5,000 tax exclusion from gross income for any amount received as an annuity, pension, or other retirement benefit.

H.R. 7719. June 10, 1977. Veterans' Affairs. Denies veterans' benefits to an individual whose discharge from military service during the Vietnam era under less than honorable conditions is administratively upgraded, under temporarily revised standards, to discharge under honorable conditions; but only when such veteran's claim for benefits is based solely on such upgraded discharge.

H.R. 7720. June 10, 1977. House Administration. Directs the printing of the proceedings of the national encampments of the Italian American War Veterans of the United States, Incorporated as a document of the House of Representatives.

H.R. 7721. June 10, 1977. Judiciary. Grants a Federal charter to the Italian American War Veterans of the United States.

H.R. 7722. June 10, 1977. Veterans' Affairs. Permits the Administrator of Veterans' Affairs to recognize representatives of the Italian American War Veterans of the United States in the preparation, presentation, and prosecution of claims under laws administered by the Administration.

H.R. 7723. June 10, 1977. Judiciary. Directs Federal judges, upon determining that a party or a witness does not speak or understand English with sufficient facility due to a hearing impairment to order that (1) the proceedings be conveyed to such party or witness through an appropriate mode of communication and (2) that the testimony of such an individual be interpreted for the court.

Requires the Director of the Administrative Office of the United States Courts to certify interpreters for the hearing impaired and to prescribe a fee schedule for, and maintain a list of interpreters so certified.

H.R. 7724. June 10, 1977. Ways and Means. Restricts the importation of fresh, chilled or frozen beef, goat, and sheep meat to entry under specified tariff classifications, regardless of form, classification as processed, change in tariff classification, executive definition, or entry into the United States through any foreign trade zone and modification in form within the trade zone.

H.R. 7725. June 10, 1977. Education and Labor. Amends the Civil Rights Act of 1964 to include as an unlawful employment practice discrimination on the basis of physical handicap. States that nothing in this Act shall be construed to require any employer to provide any special services to handicapped employees.

H.R. 7726. June 10, 1977. Judiciary. Directs that an individual charged with an act of terrorism be detained pending trial if a judicial officer determines that release would pose a danger to any other person or to the community.

Deems an act of terrorism a dangerous crime for purposes of the pretrial release provisions of the District of Columbia Code and establishes a person's being charged with such an act as a rebuttable presumption that no conditions placed on his release could reasonably assure the safety of others and the community.

H.R. 7727. June 10, 1977. Ways and Means. Amends the Tax Reform Act to delay its provisions relating to the minimum tax on individuals for 1 year.

H.R. 7728. June 10, 1977. Ways and Means; Interstate and Foreign Commerce. Amends the Social Security Act amendments of 1972 to authorize the Secretary of Health, Education, and Welfare to develop and carry out demonstration and evaluation projects to evaluate the benefits of computer-based medical information patient care systems.

H.R. 7729. June 10, 1977. Interstate and Foreign Commerce. Amends the Federal Power Commission to establish a program of grants and low-interest loans to encourage the development of small hydroelectric power projects.

Revises licensing requirements under the Act to reduce the maximum annual charges for licenses involving Government dams issued in 1976 and thereafter.

H.R. 7730. June 10, 1977. Interstate and Foreign Commerce. Amends the Federal Power Act to direct the Federal Power Commission to establish a program of grants and low-interest loans to encourage the development of small hydroelectric power projects.

Revises licensing requirements under the Act to reduce the maximum annual charges for licenses involving Government dams issued in 1976 and thereafter.

H.R. 7731. June 10, 1977. Judiciary. Amends the Immigration and Nationality Act to prohibit the admission of any immigrant unless a United States citizen has agreed in writing to sponsor and to provide financial support to such immigrant for five years after entering the United States. Makes such agreement enforceable against the sponsor in the United States district court for the district in which the sponsor resides.

H.R. 7732. June 10, 1977. Agriculture. Authorizes the Secretary of Agriculture to make grants on a matching basis to the States, Puerto Rico, the Virgin Islands, and Guam to provide financial assistance to urban areas for the planting, maintenance and protection of trees and shrubs.

H.R. 7733. June 10, 1977. Banking, Finance and Urban Affairs. Amends the Truth in Lending Act to eliminate agricultural credit transactions from such Act. Specifies procedures agencies enforcing such Act shall use in obtaining compliance. Requires the development of model forms and clauses, for use in common transactions describing the transaction in understandable language.

H.R. 7734. June 10, 1977. Ways and Means. Amends the Internal Revenue Code to repeal the carryover basis provisions enacted by the Tax Reform Act which provide that beneficiaries receiving property from a decedent's estate will retain the decedent's basis in the property. Restores prior law which "stepped up" or "stepped down" the property's basis to its market value at the time of death without imposing tax consequences on the appreciation or depreciation the property underwent while held by the decedent.

H.R. 7735. June 10, 1977. Education and Labor. Amends the Rehabilitation Act of 1973 to authorize Federal assistance to private, profitmaking agencies and organizations for purposes of conducting research, training, and other activities relating to the rehabilitation of handicapped individuals.

H.R. 7736. June 10, 1977. Education and Labor. Amends the Rehabilitation Act of 1973 to authorize Federal assistance to private, profitmaking agencies and organizations for purposes of conducting research, training, and other activities relating to the rehabilitation of handicapped individuals.

H.R. 7737. June 13, 1977. Banking, Finance and Urban Affairs. Amends the National Housing Act to require an affirmative vote of the shareholders of an insured institution owning at least two-thirds of its voting stock or voting power before the Federal Home Loan Bank Board may approve the acquisition of control of such institution by any savings and loan holding company or any other company.

H.R. 7738. June 13, 1977. International Relations. Repeals the peacetime authority of the President to regulate foreign economic transactions, under the Trading With the Enemy Act of 1917, after June 1, 1977. Permits continuation of regulations in effect under such Act as of such date. Increases the penalties for violation of regulations under such Act. Authorizes the President to regulate foreign economic transactions when a national economic emergency arising from a foreign source is declared.

Amends the Export Administration Act of 1969 to permit the regulation of exports subject to the jurisdiction of the United States, or exports by persons subject to such jurisdiction.

H.R. 7739. June 13, 1977. Small Business. Directs the head of each Federal agency to prepare a small business impact statement in connection with each rule made by such agency, unless the agency head, with the approval of the Office of Advocacy of the Small Business Administration, determines that such rule will not have a substantial effect on a significant number of small businesses.

H.R. 7740. June 13, 1977. Interstate and Foreign Commerce. Prohibits the use of appropriated funds to carry out any nontherapeutic research on a living human fetus which is outside the womb of its mother or to assist any person in carrying out such research activity.

H.R. 7741. June 13, 1977. Judiciary. Prohibits any person from: (1) carrying out any research activity on a human fetus which is outside the womb of its mother and has a beating heart if the research or the facility in which it is conducted is federally supported; or (2) taking any action to kill or hasten the death of such a fetus in a federally supported facility.

H.R. 7742. June 13, 1977. Education and Labor. Amends the Higher Education Act of 1965 to authorize appropriations for, and establish a program of grants to, urban universities for (1) development of urban-oriented educational, research, or service programs; and (2) assistance in carrying out such programs.

Establishes a five year comprehensive grant to a university qualifying as an "urban grant university" and establishes criteria for such designation.

Creates an Urban University Advisory Council to (1) review, along with the Commissioner of Education, "urban grant university" applications; (2) advise the Commissioner; and (3) make recommendations to the President and to the Congress.

H.R. 7743. June 13, 1977. Judiciary. Prohibits use or supply of false documentation, false information, or birth or immigration documents of another for purposes of obtaining a Federal document containing an element of identification.

Forbids commerce in such information or documentation for purposes of securing a State or local government document containing an element of identification.

Proscribes specified acts relative to: (1) forgery, counterfeiting, or alteration of Federal, State, or local government documents containing an element of identification; (2) interstate or foreign commerce in any such counterfeited, forged, or altered document; and (3) receipt, possession, use, or furnishing of any such document with intent to secure false official identification.

H.R. 7744. June 13, 1977. Public Works and Transportation. Requires the Secretary of the Army to have dredging and other river and harbor projects done by private contractors if private industry has the capacity to do such work at reasonable prices. Directs the gradual reduction of the Federal dredge fleet as private industry assumes this capability.

Sets forth factors to be considered when comparing the cost of such work by private industry and such work by the government.

H.R. 7745. June 13, 1977. Judiciary. Eliminates the divisions in the western judicial district of Louisiana.

H.R. 7746. June 13, 1977. Agriculture. Amends the Consolidated Farm and Rural Development Act to make operating and real estate loans under such Act available to private domestic corporations and partnerships engaged in farming or ranching.

Provides for congressional authorization of program levels under such Act.

H.R. 7747. June 13, 1977. District of Columbia. Amends the District of Columbia

Code to apply provisions relating to pretrial release of persons charged with capital crimes only to those defendants charged with first degree murder or forcible rape.

Permits institution of pretrial detention hearings by a judicial officer on such officer's own initiative.

Extends the period after which certain defendants who are detained pending trial must be released.

Expands a judicial officer's authority to order pretrial detention to include detention of a defendant when it appears such person is presently and was at the time of the offense charged on bail or other release for a State or Federal felony.

H.R. 7748. June 13, 1977. Ways and Means. Amends the Tariff Schedules of the United States to increase the customs duty on jewelry and similar boxes lined with fabric.

H.R. 7749. June 13, 1977. Merchant Marine and Fisheries; Science and Technology. Sets forth procedures for implementing the Antarctic Treaty and the Agreed Measures for the Conservation of Antarctic Fauna and Flora.

Stipulates that certain acts including the taking of native animals and plants and the discharge of oil or hazardous substances into waters adjacent to the coast of Antarctica shall be unlawful in Antarctica.

Requires the Director of the National Science Foundation, in consultation with the Secretary of State, to promulgate regulations to implement this Act.

Requires persons planning expeditions proceeding to Antarctica from the United States to notify the Secretary.

H.R. 7750. June 13, 1977. Interstate and Foreign Commerce. Amends the Public Health Service Act to authorize and direct the Secretary of Health, Education, and Welfare to make grants to designated State agencies to meet part of the costs involved in planning, establishing, maintaining, coordinating, and evaluating programs for comprehensive services for school-age girls, their infants and children.

Specifies the requirements for State plans to qualify for Federal aid under this Act.

H.R. 7751. June 13, 1977. Judiciary. Requires specified organizations which employ lobbyists to register and file quarterly expense reports with the Comptroller General. Makes such reports available to the public. Establishes civil and criminal sanctions to enforce this Act.

H.R. 7752. June 13, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to provide payment for nutritional counseling as part of the home health services provided under the supplementary medical insurance program.

H.R. 7753. June 13, 1977. Interstate and Foreign Commerce. Directs the Institute of Medicine of the National Academy of Sciences to conduct a one-year review of all available information respecting the toxicity and carcinogenicity of food additives.

Directs the Secretary of Health, Education, and Welfare to permit the continued use of saccharin for the 18-month period following enactment of this Act.

H.R. 7754. June 13, 1977. Interstate and Foreign Commerce; Ways and Means. Amends Title XVIII (Medicare) of the Social Security Act to provide payment for rural health clinic services pursuant to the program of Supplementary Medical Insurance Benefits for the Aged and Disabled of such Title.

H.R. 7755. June 13, 1977. Ways and Means. Amends the Internal Revenue Code to provide a cost-of-living adjustment to the $15,000 phaseout amount for the disability exclusion.

H.R. 7756. June 13, 1977. Ways and Means. Prohibits the seizure or detention of letter mail in sealed envelopes originating outside the United States except pursuant to a warrant issued upon probable cause supported by oath or affirmation and particularly describing the thing to be seized or detained.

H.R. 7757. June 13, 1977. Interior and Insular Affairs. Dedicates the Indiana Dunes National Lakeshore to the memory of Paul H. Douglas.

Directs the Secretary of the Interior to survey and designate one or more of the following major elements of the lakeshore in his memory: (1) the principal visitor center; (2) the use area near Mount Baldy; (3) the West Beach unit; (4) the connecting parkway for the lakeshore; (5) the Pinhook Bog unit; and (6) the environmental education center.

Authorizes the appropriations necessary to carry out this Act.

H.R. 7758. June 13, 1977. Veterans' Affairs. Provides that recipients of veterans' pensions and compensation will not have the amount of such pension or compensation reduced because of increases in social security benefits.

H.R. 7759. June 13, 1977. Public Works and Transportation. Prohibits the expenditure of Federal funds for the conversion of highway signs to the metric system unless the Congress specifically authorizes such an expenditure.

H.R. 7760. June 13, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 7761. June 14, 1977. Post Office and Civil Service. Permits public school teachers in the Canal Zone up to ten years' credit for civil service retirement purposes for service in public schools in the United States.

H.R. 7762. June 14, 1977. Judiciary. Amends the Immigration and Nationality Act to make it unlawful to knowingly employ or refer for employment an illegal alien.

Requires the Department of Health, Education, and Welfare to identify illegal aliens who are receiving assistance under the Social Security Act.

Permits the Attorney General to adjust the status of specified illegal aliens to the status of lawful permanent residents.

Imposes penalties for the making of false documents used for entry into the United States.

Directs the Attorney General to establish a larger border patrol force.

Permits the Attorney General to deport aliens who are public charges.

H.R. 7763. June 14, 1977. Veterans' Affairs. Directs the Administrator of Veterans' Affairs to disregard cost-of-living increases in social security benefits when determining the amount of a veterans' pension or dependency and indemnity compensation. Requires the inclusion of such disregarded amount in the determination of eligibility and the amount of pension or compensation benefits, within the 12-month period after any amount is disregarded an increase in the level of Veterans' Administration benefits provided an individual occurs.

H.R. 7764. June 14, 1977. Ways and Means. Amends the Internal Revenue Code to repeal the excise tax on tread rubber.

H.R. 7765. June 14, 1977. International Relations. Directs the Secretary of the Interior to convey to the government of Guam, and the government of the Virgin Islands all right, title, and interest of the United States in deposits of oil, gas, and other minerals in the submerged lands conveyed to the governments of such territories pursuant to a specified law.

H.R. 7766. June 14, 1977. District of Columbia. Authorizes the Mayor of the District of Columbia to enter into an agreement relating to the use of airspace with the United Postal Service permitting the Postal Service to build a bridge for postal use between Union Station Terminal and the City Post Office located on North Capitol Street and Massachusetts Avenue, Northeast.

Provides that such construction shall not be inconsistent with the use, maintenance, and operation of any street or alley, and shall not deprive any real property not owned by the United States and administered by the United States Postal Service of easements of light, air, and access.

H.R. 7767. June 14, 1977. Science and Technology. Directs the Administrator of the Environmental Protection Agency to establish an Oil Spill Removal Research, Development, and Demonstration Project. Requires the transfer of similar programs from other Federal agencies to the project. Directs the Administrator to assist educational institutions and small businesses in participating in oil spill removal research programs.

H.R. 7768. June 14, 1977. Public Works and Transportation. Amends the Interstate Commerce Act to direct the Interstate Commerce Commission in the performance of its duties with respect to motor carriers to consider maximum reliance on competitive market forces, the encouragement of new motor carriers, and participation by women and minorities in the motor carrier industry as being in the public convenience and necessity.

Sets forth standards to apply in determining issuance of certificates of public convenience of permits for contract carriers by motor vehicles.

Establishes time limitations during which the Commission must dispose of applications pertaining to common or contract motor carriage.

H.R. 7769. June 14, 1977. Judiciary. Authorizes the Attorney General to change the status of Indochinese refugees who entered the United States after March 31, 1975, to that of permanent resident alien.

H.R. 7770. June 14, 1977. Government Operations. Authorizes the head of any Federal agency to procure property or services for such agency from areas of high unemployment if such agency head determines that bids of offers will be obtained from a sufficient number of eligible concerns to assure that awards will be made at reasonable prices.

H.R. 7771. June 14, 1977. Public Works and Transportation. Amends the Flood Control Act to authorize the Chief of Engineers to furnish the minimum protection necessary to prevent loss of life and property damage caused by lava flow.

H.R. 7772. June 14, 1977. Banking, Finance and Urban Affairs. Amends the Housing and Community Development Act of 1974 to authorize the Secretary of the Department of Housing and Urban Development to make grants to local governments for the purpose of funding qualified nonprofit neighborhood organizations engaged in activities designed to improve housing and prevent neighborhood deterioration.

H.R. 7773. June 14, 1977. Interior and Insular Affairs. Amends the National Trails System Act to include historic trails, in addition to recreation and scenic trails, within the National Trails System.

Designates the Oregon National Historic Trail and Travelway in the States of Oregon and Washington, as a unit of the National Trails System.

H.R. 7774. June 14, 1977. Interior and Insular Affairs. Amends the National Trails System Act to include historic trails, in addition to recreation and scenic trails, within the National Trails System.

Designates the Oregon National Historic Trail and Travelway in the States of Oregon and Washington, as a unit of the National Trails System.

H.R. 7775. June 14, 1977. Education and Labor; Judiciary. Amends the Civil Rights Act of 1964 to prohibit discrimination based on affectional or sexual preference in: (1) public accommodations; (2) public facilities; (3) public education; (4) federally assisted opportunities; (5) equal employment opportunities; (6) housing; and (7) educational programs receiving Federal assistance.

H.R. 7776. June 14. 1977. Education and Labor. Requires the Bureau of Labor Statistics, in compiling unemployment statistics, to classify as unemployed: (1) any farmer who reports a farm net loss on his or her income tax return; and (2) any dependent of such farmer whose sole occupation consists of working 15 or more hours per week on the farm. Requires the Secretary of the Treasury to report the number of such farmers and dependents to the Bureau of Labor Statistics. Requires any Federal programs in which funds are allocated on the basis of unemployment statistics to base such allocations on unemployment statistics compiled pursuant to this Act.

H.R. 7777. June 14, 1977. Merchant Marine and Fisheries. Amends the Great Lakes Pilotage Act of 1960 to limit the liability of United States registered vessel pilots or authorized Association of United States Registered pilots to $1,000 for any injury or damage which results from such pilots' negligence in navigating any vessel in waters of the Great Lakes under United States jurisdiction.

H.R. 7778. June 14, 1977. Judiciary. Amends the Immigration and Nationality Act to prohibit the admission of any immigrant unless a United States citizen has agreed in writing to sponsor and to provide financial support to such immigrant for five years after entering the United States. Makes such agreement enforceable against the sponsor in the United States district court for the district in which the sponsor resides.

H.R. 7779. June 14, 1977. Post Office and Civil Service. Makes Flag Day, June 14 of each year, a legal public holiday.

H.R. 7780. June 14, 1977. Judiciary. Amends the Clayton Act to make it unlawful for any person owning any nonnuclear energy technology to refuse or fail to make it available to any qualified applicant at reasonable rates and nondiscriminatory terms.

H.R. 7781. June 14, 1977. Interior and Insular Affairs. Revises Federal mineral leasing laws to require that the Secretary of the Interior give priority to applicants for coal leases who are not petroleum companies or electric utility companies.

H.R. 7782. June 14, 1977. Interior and Insular Affairs. Revises Federal mineral leasing laws to prohibit companies from acquiring control over more than one of the following energy assets: coal, uranium or other fissionable minerals, or oil or natural gas.

H.R. 7783. June 14, 1977. Interior and Insular Affairs. Revises Federal mining laws to place the mining of uranium on Federal lands under the Mineral Leasing Act of 1920.

H.R. 7784. June 14, 1977. Judiciary. Amends the Clayton Act to make it unlawful, after December 31, 1980, for any person who owns or controls a pipeline to transport by such pipeline any petroleum, petroleum product, or natural gas which it owns or controls, or has owned, controlled, produced, or refined.

Requires each person who transports by such pipeline any petroleum, product of petroleum refining, or natural gas, not later than December 31, 1979, to submit to the Attorney General plans for compliance with this Act.

H.R. 7785. June 14, 1977. Judiciary. Amends the Clayton Act to prohibit specified concentrations of control in the energy-producing industries.

H.R. 7786. June 14, 1977. Interstate and Foreign Commerce. Amends the Railroad Revitalization and Regulatory Reform Act of 1976 to eliminate the requirement that States match Federal funds for improvement of nonoperational portions of stations used in intercity rail passenger service and of related facilities and fencing in the Northeast Corridor.

H.R. 7787. June 14, 1977. Judiciary. Amends the Civil Rights Act of 1968 to allow the Secretary of the Department of Housing and Urban Development to initiate civil actions to enforce the provisions of such Act. Extends from 30 to 60 days the period during which no civil suits may be initiated and the Secretary must make efforts to obtain voluntary compliance with such Act.

Permits courts to award attorneys' fees to prevailing plaintiffs without regard to financial ability to assume such fees.

H.R. 7788. June 14, 1977. Judiciary. Amends the Clayton Act to provide that the existence of a contract between the person alleged to be injured and the defendant need not be proven in order for the person to recover in an action for treble damages under such Act.

H.R. 7789. June 14, 1977. Ways and Means. Amends the Internal Revenue Code to allow individuals alternative, limited income tax credits or deductions for the tuition paid for the primary, secondary or higher education of the taxpayer, his spouse and dependents.

H.R. 7790. June 14, 1977. Agriculture. Requires, under the Federal Meat Inspection Act, that imported meat and meat food products made in whole or part from imported meat be labeled "imported" or "imported in part" at all stages of distribution until reaching the ultimate consumer.

Prohibits the importation of any dairy product into the United States unless it has been inspected and found to be wholesome and unless the foreign farms and plants in which such products were produced comply with all inspection, grading and other standards prescribed by the Secretary of Health, Education, and Welfare.

H.R. 7791. June 14, 1977. Ways and Means. Amends the Internal Revenue Code to provide a $5,000 tax exclusion for persons aged 65 or over for amounts received as an annuity, pension, or other retirement benefit.

H.R. 7792. June 14, 1977. Ethics. Restricts the use of franked mail by Members of Congress during election campaigns. Limits the number of pieces which may be sent as franked mail. Expands the advisory jurisdiction of the House Commission on Congressional Mailing Standards of the House of Representatives. Extends the franking privilege of a spouse of a Member who died in office to surviving relatives in the event there is no surviving spouse.

H.R. 7793. June 14, 1977. Interior and Insular Affairs; Merchant Marine and Fisheries. Permits the private, noncommercial ownership of wild burros and horses.

H.R. 7794. June 14, 1977. Judiciary. Authorizes classification of a certain individual as a child for purposes of the Immigration and Nationality Act.

H.R. 7795. June 14, 1977. Judiciary. Declares a certain individual to be a returning resident alien under specified provisions of the Immigration and Nationality Act.

H.R. 7796. June 15, 1977. Banking, Finance and Urban Affairs. Extends assistance for purposes of rehabilitation of historic structures under the following housing programs: (1) Federal insurance of rehabilitation loans program; (2) direct loans for rehabilitation; and (3) urban renewal rehabilitation loan program.

H.R. 7797. June 15, 1977. Appropriations. Makes appropriations for fiscal year 1978 for (1) Foreign Assistance Act activities, (2) foreign military credit sales, (3) migration and refuge assistance, (4) payments to international financial institutions, and (5) the Export-Import Bank.

Sets forth limitations on such appropriations.

H.R. 7798. June 15, 1977. Interstate and Foreign Commerce. Reaffirms the intent of Congress with respect to the structure of the common carrier telecommunications industry rendering services in interstate and foreign commerce. Grants additional authority to the Federal Communications Commission to authorize mergers of carriers when deemed to be in the public interest. Reaffirms the authority of the States to regulate terminal and station equipment used for telephone exchange service.

H.R. 7799. June 15, 1977. Ways and Means. Amends the Internal Revenue Code to delay, for one year, the implementation of the Tax Reform Act's increased minimum tax on tax preferences for non-corporate individuals.

H.R. 7800. June 15, 1977. Banking, Finance and Urban Affairs. Creates a Solar Energy Development Bank to make long-term, low-interest loans to encourage the use of solar energy in commercial and residential dwellings. Establishes a Solar Energy Fund in the Treasury of the United States to finance the activities of the Bank.

H.R. 7801. June 15, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to authorize payment for specified services performed by chiropractors, and physical examination, and related routine laboratory tests.

H.R. 7802. June 15, 1977. Judiciary. Amends the Immigration and Nationality Act to authorize the Attorney General and the President to admit certain refugees to the United States. Permits refugees to become permanent residents of the United States upon approval of the Immigration and Naturalization Service.

H.R. 7803. June 15, 1977. Judiciary. Establishes a Small Business Administrative Review Court to review fines, citations, or orders having a dollar value of $2,500 or less by Federal departments or agencies.

H.R. 7804. June 15, 1977. Judiciary. Amends the Mann Acts, which prohibit the transportation of females for immoral purposes, to extend coverage to prohibit transportation of any individual for immoral purposes and to increase the penalties specified in such Act.

H.R. 7805. June 15, 1977. Armed Services. Stipulates that a National Guard technician who: (1) has completed ten years of service in a position in which Guard membership was required; (2) is involuntarily separated from the Guard under honorable conditions; and (3) who continues to meet specified physical fitness standards shall not be required to be a member of the Guard as condition of employment.

H.R. 7806. June 15, 1977. Interstate and Foreign Commerce. Amends the Public Health Service Act to authorize the Secretary of Health, Education, and Welfare to make grants to public and nonprofit private entities: (1) to assist in the operation of projects to provide counseling to pregnant women on their legal rights and the services available to help them carry the fetus to term, and raise and care for the child; and (2) to assist in the development of information about such rights and services, and on family planning and population growth.

H.R. 7807. June 15, 1977. Public Works and Transportation; Agriculture; Education and Labor; Interior and Insular Affairs; Small Business. Amends the Disaster Relief Act of 1974, the Public Works and Economic Development Act of 1965, the Small Business

Act, and the Consolidated Farm and Rural Development Act to provide disaster-type assistance to areas suffering from losses caused by a drought emergency.

H.R. 7808. June 15, 1977. Veterans' Affairs. Requires the Administrator of Veterans' Affairs to pay (in addition to any already paid) a monthly pension to each veteran of World War I who meets specified service requirements, or to the surviving spouse of each such veteran, or when there is no surviving spouse, to the child or children of each such veteran.

H.R. 7809. June 15, 1977. Judiciary. Repeals the requirement of the Jury Selection and Service Act of 1968 that the written plan for jury selection of each United States District Court fix a distance, either in terms of mileage or travel time, beyond which prospective jurors may automatically be excused from traveling for jury duty.

H.R. 7810. June 15, 1977. Judiciary. Revises Federal juror fees and allowances to, among other changes, (1) increase per diem pay and (2) replace set statutory travel and subsistence allowances with standards promulgated by the Director of the Administrative Office of the United States Courts.

Requires employers to preserve employment rights of employees serving Federal jury duty.

H.R. 7811. June 15, 1977. Judiciary. Repeals the provision stipulating that changes in the number, location, and salaries of United States magistrates made by the Judicial Conference of the United States take effect 60 days following their promulgation.

Authorizes, in civil actions in forma pauperis, payment by the United States of expenses for preparing a transcript of proceedings before a magistrate who is serving as a special master.

Amends the Bankruptcy Act to allow full-time and part-time referees in bankruptcy to serve as United States magistrates. Sets forth guidelines relative to the terms and salaries of persons serving in both capacities.

H.R. 7812. June 15, 1977. Judiciary. Amends the criminal jurisdiction of United States magistrates to (1) encompass misdemeanors for which the penalty is a fine of up to $5,000, (2) deny persons charged with petty offenses an election to be tried by a district court; and (3) include petty offenses committed by juveniles.

H.R. 7813. June 15, 1977. Judiciary; Education and Labor. Sets the number of jurors in noncriminal United States district court and District of Columbia Superior Court actions at six.

Reduces the number of preemptory challenges in such cases.

Permits former felons to qualify for Federal jury duty.

Provides Federal employee disability benefits to Federal jurors.

Establishes the use of a voting list in selecting jurors as a presumption that juries so selected fairly represent the community.

Provides for random selection of jurors through electronic data processing.

Directs that district court jurors in Puerto Rico, the District of Columbia, and the Canal Zone be drawn from voting lists.

H.R. 7814. June 15, 1977. Post Office and Civil Service. Requires each Federal agency to establish a flexible scheduling or compressed work schedule program on an experimental basis.

H.R. 7815. June 15, 1977. Veterans' Affairs. Provides that the decisions of the Administrator of Veterans' Affairs on any question of law or fact under any law administered by the Veterans' Administration providing benefits for veterans and their dependents or survivors shall be subject to judicial review. Repeals the requirement that the Administrator determine and pay fees to agents or attorneys in allowed claims for monetary benefits.

H.R. 7816. June 15, 1977. Interior and Insular Affairs. Prohibits producers, refiners, transporters, and retail marketers responsible for a specified minimum output of crude oil or the equivalent natural gas or products of petroleum from directly or indirectly taking or acquiring control of mineral leases, or from locating or recording any mineral claim.

Sets forth circumstances under which the Secretary of the Interior may not issue any mineral leases or recognize any mineral claims.

H.R. 7817. June 15, 1977. Public Works and Transportation; Banking, Finance and Urban Affairs; Interior and Insular Affairs. Amends the Public Works and Economic Development Act of 1965 to establish an inland energy development impact program in the Department of Commerce.

Includes among the assistance provided under such program to States, local governments, and Indian tribes which are affected as result of energy development activities: (1) technical assistance; (2) grants for comprehensive growth management and monitoring plans; (3) loans and loan guarantees for required new public facilities and services; and (4) grants for impact crises.

Creates an Inland Energy Impact Fund within the Treasury.

H.R. 7818. June 15, 1977. Judiciary. Deems a certain individual to have fulfilled the 20 years of service requirement for purposes of the administration of retired pay for non-regular service in the United States Army Reserves.

H.R. 7819. June 16, 1977. International Relations. Repeals provisions relating to diplomatic immunity which (1) deem void judicial writs or process issuing against persons with diplomatic immunity, (2) impose penalties for wrongful suit, and (3) exempt servants of diplomatic personnel from immunity.

Extends the privileges and immunities specified in the Vienna Convention on Diplomatic Relations to diplomatic personnel and families from nations which have not ratified the Convention.

Permits the President to grant to diplomatic personnel privileges and immunities more or less favorable than those in the Convention.

Directs any judicial action brought against immune personnel to be dismissed.

Requires such personnel to have liability insurance.

H.R. 7820. June 16, 1977. Judiciary. Amends the Omnibus Crime Control and Safe Streets Act of 1968 to require that comprehensive State law enforcement plans submitted thereunder include, where appropriate, police escort programs for elderly residents of high crime areas.

Directs the Law Enorcement Assistance Administration to conduct a study to determine the effects of denying release to persons convicted of violent crimes against the elderly and of prosecuting juveniles committing crimes against the elderly as adults.

H.R. 7821. June 16, 1977. Judiciary. Amends the Omnibus Crime Control and Safe Streets Act of 1968 to require that comprehensive State law enforcement plans submitted thereunder include, where appropriate, police escort programs for elderly residents of high crime areas.

Directs the Law Enforcement Assistance Administration to conduct a study to determine the effects of denying release to persons convicted of violent crimes against the elderly and of prosecuting juveniles committing crimes against the elderly as adults.

H.R. 7822. June 16, 1977. Banking, Finance and Urban Affairs. Extends from June 30, 1978, until June 30, 1981, the authority of the Secretary of the Treasury to make loans under the New York City Seasonal Financing Act.

H.R. 7823. June 16, 1977. Banking, Finance and Urban Affairs; Ways and Means. Establishes the National Development Bank for the purposes of making long-term, low-interest loans to individuals, State and local governments, and corporations in order to increase employment opportunities and foster public works and low- and moderate-income housing projects.

H.R. 7824. June 29, 1977. Ways and Means. Amends the Social Security Act to provide that an individual who would be fully qualified at age 62 for insurance under the Old-Age, Survivors, and Disability Insurance program may qualify for disability benefits under such program if such individual has 40 quarters of coverage, regardless of when such quarters were earned.

H.R. 7825. June 16, 1977. Post Office and Civil Service. Includes as creditable service for civil service retirement purposes employment by Howard University if such employment is financed directly by Federal funds.

H.R. 7826. June 16, 1977. Education and Labor. Amends the National Labor Relations Act to provide that the duty to bargain collectively includes bargaining with respect to retirement benefits for retired employees.

H.R. 7827. June 16, 1977. Interior and Insular Affairs. Recognizes and vests in the Commonwealth of Puerto Rico all right, title, and interest in and to, and jurisdiction and authority over, the lands beneath the navigable waters within the boundaries of the Commonwealth, and the natural resources underlying such lands and waters.

H.R. 7828. June 16, 1977. Judiciary. Prohibits commerce in contraband cigarettes.

Defines "contraband cigarettes" as a quantity of more than 20,000 cigarettes, bearing no evidence of payment of applicable State cigarette taxes, which are in the possession of any person other than (1) a person licensed by the State where the cigarettes are found or by the Internal Revenue Service, (2) a common or contract carrier, or (3) a government agent in the performance of duties.

H.R. 7829. June 16, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to increase the amount of outside income an individual may earn without reduction in benefits, to cease the reduction of dependent's benefits because of the excess earnings of the entitled individual, and to remove the limitation on the amount of outside income which an individual may earn after age 70.

Directs the Secretary of Labor to prepare a Senior Citizens Price Index for the computation of cost-of-living increases in benefits.

Eliminates marital status as a factor in the determination of eligibility of specified beneficiaries.

H.R. 7830. June 16, 1977. Judiciary. Amends the Hobbs Act to impose penalties for interfering with commerce by willfully causing property damage of at least $2,000 at or near a factory, construction site, or other place where work or business of an employer or owner is carried on or where such employer or owner transports, stores, or maintains property.

Stipulates that a violation of such provision or of the provision prohibiting interference with commerce through robbery, violent acts, or extortion shall not be nullified or mitigated by certain factors.

H.R. 7831. June 16, 1977. Veterans' Affairs. Exempts courses which lead to a standard college degree from the "85–15" rule governing approval of courses for enrollment by veterans receiving educational assistance allowances, and limits application of the rule to proprietary profit or proprietary nonprofit educational institutions. Consolidates existing provisions of the law relating to the certification of courses. Exempts specified kinds of courses from the two-year minimum of operation requirement. Prohibits the execution of powers of attorney for the negotiation of educational assistance allowance checks.

H.R. 7832. June 16, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to revise the eligibility requirements for disability insurance benefits for blind persons. Revises the method of computing the primary insurance amount for blind persons under such Act.

H.R. 7833. June 16, 1977. Ways and Means. Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to provide payment for optometric and medical vision care under the supplementary medical insurance program.

H.R. 7834. June 16, 1977. Judiciary. Prohibits the sexual exploitation of children by making it unlawful for any individual to (1) cause or permit a child to be photographed or filmed engaged in a sexual act prohibited under this Act; (2) photograph or film a prohibited sexual act; (3) knowingly transport a film or photograph depicting a prohibited sexual act; or (4) receive for sale or sell any such film or photograph, if such individual knows or should know such film or photograph has or may be transported in such a manner as to affect interstate or foreign commerce.

H.R. 7835. June 16, 197. Government Operations. Directs the Administrator of General Services to convey surplus property, consisting of railroad rails, ties and associated hardware, to the State of Hawaii.

H.R. 7836. June 16, 1977. Ways and Means. Amends the Internal Revenue Code to provide for permanent tax rate reductions for individuals and businesses, and for a permanent increase in the corporate surtax exemption.

H.R. 7837. June 16, 1977. Ways and Means. Amends the Internal Revenue Code to: (1) reduce individual and corporate income tax rates; (2) allow a limited income tax deduction by certain domestic corporations for dividends paid; (3) allow a tax credit for new savings deposits; (4) allow a deduction for a portion of a property's cost in lieu of a deduction for depreciation; and (5) reduce the maximum corporate normal tax rate.

H.R. 7838. June 16, 1977. Interior and Insular Affairs. Amends the Atomic Energy Community Act of 1955 to stipulate that assistance payments provided under such Act are supplemental to any State and local funds to which such recipients would otherwise be entitled. Prohibits funding of school districts which receive assistance under such Act in a different manner from other school districts solely on such basis.

H.R. 7839. June 16, 1977. Armed Services. Extends the special pay provisions for physicians and dentists in the uniformed services until September 30, 1978.

H.R. 7840. June 16, 1977. Interstate and Foreign Commerce. Amends the Railroad Retirement Act of 1974 to eliminate deductions from annuities under such Act on account of military pensions, disability compensation or other gratuitous benefits given under any other Acts of Congress.

H.R. 7841. June 16, 1977. Banking, Finance and Urban Affairs. Amends the Federal Reserve Act to provide for Congressional review of the Federal Reserve's monetary policy.

Prohibits use of the Federal Reserve System's income for lobbying and participation of Federal Reserve System employees in specified activities which affect personal financial interests.

Directs the Comptroller General to audit the Federal Reserve Board, the Federal Open Market Committee, and all Federal Reserve banks.

H.R. 7842. June 16, 1977. Judiciary. Subjects, with certain exceptions, to the appropriate punishment for the Commission of a criminal act within the special maritime and territorial jurisdiction of the United States persons committing a like act in Antarctica if (1) such person is a United States national or a member of a United States expedition, or (2) such act is committed against property of the United States or against the person or property of a United States national or a member of a United States expedition.

H.R. 7843. June 16, 1977. Judiciary. Directs the President to appoint a specified number of additional judges to designated United States district courts and courts of appeals.

Eliminates the exception for certain districts having two judges with respect to the requirement that no judge age 70 or over serve as chief judge.

H.R. 7844. June 16, 1977. Public Works and Transportation. Amends the Public Works and Economic Development Act of 1965 to allow the use of any funds appropriated which are available for use with respect to any major disaster to be expended by any Federal, State, or local authority receiving such funds for any loan, grant, or other authorized activity beginning on the date of the declartion of such disaster.

H.R. 7845. June 16, 1977. Ways and Means. Amends the Internal Revenue Code to increase the limitations on charitable deductions and investment tax credits taken by cooperations. Allows cooperatives to allocate investment tax credits among their programs.

H.R. 7846. June 16, 1977. Armed Services. Stipulates that a National Guard technician who: (1) has completed ten years of service in a position in which Guard membership was required; (2) is involuntarily separated from the Guard under honorable conditions; and (3) who continues to meet specified physical fitness standards shall not be required to be a member of the Guard as condition of employment.

H.R. 7847. June 16, 1977. Veterans' Affairs. Prohibits denial of employment (except by an employer with no more than ten employees) of any person because of any obligation as a member of a Reserve component of the Armed Forces.

H.R. 7848. June 16, 1977. Interstate and Foreign Commerce. Establishes within the Department of Commerce the United States Design Council to establish standards for excellence in the design of objects and systems, to identify the ways in which marketing may be improved through better design and manufacture, to implement programs to educate entrepreneurs and the public to the value of excellence in design, to make awards for outstanding products, and to conduct specified other activities to encourage excellence in design.

H.R. 7849. June 16, 1977. Interior and Insular Affairs. Authorizes the Secretary of the Interior to convey all right, title and interest (except mineral rights) in certain public lands in Montana to specified occupants of such lands.

H.R. 7850. June 16, 1977. Judiciary. Directs the Secretary of the Treasury to pay a specified sum to a certain individual in full settlement of such individual's claims against the United States.

H.R. 7851. June 16, 1977. Judiciary. Declares that, for naturalization purposes, a certain individual shall be held and considered to have met the residence and physical presence requirements of the Immigration and Nationality Act.

H.R. 7852. June 16, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 7853. June 17, 1977. Education and Labor. Establishes in the Office of Education a National Student Financial Assistance Data Bank to assist students in identifying public and private sources of financial assistance for higher education.

Directs the Commissioner of Education to (1) collect and assemble all available information pertaining to scholarships, loans, grants, and other financial assistance; and (2) disseminate such information without charge to individuals applying to the data bank.

H.R. 7854. June 17, 1977. International Relations. Amends the Foreign Assistance Act of 1961 to repeal the time limitations on participation in investment insurance by the Overseas Private Investment Corporation and requirements that specified percentages of such insurance be carried by private insurance companies. Permits investment loans and feasibility surveys by the Corporation for the extraction of ore and minerals. Extends the authority of the Corporation to September 30, 1981. Permits the Corporation to adjust the value of an investment, for insurance purposes, to reflect replacement cost. Exempts the insurance of loans to unrelated parties by financial institutions from the requirement that ten percent of the risk be borne by the insured.

H.R. 7855. June 17, 1977. Agriculture. Amends the Agricultural Act of 1949 to specify new formulas for prevented planting disaster payments and cotton farm disaster payments. Directs the Secretary of Agriculture to establish a national program acreage for each of the 1978 through 1981 crops of upland cotton. Requires the Secretary to determine a program allocation factor for each cotton farm and states the formula for the determination of the individual farm program acreage for each crop of upland cotton. Extends specified provisions of such Act and the Agricultural Adjustment Act of 1939 through the 1981 crops.

H.R. 7856. June 17, 1977. Ways and Means. Amends the Tariff Schedules of the United States to exempt from customs duties products of the insular possessions of the United States if not more than 70 percent of the product's value is attributable to foreign materials, until the value of such imports reaches a specified annual total. Exempts watch products of the insular possessions of the United States from customs duties. Exempts from customs duties products of such possessions upon re-entry, if applicable duties were previously paid.

H.R. 7857. June 17, 1977. Ways and Means. Amends the Internal Revenue Code to provide a $5,000 tax exclusion from gross income for any amount received as an annuity, pension, or other retirement benefit.

H.A. 7858. June 17, 1977. Interstate and Foreign Commerce. Reaffirms the intent of Congress with respect to the structure of the common carrier telecommunications industry rendering services in interstate and foreign commerce. Grants additional authority to the Federal Communications Commission to authorize mergers of carriers when deemed to be in the public interest. Reaffirms the authority of the States to regulate terminal and station equipment used for telephone exchange service.

H.R. 7859. June 17, 1977. Agriculture. Extends from June 30, 1977 to September 30, 1977, the provision of the Food Stamp Act of 1964 which disqualifies from eligibility for either food stamps or the Food Distribution Program any recipient of Federal or State supplemental security income benefits for any month during which he or she resides in a State providing State supplemental security income benefits whose level the Secretary of Health, Education, and Welfare has found to have been specifically increased to include the bonus value of food stamps.

H.R. 7860. June 17, 1977. Judiciary; Rules. Requires that the public be given an opportunity to participate in the rulemaking proceedings of a Federal agency.

Requires that proposed rules be submitted to Congress for disapproval before they become effective.

H.R. 7861. June 17, 1977. Judiciary; Rules. Requires that the public be given an opportunity to participate in the rulemaking proceedings of a Federal agency.

Requires that proposed rules be submitted to Congress for disapproval before they become effective.

H.R. 7862. June 17, 1977. Judiciary; Rules. Requires that the public be given an opportunity to participate in the rulemaking proceedings of a Federal agency.

Requires that proposed rules be submitted to Congress for disapproval before they become effective.

H.R. 7863. June 17, 1977. House Administration.

Permits candidates for the House of Representatives who agree to certain conditions allotments for a specified amount of media time.

Reduces the maximum amount which an individual or multicandidate committee may contribute to a candidate for the House of Representatives.

H.R. 7864. June 17, 1977. Ways and Means. Repeals the provision of the Emergency Jobs and Unemployment Assistance Act of 1974 which denies assistance and waiting period credits under the special unemployment assistance program between academic years or terms to certain nonprofessional employees of educational institutions or agencies.

H.R. 7865. June 17, 1977. Judiciary. Grants the Court of Claims jurisdiction to render judgments against the United States upon claims for losses other than lost profits sustained by procedures, processors, manufacturers, distributors, dealers, or other persons resulting from the ban on apparel, fabric, yarn, or fiber containing tris phosphate.

H.R. 7866. June 17, 1977. Post Office and Civil Service. Makes Flag Day, June 14 of each year, a legal public holiday.

H.R. 7867. June 17, 1977. Interior and Insular Affairs. Regulates the relocation of Hopi and Navajo individuals pursuant to Public Law 93-531 (An Act to provide for final settlement of the conflicting rights and interests of the Hopi and Navajo Tribes in certain lands.)

H.R. 7868. June 17, 1977. Education and Labor. Directs the Secretary of Labor to establish and maintain in counties with populations under 20,000 a pilot program designed to provide a guaranteed job opportunity to certain county residents from low-income households by partially reimbursing public and private employers for wages paid to certain such individuals, and fully reimbursing such employers for wages paid to certain other such individuals.

H.R. 7869. June 17, 1977. Post Office and Civil Service. Amends the Postal Reorganization Act Amendments of 1976 to extend to October 31, 1977, the period during which the Postal Service is prohibited from: (1) increasing rates and fees to levels exceeding those in effect on the date of enactment of the Act; (2) offering levels and types of services which are less than those available on July 1, 1976; and (3) closing certain postal facilities which were in operation on July 1, 1976.

H.R. 7870. June 17, 1977. Ways and Means. Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to expand the coverage of the supplementary medical insurance program to include physician extender services to the extent recognized under State law.

H.R. 7871. June 17, 1977. Agriculture. Amends the Agriculture Act of 1949 to establish separate reserves of wheat, corn, and other feed grains through storage contracts with producers. Sets loan levels for the 1977 through 1981 crops of wheat and corn. Authorizes the President to establish an International Emergency Food Reserve in this country and to negotiate international agreements with other countries to develop an international system of food reserves for humanitarian food relief.

H.R. 7872. June 17, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 7873. June 20, 1977. Veterans' Affairs. Requires the Administrator of Veterans' Affairs to pay (in addition to any already paid) a monthly pension to each veteran of World War I who meets specified service requirements, or to the surviving spouse of each such veteran, or when there is no surviving spouse, to the child or children of each such veteran.

H.R. 7874. June 20, 1977. Judiciary; Merchant Marine and Fisheries; Interstate and Foreign Commerce. Requires the Secretary of the Interior to issue regulations relating to traps and trapping. Sets forth standards for approved traps.

Establishes an advisory commission to advise the Secretary on traps designed or intended for use.

Prohibits trapping on Federal lands where such trapping will adversely affect any species of mammal or bird.

Sets forth a procedure for the application and issuance of trapping permits.

Requires shipping certificates for packages containing specified parts of trapped animals shipped in interstate commerce.

Sets forth criminal penalties for violations of this Act.

H.R. 7875. June 20, 1977. Education and Labor. Exempts residential care facilities from the minimum wages and maximum hours provisions of the Fair Labor Standards Act with respect to the employment of patients.

H.R. 7876. June 20, 1977. Post Office and Civil Service. Provides for congressional oversight of all rate, fee, and mail classification decisions made by the Postal Rate Commission. Sets maximum size and weight limits for all parcel mail. Abolishes the Board of Governors of the Postal Service and transfers its functions to the Postmaster General.

H.R. 7877. June 20, 1977. Veterans' Affairs. Provides for payment of a supplemental tuition allowance to each qualified veteran upon application to the Administrator of Veterans' Affairs.

H.R. 7878. June 20, 1977. Science and Technology. Directs the Administrator of the National Oceanic and Atmospheric Administration to establish a coordinated Federal program of ocean pollution environmental research, development, and monitoring.

H.R. 7879. June 20, 1977. Merchant Marine and Fisheries. Directs the Secretary of the Department under which the Coast Guard is operating to document the vessel Fundy Pride, owned by the Washington County Vocational Technical Institute of Calais, Maine, as a vessel of the United States with the privilege of engaging in the American fisheries so long as such vessel is owned by a citizen of the United States and is used for instructing students in vocations related to commercial fishing.

H.R. 7880. June 20, 1977. Judiciary. Makes it a Federal offense to assault an individual age 62 or older and cause medical damages to such individual of more than $100 paid under title XVIII of the Social Security Act by an instrumentality of the Government of the United States. Specifies a mandatory minimum 30 days' imprisonment for such offense.

H.R. 7881. June 20, 1977. Interstate and Foreign Commerce. Amends the Toxic Substances Control Act to create a Chemical Emergency Response Team within the Environmental Protection Agency to specialize in countering imminent threats to health and the environment posed by chemical substances. Directs the Administrator of the Environmental Protection Agency to develop a contingency plan to deal with such emergencies. Authorize financial assistance for the development of similar State contingency plans.

H.R. 7882. June 20, 1977. Education and Labor; Banking, Finance and Urban Affairs. Amends the Fair Labor Standards Act of 1938 to authorize the Secretary of Labor to investigate any proposed business closing or relocation and to provide assistance to certain employees and local governments affected by such action.

Denies specified tax benefits to a business closing or transferring an operation upon certain findings by the Secretary.

Establishes a National Employment Relocation Administration within the Department of Labor and a National Employment Relocation Advisory Council.

H.R. 7883. June 20, 1977. Ways and Means. Amends the Internal Revenue Code to allow individuals alternative, limited income tax credits or deductions for the tuition paid for the primary, secondary or higher education of the taxpayer, his spouse and dependents.

H.R. 7884. June 20, 1977. Ways and Means. Amends the Internal Revenue Code to provide an income tax credit for expenses incurred in the conversion of farm and ranch land into qualified wind erosion control or wildlife habitat areas.

H.R. 7885. June 20, 1977. Veterans' Affairs. Allows to certain persons, but denies to others, entitlement to veterans' benefits due to an administrative upgrading of a less than honorable discharge.

H.R. 7886. June 20, 1977. Interstate and Foreign Commerce. Prohibits the sale of beverage containers without a minimum refund value of five cents. Requires labeling of refund values on all such containers. Prohibits sale of metal beverage containers with detachable openings.

H.R. 7887. June 20, 1977. Education and Labor; Judiciary; Ways and Means. Amends the Employee Retirement Income Security Act, including sections within the Internal Revenue Code, to revise the regulatory jurisdiction of the Department of Labor and the Department of the Treasury with respect to employee benefits plans. Directs the Secretary of Labor and the Secretary of the Treasury to develop a single reporting form and deadline for such plans.

Authorizes Federal courts to render declaratory judgments in certain instances where the Secretary of Labor, the Secretary of the Treasury, or the Pension Benefit Guaranty Corporation fail to take action relative to an employee benefit plan.

H.R. 7888. June 20, 1977. Amends the Federal Rules of Criminal Procedure to allow a Federal magistrate to issue a search warrant based upon sworn oral testimony communicated by telephone or other appropriate means.

H.R. 7889. June 20, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to provide Medicare benefits for individuals who require total parenteral nutrition (TPN) as a result of intestinal surgery.

H.R. 7890. June 20, 1977. Armed Services.

Removes the present restrictions which prohibit enlisted members of the armed forces on active duty from engaging in a civilian pursuit or business or prohibit members of the Army, Navy, Air Force, or Marine bands from remuneration for furnishing music outside of a military base where such activities are in competition with local civilians.

H.R. 7891. June 20, 1977. Ways and Means. Amends the Internal Revenue Code to provide a $5,000 tax exclusion for persons aged 65 or over for amounts received as an annuity, pension, or other retirement benefit, and for all persons receiving retirement benefits under a public retirement system.

H.R. 7892. June 20, 1977. Education and Labor. Amends the Farm Labor Contractor Registration Act of 1963 to exclude from the requirement of registering as farm labor contractors any farmer, processor, canner, ginner, packing shed operator, or nurseryman who recruits, solicits, hires, furnishes or transports migrant workers on behalf of a farmer whose farm is located within 25 miles, and who receives no monetary consideration (other than reimbursement of actual expenses incurred) for engaging in such activity.

H.R. 7893. June 20, 1977. Banking Finance and Urban Affairs. Amends specified Federal laws to promote energy conserving measures through: (1) utility programs designed to cut heating and cooling costs; (2) Federal grants to low-income families for home weatherization; and (3) secondary financing and loan insurance by specified government agencies for the installation of energy conserving improvements.

H.R. 7894. June 20, 1977. Education and Labor. Prohibits the sexual exploitation of children by making it unlawful for any individual to (1) cause or permit a child to be photographed or filmed engaged in a sexual act prohibited under this Act; (2) photograph or film a prohibited sexual act; (3) knowingly transport a film or photograph depicting a prohibited sexual act; or (4) receive for sale or sell any such film or photograph, if such individual knows or should know such film or photograph has or may be transported in such a manner as to affect interstate or foreign commerce.

H.R. 7895. June 20, 1977. Judiciary. Prohibits the sexual exploitation of children by making it unlawful for any individual to (1) cause or permit a child to be photographed or filmed engaged in a sexual act prohibited under this Act; (2) photograph or film a prohibited sexual act; (3) knowingly transport a film or photograph depicting a prohibited sexual act; or (4) receive for sale or sell any such film or photograph, if such individual knows or should know such film or photograph was or may be transported in such manner as to affect interstate or foreign commerce.

H.R. 7896. June 20, 1977. Ways and Means. Amends the Internal Revenue Code to provide that artistic compositions, copyrights, and the like shall not be included in the estate tax valuation of the creator's estate.

H.R. 7897. June 20, 1977. Interstate and Foreign Commerce. Amends the Public Health Service Act to regulate, through a comprehensive licensing and inspection scheme, activities related to recombinant DNA.

Requires the establishment of local biohazards committees to participate in the licensing of facilities conducting such activities, and to inspect and monitor such activities.

Establishes the Recombinant DNA Advisory Committee to advise the Secretary of Health, Education, and Welfare in promulgating regulations required by this Act.

H.R. 7898. June 20, 1977. Judiciary. Directs the Secretary of the Treasury to pay a specified sum to a certain individual in full settlement of such individual's claims against the United States.

H.R. 7899. June 20, 1977. Judiciary. Declares two individuals lawfully admitted to the United States for permanent residence, under the Immmigration and Nationality Act.

H.R. 7900. June 21, 1977. Interstate and Foreign Commerce. Amends the Flammable Fabrics Act to prohibit the manufacture for sale in commerce or the importation into the United States of articles of interior furnishing intended for use in any public facility unless such articles conform with requirements established by the Consumer Product Safety Commission.

Requires the Consumer Product Safety Commission to establish regulations requiring that such articles be made fire-resistant.

H.R. 7901. June 21, 1977. Banking, Finance and Urban Affairs. Amends specified Federal laws to promote energy conserving measures through: (1) Utility programs designed to cut heating and cooling costs; (2) Federal grants to low-income families for home weatherization; and (3) secondary financing and loan insurance by specified government agencies for the installation of energy conserving improvements.

H.R. 7902. June 21, 1977. Banking, Finance and Urban Affairs. States that an otherwise qualified director of a national bank may satisfy the requirement that he own capital stock, having a specified value, of the bank of which he is the director by owning stock (having that same value) of a bank holding company which controls the national bank of which he is the director.

H.R. 7903. June 21, 1977. Banking, Finance and Urban Affairs. Creates, in the Department of Housing and Urban Development, an Office of Indian and Alaska Native Affairs, through which the Secretary of HUD shall carry out functions relating to Indian and Alaska native housing and community development. Creates the Office of Assistant Secretary for Indian and Alaska Native Affairs. Directs the Assistant Secretary to submit certain reports to Congress, and conduct an annual conference on Indian and Alaska native housing.

H.R. 7904. June 21, 1977. Agriculture. Amends the Agricultural Act of 1949 to specify new formulas for prevented planting disaster payments and cotton farm disaster payments. Directs the Secretary of Agriculture to establish a national program acreage for each of the 1978 through 1981 crops of upland cotton. Requires the Secretary to determine a program allocation factor for each cotton farm and states the formula for the determination of the individual farm program acreage for each crop of upland cotton. Extends specified provisions of such act and the Agricultural Adjustment Act of 1939 through the 1981 crops.

H.R. 7905. June 21, 1977. Education and Labor. Amends the Rehabilitation Act of 1973 to set the authorization for appropriations for State grants for vocational rehabilitation services at the previous year's authorization adjusted by fluctuations in the Consumer Price Index.

Extends through fiscal year 1983 the authorization for appropriations for the following purposes: (1) innovation and expansion grants, (2) vocational rehabilitation personnel training, (3) construction and staffing of rehabilitation facilities, (4) the study of comprehensive service needs, (5) vocational rehabilitation services grants, (6) special projects and demonstrations, (7) the National Center for Deaf-Blind Youths and Adults, (8) program evaluations, and (9) the Architectural and Transportation Barriers Compliance Board.

H.R. 7906. June 21, 1977. Interstate and Foreign Commerce. Amends the Railroad Retirement Act of 1974 to eliminate deductions from supplemental annuities payable under such Act on account of private pensions.

H.R. 7907. June 21, 1977. Ways and Means. Interstate and Foreign Commerce. Requires every employer to offer qualified health care insurance to his employees and their families. Establishes a program of Federal participation to provide qualified health care insurance to low-income, nonemployed and self-employed individuals and their families. Requires the Secretary of Health, Education, and Welfare to pay the full premium for continuation of qualified health care insurance for individuals receiving State or Federal unemployment benefits.

H.R. 7908. June 21, 1977. Ways and Means. Amends the Internal Revenue Code to allow individuals alternative, limited income tax credits or deductions for the tuition paid for the primary, secondary or higher education of the taxpayer, his spouse and dependents.

H.R. 7909. June 21, 1977. Interior and Insular Affairs. Increases the authorization of appropriations for the acquisition of lands within the Sawtooth National Recreation Area, Idaho.

H.R. 7910. June 21, 1977. Interstate and Foreign Commerce. Directs the Institute of Medicine of the National Academy of Sciences to conduct a review of toxic and carcinogenic substances and to report its findings and advisory recommendations to the Congress and the Secretary of Health, Education, and Welfare within one year.

Authorizes the continued use of saccharin for 18 months. Prohibits the Secretary from taking any action under the Federal Food, Drug, and Cosmetic Act to prohibit or restrict the sale or distribution of saccharin.

H.R. 7911. June 21, 1977. Ways and Means. Amends the Internal Revenue Code to exclude from the income tax, pensions paid to retired policemen and firefighters, or to their dependents, widows or other survivors to the extent that such benefits are based on full-time service for a governmental entity.

H.R. 7912. June 21, 1977. Interstate and Foreign Commerce. Prohibits the use of Federal funds to perform abortions except where the life of the mother would be endangered if the fetus were carried to term.

H.R. 7913. June 21, 1977. Judiciary. Amends the Mann Acts, which prohibit the transportation of females for immoral purposes, to extend coverage to prohibit transportation of any individual for immoral purposes and to increase the penalties specified in such Act.

H.R. 7914. June 21, 1977. Judiciary. Amends the Mann Acts, which prohibit the transportation of females for immoral purposes, to extend coverage to prohibit transportation of any individual for immoral purposes and to increase the penalties specified in such Act.

H.R. 7915. June 21, 1977. Interstate and Foreign Commerce; Judiciary. Establishes within each Federal agency an independent Office of Consumer Counsel to represent the interests of consumers within and before the agency of which it is a part. Requires the Consumer Counsels to encourage consumer research and distribute consumer information.

Establishes the office of Assistant Attorney General for Consumer Protection and Advocacy within the Department of Justice to coordinate the various Offices of Consumer Counsel and to represent the interests of consumers in the courts.

H.R. 7916. June 21, 1977. Judiciary. Provides for appointment of a special prosecutor relative to alleged violations of criminal law involving abuse of office, fraud against the United States, obstruction of justice, or campaign finance by any of specified Federal officials or campaign managers.

Directs the Attorney General to promulgate regulations requiring employees of the Department of Justice to disqualify themselves from investigations or prosecutions which may result in a conflict of interest or the appearance thereof.

H.R. 7917. June 21, 1977. Armed Services.

Entitles individuals in the armed forces who are entitled to retired or retainer pay and who did not elect to participate in the survivor benefit plan to do so within 270 days after the effective date of this Act.

H.R. 7918. June 21, 1977. Ways and Means; Banking, Finance and Urban Affairs. Amends the Federal Financing Bank Act of 1973 to require that receipts and disbursements of the Federal Financing Bank be included in the Federal Budget.

Directs such Bank to make commitments to purchase, and to purchase specified obligations which are guaranteed by Federal agencies.

H.R. 7919. June 21, 1977. Judiciary. Makes it a Federal offense for a Member of Congress or certain officers of the executive branch of the United States Government to seek or accept any compensation for any services rendered or to be rendered by himself or another in relation to a lobbying communication at a time while he is in office and for a period of 2 years after he leaves office.

H.R. 7920. June 21, 1977. Interstate and Foreign Commerce. Reaffirms the intent of Congress, with respect to the structure of the common carrier telecommunications industry rendering services in interstate and foreign commerce. Grants additional authority to the Federal Communications Commission to authorize mergers of carriers when deemed to be in the public interest. Reaffirms the authority of the States to regulate terminal and station equipment used for telephone exchange service.

H.R. 7921. June 21, 1977. Post Office and Civil Service. Prohibits the Postal Service from decreasing the frequency of mail delivery service below the frequency in effect for the calendar week beginning May 1, 1977.

H.R. 7922. June 21, 1977. Post Office and Civil Service. Provides for congressional oversight of all rate, fee, and mail classification decisions made by the Postal Rate Commission. Sets maximum size and weight limits for all parcel mail. Abolishes the Board of Governors of the Postal Service and transfers its functions to the Postmaster General.

H.R. 7923. June 21, 1977. Veterans' Affairs. Provides to veterans with a total service-connected disability the right to travel on a space-available basis on unscheduled military flights within the continental United States and on scheduled overseas flights operated by the Military Airlift Command.

H.R. 7924. June 21, 1977. Education and Labor. Amends the National Labor Relations Act to provide that the duty to bargain collectively includes bargaining with respect to retirement benefits for retired employees.

H.R. 7925. June 21, 1977. Judiciary. Amends the Clayton Act to prohibit specified concentrations of control in the energy-producing industries.

H.R. 7926. June 21, 1977. Interstate and Foreign Commerce. Repeals the prohibition in the Federal Communications Act of 1934 against the coercion of specified practices affecting broadcasting or enforcement of broadcasting contracts.

H.R. 7927. June 21, 1977. Education and Labor; Interstate and Foreign Commerce; Judiciary. Authorizes the Secretary of Health, Education, and Welfare, acting through the Director of the National Institute of Mental Health, to: (1) establish a grant program to support projects which develop methods for the identification, prevention, and treatment of domestic violence; and (2) review existing State laws, practices, and policies relating to domestic violence.

H.R. 7928. June 21, 1977. Merchant Marine and Fisheries. Authorizes the Secretary of Commerce to sell two obsolete vessels to a certain corporation.

H.R. 7929. June 21, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 7930. June 21, 1977. Judiciary. Directs the Secretary of the Treasury to pay a specified sum to a certain association in full settlement of such association's claims against the United States.

H.R. 7931. June 21, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 7932. June 21, 1977. Appropriations. Appropriates funds for the Legislative Branch for fiscal year 1978. Makes supplemental appropriations for congressional operations for fiscal year 1977.

H.R. 7933. June 21, 1977. Makes appropriations to the Department of Defense for expenses, procurement, research and development, the special foreign currency program, and the working capital funds of the military departments and Defense Agencies for fiscal year 1978.

H.R. 7934. June 22, 1977. Interstate and Foreign Commerce. Amends the Clean Air Act to authorize the Administrator of the Environmental Protection Agency to approve revisions in State implementation plans which would suspend or eliminate provisions which curtail motor vehicle parking in urban areas.

H.R. 7935. June 22, 1977. Education and Labor. Amends the Labor Management Relations Act of 1947 to require an employer and the representative of such employer's employees, upon entering into any collective-bargaining agreement, to prepare and issue an estimate of the effect of the agreement on the cost of any product or service provided by the employer.

H.R. 7936. June 22, 1977. Ways and Means. Amends the Internal Revenue Code to allow individuals limited, alternative income tax deductions and credits for expenses incurred for the primary, secondary and higher education of themselves and their spouses and dependents.

H.R. 7937. June 22, 1977. Interstate and Foreign Commerce; Ways and Means. Creates a national system of health insurance. Establishes a Health Security Board in the Department of Health, Education, and Welfare to administer such health insurance program.

Repeals the Medicare provisions of the Social Security Act and all health benefit plans for employees of the Federal Government.

H.R. 7938. June 22, 1977. Post Office and Civil Service. Makes January 15, the anniversary of Martin Luther King Junior's birth, a legal public holiday.

H.R. 7939. June 22, 1977. Judiciary. Amends the Immigration and Nationality Act to exclude from the definition of the term "immigrant" those persons entering the United States for a period of not more than one year to perform temporary services or labor if the Secretary of Labor has determined and certified to the Attorney General that there are not sufficient workers available at the aliens' destination who are willing and able to perform such services.

H.R. 7940. June 22, 1977. Agriculture. Repeals the Food Stamp Act of 1964 and replaces the existing program with a new program substantially similar, but, among other things: (1) eliminates charges for coupon allotments; (2) requires national income standards of eligibility to be income guidelines for nonfarm United States prescribed by the Office of Management and Budget; (3) directs that food stamp applications be included on application forms for other public assistance programs; and (4) directs the Secretary of Agriculture to make contracts or grants for research that will help improve the administration and effectiveness of the food stamp program.

H.R. 7941. June 22. 1977. Education and Labor. Increases the dollar amount of contracts to which the Davis-Bacon Act applies and provides for future increases tied to cost-of-living increases. Makes such Act applicable only to unskilled laborers. Details the method for computing the "prevailing wage" under the Act. Establishes a Federal Construction Appeals Board to hear appeals regarding wage rate determinations under the Act.

H.R. 7942. June 22, 1977. Veterans' Affairs. Denies veterans' benefits to an individual whose discharge from military service during the Vietnam era under less than honorable conditions is administratively upgraded, under temporarily revised standards, to discharge under honorable conditions; but only when such veteran's claim for benefits is based solely on such upgraded discharge.

H.R. 7943. June 22, 1977. Post Office and Civil Service. Prohibits the Postal Service from decreasing the frequency of mail delivery service below the frequency in effect for the calendar week beginning May 1, 1977.

H.R. 7944. June 22, 1977. Ways and Means. Amends the Internal Revenue Code to treat as a scholarship and to exclude from gross income any amount received by a member of a uniformed service under the Armed Forces health professions scholarship program.

H.R. 7945. June 22, 1977. Post Office and Civil Service. Repeals the requirement that Federal employees be mandatorily retired upon reaching the age of 70 years.

H.R. 7946. June 22, 1977. Judiciary. Amends the Indochina Migration and Refugee Assistance Act of 1975 to extend through 1980 funds for the provision of financial, medical, employment, and relocation assistance to refugees from Cambodia, Vietnam, or Laos.

H.R. 7947. June 22, 1977. Interior and Insular Affairs. Permits the State of Hawaii to use the revenue or proceeds from the disposition of specified lands at Land Island, Hawaii, for any public purpose.

H.R. 7948. June 22, 1977. Merchant Marine and Fisheries. Amends the Merchant Marine Act, 1920, to authorize the Secretary of Commerce to make grants in order to establish a system of public seaports adequate to meet the needs of domestic offshore communities.

H.R. 7949. June 22, 1977. Public Works and Transportation. Amends the Federal Water Pollution Control Act to authorize the Administrator of the Environmental Protection Agency to exempt publicly owned treatment works discharging into open ocean waters from certain effluent standards.

H.R. 7950. June 22, 1977. Interstate and Foreign Commerce. Amends the Clean Air Act to authorize States to unilaterally revise clean air implementation plans to suspend or eliminate provisions which curtail motor vehicle parking in urban areas during times of economic hardship.

H.R. 7951. June 22, 1977. Interstate and Foreign Commerce. Amends the Clean Air Act to authorize States to unilaterally revise clean air implementation plans to suspend or eliminate provisions which curtail motor vehicle parking in urban areas.

H.R. 7952. June 22, 1977. Education and Labor. Amends the General Education Provisions Act to extend its provisions requiring due process before termination of Federal assistance to local educational agencies to include terminations of aid to State agencies, institutions of higher learning, community colleges, schools, agencies offering a preschool program, or other educational institutions.

Enlarges such due process requirements to include terminations of Federal assistance programs for any reason whatsoever.

Changes existing due process requirements under such Act to a requirement of a finding of noncompliance with a specific Federal law after an administrative hearing.

H.R. 7953. June 22, 1977. Small Business. Directs the head of each Federal agency to prepare a small business impact statement in connection with each rule made by such agency, unless the agency head, with the approval of the Office of Advocacy of the Small Business Administration, determines that such rule will not have a substantial effect on a significant number of small businesses.

H.R. 7954. June 22, 1977. Government Operations. Requires each Federal agency to take steps which will improve the uniformity, speed, and comprehensiveness of such agency's response to citizen complaints and inquiries.

H.R. 7955. June 22, 1977. Judiciary; Rules. Requires all rules proposed by any Federal agency, except emergency rules, to be submitted to Congress before becoming effective. Permits such rules to become effective 60 days after submission to Congress if not disapproved by either House within such period.

Exempts from publication requirements notice of rule making proceedings for agency rules dealing with emergency or routine matters or ones which have an insignificant impact. Sets other maximum and minimum time limits during which public comment is to be accepted regarding proposed agency rules.

H.R. 7956. June 22, 1977. Judiciary. Amends the Golden Nematode Act to extend the authority of the Secretary of Agriculture to destroy tomatoes and potatoes infested with the golden nematode and to compensate the owners thereof to all commercial crops including turf and nursery stock.

H.R. 7957. June 22, 1977. Ways and Means. Amends Title II (Old-Age, Survivors', and Disability Insurance) of the Social Security Act to allow a State to terminate social security coverage for policemen and firemen without affecting the coverage of other public employees.

H.R. 7958. June 22, 1977. Post Office and Civil Service. Revises provisions prohibiting Postal Service employees from engaging in political activities.

Directs the Civil Service Commission to conduct a continuing program to inform all employees of their rights of political participation under the Act and to educate employees with respect to those activities which are prohibited.

Directs the Commission to investigate violations of this Act.

Creates a specific criminal offense for extorting political contributions from Federal personnel.

H.R. 7959. June 22, 1977. Ways and Means. Amends the Internal Revenue Code to lower the corporate normal taxes and increase the surtax exemption.

H.R. 7960. June 22, 1977. Interstate and Foreign Commerce. Reaffirms the intent of Congress with respect to the structure of the common carrier telecommunications industry rendering services in interstate and foreign commerce. Grants additional authority to the Federal Communications Commission to authorize mergers of carriers when deemed to be in the public interest. Reaffirms the authority of the States to regulate terminal and station equipment used for telephone exchange service.

H.R. 7961. June 22, 1977. Interstate and Foreign Commerce. Amends the Motor Vehicle Information and Cost Savings Act to establish mandatory minimum motor vehicles fuel economy standards for passenger automobiles manufactured in model years 1982, 1983, 1984, and 1985.

H.R. 7962. June 22, 1977. Post Office and Civil Service. Provides for congressional oversight of all rate, fee, and mail classification decisions made by the Postal Rate Commission. Sets maximum size and weight limits for all parcel mail. Abolishes the Board of Governors of the Postal Service and transfers its functions to the Postmaster General.

H.R. 7963. June 22, 1977. Ways and Means. Provides that the income tax treatment of certain transportation expenses between the taxpayer's residence and place of work shall be determined without regard to Revenue Ruling 76–453 or any other ruling, regulation or decision reaching the same result.

H.R. 7964. June 22, 1977. Public Works and Transportation. Authorizes the Secretary of Transportation to make grants to States and municipalities for the construction of bikeway projects.

H.R. 7965. June 22, 1977. Interior and Insular Affairs. Increases the authorization of appropriations ceiling for development of Perry's Victory and International Peace Memorial, Ohio.

H.R. 7966. June 22, 1977. House Administration. Revises recordkeeping and reporting requirements under the Federal Election Campaign Act.

Restricts persons who may make contributions to a candidate for Federal office to individuals residing within an electoral district in which the candidate seeks election and party committees.

Permits a taxpayer to designate that one dollar of his taxes to be used for public financing of congressional elections.

Entitles candidates for nomination for election or for election to Congress who agree to certain reporting requirements and certify receipt of certain contribution minimums to matching payments for campaign expenses.

Establishes a Congressional Elections Campaign Fund.

H.R. 7967. June 22, 1977. Interior and Insular Affairs. Exempts the Rio Grande project, in the States of New Mexico and Texas, from the acreage limitation provisions of Federal reclamation laws which limit the acreage of irrigable land which may receive irrigation benefits from, through or by means of Federal reclamation works.

H.R. 7968. June 22, 1977. Agriculture. Amends the Federal Crop Insurance Act to increase the capital stock of the Federal Crop Insurance Corporation and to make insurance available to producers of rice, wheat, cotton and certain feed grains wherever they are grown commercially. Provides for a 25 percent Federal subsidy of premiums and removes the ceiling on appropriations. Creates a revolving fund for the Corporation in the United States Treasury and gives the Corporation discretionary borrowing authority.

H.R. 7969. June 22, 1977. Government Operations. Amends the State and Local Fiscal Assistance Act to provide that user fees and service charges collected by States and local governments for public services be counted as taxes for purposes of allocating funds under such Act.

H.R. 7970. June 22, 1977. Interior and Insular Affairs. Designates specified lands within the National Forest System in the State of Virginia as wilderness.

H.R. 7971. June 22, 1977. Interior and Insular Affairs. Validates specified conveyances of specified land in the State of California by a certain corporation, as far as any interest of the United States in such land is concerned.

H.R. 7972. June 23, 1977. International Relations; Interior and Insular Affairs. Requires that all timber harvested from lands owned by the United States and located West of the one hundredth meridian be processed in the United States.

Prohibits the exportation, purchase for exportation, and sale of all unprocessed timber from public lands.

H.R. 7973. June 23, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) and Title XIX (Medicaid) of the Social Security Act to include in the coverage provided under such programs the services of licensed (registered) nurses.

H.R. 7974. June 23, 1977. District of Columbia. Amends the District of Columbia Code to allow persons in custody under sentence of the Superior Court of the District of Columbia to apply for writs of habeas corpus in Federal courts on the same basis as persons in custody pursuant to the judgment of a State court.

H.R. 7975. June 23, 1977. Education and Labor. Amends the National Labor Relations Act to confer on the district courts of the United States, the District Court of the Virgin Islands, and the United States District Court for the District of the Canal Zone, exclusive jurisdiction to prevent any person from engaging in any unfair labor practice.

H.R. 7976. June 23, 1977. Education and Labor. Amends the National Labor Relations Act to provide that all employees covered by such Act who are members of a bona fide religion which has historically held conscientious objections to joining or financially supporting labor organizations shall not be required to join or so support any such organization as a condition of employment.

H.R. 7977. June 23, 1977. Interstate and Foreign Commerce. Prohibits the use of Federal funds to pay for, promote, or encourage abortions which are not necessary to save the life of the mother.

H.R. 7978. June 23, 1977. Ways and Means. Amends Title XVI (Supplemental Security Income for the Aged, Blind, and Disabled) of the Social Security Act to make benefits under such Title payable to a resident alien only if such alien has continuously resided in the United States for at least six years.

Directs the Secretary of Health, Education, and Welfare to establish procedures to prevent payment of benefits to individuals who become ineligible due to their departure from the United States.

H.R. 7979. June 23, 1977. Education and Labor. Amends the Federal Metal and Nonmetallic Mine Safety Act to authorize additional standards to protect the health and safety of miners. Includes provisions to authorize inspections by Federal officials, to require reporting of major accidents, and to establish procedures for enforcement of standards and emergency relief.

Establishes the Office of Assistant Secretary for Mine Safety and Health in the Department of Labor. Transfers regulatory and enforcement authority from the Secretary of the Interior to the Secretary of Labor, to the Secretary of Health, Education, and Welfare, and to the newly established Federal Metal and Nonmetallic Mine Safety and Health Commission.

H.R. 7980. June 23, 1977. Ways and Means. Amends the Internal Revenue Code to exclude from taxable unrelated income, income derived by tax exempt colleges, universities and their wholly owned corporations from the broadcasting of sporting events.

H.R. 7981. June 23, 1977. Interior and Insular Affairs. Amends the Wild and Scenic Rivers Act to designate a specified segment of the Delaware River as a component of the National Wild and Scenic Rivers System.

H.R. 7982. June 23, 1977. Education and Labor. Amends the Rehabilitation Act of 1973 to authorize the Secretary of Health, Education, and Welfare to conduct demonstration projects, either directly or by way of arrangement with public or private agencies, for the payment of wage supplements to handicapped individuals who are employed in sheltered workshops or work activity centers which meet certain standards, including any promulgated under this Act by the Secretary jointly with the Secretary of Labor.

H.R. 7983. June 23, 1977. International Relations. Requires that the Hungarian Crown of Saint Stephen and other relics of Hungarian royalty be kept in the United States, unless Congress specifically provides otherwise.

H.R. 7984. June 23, 1977. Education and Labor. Amends the Emergency School Aid Act to extend (1) appropriations for programs under such Act; and (2) the existence of the National Advisory Council on Equality of Educational Opportunity.

H.R. 7985. June 23, 1977. Judiciary. Requires specified organizations which employ lobbyists to register and file quarterly expense reports with the Comptroller General. Makes such reports available to the public. Establishes civil and criminal sanctions to enforce this Act.

H.R. 7986. June 23, 1977. Judiciary. Sets forth penalties for killing, maiming, or committing specified other acts against members of a national, ethnic, racial, or religious group with the intent to destroy such group.

Expresses the sense of Congress with respect to extradition of persons charged with such an act.

H.R. 7987. June 23, 1977. Post Office and Civil Service. Requires appointments to the position of postmaster at post offices serving a delivery area with a resident population of 5,000 or less to be made from a list of qualified applicants who have resided in the area for at least one year unless no such individual has applied for the position.

H.R. 7988. June 23, 1977. Public Works and Transportation. Amends the Public Buildings Act of 1959 ot require that one percent of any funds appropriated for the construction of specified public buildings be used for artwork for such buildings.

H.R. 7989. June 23, 1977. Education and Labor. Amends the National Labor Relations Act to provide that the duty to bargain collectively includes bargaining with respect to retirement benefits for retired employees.

H.R. 7990. June 23, 1977. Amends the Clean Air Act to authorize States to unilaterally revise clean air implementation plans to suspend or eliminate provisions which curtail motor vehicle parking in urban areas.

H.R. 7991. June 23, 1977. Interstate and Foreign Commerce. Amends the Clean Air Act to authorize States to unilaterally revise clean air implementation plans to suspend or eliminate provisions which curtail motor vehicle parking in urban areas during times of economic hardship.

H.R. 7992. June 23, 1977. Interior and Insular Affairs. Amends the National Trails System Act to authorize the Secretary of the Interior, the Secretary of Agriculture, and the Secretary of Transportation to conduct studies for the purpose of determining the feasibility and desirability of establishing specified bicycle trails.

H.R. 7993. June 23, 1977. Ways and Means. Amends the Internal Revenue Code to treat as a scholarship and to exclude from gross income any amounts received by an individual under the Armed Forces health professions scholarship program or the National Health Service Corps scholarship program, without regard to whether such individual is receiving training while on active duty or in an off-duty or inactive status, and without regard to whether a period of active duty or other service is required of such individual as a condition of receiving such payments.

H.R. 7994. June 23, 1977. Interstate and Foreign Commerce. Reaffirms the intent of Congress with respect to the structure of the common carrier telecommunications industry rendering services in interstate and foreign commerce. Requires the Federal Communications Commission to make specified findings in connection with Commission actions authorizing specialized carriers.

H.R. 7995. June 23, 1977. Banking, Finance and Urban Affairs. Declares a national policy on investment in the private sector of the United States economy.

Requires the Council on Wage and Price Stability to deliver to Congress an annual Investment Policy Report which shall include information on levels of capital investment available, trends in such levels, and reviews of economic programs affecting capital investment. Requires the President to submit other recommendations for implementation of the national policy declared in this Act.

H.R. 7996. June 23, 1977. Banking, Finance and Urban Affairs. Declares a national policy on investment in the private sector of the United States economy.

Requires the Council on Wage and Price Stability to deliver to Congress an annual Investment Policy Report which shall include information on levels of capital investment available, trends in such levels, and reviews of economic programs affecting capital investment. Requires the President to submit other recommendations for implementation of the national policy declared in this Act.

H.R. 7997. June 23, 1977. Banking, Finance and Urban Affairs. Declares a national policy on investment in the private sector of the United States economy.

Requires the Council on Wage and Price Stability to deliver to Congress an annual Investment Policy Report which shall include information on levels of capital investment available, trends in such levels, and reviews of economic programs affecting capital investment. Requires the President to submit other recommendations for implementation of the national policy declared in this Act.

H.R. 7998. June 23, 1977. Banking, Finance and Urban Affairs. Declares a national policy on investment in the private sector of the United States economy.

Requires the Council on Wage and Price Stability to deliver to Congress an annual Investment Policy Report which shall include information on levels of capital investment available, trends in such levels, and reviews of economic programs affecting capital investment. Requires the President to submit other recommendations for implementation of the national policy declared in this Act.

H.R. 7999. June 23, 1977. Public Works and Transportation. Amends the Federal Water Pollution Control Act to exclude wastewaters resulting from commercial processing of seafoods from the definition of "pollutant" under such Act.

H.R. 8000. June 23, 1977. Judiciary. Directs the Secretary of the Treasury to pay a specified sum to a certain individual in full settlement of such individual's claims against the United States.

H.R. 8001. June 23, 1977. Judiciary. Declares that in the event of any reorganization, merger, or consolidation of a certain corporation the surviving or successor entity is entitled to continue to use the word "Federal" in its new name.

H.R. 8002. June 23, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 8003. June 23, 1977. Judiciary. Declares two individuals lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 8004. June 23, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 8005. June 23, 1977. Judiciary. Declares that in the event of any reorganization, merger, or consolidation of a certain corporation the surviving or successor entity is entitled to continue to use the word "Federal" in its new name.

H.R. 8006. June 24, 1977. Ways and Means. Amends Title II (Old Age, Survivors, and Disability Insurance) of the Social Security Act to raise to seven percent for each year of delayed retirement the amount by which an individual's old-age insurance benefits are to be increased on account of delayed retirement.

H.R. 8007. June 24, 1977. Ways and Means. Amends the Railroad Retirement Act and Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to exempt individuals suffering from multiple sclerosis from the requirement that an individual be entitled to disability benefits for at least 24 consecutive months in order to qualify for hospital insurance benefits under the Medicare program.

H.R. 8008. June 24, 1977. Veterans' Affairs. Declares that service during World War I by any female citizen of the United States as a member of a telephone operating unit of the Army Signal Corps shall be considered active duty in the Army for purposes of all laws administered by the Veterans' Administration.

H.R. 8009. June 24, 1977. Education and Labor. Prohibits the sexual exploitation of children by making it unlawful for any individual to (1) cause or permit a child to be photographed or filmed engaged in a sexual act prohibited under this Act; (2) photograph or film a prohibited sexual act; (3) knowingly transport a film or photograph depicting a prohibited sexual act; or (4) receive for sale or sell any such film or photograph, if such individual knows or should know such film or photograph has or may be transported in such a manner as to affect interstate or foreign commerce.

H.R. 8010. June 24, 1977. Public Works and Transportation. Amends the Federal Water Pollution Control Act to stipulate that specified regulations of the Secretary of the Army, acting through the Corps of Engineers, with respect to discharges for dredged or fill material, shall remain in effect for the period ending on the day following final adjournment of the 95th Congress.

H.R. 8011. June 24, 1977. Armed Services. Extends the special pay provisions for physicians and dentists in the uniformed services. Authorizes special pay for officers of the Army, Navy, or Air Force who are designated as optometry officers, optometry officers of the Public Health Service, Army or Air Force officers appointed as veterinary officers, and veterinary officers of the Public Health Service.

H.R. 8012. June 24, 1977. Interstate and Foreign Commerce. Directs the Institute of Medicine of the National Academy of Sciences to conduct a review of toxic and carcinogenic substances and to report its findings and advisory recommendations to the Congress and the Secretary of Health, Education, and Welfare within one year.

Directs the Secretary to require products containing saccharin to meet certain labeling and advertising requirements.

Authorizes the continued use of saccharin for two years.

Provides for an earlier expiration date for such use if a saccharin substitute is developed.

H.R. 8013. June 24, 1977. Ways and Means. Amends the Tariff Schedules of the United States to repeal the duty imposed on articles assembled abroad with components produced in the United States.

H.R. 8014. June 24, 1977. Armed Services. Directs the Secretary of Defense to establish a program to make grants to units of local government whose economy is adversely affected by the closure or major realignment of a military base.

H.R. 8015. June 24, 1977. Ways and Means. Amends the Internal Revenue Code to increase the limitation on the excise tax credit for State gaming taxes on coin-operated devices from 80 to 95 percent.

H.R. 8016. June 24, 1977. Post Office and Civil Service. Entitles the former spouse of a Federal employee or Member of Congress to a portion of that employee's or Member's annuity, and to a portion of the annuity of any surviving spouse of such employee or Member.

H.R. 8017. June 24, 1977. Interstate and Foreign Commerce. Amends the Railroad Safety Act of 1970 to direct the Secretary of Transportation to issue regulations requiring that the locomotives of all trains be equipped with strobe lights for safety purposes.

H.R. 8018. June 24, 1977. Education and Labor. Amends the National Labor Relations Act to include supervisors in the definition of an "employee" covered by such Act.

H.R. 8019. June 24, 1977. Education and Labor. Amends the National Labor Relations Act to authorize an employer to make contributions to a pooled or individual trust fund established by an employee representative for the purpose of providing or defraying the costs of motor vehicle, homeowners multiple peril, fire, or other insurance benefits for employees, their families and dependents.

H.R. 8020. June 24, 1977. Agriculture. Amends the Forest and Rangeland Renewable Resources Planning Act of 1974 to consolidate specified existing programs of cooperative forest resources assistance under such Act.

H.R. 8021. June 24, 1977. Agriculture. Repeals the McSweeney-McNary Act of 1928 and amends the Forest and Rangeland Renewable Resources Planning Act of 1974 to substitute for the existing reforestation and forest products research program a new program of investigations, experiments, tests, and other activities necessary to obtain, analyze, demonstrate, and disseminate scientific information about protecting, managing, and utilizing forest and rangeland renewable resources in rural, suburban, and urban areas.

H.R. 8022. June 24, 1977. Agriculture. Authorizes the Secretary of Agriculture, in cooperation with State extension directors, to conduct educational programs for professionals in forestry and related fields disseminating the results of forestry research.

H.R. 8023. June 24, 1977. Ways and Means. Amends the Internal Revenue Code to qualify trusts established for the payment of product liability claims as tax exempt organizations. Allows taxpayers a business income tax deduction for contributions to such trusts only to the extent they exceed the reasonable costs of product liability insurance for the deducting taxpayer.

H.R. 8024. June 24, 1977. Ways and Means. Amends the Internal Revenue Code to qualify trusts established for the payment of product liability claims as tax exempt organizations. Allows taxpayers a business income tax deduction for contributions to such trusts only to the extent they exceed the reasonable costs of product liability insurance for the deducting taxpayer.

H.R. 8025. June 24, 1977. Science and Technology; Ways and Means. Authorizes the Secretary of the Treasury to issue United States energy research and development savings bonds. Establishes the Energy Research and Development Trust Fund in the United States Treasury.

H.R. 8026. June 24, 1977. Post Office and Civil Service. Sets the postage rate for a postal card mailed to the official address of a Member of Congress by a constituent of such Member at an amount equal to the cost of the manufacture, printing, and delivery of such card.

H.R. 8027. June 27, 1977. Banking, Finance and Urban Affairs. Amends the Department of Housing and Urban Development Act to create, in the Department of Housing and Urban Development, an Office of Indian and Alaska Native Programs, through which the Secretary of Housing and Urban Development shall administer all departmental programs relating to Indian and Alaska Native housing and community affairs.

H.R. 8028. June 27, 1977. Interstate and Foreign Commerce, Amends Title XIX (Medicaid) of the Social Security Act to qualify an individual who, although employable, is unable to care for his or her personal needs without assistance as a disabled person eligible for the services of a home health aide.

H.R. 8029. June 27, 1977. Ways and Means. Amends the Internal Revenue Code: (1) to allow the election of a deduction with respect to the amortization, based on a 60-month period, of any qualified facility producing alcohol from coal, wood, waste, or agricultural products for primary use as a motor fuel; (2) to exempt from specified excise taxes the sale of any gasoline or fuel at least ten percent of which is alcohol; and (3) to allow the tax-free withdrawal from bonded premises of distilled spirits to the extent such spirits are alcohol produced by a qualified alcohol-producing facility for primary use as motor fuel.

H.R. 8030. June 27, 1977. Judiciary. Provides that any person, in the special maritime and territorial jurisdiction of the United States, having custody of a child who abuses or neglects that child shall be sentenced to appropriate counseling in the case of nonsexual abuse and to prison in the case of sexual abuse. Imposes on any individual who has knowledge of a violation of this Act a duty to report such violation. Amends the Omnibus Crime Control and Safe Streets Act of 1968 to condition certain grants thereunder on the adoption by the State of criminal penalties substantially the same as provided in this Act.

H.R. 8031. June 27, 1977. Veterans' Affairs. Allows to certain persons, but denies to others, entitlement to veterans' benefits due to an administrative upgrading of a less than honorable discharge.

H.R. 8032. June 27, 1977. Ways and Means. Amends the Tariff Schedules of the United States to repeal the duty imposed on articles assembled abroad with components produced in the United States.

H.R. 8033. June 27, 1977. Ways and Means. Amends the Internal Revenue Code to allow a taxpayer to treat as a deductible expense not chargeable to capital account any amount paid or incurred by him which otherwise would be taken into account in the amortizable basis of any certified pollution control facility.

H.R. 8034. June 27, 1977. Education and Labor; Judiciary. Amends the Walsh-Healey Act to permit government contractors to have their employees work ten-hour workdays if the employees choose such workday and the resulting workweek does not exceed 40 hours.

H.R. 8035. June 27, 1977. Interstate and Foreign Commerce. Requires franchisors to give franchisees 90-days notice, with limited exceptions, of intent to cancel, or failure to renew, a franchise agreement. Allows such cancellation or failure to renew only for certain specified reasons. Requires a franchisor to compensate a franchisee for the value of the franchisee's business when the franchisor, for a legitimate business reason, fails to renew the franchise. Sets forth the judicial remedies available to a franchisee for a violation of this Act by the franchisor.

H.R. 8036. June 27, 1977. Small Business. Amends the Small Business Investment Act to change the title of the Associate Administrator for Finance and Investment of the Small Business Administration to that of Associate Administrator for Investment. Changes the duties of such office.

H.R. 8037. June 27, 1977. Interstate and Foreign Commerce. Amends the Natural Gas Act to direct the Federal Power Commission to establish national ceiling prices to allow natural gas companies to receive profits at specified levels. Authorizes higher ceilings in cases of high-cost production and high-cost independent producers.

Directs the Commission to prohibit the curtailment of natural gas supplies for essential agricultural purposes. Directs the Commission to establish procedures for allocation of increased costs among user classes.

Imposes additional requirements for exploration and development of Federal oil and gas leases.

H.R. 8038. June 27, 1977. Veterans' Affairs. Makes veterans with less than honorable discharges from periods of war prior to the Vietnam era eligible for review of their discharges under criteria similar to revised standards for veterans of the Vietnam era. Allows certain persons, but denies to others, entitlement to veterans' benefits due to an administrative upgrading of a less than honorable discharge.

H.R. 8039. June 27, 1977. Interstate and Foreign Commerce. Directs the Institute of Medicine of the National Academy of Sciences to conduct a review of toxic and carcinogenic substances and to report its findings and advisory recommendations to the Congress and the Secretary of Health, Education, and Welfare within one year.

Directs the Secretary to require products containing saccharin to meet certain labeling and advertising requirements.

Authorizes the continued use of saccharin for two years.

Provides for an earlier expiration date for such use if a saccharin substitute is developed.

H.R. 8040. June 27, 1977. Education and Labor. Amends the Elementary and Secondary Education Act of 1965, the Adult Education Act, the National Defense Education Act of 1958, and the General Education Provisions Act to extend certain educational programs.

H.R. 8041. June 27, 1977. Public Works and Transportation. Establishes an emergency federally funded bridge replacement program for bridges located on rural non-federal aid system public roads. Specifies the method by which the Secretary of Transportation shall apportion funds to the States for such program.

H.R. 8042. June 27, 1977. Ways and Means. Amends the Internal Revenue Code: (1) to allow the election of a deduction with respect to the amortization, based on a 60-month period, of any qualified facility producing alcohol from coal, wood, waste, or agricultural products for primary use as a motor fuel; and (2) to allow the tax-free withdrawal from bonded premises of distilled spirits to the extent such spirits are alcohol produced by a qualified alcohol-producing facility for primary use as motor fuel.

H.R. 8043. June 27, 1977. Interstate and Foreign Commerce. Directs the Institute of Medicine of the National Academy of Sciences to conduct a review of toxic and carcinogenic substances and to report its findings and advisory recommendations to the Congress and the Secretary of Health, Education, and Welfare within one year.

Authorizes the continued use of saccharin for 18 months. Prohibits the Secretary from taking any action under the Federal Food, Drug, and Cosmetic Act to prohibit or restrict the sale or distribution of saccharin.

H.R. 8044. June 27, 1977. Interstate and Foreign Commerce. Directs the Institute of Medicine of the National Academy of Sciences to conduct a review of toxic and carcinogenic substances and to report its findings and advisory recommendations to the Congress and the Secretary of Health, Education, and Welfare within one year.

Authorizes the continued use of saccharin for 18 months. Prohibits the Secretary from taking any action under the Federal Food, Drug, and Cosmetic Act to prohibit or restrict the sale or distribution of saccharin.

H.R. 8045. June 27, 1977. Interstate and Foreign Commerce. Directs the Institute of Medicine of the National Academy of Sciences to conduct a review of toxic and carcinogenic substances and to report its findings and advisory recommendations to the Congress and the Secretary of Health, Education, and Welfare within one year.

Authorizes the continued use of saccharin for 18 months. Prohibits the Secretary from taking any action under the Federal Food, Drug, and Cosmetic Act to prohibit or restrict the sale or distribution of saccharin.

H.R. 8046. June 27, 1977. Interstate and Foreign Commerce. Prohibits any person or State from accepting any interstate off-track horseracing wager.

H.R. 8047. June 27, 1977. Post Office and Civil Service. Entitles the former spouse of a Federal employee or Member of Congress to a portion of that employee's or Member's annuity, and to a portion of the annuity of any surviving spouse of such employee or Member.

H.R. 8048. June 27, 1977. Post Office and Civil Service. Prohibits the closing of any post office serving more than 30 households or the consolidation of any existing rural route without postal patron approval. Prohibits the reduction in mail delivery service in any rural area or town of less than 100,000 inhabitants. Permits the reduction of mail delivery frequency in cities of over 100,000 inhabitants if such proposed reduction is submitted to the Postal Rate Commission.

Requires each post office to be headed by a postmaster and requires at least one post office to be established in each seat of county government.

H.R. 8049. June 27, 1977. Ways and Means; Interstate and Foreign Commerce. Amends title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to remove disparities in determining benefit basis between men and women. Revises specified prerequisites of eligibility for benefits. Allows the exemptions of individuals 65 years or older from social security taxes. Authorizes payments directly to providers of services under Medicare.

Amends the Internal Revenue Code of 1954 to provide income tax credit for real property taxes and a tax exclusion for interest on savings.

H.R. 8050. June 27, 1977. Judiciary. Directs that a certain individual be allowed credit and be paid additional retired pay for a specified period during which he engaged in activities with the Air Force Reserves.

H.R. 8051. June 27, 1977. Judiciary. Declares five individuals lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 8052. June 27, 1977. Judiciary. Confers jurisdiction on the United States Court of Claims to consider and render judgment on any claim filed by a certain individual within a certain time period, respecting the alleged wrongful death of her husband.

H.R. 8053. June 27, 1977. Judiciary. Directs the Secretary of the Treasury to pay a specified sum to a certain individual in full settlement of such individual's claims against the United States.

H.R. 8054. June 27, 1977. Judiciary. Authorizes classification of a certain individual as a child for purposes of the Immigration and Nationality Act.

H.R. 8055. June 28, 1977. Banking, Finance and Urban Affairs. Limits, to seven percent, the interest charge in connection with any credit or loan transaction entered into after December 31, 1980.

H.R. 8056. June 28, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to revise the eligibility requirements for disability insurance benefits for blind persons. Revises the method of computing the primary insurance amount for blind persons under such Act.

H.R. 8057. June 28, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act, the Internal Revenue Code of 1954, and the Railroad Retirement Act of 1974, to set forth procedures for the crediting of an individual's income to calendar years instead of the specific calendar quarters as is now required for the determination of eligibility and amount of benefits.

Sets forth a procedure for adjusting annually the amount of earnings which will qualify as a quarter of employment for eligibility determination purposes.

H.R. 8058. June 28, 1977. Post Office and Civil Service. Provides for the arbitration of disputes between the Postal Service and recognized organizations of Postal Service managerial personnel other than officers, postmasters, and employees engaged in personnel work in Postal Service headquarters. Identifies as subject to arbitration under this Act issue relating to pay policies, fringe benefits, and the determination of whether or not a matter is subject to participation by such organization. Establishes an arbitration board to consider a dispute upon the request of the Postal Service or such recognized organization.

H.R. 8059. June 28, 1977. Judiciary. Amends provisions of the Mann Act prohibiting the coercion or enticement of a female younger than 18 years old to travel by common carrier in commerce for immoral purposes to proscribe the transportation in commerce of any person younger than 16 years old for purposes of facilitating sexual contact by any person with such minor.

H.R. 8060. June 28, 1977. Interior and Insular Affairs. Establishes the Office of Water Management and the Independent Water Project Review Board within the Executive branch. Requires the Office to develop a comprehensive water policy and coordinate Federal water authorities. Requires the Board to establish a system for the evaluation of proposed water resource construction projects and to coordinate such projects.

H.R. 8061. June 28, 1977. Public Works and Transportation. Amends the Flood Control Act of 1970 to require the Secretary of the Army, in determining the need for a flood control project, to consider the economic and social impact of not providing such social protection. Sets forth factors for evaluating such impact.

Requires the Secretary of the Army, acting through the Chief of Engineers, and upon a finding that the costs of any flood control project exceed its benefits, to furnish the non-Federal interests affected by such decision with an opportunity to contribute to the project the amount by which the costs exceed the benefits.

H.R. 8062. June 28, 1977. Education and Labor. Amends the Higher Education Act of 1965 to authorize appropriations for, and establish a program of grants to, urban universities for (1) development of urban-oriented educational, research, or service programs; and (2) assistance in carrying out such programs.

Establishes a five year comprehensive grant to a university qualifying as an "urban grant university" and establishes criteria for such designation.

Creats an Urban University Advisory Council to (1) review, along with the Commissioner of Education, "urban grant university" applications; (2) advise the Commissioner; and (3) make recommendations to the President and to the Congress.

H.R. 8063. June 28, 1977. Interstate and Foreign Commerce. Amends the Communications Act of 1934 to authorize the Federal Communications Commission to grant broadcast licenses and license renewals for five-year terms.

Revises the Act to allow certain appeals from orders or decisions of the Commission to be brought in the United States court of appeals for the circuit in which the broadcast facility is, or is proposed to be located.

Requires the Commission to examine its broadcast license renewal procedure to determine how it can be simplified.

H.R. 8064. June 28, 1977. Ways and Means. Amends the Internal Revenue Code to allow a deduction to any taxpayer engaged in the manufacture, importation, distribution, lease, or sale of any product for contributions to his product liability loss reserve account.

H.R. 8065. June 28, 1977. Banking, Finance and Urban Affairs; Education and Labor. Directs the President to carry out, through private and public nonprofit institutions, a program consisting of projects which either (1) involve labor-management cooperation for the improvement of productivity and quality of work life, innovation in a major feature of employment, increased worker participation in decisionmaking, or profit-sharing or (2) are designed to establish the efficacy of practices maintaining normal employment levels during periods of cyclical downturns in demand through reassignment of workers to specified types of programs.

Directs the Federal Mediation and Conciliation Service and the National Center for Productivity and Quality of Working Life to assist in carrying out such program.

H.R. 8066. June 28, 1977. Education and Labor. Prohibits the sexual exploitation of children by making it unlawful for any individual to (1) cause or permit a child to be photographed or filmed engaged in a sexual act prohibited under this Act; (2) photograph or film a prohibited sexual act; (3) knowingly transport a film or photograph depicting a prohibited sexual act; or (4) receive for sale or sell any such film or photograph, if such individual knows or should know such film or photograph has or may be transported in such a manner as to affect interstate or foreign commerce.

H.R. 8067. June 28, 1977. Judiciary. Prohibits the sexual exploitation of children by making it unlawful for any individual to: (1) cause or permit a child to be photographed or filmed engaged in a sexual act prohibited under this Act; (2) photograph or film a prohibited sexual act; (3) knowingly transport any film or photograph depicting a prohibited sexual act; or (4) receive for sale or sell any such film or photograph, if such individual knows or should know such film or photograph has or may be transported in such a manner as to affect interstate or foreign commerce.

H.R. 8068. June 28, 1977. Interstate and Foreign Commerce. Prohibits the shipment in interstate or foreign commerce of any fur or leather, raw or in finished form, from animals trapped in any State or foreign country which has not banned the manufacture, sale, or use of leg-hold or steel jaw traps.

Directs the Secretary of Commerce to publish a list of such States and foreign countries.

H.R. 8069. June 28, 1977. Education and Labor. Amends the Age Discrimination in Employment Act of 1967 to eliminate age limitations with respect to the requirement that all personnel actions affecting employees or applicants for employment in Federal agencies, the United States Postal Service, or the District of Columbia government be taken without regard to such employees' or applicants' age.

H.R. 8070. June 28, 1977. Education and Labor. Amends the Age Discrimination in Employment Act of 1967 to eliminate age limitations with respect to the requirement that all personnel actions affecting employees or applicants for employment in Federal agencies, the United States Postal Service, or the District of Columbia government be taken without regard to such employees' or applicants' age.

H.R. 8071. June 28, 1977. Interstate and Foreign Commerce. Directs the Institute of Medicine of the National Academy of Sciences to conduct a review of toxic and carcenogenic substances and to report its findings and advisory recommendations to the Congress and the Secretary of Health, Education, and Welfare within one year.

Authorizes the continued use of saccharin for 18 months. Prohibits the Secretary from taking any action under the Federal Food, Drug, and Cosmetic Act to prohibit or restrict the sale or distribution of saccharin.

H.R. 8072. June 28, 1977. Veterans' Affairs. Directs the Secretary of Defense to provide for the burial at Arlington Memorial Amphitheater, Arlington National Cemetery, Virginia, of the remains of an unknown American solider who lost his life in the American Revolutionary War.

H.R. 8073. June 28, 1977. Post Office and Civil Service; Rules. Amends the Federal Salary Act of 1967 to require the appointment of persons to the Commission on Executive, Legislative, and Judicial Salaries every second calendar year beginning in 1978. Requires the President to separately submit pay recommendations for Members of Congress. Stipulates that such recommendations may not take effect prior to the Congress following the Congress during which they were transmitted. Declares that such recommendations shall take effect if not disapproved by resolution of either House.

Amends the Legislative Reorganization Act of 1946 to abolish automatic cost-of-living adjustments for Members of Congress.

H.R. 8074. June 28, 1977. Education and Labor. Amends the Occupational Safety and Health Act of 1970 to exclude employers of 25 or less people from coverage under such act.

Revises certain procedures dealing with (1) standards and their promulgation; (2) citations and notices; and (3) enforcement.

H.R. 8075. June 28, 1977. Interstate and Foreign Commerce. Amends the Communications Act of 1934 to require the Federal Communications Commission to regulate the rates, terms, and conditions for pole attachments used for wire communication, in any case in which such rates, terms, and conditions are not regulated by any State authority.

Sets forth the limits for charges by a utility for pole attachments.

H.R. 8076. June 28, 1977. Education and Labor; Judiciary; Post Office and Civil Service; Ways and Means. Amends the Internal Revenue Code of 1954 and Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to establish separate financing for the disability insurance program of Title II.

Sets forth new procedures for the review of determinations of disability made by the Secretary of Health, Education, and Welfare. Establishes the United States Disability Court to provide judicial review of such determinations.

Amends the regulations governing eligibility for and duration of disability insurance benefits.

H.R. 8077. June 28, 1977. Judiciary. Directs the Secretary of the Treasury to pay a specified sum to a certain individual in reimbursement for travel expenses incurred by her family following the kidnapping and killing of her son, a commercial attaché for the Department of State.

H.R. 8078. June 29, 1977. Banking, Finance and Urban Affairs. Amends the Federal Reserve Act to provide low-interest construction and mortgage loans for low- and medium-priced housing by permitting member banks of the Federal Reserve System to elect to be paid interest on their funds on reserve in exchange for furnishing such loans.

Permits nonmember banks, savings and loan associations, and other financial institutions to offer deferred-interest loans for low- and medium-priced housing.

H.R. 8079. June 29, 1977. Interstate and Foreign Commerce. Amends the Communications Act of 1934 to authorize the Federal Communications Commission to regulate the use of protective components in consumer electronic equipment which are capable of reducing interference from radio frequency energy.

H.R. 8080. June 29, 1977. Interstate and Foreign Commerce. Reaffirms the intent of Congress with respect to the structure of the common carrier telecommunications industry rendering services in interstate and foreign commerce. Grants additional authority to the Federal Communications Commission to authorize mergers of carriers when deemed to be in the public interest. Reaffirms the authority of the States to regulate terminal and station equipment used for telephone exchange service.

H.R. 8081. June 29, 1977. Judiciary. Requires the Federal Government to pay the costs (including attorney's fees) of civil actions brought by the Government against the same defendant if the Government fails to raise all of its claims based on substantially the same factual allegations or circumstances against such defendant in the first civil action. Authorizes such defendant to bring a civil action against the United States to recover such costs.

H.R. 8082. June 29, 1977. Interior and Insular Affairs. Establishes the West Lake National Park in the State of Florida.

H.R. 8083. June 29, 1977. Education and Labor. Directs the Secretary of Health, Education, and Welfare to pay benefits to any textile worker who has been totally disabled by byssinosis and to the surviving dependents of any such worker whose death was due to byssinosis.

Sets forth the conditions under which there shall be a rebuttable presumption that a worker's byssinosis arose out of employment in a textile plant.

H.R. 8084. June 29, 1977. House Administration. Directs the Attorney General in consultation with the Secretary for Health, Education, and Welfare to prescribe standards for polling and registration facilities which will assure ready access by the handicapped and the aged.

Permits designation of facilities for Federal elections which do not comply with such standards only where conforming facilities are unavailable.

Requires States to provide alternative registration and voting methods for aged and handicapped persons assigned to inaccessible registration facilities or polling places.

Requires that a paper ballot be made available to a person unable to operate a voting machine.

H.R. 8085. June 29, 1977. Veterans' Affairs. Provides for payment of a supplemental tuition allowance to each qualified veteran upon application to the Administrator of Veterans' Affairs.

H.R. 8086. June 29, 1977. Ways and Means. Amends the Internal Revenue Code to allow limited, nonrefundable income tax credits for specified higher education expenses, including tuition, fees, books and supplies, incurred by the taxpayer for himself and any dependents.

H.R. 8087. June 29, 1977. Ways and Means. Amends the Internal Revenue Code to exempt light farming and livestock trailers from the highway motor vehicle excise tax.

H.R. 8088. June 29, 1977. Interstate and Foreign Commerce. Amends the Railroad Retirement Act of 1974 to entitle spouses of persons receiving an annuity on account of disability to an annuity at age 60 if the disabled individual would have completed 30 years of service by age 60.

H.R. 8089. June 29, 1977. Veterans' Affairs. Provides that recipients of veterans' pensions and compensation will not have the amount of such pension or compensation reduced because of increases in social security benefits.

H.R. 8090. June 29, 1977. House Administration. Directs the Librarian of Congress to transfer one of the Gettysburg Address manuscripts to the Secretary of the Interior for the purpose of placing such manuscript on display in Gettysburg National Park, Pennsylvania.

H.R. 8091. June 29, 1977. Interior and Insular Affairs. Expedites the study to be conducted as to the feasibility and suitability of the Mount Mitchell National Park, North Carolina.

Prohibits the Secretary of the Interior from commencing land acquisition for such park until he receives Congressional authorization is received.

H.R. 8092. June 29, 1977. House Administration. Revises recordkeeping and reporting requirements under the Federal Election Campaign Act.

Restricts persons who may make contributions to a candidate for Federal office to individuals residing within an electoral district in which the candidate seeks election and party committees.

Permits a taxpayer to designate $1 of his taxes be used for public financing of congressional elections.

Entitles candidates for nomination for election or for election to Congress who agree to certain reporting requirements and certify receipt of certain contribution minimums to matching payments for campaign expenses.

Establishes a Congressional Elections Campaign Fund from which such payments are to be made.

H.R. 8093. June 29, 1977. Ways and Means. Amends the Internal Revenue Code to impose a 75 percent tax rate on short-term capital gains from the sale of new houses acquired by the vendor for rental or as an investment.

H.R. 8094. June 29, 1977. Banking, Finance and Urban Affairs. Amends the Federal Reserve Act to provide for Congressional review of the Federal Reserve's monetary policy.

Prohibits discrimination in the selection of the Board of Directors of the Federal Reserve System.

Prohibits Federal Reserve System officials and employees from participating in specified activities which affect personal financial interests and from lobbying with institutions subject to the regulatory authority of the Federal Reserve System.

H.R. 8095. June 29, 1977. Interstate and Foreign Commerce. Amends Title XIX (Medicaid) of the Social Security Act to require the States to establish methods and procedures for safeguarding against unnecessary utilization of health care and services and to conduct medical and independent professional review of health facilities participating in the Medicaid program to determine their compliance with the requirements for participation under that program.

H.R. 8096. June 29, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to authorize the Governor of any State to request that payment for Medicare services rendered by physicians in the State be made in accordance with a single fee schedule applicable throughout such State.

H.R. 8097. June 29, 1977. Interior and Insular Affairs. Renames the Advisory Council on Historic Preservations as the Council on Historic Preservation. States that such Council is to administer specified Acts which relate to the historic preservation responsibilities of the Secretary of the Interior and to promote nominations to the National Register of Historic Places properties proposed for sale, transfer, demolition or substantial alteration as a result of action by any Federal agency.

H.R. 8098. June 29, 1977. Judiciary. Expands the exemption from the copyright laws for performance of dramatic literary works for blind or handicapped persons to increase the number of performances permitted under such exemption, and to allow the performance of works published one year prior to such performance. Permits the same performers or organization to perform the same work more than once under such exemption.

Allows radio subcarriers entitled to transmit performances of dramatic literary works for the blind or handicapped, to make three copies or phonorecords of such performances, or to permit the use of such copies by certain radio subcarriers.

H.R. 8099. June 29, 1977. Interior and Insular Affairs. Authorizes and directs the Secretary of the Interior to annually pump and deliver 100,000 acre-feet of ground water from Federal lands to the Ak-Chin Indian community to enable the community to farm all its practicably irrigable acreage.

Authorizes the Secretary to pay claims of water users other than the Ak-Chin Indian community for any losses incurred by the enactment of this Act.

H.R. 8100. June 29, 1977. Agriculture. Amends the Agriculture Act of 1949 to establish separate reserves of wheat, corn and other feed grains through storage contracts with producers. Set loan levels for the 1977 through 1981 crops of wheat and corn. Authorizes the President to establish an International Emergency Food Reserve in this country and to negotiate international agreements with other countries to develop an international system of food reserves for humanitarian food relief.

H.R. 8101. June 29, 1977. House Administration. Establishes within the Information systems of the Congress an office to compile and disseminate information to the public relating to pending legislative proposals. Directs the Committee on House Administration to establish and administer such system.

H.R. 8102. June 29, 1977. Agriculture. Authorizes the Secretary of Agriculture, through the Packers and Stockyards Administration, to monitor sales and transfers of meat and meat food products of forty thousand pounds or more and to require persons involved in such sales and transfers to report information concerning prices and quantities.

H.R. 8103. June 29, 1977. Interior and Insular Affairs; Public Works and Transportation. Authorizes the Secretary of the Interior to implement specified measures which will encourage the use of transportation modes other than personal motor vehicles for travel to and in national parks.

H.R. 8104. June 29, 1977. Education and Labor. Amends the Fair Labor Standard Act of 1938 to prohibit the employment of blind persons, or persons with impaired sight, at less than the applicable minimum wage under such Act.

H.R. 8105. June 29, 1977. International Relations. Amends the Mutual Educational and Cultural Exchange Act of 1961 to disallow Federal employees to accept grants and other types of assistance provided by a foreign government to facilitate participation of such employees in certain cultural exchange programs.

H.R. 8106. June 29, 1977. Banking, Finance and Urban Affairs. Amends the Truth in Lending Act to require such appropriate regulatory agency to conduct biennial examinations of every creditor subject to the requirements of this Act. Calls for public disclosure of specified information obtained in such examinations and for disclosure to consumers of the discovery of apparent substantial violations.

Sets forth a limited exemption from civil liability for creditors in error.

H.R. 8107. June 29, 1977. Judiciary. Amends the Immigration and Nationality Act to eliminate from the classes of excludable and deportable aliens those aliens who: (1) are anarchists; (2) are opposed to organized government; or (3) are members or advocates of the Communist or a totalitarian party.

Amends the Subversive Activities Control Act of 1950 to remove the prohibition against the application by a member of a communist organization for a U.S. passport, and the issuance of a passport to such a member.

H.R. 8108. June 29, 1977. Rules. Amends the Employment Act of 1946 to prohibit any Member of the House of Representatives or Senator from serving as a member on the Joint Economic Committee during more than two Congresses in any period of five successive Congresses after 1978.

H.R. 8109. June 29, 1977. Merchant Marine and Fisheries. Amends the Merchant Marine Act, 1920, to authorize the Secretary of Commerce to make grants in order to establish a system of public seaports adequate to meet the needs of domestic offshore communities.

H.R. 8110. June 29, 1977. Ways and Means. Amends the Tariff Schedules of the United States to exempt from customs duties products of the insular possessions of the United States if not more than 70 percent of the product's value is attributable to foreign materials, until the value of such imports reaches a specified annual total. Exempts watch products of the insular possessions of the United States from customs duties. Exempts from customs duties products of such possessions upon re-entry, if applicable duties were previously paid.

H.R. 8111. June 29, 1977. Veterans' Affairs. Increases the rates of vocational rehabilitation, educational assistance, and special training allowances paid to eligible veterans. Increases the allowance for administrative expenses incurred by State and local agencies administering these programs.

H.R. 8112. June 29, 1977. House Administration. Abolishes the Federal Records Council.

H.R. 8113. June 29, 1977. Post Office and Civil Service. Entitles employees of the Bureau of Indian Affairs or the Indian Health Service to an annuity if separated from service after completing 25 years of service or after becoming 50 years of age and completing 20 years of service before December 31, 1989, if such employee is not otherwise entitled to other full retirement benefits and is not an Indian entitled to an employment preference by law.

H.R. 8114. June 29, 1977. Judiciary. Directs the Secretary of the Navy to determine, and the Secretary of the Treasury to pay, the amount to which a certain individual would have been entitled if he had been found permanently incapacitated as a result of an incident of his service as a commissioned officer of the Navy. Declares such individual to have been retired for physical disability.

H.R. 8115. June 29, 1977. Judiciary. Declares four individuals lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 8116. June 29, 1977. Judiciary. Declares four individuals lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 8117. June 29, 1977. Judiciary. Directs the Secretary of the Treasury to pay a specified sum to a certain individual in full settlement of such individual's claims against the United States.

H.R. 8118. June 29, 1977. Judiciary. Confers jurisdiction upon the United States Court of Claims to hear, determine, and render judgment upon the claim of a certain individual.

H.R. 8119. June 29, 1977. Judiciary. Declares six individuals lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act. Declares a specified provision of such Act inapplicable to two other individuals.

H.R. 8120. June 29, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act. Declares a specified provision of such Act inapplicable to four other individuals.

H.R. 8121. June 30, 1977. Interstate and Foreign Commerce; Ways and Means. Sets forth a program to constrain the rate of increases in total acute care hospital inpatient costs. Directs the Secretary of Health, Education, and Welfare to promulgate annually an "inpatient hospital revenue increase limit." Promulgates formulae for the computation of such limit.

Amends the Internal Revenue Code of 1954 to establish an excise tax on charges for hospital services in excess of the limit.

Amends the Public Health Service Act to limit the annual amount of hospital capital expenditures to spending for essential hospital needs.

Establishes a financial incentives program to encourage the discontinuance of unneeded hospital services.

H.R. 8122. June 30, 1977. Science and Technology. Directs the Administrator of the Energy Research and Development Administration to conduct an investigation and study of the use of grain or grain products and wood and other forest products in the development and use of fuels.

H.R. 8123. June 30, 1977. Public Works and Transportation. Amends the Tennessee Valley Authority Act of 1933 to direct the Authority to implement specified rate design policies to discourage wasteful consumption of electric energy. Directs the Authority to establish additional programs designed to assist residential energy conservation and to demonstrate new technologies for cogeneration, burning of coal, solar heating and cooling, and electric storage facilities.

H.R. 8124. June 30, 1977. Public Works and Transportation. Directs the Secretary of Transportation to establish a single system of measuring noise and the impact of noise at airports and areas surrounding airports and to prescribe land uses for such areas which are compatible with such noise levels.

Amends the Airport and Airway Development Act of 1970 to make grants available under such Act for noise compatibility programs with respect to land situated near airports.

Requires the retrofitting or replacement of subsonic aircraft which do not meet existing noise standards. Prohibits the operation of foreign aircraft over the United States which do not meet such standards after 1985.

H.R. 8125. June 30, 1977. Judiciary. Provides for appointment of a special prosecutor relative to alleged violations of criminal law involving abuse of office, fraud against the United States, obstruction of justice, or campaign finance by any of specified Federal officials or campaign managers.

Directs the Attorney General to promulgate regulations requiring employees of the Department of Justice to disqualify themselves from investigations or prosecutions which may result in a conflict of interest or the appearance thereof.

H.R. 8126. June 30, 1977. Interstate and Foreign Commerce. Amends the Clean Air Act to authorize States to unilaterally revise clean air implementation plans to suspend or eliminate provisions which curtail motor vehicle parking in urban areas.

H.R. 8127. June 30, 1977. Judiciary; Banking, Finance and Urban Affairs; Armed Services; Government Operations. Prohibits the intelligence activities which interfere with first amendment rights. Limits the jurisdictions of the Federal Bureau of Investigation and the Central Intelligence Agency to criminal investigations and foreign intelligence gathering, respectively. Renames such agencies. Repeals specified statutes relating to the exercise of the first amendment rights of freedom of speech and association. Establishes procedures to investigate law violations committed by Federal officials involved in intelligence activities.

H.R. 8128. June 30, 1977. Judiciary. Makes it unlawful for any person to import, manufacture, sell, buy, transfer, receive, transport, own, or possess any handgun or handgun ammunition. Authorizes the Secretary of the Treasury to exempt certain handguns from this prohibition.

H.R. 8129. June 30, 1977. Armed Services. Authorizes the Secretary of Defense to budget funds for certain specified purposes to assist the Civil Air Patrol. Authorizes the Secretary of the Air Force to give, sell, or lend to the Civil Air Patrol excess property acquired by the Air Force under the Federal Property and Administrative Services Act of 1949.

H.R. 8130. June 30, 1977. International Relations. Amends the Foreign Assistance Act of 1961 to establish as a nonprofit corporation the African Development Foundation. Authorizes the Foundation to make grants, loans, and loan guarantees to any African private or public group, association, or other entity for (1) the support of self-initiated community development efforts; (2) development research by Africans and the transfer of development resources, expertise, and knowledge within Africa; (3) procurement from other sources of such technical or other assistance in cases and manners deemed appropriate by African recipient entities; and (4) such other projects as the Foundation considers appropriate.

H.R. 8131. June 30, 1977. Interstate and Foreign Commerce. Amends Title XIX (Medicaid) of the Social Security Act to permit State Medicaid plans to provide medical assistance for qualified former Supplemental Security Income recipients.

H.R. 8132. June 30, 1977. Interior and Insular Affairs. Amends the National Trails System Act by requiring the Secretary of the Interior to study the feasibility of designating the Overmountain Men Victory Trail in the States of Tennessee, North Carolina, and South Carolina, and as a national scenic trail.

H.R. 8133. June 30, 1977. Banking, Finance and Urban Affairs. Prescribes procedures and standards governing the disclosure of customer records by financial institutions to Federal agencies.

H.I. 8134. June 30, 1977. Ways and Means; Interstate and Foreign Commerce. Requires every employer to offer qualified health care insurance to his employees and their families. Establishes a program of Federal participation to provide qualified health care insurance to low-income, nonemployed and self-employed individuals and their families. Requires the Secretary of Health, Education, and Welfare to pay the full premium for continuation of qualified health care insurance for individuals receiving State or Federal unemployment benefits.

H.R. 8135. June 30, 1977. Ways and Means; Interstate and Foreign Commerce. Amends the programs of Medicare, Medicaid, and Grants to States for Social Services of the Social Security Act to establish a Special Commission on Quality Assurance and Utilization Control in Home Health Care.

Requires the Commission to conduct a review of the provision of home health care and services in the United States, and to develop a plan for quality assurance and utilization control in such care.

H.R. 8136. June 30, 1977. Ways and Means. Amends the Internal Revenue Code to exempt from taxation certain contributions to profit sharing plans by employers which would otherwise be taxable to the employee merely because a plan includes an arrangement under which the contribution is made only if the employee elects not to receive such contribution in cash.

H.R. 8137. June 30, 1977. Interstate and Foreign Commerce. Amends the Federal Food, Drug, and Cosmetic Act to stipulate that a food additive which causes cancer in animals but not man need not be deemed unsafe as a result of causing cancer in animals.

H.R. 8138. June 30, 1977. Ways and Means. Amends the Tariff Schedules of the United States to exempt certain wearing apparel and footwear assembled with components made in the United States, from the reduced customs duties normally granted products made abroad from components made in the United States.

H.R. 8139. June 30, 1977. Post Office and Civil Service. Sets the postal rate for personal mail of individuals sealed against inspection and mailed in the United States at 13 cents for the first ounce of each piece and 11 cents for each additional ounce for each piece. Permits the Postal Service to adjust such rate annually in proportion to the increase in the Consumer Price Index since the previous rate adjustment but not to an amount exceeding the current rate for first class mail.

H.R. 8140. June 30, 1977. Veterans' Affairs. Directs the Administrator of Veterans' Affairs to establish and maintain a clinic for outpatient medical services and treatment in an area comprised of certain counties in northwest Florida.

H.R. 8141. June 30, 1977. Agriculture. Amends the Consolidated Farm and Rural Development Act with respect to emergency and disaster loans: (1) to further define specified eligibility conditions, interest rates and repayment requirements; and (2) to declare the sense of Congress as to the kind of personnel employed, and the priorities placed, in the carrying out of the provisions of such Act.

H.R. 8142. June 30, 1977. Banking, Finance and Urban Affairs. Authorizes the Secretary of Housng and Urban Development to make loans to assist in purchase and installation of home solar heating and cooling equipment, through a program to be administered by the States.

H.R. 8143. June 30, 1977. Public Works and Transportation. Amends the Airport and Airway Development Act of 1970 to direct the Secretary of Transportation to obligate a certain portion of the funds authorized to be appropriated under such Act for improving air navigation facilities for the purpose of establishing no fewer than 45 automated flight service stations. Defines "flight service stations" as air navigation facilities used to assist pilots in the safe conduct of flight.

H.R. 8144. June 30, 1977. Veterans' Affairs. Allows to certain persons, but denies to others, entitlement to veterans' benefits due to an administrative upgrading of a less than honorable discharge.

H.R. 8145. June 30, 1977. Banking, Finance and Urban Affairs. Amends the Home Owners' Loan Act to authorize the Federal Home Loan Bank Board to provide for the organization, operation, and regulation of Federal Savings and Loan Associations or Federal Savings Banks.

Amends the Federal Deposit Insurance Act to provide for the conversion of State-chartered mutual savings banks into Federal Savings Banks.

H.R. 8146. June 30, 1977. Banking, Finance and Urban Affairs. Amends the Home Owners' Loan Act to authorize the Federal Home Loan Bank Board to provide for the organization, operation, and regulation of Federal Savings and Loan Associations or Federal Savings Banks.

Amends the Federal Deposit Insurance Act to provide for the conversion of State-chartered mutual savings banks into Federal Savings Banks.

H.R. 8147. June 30, 1977. Post Office and Civil Service. Sets the maximum workweek for Federal firefighters at 54 hours. Entitles such firefighters to premium pay in lieu of overtime pay equal to up to 25 percent of their basic pay rate.

H.R. 8148. June 30, 1977. Armed Services. Authorizes the Secretary of the Navy to convey to the State of Hawaii specified lands within the Fort Ruger Military Reservation, Hawaii, for educational purposes.

H.R. 8149. June 30, 1977. Ways and Means. Amends the Tariff Act of 1930 to revise customs procedures. Amends the Tariff Schedules of the United States with respect to the importation of alcohol, tobacco, and other articles for personal use. Authorizes appropriations for the United States Customs Service.

H.R. 8150. June 30, 1977. Agriculture. Directs the Secretary of Agriculture to implement a nationwide agricultural water quality assistance program to maintain or enhance the quality of water in rural areas.

H.R. 8151. June 30, 1977. House Administration. Directs the Attorney General, in consultation with the Secretary of Health, Education, and Welfare, to prescribe standards for polling and registration facilities which will assure ready access by the handicapped and the aged. Requires States to provide alternative registration and voting methods for aged and handicapped persons assigned to inaccessible registration facilities or polling places. Requires that a paper ballot be made available to any person unable to operate a voting machine.

H.R. 8152. June 30, 1977. Education and Labor; Interstate and Foreign Commerce. Establishes the Office of Independent Living within the Department of Health, Education, and Welfare to administer grants to establish independent living centers for the disabled.

Requires such centers to provide specified services including: (1) counseling regarding attendant care; (2) health programs; (3) housing and transportation assistance; (4) independent living skills; and (5) legal and economic counseling.

Establishes the Task Force on Independent Living with H.E.W. to review the operations of such Office and of the centers.

H.R. 8153. June 30, 1977. Education and Labor; Interstate and Foreign Commerce. Establishes the Office of Independent Living within the Department of Health, Education, and Welfare to administer grants to establish independent living centers for the disabled.

Requires such centers to provide specified services including: (1) counseling regarding attendant care; (2) health programs; (3) housing and transportation assistance; (4) lindependent living skills; and (5) legal and economic counseling.

Establishes the Task Force on Independent Living with H.E.W. to review the operations of such Office and of the centers.

H.R. 8154. June 30, 1977. Judiciary. Amends the Immigration and Nationality Act to prohibit the admission into the United States of any alien who is likely to become a public charge unless a United States citizen posts a $5,000 bond on behalf of such alien.

H.R. 8155. June 30, 1977. Judiciary. Prohibits as a defense in any proceeding against any person for violation of any law of the United States a claim that such person was under compulsion by a foreign state to act, or fail to act, in violation of such law.

H.R. 8156. June 30, 1977. Banking, Finance and Urban Affairs. Amends the Federal Deposit Insurance Act to prohibit any insured bank from investing any of the funds of a common trust fund or other funds for the collective investment of assets held by the bank as fiduciary, agent, or in any similar capacity, in real estate used principally for agricultural purposes.

H.R. 8157. June 30, 1977. Ways and Means. Amends the Internal Revenue Code to repeal the limitations made by the Tax Reform Act of 1976 on the exclusion for sick pay.

H.R. 8158. June 30, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and

Disability Insurance) of the Social Security Act to revise the eligibility requirements for disability insurance benefits for blind persons. Revises the method of computing the primary insurance amount for blind persons under such Act.

H.R. 8159. June 30, 1977. International Relations; Interstate and Foreign Commerce; Merchant Marine and Fisheries. Requires that all containers used in international transport meet minimum safety standards as prescribed by the International Convention for Safe Containers. Directs the Secretary of Transportation to prescribe regulations regarding: (1) revocation procedures for safety approval plates on containers which no longer meet such standards; (2) fees associated with approval and examination services for containers; (3) approval of containers and container designs; and (4) examination of approved containers. Authorizes the Secretary to issue detention orders for containers not having valid safety approval plates.

H.R. 8160. June 30, 1977. Interstate and Foreign Commerce. Authorizes the Secretary of Health, Education, and Welfare to (1) make loans to certain cities and counties for the establishment and initial operating costs of clinics for the spaying and neutering of dogs and cats, and (2) make grants for the esablishment of courses to train paraprofessionals in the anaesthetising and spaying and neutering of dogs and cats.

H.R. 8161. June 30, 1977. Merchant Marine and Fisheries. Amends the Fish and Wildlife Coordination Act to revise interagency coordination requirements with respect to fish and wildlife conservation for approval of federally assisted projects for impoundment, control, or diversion of waters.

Repeals exemptions from such procedures for water impoundment projects where the impoundment has a maximum surface area of less than ten acres, or for programs for land management.

Permits a citizen to bring a civil action in a district court of the United States against persons violating this Act or regulations issued hereunder or against any Federal department for failure to perform its duties under this Act.

H.R. 8162. June 30, 1977. Post Office and Civil Service. Provides for congressional oversight of all rate, fee, and mail classification decisions made by the Postal Rate Commission Sets maximum size and weight limits for all parcel mail. Abolishes the Board of Governors of the Postal Service and transfers its functions to the Postmaster General.

H.R. 8163. June 30, 1977. Ways and Means. Amends the Internal Revenue Code to provide a $5,000 tax exclusion for persons aged 65 or over for amounts received as an annuity, pension, or other retirement benefit, and for all persons receiving retirement benefits under a public retirement system.

H.R. 8164. June 30, 1977. Ways and Means. Amends Title XVI (Supplemental Income for the Aged, Blind, and Disabled) of the Social Security Act to require the Secretary of Health, Education, and Welfare to pay a special housing allowance to each eligible individual whose housing expenses exceed 25 percent of income or $1,200 a year, whichever is less.

H.R. 8165. June 30, 1977. Ways and Means. Amends the Internal Revenue Code to provide a $5,000 tax exclusion for persons aged 65 or over for amounts received as an annuity, pension, or other retirement benefit, and for all persons receiving retirement benefits under a public retirement system.

H R. 8166. June 30, 1977. Ways and Means. Amends Title XVI (Supplemental Income for the Aged, Blind, and Disabled) of the Social Security Act to require the Secretary of Health, Education, and Welfare to pay a special housing allowance to each eligible individual whose housing expenses exceed 25 percent of income or $1,200 a year, whichever is less.

H.R. 8167. June 30, 1977. Ways and Means. Amends Title XVIII (Medicare) of the Social Security Act to provide payment for hearing aids and dentures under the supplementary medical insurance program.

H.R. 8168. June 30, 1977. Interstate and Foreign Commerce; Ways and Means. Amends Title XVIII (Medicare) of the Social Security Act to provide payment for hearing aids and dentures under the supplementary medical insurance program

H.R. 8169. June 30, 1977. Ways and Means. Amends the Tariff Schedules of the United States to repeal the duty imposed on: (1) articles assembled abroad with components produced in the United States; and (2) certain metal articles manufactured in the United States and exported for further processing.

H.R. 8170. June 30, 1977. Post Office and Civil Service. Amends the Federal Salary Act of 1967 to eliminate review of rates of pay for Members of Congress by the Commission on Executive, Legislative, and Judicial Salaries.

Amends the Legislative Reorganization Act of 1946 to abolish automatic cost-of-living pay adjustments for Members of Congress, and to set the rate of pay for such Members at the rate in effect on September 30, 1976.

Stipulates that any pay increase for Members of Congress shall not take effect until the Congress succeeding the Congress which approves such increase.

H.R. 8171. June 30, 1977. Banking, Finance and Urban Affairs. Authorizes national banking associations to underwrite and deal in non-general obligations of States and cities.

Sets limitations and restrictions on dealings in such obligations by national banking associations.

H.R. 8172. June 30, 1977. Interstate and Foreign Commerce. Amends the Department of Transportation Act and the Regional Rail Reorganization Act to revise the time periods during which Federal financial assistance shall be available for rail service assistance programs under such Acts.

H.R. 8173. June 30, 1977. Government Operations. Prohibits Government use of any limousine, use of any Government motor vehicle to transport any official between his place of employment and his dwelling place, and Government employment of any chauffeur.

Excepts from this Act limousines for the President, Ambassadors, and specified other persons whose personal safety depends upon the use of such limousines.

H.R. 8174. June 30, 1977. Government Operations. Prohibits Government use of any limousine, use of any Government motor vehicle to transport any official between his place of employment and his dwelling place, and Government employment of any chauffeur.

Excepts from this Act limousines for the President, Ambassadors, and specified other persons whose personal safety depends upon the use of such limousines.

H.R. 8175. June 30, 1977. Veterans' Affairs. Amends the Veterans' Administration Physician and Dentist Pay Comparability Act of 1975 to extend from September 30, 1977, to September 30, 1978, the authority of the Veterans' Administration to enter into special pay agreements with physicians and dentists employed in the Department of Medicine and Surgery. Permits such physicians and dentists to enter into new agreements with the Veterans' Administration for additional service upon completion of the initial period, but stipulates that no additional service may extend beyond September 30, 1981.

H.R. 8176. June 30, 1977. Veterans' Affairs. Amends the Veterans' Administration Physician and Dentist Pay Comparability Act of 1975 to extend from September 30, 1977, to September 30, 1978, the authority of the Veterans' Administration to enter into special pay agreements with physicians and dentists employed in the Department of Medicine and Surgery. Permits such physicians and dentists to enter into new agreements with the Veterans' Administration for up to four years of additional service in the Department upon completion of the initial period of service.

H.R. 8177. June 30, 1977. Post Office and Civil Service. Permits any individual to send postage free mail matter not exceeding four ounces in weight to his or her representatives in the House of Representatives and the Senate and to the President of the United States.

H.R. 8178. June 30, 1977. Veterans' Affairs. Extends the delimiting period for completing a veteran's education program until such time as the veteran completes or ends the program, if at the close of the ordinary ten-year delimiting period the veteran is enrolled in a program.

H.R. 8179. June 30, 1977. Veterans' Affairs. Prohibits denial of employment (except by an employer with no more than ten employees) of any person because of any obligation as a member of a Reserve component of the Armed Forces.

H.R. 8180. June 30, 1977. Post Office and Civil Service; Rules. Amends the Federal Salary Act of 1967 to require the appointment of persons to the Commission on Executive, Legislative, and Judicial Salaries every second calendar year beginning 1978. Requires the President to separately submit pay recommendations for Members of Congress. Stipulates that such recommendations may not take effect prior to the Congress following the Congress during which they were transmitted. Declares that such recommendations shall take effect if not disapproved by resolution of either House.

Amends the Legislative Reorganization Act of 1946 to abolish automatic cost-of-living adjustments for Members of Congress.

H.R. 8181. June 30, 1977. Ways and Means. Amends the Internal Revenue Code to allow certain individuals to compute the amount of the deduction for retirement savings on the basis of the earned income of their spouses.

H.R. 8182. June 30, 1977. Ways and Means. Amends the Internal Revenue Code to allow certain individuals to compute the amount of the deduction for retirement savings on the basis of the earned income of their spouses.

H.R. 8183. June 30, 1977. Ways and Means. Amends the Internal Revenue Code to allow certain individuals to compute the amount of the deduction for retirement savings on the basis of the earned income of their spouses.

H.R. 8184. June 30, 1977. Interstate and Foreign Commerce; Science and Technology. Requires the Federal Trade Commission (FTC) to promulgate rules relating to the procedures and practices of standards-development organizations, testing laboratories, and certification agencies, and the use of product listings and certificates of approval in marketing.

Establishes an Institute of Standards and Accreditation, within the Department of Commerce, to assist the Secretary and the FTC in carrying out this Act.

Establishes a National Standards Management Board to develop the necessary rules and policies to manage and coordinate national standards-development activities.

H.R. 8185. June 30, 1977. Agriculture. Amends the Agriculture Act of 1949 to establish separate reserves of wheat, corn and other feed grains through storage contracts with producers. Sets loan levels for the 1977 through 1981 crops of wheat and corn. Authorizes the President to establish an International Emergency Food Reserve in this country and to negotiate international agreements with other countries to develop an international system of food reserves for humanitarian food relief.

H.R. 8186. June 30, 1977. Post Office and Civil Service. Provides that the United States Postal Service shall be subject to certain provisions of the Occupational Safety and Health Act of 1970.

H.R. 8187. June 30, 1977. Veterans' Affairs. Permits acceleration of monthly educational assistance payments made by the Veterans Administration to eligible veterans and dependents. Provides alternative financial and educational assistance to peacetime, post-Korean veterans affected by the expiration of their delimiting period. Provides for a conditional extension of the delimiting period for certain Vietnam era veterans. Provides for the development of additional educational employment, and readjustment assistance programs for veterans, and for protection against abuses and misuse of veterans benefits. Revises the criteria for nonaccredited courses.

H.R. 8188. June 30, 1977. Veterans' Affairs. Permits the Administrator of Veterans' Affairs to discontinue educational assistance to an eligible veteran or survivor or dependent of a veteran if the Administrator finds that the institution of higher learning concerned has failed to enforce its regularly prescribed standards and practices as approved by the appropriate State approving agency with respect to such veteran or person.

Requires the Administrator to provide individual educational and career counseling and other appropriate services to facilitate the education of any veteran or person whose educational asistance has been discontinued under this Act.

H.R. 8189. June 30, 1977. Veterans' Affairs. Directs the Secretary of Labor to provide (1) such comprehensive, coordinated, and interrelated programs as are deemed necessary to facilitate training, readjustment, and rehabilitation, and (2) career, veterans benefits and rights, and personal adjustment and motivational counseling to promote the productive employment of Vietnam era veterans, especially disabled veterans.

H.R. 8190. June 30, 1977. Veterans' Affairs. Directs the Secretary of Labor to provide (1) such comprehensive, coordinated ,and interrelated programs as are deemed necessary to facilitate training, readjustment, and rehabilitation, and (2) career, veterans benefits and rights, and personal adjustment and motivational counseling to promote the productive employment of Vietnam era veterans, especially disabled veterans.

H.R. 8191. June 30, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 8192. June 30, 1977. Judiciary. Declares two individuals lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 8193. June 30, 1977. Judiciary. Deems a certain individual, for retirement purposes, to have served satisfactorily on active duty for six months in the grade of Captain, in the United States Air Force.

H.R. 8194. June 30, 1977. Judiciary. Deems a certain individual, for purposes of determining his entitlement to disability insurance benefits under the Social Security Act, to have filed his self-employment income tax returns for the taxable years 1964 and 1965 prior to the expiration of the time limitation.

H.R. 8195. July 11, 1977. Appropriations. Rescinds the budget authority recommended in the message of the President of May 18, 1977 (H. Doc. 95–158), namely: (1) $87,212,000 of the funds appropriated for the patrol hydrofoil missile program under the Department of Defense Appropriation Act, 1975; and (2) $39,000,000 of the funds appropriated for the completion of the second PHM patrol hydrofoil missile ship under the Department of Defense Appropriation Act, 1975.

H.R. 8196. July 11, 1977. Banking, Finance and Urban Affairs. Amends the Export-Import Bank Act of 1945 to permit the Bank to extend credit to the Peoples Republic of China. Eliminates the avoidance of arms races between countries not menaced by Communist China from the factors considered by the President in determining whether the prohibitions against credit extensions by the Export-Import Bank for defense sales to developing countries should be waived in the national interest.

H.R. 8197. July 11, 1977. Ways and Means. Amends the Trade Act of 1974 to permit the People's Republic of China to participate in United States credit and investment programs.

H.R. 8198. July 11, 1977. Ways and Means. Amends the Tariff Schedules of the United States to repeal the duty imposed on: (1) articles assembled abroad with components produced in the United States; and (2) certain metal articles manufactured in the United States and exported for further processing.

H.R. 8199. July 11, 1977. Armed Services. Entitles officers of the Army or Navy in the Judge Advocate General's Corps, officers in the Air Force or Marine Corps, who are judge advocates, and commissioned officers of the Coast Guard designated for special duty (law) to special pay. Entitles such individuals to bonuses upon the execution of a written agreement to remain on active duty for not less than three nor more than six years after completion of initial active duty service.

H.R. 8200. July 11, 1977. Judiciary. Enacts title 11 of the United States Code to establish a uniform law of bankruptcy. Changes the administration of bankruptcy cases including the determination of claims and allowances. Amends procedures for liquidation and reorganization. Makes provisions for the adjustment of debts of municipalities and individuals with regular income.

Amends title 28 of the United States Code and the Federal Rules of Evidence as they pertain to the creation and the powers of bankruptcy courts. Provides for a transition period of the bankruptcy court system.

H.R. 8201. July 11, 1977. Ways and Means; Government Operations. Amends the Internal Revenue Code to increase the corporate deduction and the personal exclusion for dividends received. Imposes limitations on increases in corporate tax rates and Federal spending. Provides for the distribution of corporate income tax revenues to registered voters.

H.R. 8202. July 11, 1977. House Administration. Amends the Federal Election Campaign Act of 1971 to (1) permit designated committees to make expenditures for Presidential candidates, (2) exempt from a candidate's contribution limit payments for certain media advertisement by other candidates which advocate election of such candidate, and (3) direct the Federal Election Commission to establish uniform recordkeeping and reporting procedures.

H.R. 8203. July 11, 1977. Banking, Finance and Urban Affairs. Directs the Secretary of Housing and Urban Development to monitor the planning and implementation of public housing construction, rehabilitation, or modernization projects to assure that crime prevention is taken into account in the design of such housing.

Directs the Secretary to make funds available for citizen crime prevention programs.

H.R. 8204. July 11, 1977. Merchant Marine and Fisheries. Amends the Merchant Marine Act, 1920, to require that vessels, as a condition for engaging in the coastwise trade, be built or rebuilt using only materials of United States origin.

Authorizes the Secretary of Commerce to waive such requirement under specified circumstances.

H.R. 8205. July 11, 1977. Public Works and Transportation; Ways and Means. Authorizes the Secretary of Transportation to approve Federal participation in State projects to replace bridges not located on any of the Federal-aid systems. Amends the Highway Revenue Act of 1956 to extend appropriations authorized under such Act for the Highway Trust Fund through fiscal year 1990. Amends the Land and Water Conservation Fund Act to extend such fund through fiscal year 1990. Amends the Internal Revenue Code of 1954 to postpone specified excise tax reductions and to increase the excise tax on gasoline, diesel fuels, and special motor fuels.

H.R. 8206. July 11, 1977. Ways and Means. Amends the Internal Revenue Code to allow certain individuals whose employers make contributions to pension plans a deduction for their contributions to employer pension funds, and to allow a deduction to certain individuals who establish modified individual retirement plans when the employer-employee pension contributions are small.

H.R. 8207. July 11, 1977. Education and Labor. Provides that with respect to out-of-State Indian children attending public elementary or secondary schools for whom tuition charge is made, certain Federal assistance payments may be made in the State where such children attend school upon request of the involved States.

H.R. 8208. July 11, 1977. Post Office and Civil Service. Repeals the Postal Reorganization Act. Re-enacts provisions relating to the postal service which were in effect immediately prior to the enactment of such Act.

H.R. 8209. July 11, 1977. Public Works and Transportation. Authorizes the Secretary of Transportation to make Federal funds available, on a matching basis, to the county executive of Montgomery County, Maryland, for the purpose of mitigating the health hazard caused by the asbestos found in the public roads, paths, and walkways of the county. Authorizes appropriations of $4,500,000 for this purpose.

H.R. 8210. July 11, 1977. Interior and Insular Affairs. Designates specified lands within the National Forest System in the State of Virginia as wilderness.

H.R. 8211. July 11, 1977. Judiciary. Relieves certain employees of the Department of the Navy of liability for specified amounts due to the United States as a result of overpayments of per diem allowances.

H.R. 8212. July 11, 1977. Judiciary. Directs the Secretary of the Treasury to redetermine the tax liability of a certain individual for the taxable year 1962.

H.R. 8213. July 12, 1977. Veterans' Affairs. Requires the Administrator of Veterans' Affairs to pay (in addition to any already paid) a monthly pension to each veteran of World War I who meets specified service requirements, or to the surviving spouse of each such veteran, or when there is no surviving spouse, to the child or children of each such veteran.

H.R. 8214. July 12, 1977. Interior and Insular Affairs. Enlarges the membership of the Gateway National Recreation Area Advisory Commission.

H.R. 8215. July 12, 1977. Government Operations; Public Works and Transportation. Amends the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 to provide for the reimbursement of costs to real property owners who prevail in specified condemnation proceedings.

H.R. 8216. July 12, 1977. Veterans' Affairs. Repeals the delimiting period in which an eligible veteran must use his educational benefits.

H.R. 8217. July 12, 1977. Ways and Means. Amends the Emergency Unemployment Compensation Act of 1974 to (1) provide extended benefits in States with high unemployment rates and (2) permit an individual to receive emergency compensation even though he failed to apply for or accept suitable employment if the average pay for the position does not exceed 75 percent of the individuals' average weekly wage, as defined by this Act.

H.R. 8218. July 12, 1977. Ways and Means. Amends the Internal Revenue Code of 1954 and Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to increase the tax base of OASDI program.

Amends Title II: (1) to revise the method for determining benefit amounts; and (2) to eliminate gender-based distinctions in awarding benefits.

H.R. 8219. July 12, 1977. Public Works and Transportation. Amends the Flood Control Act of 1958 to authorize the Secretary of the Army, acting through the Chief of Engineers, to implement a nonstructural plan for flood damage reduction on the Tittabawassee River at Midland, Michigan, in lieu of structural flood damage reduction, or combination thereof.

H.R. 8220. July 12, 1977. Judiciary. Increases per diem pay and revises subsistence and travel allowances of Federal court witnesses.

H.R. 8221. July 12, 1977. Education and Labor. Amends the Adult Education Act to increase the funds available for Guam, American Samoa, the Trust Territory of the Pacific Islands, and the Virgin Islands.

H.R. 8222. July 12, 1977. Ways and Means. Amends the Tariff Schedules of the United States to exempt from customs duties products of the insular possessions of the United States if not more than 70 percent of the product's value is attributable to foreign materials, until the value of such imports reaches a specified annual total. Exempts watch products from such quota. Exempts from customs duties products of the insular possessions of the United States upon reentry, if applicable duties were previously paid.

H.R. 8223. July 12, 1977. Judiciary; Interior and Insular Affairs. Reduces the size of the Bull Run Reserve within Mount Hood National Forest, Oregon.

H.R. 8224. July 12, 1977. Interstate and Foreign Commerce; Ways and Means. Amends Title XVIII (Medicare) of the Social Security Act to eliminate the deduction from payments to providers of health services for unreplaced blood and provides for payment to providers of health services for processing fees incurred in the replacement of blood.

H.R. 8225. July 12, 1977. Interstate and Foreign Commerce. Amends the Regional Rail Reorganization Act of 1973 to permit States to combine their entitlements for rail service continuation subsidies in order to improve rail properties within their respective States or regions.

H.R. 8226. July 12, 1977. Veterans' Affairs. Provides that recipients of veterans' pensions and compensation will not have the amount of such pension or compensation reduced because of increases in social security benefits.

H.R. 8227. July 12, 1977. Interior and Insular Affairs. Directs the Secretary of the Interior to convey to the present owners specified lands in Hennepin County, Minnesota.

H.R. 8228. July 12, 1977. Government Operations. Establishes the Federal Emergency Assistance and Preparedness Administration to implement and coordinate all Federal disaster assistance and emergency preparedness programs and to collect data to be made available to the public, States and localities respecting the prediction and planning for emergencies and disasters. Extends the termination dates of specified provisions of the Federal Civil Defense Act to September 30, 1980.

H.R. 8229. July 12, 1977. Veterans' Affairs. Requires the Administrator of Veterans' Affairs to provide eligible veterans with professional readjustment counseling, preventive health care services, and treatment and rehabilitation for alcohol or drug dependence or abuse disabilities.

H.R. 8230. July 12, 1977. Judiciary. Amends the Omnibus Crime Control and Safe Streets Act of 1968 to include rescue squad members in the group of persons eligible for public safety officers' death benefits.

H.R. 8231. July 12, 1977. Small Business; Banking, Finance and Urban Affairs. Amends the Small Business Act to establish the Division of Advocacy, Economic Research, and Analysis within the Small Business Administration. Enunciates a national small business economic policy and requires that the President annually assess the capital needs of small business.

Creates the Small Business Economic Council to advise the President of the impact of Federal programs on small business and to maximize the cooperation between the administration and other Federal departments and agencies.

H.R. 8232. July 12, 1977. Education and Labor. Exempts from coverage under the Farm Labor Contractor Registration Act of 1963 any person who engages in farm labor contracting solely within a 75-mile (currently, within only a 25-mile) radius of his home.

H.R. 8233. July 12, 1977. Education and Labor. Amends the Farm Labor Contractor Registration Act of 1963 to add to the definition of "migrant worker" the requirement that an individual's employment necessitates travel of a kind which prevents such individual from returning to his permanent residence on a daily basis.

H.R. 8234. July 12, 1977. Education and Labor. Exempts from coverage under the Farm Labor Contractor Registration Act of 1963 any person who engages in farm labor contracting solely for the purpose of supplying migrant workers who return each day from their places of employment to their permanent residences.

H.R. 8235. July 12, 1977. Post Office and Civil Service. Prohibits the Postal Service from decreasing the frequency of mail delivery service below the frequency in effect for the calendar year beginning May 1, 1977.

H.R. 8236. July 12, 1977. Judiciary. Renders survivors of rescue squad members killed in the performance of duty eligible for public safety officer death benefits under the Omnibus Crime Control and Safe Streets Act of 1968.

H.R. 8237. July 12, 1977. Banking, Finance and Urban Affairs. Extends assistance for purposes of rehabilitation of historic structures under the following housing programs: (1) Federal insurance of rehabilitation loan program; (2) direct loan for rehabilitation; and (3) urban renewal rehabilitation loan program.

H.R. 8238. July 12, 1977. Post Office and Civil Service. Provides for congressional oversight of all rate, fee, and mail classification decisions made by the Postal Rate Commission. Sets maximum size and weight limits for all parcel mail. Abolishes the Board of Governors of the Postal Service and transfers its functions to the Postmaster General.

H.R. 8239. July 12, 1977. Judiciary. Grants a Federal charter to the United States Coastal Cadets.

H.R. 8240. July 12, 1977. Veterans' Affairs. Declares that the term "veteran" includes a person in the active military, naval, or air service who receives an early discharge conditioned upon immediate reentrance of such services.

H.R. 8241. July 12, 1977. Veterans' Affairs. Includes lupus erythematosis among the chronic diseases for purposes of the administration of service-connected disability compensation by the Administrator of Veterans' Affairs.

H.R. 8242. July 12, 1977. Veterans' Affairs. Entitles to hospital and domiciliary care and other medical services any member of the Canadian Armed Forces: (1) who served in armed conflict with an enemy of the United States during World War I or World War II; and (2) who has been a citizen of the United States for at least ten years.

H.R. 8243. July 12, 1977. Ways and Means. Amends the Medicare program of the Social Security Act to authorize the President to enter agreements establishing reciprocal arrangements between such program and the program of any foreign country under which health services are provided.

H.R. 8244. July 12, 1977. Ways and Means. Amends the Internal Revenue Code to increase the limitations on charitable deductions and investment tax credits taken by cooperative corporations. Allows cooperatives to allocate their investment tax credits among their patrons.

H.R. 8245. July 12, 1977. Armed Services. Makes it unlawful for any individual or entity to solicit to enroll or enroll any member of the armed forces in any labor organization or for any member of the armed forces to join, or encourage others to join any labor organization. Sets forth penalties for violations of this Act.

H.R. 8246. July 12, 1977. Education and Labor. Amends the Civil Rights Act of 1964 to deny exemption from the prohibition against unlawful employment practices to seniority systems which perpetuate the effects of past discrimination.

H.R. 8247. July 12, 1977. Armed Services. Abolishes one of the two present positions of Deputy Secretary of Defense within the Department of Defense. Establishes an Under Secretary of Defense for policy. Renames the present position of Director of Defense for Research and Engineering as the Under Secretary of Defense for Research and Engineering.

H.R. 8248. July 12, 1977. Armed Services. Entitles certain unremarried former spouses of members of the uniformed services to medical and dental benefits under the Civilian Health and Medical Plan of the Uniformed Services (CHAMPUS).

H.R. 8249. July 12, 1977. Education and Labor. Exempts from coverage under the Farm Labor Contractor Registration Act of 1963 any persons who engage in farm labor contracting within a 50-mile (currently, a 25-mile) radius of their permanent place of residence and for not more than 26 (currently, 13) weeks.

H.R. 8250. July 12, 1977. Judiciary. Prohibits the admission of any immigrant unless a United States citizen has agreed in writing to sponsor such immigrant and to reimburse the Federal, State, or local government for financial support or medical treatment provided to the immigrant during the five-year period after entering the United States.

H.R. 8251. July 12, 1977. Ways and Means. Amends the Internal Revenue Code to exclude certain military retirement pay from gross income when such pay is essentially equivalent to a veteran's disability pension which is excludable.

H.R. 8252. July 12, 1977. Education and Labor. Amends the Comprehensive Employment and Training Act of 1973 to define the terms "low income" and "economically disadvantaged," for purposes of specified youth and other special programs, to mean an individual who is a member of a household which has a current gross family income at a rate not in excess of that income level (adjusted for specified differences) determined annually by the Secretary of Labor based upon the most recent lower living standard budget issued by the Bureau of Labor Statistics.

H.R. 8253. July 12, 1977. Judiciary. Requires a petition for removal of a State prosecution to Federal court to include all grounds for removal. Specifies procedures for consideration of such petitions by district courts.

H.R. 8254. July 12, 1977. Ways and Means; Public Works and Transportation. Amends the Internal Revenue Code to impose an excise tax on property transported by carriers on inland waterways. Authorizes the Secretary of the Army to collect a $25 fee for the use of locks along such waterways.

H.R. 8255. July 12, 1977. Judiciary. Declares that specified provisions of the Immigration and Nationality Act shall be inapplicable in the case of a certain individual.

H.R. 8256. July 13, 1977. Education and Labor. Amends the Wagner-Peyser Act to direct the Secretary of Labor to provide technical and management assistance to State public employment offices, establish a national clearinghouse for employment service information in the United States Employment Service, and implement an assistance program for certain State employment office job placement projects.

Directs the Secretary to study the merits of a nationwide job bank system.

H.R. 8257. July 13, 1977. Interstate and Foreign Commerce. Amends the Clean Air Act to authorize States to unilaterally revise clean air implementation plans to suspend or eliminate provisions which curtail motor vehicle parking in urban areas.

H.R. 8258. July 13, 1977. Armed Services. Entitles certain unremarried former spouses of members of the uniformed services to medical and dental benefits under the Civilian Health and Medical Plan of the Uniformed Services (CHAMPUS).

H.R. 8259. July 13, 1977. Government Operations; Public Works and Transportation. Amends the Uniform Relocation Assistance and Real Property Acquisition Policies Act to redefine the term "person" in order to exclude persons who are unlawfully present in the United States from entitlement to relocation payments.

H.R. 8260. July 13, 1977. Judiciary. Authorizes the district court to award reasonable attorney's fees and costs to any prevailing taxpayer in any case in which tax liability to the United States is asserted.

H.R. 8261. July 13, 1977. Judiciary. Gives the author of a pictorial, graphic, or sculptural work the right to claim authorship of such work and to object to any distribution or alteration thereof, and to enforce any other limitation recorded in the Copyright Office that would prevent prejudice to the author's honor or reputation during the life of such author and 50 years after death.

H.R. 8262. July 13, 1977. Small Business. Simplifies Government contracting procedures with respect to small businesses.

Establishes Government contract arbitration panels within the Small Business Administration.

Directs Federal agencies to take the apparent low responsive bidder's small business concern subcontracting plan into account in determining the responsibility of such bidder for the award of such contract.

Assigns an employee of the Small Business Administration to each Federal agency.

Establishes the Small Business Procurement Advisory Committee.

H.R. 8263. July 13, 1977. Judiciary. Directs that United States attorneys be appointed and subject to removal by the Attorney General rather than the President.

Eliminates set terms for United States attorneys.

H.R. 8264. July 13, 1977. Interstate and Foreign Commerce. Authorizes the Federal Energy Administrator to establish an energy stamp program to assist low-income households in meeting monthly fuel costs.

H.R. 8265. July 13, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act by removing the limitation upon the amount of outside income which an individual may earn while receiving benefits.

H.R. 8266. July 13, 1977. Judiciary. Prohibits use or supply of false documentation, false information, or birth or immigration documents of another for purposes of obtaining a Federal document containing an element of identification.

Forbids commerce in such information or documentation for purposes of securing a State or local government document containing an element of identification.

Proscribes specified acts relative to: (1) forgery, counterfeiting, or alteration of Federal, State, or local government documents containing an element of identification; (2) interstate or foreign commerce in any such counterfeited, forged, or altered document; and (3) receipt, possession, use, or furnishing of any such document with intent to secure false official identification.

H.R. 8267. July 13, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to increase to $6,000 the amount an individual may earn without a reduction in benefits and to eliminate the five-month waiting period for disability benefits.

Amends Title II and the Railroad Retirement Act of 1974 to include all types of income in determining deductions from benefits and to eliminate the requirement that individuals be entitled to disability benefits for 24 consecutive months before qualifying for Medicare benefits on the basis of disability.

H.R. 8268. July 13, 1977. Education and Labor; Judiciary. Amends the Civil Rights Act of 1964 to prohibit discrimination based on affectional or sexual preference in: (1) public accommodations; (2) public facilities; (3) public education; (4) federally assisted opportunities; (5) equal employment opportunities; (6) housing; and (7) educational programs receiving Federal assistance.

H.R. 8269. July 13, 1977. Education and Labor; Judiciary. Amends the Civil Rights Act of 1964 to prohibit discrimination based on affectional or sexual preference in: (1) public accommodations; (2) public facilities; (3) public education; (4) federally assisted opportunities; (5) equal employment opportunities; (6) housing; and (7) educational programs receiving Federal assistance.

H.R. 8270. July 13, 1977. Ways and Means; Interstate and Foreign Commerce, amends Titles XVIII (Medicare) and XIX (Medicaid) of the Social Security Act to revise the conditions and limitations applicable to home health services under such titles.

Establishes a Home Health Patient Ombudsman in the Department of Health, Education, and Welfare.

Increases the amount of Federal funds which may be made available to public agencies for congregate housing under the United States Housing Act of 1937.

H.R. 8271. July 13, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to provide Medicare benefits for individuals who require total parenteral nutrition (TPN) as a result of intestinal surgery.

H.R. 8272. July 13, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to provide Medicare benefits for individuals who require total parenteral nutrition (TPN) as a result of intestinal surgery.

H.R. 8273. July 13, 1977. Agriculture. Amends the Commodity Exchange Act to expand the present Congressional oversight of the Commodity Futures Trading Commission. Requires the Commission to furnish specified items of information, including any information about its own investigations and activities, to any subcommittee as well as to any committee of either House of Congress, or to the chairman of any committee or subcommittee, acting within the scope of the jurisdiction of such committee or subcommittee.

H.R. 8274. July 13, 1977. Public Works and Transportation; Armed Services. Amends the Federal Aviation Act of 1958 to require the Department of Defense, in transporting persons or property by air between a place in the United States and a place outside the United States, or between two points inside the United States, to use air carriers participating in the civil reserve air fleet program to to fullest extent practicable.

H.R. 8275. July 13, 1977. Education and Labor. Authorizes the Secretary of Health, Education, and Welfare to provide Federal financial assistance to employers, labor organizations and public or private nonprofit agencies to establish occupational alcoholism programs for the diagnosis and treatment of alcohol abuse in employed persons.

Authorizes the appropriation of a specified percentage of Federal taxes collected on alcohol to finance such assistance.

H.R. 8276. July 13, 1977. Merchant Marine and Fisheries. Amends the Merchant Marine Act, 1936, to extend the age limitation before which passenger ships delivered on or after December 1, 1952, can qualify for operating differential subsidies from 25 to 30 years.

H.R. 8277. July 13, 1977. Ways and Means. Amends the Internal Revenue Code to provide for the credit or refund of highway use taxes on motor vehicles which are destroyed through casualty or theft while registered to the taxpayer.

H.R. 8278. July 13, 1977. Interstate and Foreign Commerce. Amends the Department of Transportation Act and the Regional Rail Reorganization Act to revise the time periods during which Federal financial assistance shall be available for rail service assistance programs under such Acts.

H.R. 8279. July 13, 1977. Government Operations. Requires, under the Privacy Act of 1974, Federal agencies maintaining records which identify persons to whom they pertain to disclose to such persons the actual uses and disclosures made of such records when access to such records is granted to such person under that Act. Specifies limitations on disclosures of such records to third parties, on collection, and on maintenance of such information. Requires agencies to reconsider any determination which was made on the basis of erroneous information which has been subsequently corrected.

H.R. 8280. July 13, 1977. Banking, Finance and Urban Affairs. Sets restrictions on Federal Government access to personal information on individuals which is held by consumer reporting agencies, creditors, financial and insurance institutions.

H.R. 8281. July 13, 1977. Banking, Finance and Urban Affairs. Amends the Fair Credit Reporting Act to set standards to be followed by depository institutions with respect to the gathering of any information concerning a consumer, including disclosure to the consumer of all types of information which may be collected and all types of institutions which may collect such information.

Requires an electronic funds transfer service to destroy individually identifiable account information 45 days after the date of each transaction.

H.R. 8282. July 13. 1977. Banking, Finance and Urban Affairs. Amends the Fair Credit Reporting Act to make specified restrictions on disclosures by credit reporting agencies applicable to independent authorization services who regularly engage in the practice of providing consumer credit information.

Requires credit card issuers to maintain reasonable procedures to prevent disclosures of inaccurate information.

H.R. 8283. July 13, 1977. Interstate and Foreign Commerce; Ways and Means. Directs the Secretary of Health, Education, and Welfare to require each medical-care institution participating in the Medicaid or Medicare program to implement procedures for the maintenance and disclosure of personal medical information.

Prohibits the disclosure of personal medical information by such institutions except for specifically delineated purposes. Allows Federal officials or employees to obtain such information through proper judicial or administrative subpenas.

Includes within the definition of mail fraud the false or fraudulent procurement of personal medical information through the mails.

H.R. 8284. July 13, 1977. Ways and Means. Limits Federal departments, establishments, or agencies in their use of social security account numbers to identify accounts pertaining to individuals.

H.R. 8285. July 13, 1977. Banking, Finance and Urban Affairs. Amends the Fair Credit Reporting Act to require a credit grantor to disclose, upon request, specified information to a consumer who is adversely affected by a credit decision. Sets forth procedures to be followed when a consumer disputes the completeness or accuracy of any item of information contained in such consumer's file.

Requires each commercial reporting service to maintain reasonable procedures designed to avoid the disclosure of inaccurate information to third persons and to assure that information maintained in its files is accurate.

Makes provisions for the enforcement of this Act.

H.R. 8286. July 13, 1977. Agriculture; Interstate and Foreign Commerce; Ways and Means. Requires each State, as a condition for the receipt of Federal moneys for public assistance or social services programs, to provide for the privacy of records used in the administering of such programs. Subjects such State privacy laws to the certification of the Secretary of Health, Education, and Welfare as meeting the principles specified in this Act. Requires in accordance with such principles, the provision of access to information by the person subject of such information, the correction and accuracy of such information and the establishment of appropriate remedies and penalties for the enforcement of such statute.

H.R. 8287. July 13, 1977. Ways and Means. Amends the Internal Revenue Code to restrict or prohibit the disclosure of taxpayer return information in matters pertaining to: prospective jurors; State tax enforcement; investigations of prospective Federal appointees; child support enforcement efforts; and Federal enforcement of nontax laws.

H.R. 8288. July 13, 1977. Banking, Finance and Urban Affairs. Amends the Fair Credit Reporting Act to establish safeguards for holders of insurance policies against errors of the insurance institution and violation of the privacy of such holders.

Directs the Federal Trade Commission to promulgate regulations requiring specified institutions to make disclosures to policy holders. Specifies which information shall be disclosed.

H.R. 8289. July 13, 1977. Education and Labor. Amends the National Labor Relations Act to (1) stipulate that only bargaining representatives chosen by secret ballot may be deemed exclusive representatives, (2) forbid a labor organization to threaten or impose economic sanctions against any person exercising rights under the Act, (3) institute a strike vote system, (4) deem binding arbitration an exclusive remedy in certain disputes, and (5) permit members of certain religious bodies, or sects to refrain from joining or financially supporting unions.

Amends the Federal Election Campaign Act to prohibit use of any payroll deduction procedure in soliciting and collecting contributions for a segregated campaign fund.

H.R. 8290. July 13, 1977. Interior and Insular Affairs. Directs the Secretary of the Interior to establish the Jean Lafitte National Park in Louisiana. Establishes the Delta Region Preservation Commission to advise the Secretary of the Interior on general policies and specific matters related to the planning, administration, and development of such park.

H.R. 8291. July 13, 1977. Ways and Means. Entitles, under the Social Security Act, States whose rates of insured unemployment is at least six percent to partial reimbursement on an ascending sliding scale of unemployment compensation costs incurred above a certain amount.

H.R. 8292. July 13, 1977. Ways and Means. Entitles, under the Social Security Act, States whose rates of insured unemployment is at least six percent to partial reimbursement on an ascending sliding scale of unemployment compensation costs incurred above a certain amount.

H.R. 8293. July 13, 1977. Interstate and Foreign Commerce. Reaffirms the intent of Congress with respect to the structure of the common carrier telecommunications industry rendering service in interstate and foreign commerce. Grants additional authority to the Federal Communications Commission to authorize mergers of carriers when deemed to be in the public interest. Reaffirms the authority of the States to regulate terminal and station equipment used for telephone exchange service.

H.R. 8294. July 13, 1977. Ways and Means. Amends the Internal Revenue Code of 1954 with respect to the payment of unemployment compensation to nonprofessional school employees during periods between academic years or terms.

H.R. 8295. July 13, 1977. Ways and Means. Prohibits an increase in hospital personnel and the purchase of new equipment or facilities for use in health care delivery during the 24-month period beginning on October 1, 1977.

H.R. 8296. July 13, 1977. Public Works and Transportation. Requires the Secretary of Transportation to establish a schedule of user charges to be paid by the owner or operator of any shallow-draft cargo vessel using inland waterways.

H.R. 8297. July 13, 1977. Education and Labor. Amends the Age Discrimination in Employment Act of 1967 to make the provisions, formerly applicable to persons between 40 and 65 years of age, applicable to anyone 40 years of age or older.

H.R. 8298. July 13, 1977. Ways and Means. Amends the Internal Revenue Code to provide an additional income tax exemption for disabled taxpayers and their spouses and dependents. Allows disabled taxpayers to deduct their personal care expenses where they are not receiving such services from their States under Social Security grants.

H.R. 8299. July 7, 1977. Public Works and Transportation. Amends the Airport and Airway Development Act of 1970 to direct the Secretary to obligate a certain portion of the funds authorized to be appropriated under such Act for improving air navigation facilities for the purpose of establishing no fewer than 45 automated flight service stations. Defines "flight service stations" as air navigation facilities used to assist pilots in the safe conduct of flight.

H.R. 8300. July 13, 1977. Veterans' Affairs. Exempts courses which lead to a standard college degree from the "85–15" rule governing approval of courses for enrollment by veterans receiving educational assistance allowances, and limits application of the rule to proprietary profit or proprietary nonprofit educational institutions. Consolidates existing provisions of the law relating to the certification of courses. Exempts specified kinds of courses from the two-year minimum of operation requirement. Prohibits the execution of powers of attorney for the negotiation of educational assistance allowance checks.

H.R. 8301. July 13, 1977. Banking, Finance, and Urban Affairs. Amends the National Housing Act to permit the Secretary of Housing and Urban Development to insure mortgages and loans with varying rates of amortization corresponding to anticipated variations in family income on a regular basis.

Amends the Internal Revenue Code to establish tax-exempt savings accounts which would be available to first-time home buyers, known as individual housing accounts.

H.R. 8302. July 13, 1977. Ways and Means; Public Works and Transportation.

Imposes a three cent-per-gallon fuel excise tax, and a $32 passage fee for locks on inland waterways, upon commercial vessels using those waterways. Conditions such tax and passage fee upon the construction of the Alton lock.

H.R. 8303. July 13, 1977. Ways and Means; Interstate and Foreign Commerce.

Amends Title XI (General Provisions) of the Social Security Act to require the participation of optometrists in the activities of the National Professional Standards Review Council and of local professional standards review organizations.

H.R. 8304. July 13, 1977. Public Works and Transportation.

Authorizes the Secretary of Transportation to make grants to airport operators to cover 100 perecnt of the costs of projects to: (1) mark runways and taxiways or to establish a taxiway guidance system; or (2) to purchase and install visual slope indicators.

Authorizes appropriations in specified amounts out of the Airport and Airway Trust Fund for fiscal years 1978, 1979, and 1980 to carry out such grant program.

H.R. 8305. July 13, 1977. Government Operations.

Amends the Office of Federal Procurement Policy Act to require the payment of interest on contract payments which are overdue under Federal contracts with small businesses.

H.R. 8306. July 13, 1977. Post Office and Civil Service.

Changes the organizational structure of the United States Postal Service by: (1) transferring the authority of the Board of Governors to the Postmaster General; (2) revising the procedures for adjustment of rates and services; (3) creating a procedure for review of proposed capital investments; and (4) requiring the Postal Rate Commission to submit to the President a separate annual budget.

H.R. 8307. July 13, 1977. Judiciary.

Declares that a certain synagogue shall not have to pay any amount to the referee's salary and expense fund during the course of proceedings under the Bankruptcy Act.

H.R. 8308. July 13, 1977. Judiciary.

Authorizes classification of a certain individual as a child for purposes of the Immigration and Nationality Act.

H.R. 8309. July 14, 1977. Public Works and Transportation; Ways and Means.

Authorizes the project for replacement of locks and dam 26 on the Mississippi River, Alton, Illinois, and Missouri.

Makes certain inland and intracoastal waterways subject to this Act. Authorizes the Secretary of Transportation to study the imposition of any fuel tax on inland waterway users, alternate or supplemental charges, and related matters.

H.R. 8310. July 14, 1977. Education and Labor. Amends the National Labor Relations Act to (1) stipulate that only bargaining representatives chosen by secret ballot may be deemed exclusive representatives, (2) forbid a labor organization to threaten or impose economic sanctions against any person exercising rights under the Act, (3) institute a strike vote systm, (4) deem binding arbitration an exclusive remedy in certain disputes, and (5) permit members of certain religions, bodies, or sects to refrain from joining or financially supporting unions.

Amends the Federal Election Campaign Act to prohibit use of any payroll deduction procedure in soliciting and collecting contributions for a segregated campaign fund.

H.R. 8311. July 14, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Titles XVIII (Medicare) and XIX (Medicaid) of the Social Security Act to require automatic sprinkler systems in all skilled nursing facilities and intermediate care facilities certified for participation in the Medicare or Medicaid programs unless a waiver of such requirement is granted in accordance with conditions set forth in this Act.

Establishes a program of low-interest Federal loans to assist such facilities in constructing or purchasing and installing automatic sprinkler systems.

H.R. 8312. July 14, 1977. Judiciary. Authorizes the district court to award reasonable attorney's fees and costs to any prevailing taxpayer in any case in which tax liability to the United States is asserted.

H.R. 8313. July 14, 1977. Ways and Means. Amends the Internal Revenue Code to repeal the taxpayer's age requirement (65 years) and the dollar limitation on the adjusted sales price ($35,000) for the exclusion from gross income of gain realized on the sale of the taxpayer's principal residence.

H.R. 8314. July 14, 1977. Ways and Means. Amends the Internal Revenue Code to allow individuals an income tax deduction for their commuting expenses on public transportation systems.

H.R. 8315. July 14, 1977. Agriculture. Amends the Consolidated Farm and Rural Development Act to make operating and real estate loans under such Act available to private domestic corporations and partnerships engaged in farming or ranching.

H.R. 8316. Juy 14, 1977. Ways and Means. Amends Title XVI (Supplemental Security Income for the Aged, Blind, and Disabled) of the Social Security Act to treat as earned income remuneration received by an individual for services performed in a sheltered workshop or work activities center in determining eligibility under such Title.

H.R. 8317. July 14, 1977. Post Office and Civil Service. Provides that an unremarried former spouse of a Federal employee who is married to such employee for five years or more shall be entitled to a portion of such employee's annuity and to a portion of the annuity of any surviving spouse of such employee.

H.R. 8318. July 14, 1977. Interior and Insular Affairs. Declares certain New Mexican lands to be held in trust for the Ramah Band of the Navajo Tribe.

H.R. 8319. July 14, 1977. Post Office and Civil Service. Grants civil service retirement benefits comparable to those provided Federal firefighters and law enforcement officers for persons employed by the Energy Research and Development Administration as atomic energy security guards or ERDA couriers. Requires the retirement of such employees when they have attained the age of 55 years and completed 20 years of service.

H.R. 8320. Juy 14, 1977. Interior and Insular Affairs. Authorizes Federal financial assistance for the operation and maintenance of the Theodore Roosevelt Inaugural National Historic Site in Buffalo, New York.

H.R. 8321. July 14, 1977. Interior and Insular Affairs. Authorizes Federal financial assistance for the operation and maintenance of the Theodore Roosevelt Inaugural National Historic Site in Buffalo, New York.

H.R. 8322. July 14, 1977. House Administration. Directs that five regional primaries be held each Presidential election year. Sets forth guidelines for such primaries relative to (1) date, (2) content of ballots, (3) qualifying for placement on ballots, (4) eligibility for voting, and (5) scope of voter choice.

Requires allocation of State convention delegates on the basis of percentage of votes received within the State.

Requires each delegate to vote for the candidate for whom he was appointed until (1) two ballots have been taken, (2) such candidate receive less than 20 percent of votes cast, or (3) such candidate releases him.

H.R. 8323. July 14, 1977. Judiciary. Amends the Omnibus Crime Control and Safe Streets Act of 1968 to extend public safety officer death benefits to members of volunteer ambulance, first aid, or rescue squads.

Makes coverage under the Public Safety Officers Benefits Act retroactive so as to apply to deaths occurring after 1971.

H.R. 8324. July 14, 1977. Interstate and Foreign Commerce. Prohibits the Interstate Commerce Commission from authorizing the abandonment of any rail line or the discontinuance of any rail service for 18 months.

Amends the Department of Transportation Act to stipulate that the Federal share of the costs of rail service assistance programs under such Act shall be 100 percent for the first fiscal year which is more than 18 months after the enactment of the this Act, 90 percent for the second fiscal year, 80 percent for the third and 70 percent for the fourth fiscal year.

H.R. 8325. July 14, 1977. International Relations. Prohibits the obligation or expenditure of any funds for use of United States Armed Forces which is prohibited by specified provisions of the War Powers Resolution. Prohibits the inference of authority to introduce United States Armed Forces into any hostilities from any concurrent resolution or executive agreement which does not specifically provide for such authority. Requires, in the case of an executive agreement, that such agreement, to constitute such authority, be implemented by legislation specifically granting such authority.

H.R. 8326. July 14, 1977. Armed Services. Makes it unlawful for any individual or entity to solicit to enroll or enroll any member of the armed forces in any labor organization or for any member of the armed forces to join, or encourage others to join any labor organization. Sets forth penalties for violations of this Act.

H.R. 8327. July 14, 1977. District of Columbia. Establishes the Commission on the Adequacy of the Annual Federal Payment of the District to conduct a one year study of the adequacy of the annual Federal payment to the District of Columbia.

H.R. 8328. July 14, 1977. Banking, Finance and Urban Affairs. Amends the National Housing Act to permit the Secretary of Housing and Urban Development to insure mortgages and loans with varying rates of amortization corresponding to anticipated variations in family income on a regular basis.

Amends the Internal Revenue Code to establish tax-exempt savings accounts which would be available to first-time house buyers, known as individual housing accounts.

H.R. 8329. July 14, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to extend the coverage for dental services to include any services performed by a properly licensed dentist and to authorize payment under such program for all inpatient hospital services furnished in connection with dental procedures requiring hospitalization.

H.R. 8330. July 14, 1977. Veterans' Affairs. Directs the Secretary of Defense to establish a memorial tomb in the Memorial Amphitheater of the National Cemetery at Arlington, Virginia, to commemorate the members of the Armed Forces who lost their lives during the Vietnam era in Southeast Asia and whose remains have never been recovered.

Directs the Secretary to inter in such tomb the remains of an unknown serviceman recovered from Southeast Asia.

H.R. 8331. July 14, 1977. Interstate and Foreign Commerce. Amends the Securities Investor Protection Act with respect to the liquidation of self-regulatory organizations.

Revises the Act to cover (1) the powers and duties of trustees in bankruptcy; (2) special provisions of a liquidation proceeding; (3) advances in a liquidation proceeding; and (4) direct payment procedure in such actions.

H.R. 8332. July 14, 1977. Rules; Post Office and Civil Service. Requires all legislation in the House of Representatives which establishes any civil service or executive branch position with a rate of pay equal to or greater than that for level V of the Executive Schedule to be referred to the Committee on Post Office and Civil Service.

Limits the maximum number of such positions to the number in existence on the date this Act is enacted. Requires the President to transmit to Congress by January 1, 1979, a plan for authorizing executive level positions in the executive branch including the maximum number of such positions. Terminates any authority within the executive branch to employ any executive level position which is in effect on the date of enactment of this Act effective July 1, 1980.

H.R. 8333. July 14, 1977. Ways and Means. Amends the Internal Revenue Code to lower individual and corporate income tax rates.

H.R. 8334. July 14, 1977. Interstate and Foreign Commerce. Exempts sales of natural gas by small, independent producers from regulation by the Federal Power Commission.

H.R. 8335. July 14, 1977. Ways and Means. Amends the Internal Revenue Code to require an automatic cost-of-living adjustment in the income tax rates, the amount of the standard deduction, personal exemption, and depreciation deduction, and the rate of interest payable on certain obligations of the United States.

H.R. 8336. July 14, 1977. Interior and Insular Affairs. Establishes the Chattahoochee River National Recreation Area composed of a 48-mile segment of the Chattahoochee River and adjoining lands in the State of Georgia. Authorizes the Secretary of the Interior to acquire property for such recreation area and provides for its development.

H.R. 8337. July 14, 1977. Interstate and Foreign Commerce; Ways and Means. Sets forth a program to constrain the rate of increase in total acute care hospital inpatient costs.

Establishes the limits to be imposed on increases in hospital inpatient charges and reimbursements.

Amends the Internal Revenue Code of 1954 to establish an excise tax on charges for hospital services in excess of the limit.

H.R. 8338. July 14, 1977. Agriculture. Amends the Agriculture Act of 1949 to establish separate reserves of wheat, corn and other feed grains through storage contracts with producers. Sets loan levels for the 1977 through 1981 crops of wheat and corn. Authorizes the President to establish an International Emergency Food Reserve in this country and to negotiate international agreements with other countries to develop an international system of food reserves for humanitarian food relief.

H.R. 8339. July 14, 1977. Ways and Means. Amends the Internal Revenue Code to qualify trusts established for the payment of product liability claims as tax exempt organizations. Allows taxpayers a business income tax deduction for contributions to such trusts only to the extent they exceed the reasonable costs of product liability insurance for the deducting taxpayer.

H.R. 8340. July 15, 1977. Agriculture. Authorizes the Secretary of Agriculture, through the Packers and Stockyards Administration, to monitor sales and transfers of meat and meat food products of 40,000 pounds or more and to require persons involved in such sales and transfers to report information concerning prices and quantities.

H.R. 8341. July 15, 1977. Interstate and Foreign Commerce. Amends Title XIX (Medicaid) of the Social Security Act to qualify an individual who, although employable, is unable to care for his or her personal needs without assistance as a disabled person eligible for the services of a home health aide.

H.R. 8342. July 15, 1977. Post Office and Civil Service. Requires the withholding of city income taxes from the pay of Federal employees who are residents of the city or county imposing such taxes.

H.R. 8343. July 15, 1977. Ways and Means. Amends the Internal Revenue Code to reduce the excise tax on private foundations investment income.

H.R. 8344. July 15, 1977. Ways and Means. Amends the Internal Revenue Code to reduce the excise tax on private foundations' investment income.

H.R. 8345. July 15, 1977. Ways and Means. Amends the Internal Revenue Code to allow individuals alternative, limited income tax credits or deductions for the tuition paid for the primary, secondary of higher education of the taxpayer, his spouse and dependents.

H.R. 8346. July 15, 1977. Public Works and Transportation. Amends the Urban Mass Transportation Act of 1964 to increase the Federal share of the costs or providing rail passenger service (emergency operating assistance) during a specified period. Removes specified restrictions regarding eligibility for such assistance during such period.

H.R. 8347. July 15, 1977. Veterans' Affairs. Increases the period of veterans' education assistance from 45 to 54 months, and eliminates the delimiting period. Grants eligibility for such assistance to any veteran of World War II, the Korean conflict, or the Vietnam era whose previous entitlement terminated without such veteran's availing himself of all the assistance to which he was entitled.

H.R. 8348. July 15, 1977. Public Works and Transportation. Amends the Airport and Airway Development Act of 1970 to direct the Secretary of to obligate a certain portion of the funds authorized to be appropriated under such Act for improving air navigation facilities for the purpose of establishing no fewer than 45 automated flight service stations. Defines "flight service stations" as air navigation facilities used to assist pilots in the safe conduct of flight.

H.R. 8349. July 15, 1977. Veterans' Affairs. Provides that recipients of veterans' pensions and compensation will not have the amount of such pension or compensation reduced because of increases in social security benefits.

H.R. 8350. July 15, 1977. Judiciary. Amends the Immigration and Nationality Act to exclude from admission into, and provide for the deportation from the United States of any alien who engaged or assisted in, or incited or directed others to engage in, the persecution of others on the basis of religion, race, or national origin under the direction of the Nazi government of Germany between March 23, 1933, and May 8, 1945.

H.R. 8351. July 15, 1977. Agriculture. Amends the Agricultural Act of 1949 to extend specified provisions of the feed grain program through the 1981 crops. Sets loan levels, replaces established prices with target prices, and revises formulae for the determination of acreage allotments and disaster and prevented planting payments.

H.R. 8352. July 15, 1977. Banking, Finance and Urban Affairs. Amends the National Housing Act to permit the Secretary of Housing and Urban Development to insure mortgages and loans with varying rates of amortization corresponding to anticipated variations in family income on a regular basis.

Amends the Internal Revenue Code to establish tax-exempt savings accounts which would be available to first-time home buyers, known as individual housing accounts.

H.R. 8353. July 15, 1977. Interior and Insular Affairs. Amends the Federal Coal Leasing Amendments Act of 1975 to extend for an additional year the deadline for the Office of Technology Assessment study of Federal coal leasing to be undertaken pursuant to such Act.

H.R. 8354. July 15, 1977. Judiciary. Amends the Immigration and Nationality Act to eliminate the limit on the number of alien children which may be adopted.

H.R. 8355. July 15, 1977. Ways and Means. Amends the Tariff Schedules of the United States to repeal the duty imposed on articles assembled abroad with components produced in the United States.

H.R. 8356. July 15, 1977. International Relations. Establishes a Commission on Proposals for a National Academy of Peace and Conflict Resolution to study the establishment of such academy and alternative proposals which would assist the Federal Government in promoting peace. Directs the Commission to review the theory and techniques of conflict resolution and the institutions for conflict resolution

H.R. 8357. July 15, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to increase from 22 to 26 the age until which child's insurance benefits may be paid on the basis of full-time student status, and the age before which a child must have become disabled to qualify for disability benefits.

H.R. 8358. July 15, 1977. House Administration. Provides for the designation of the library of any nationally accredited law school as a depository library upon request of such law school

H.R. 8359. July 15, 1977. Judiciary. Amends the Clayton Antitrust Act to entitle the United States, natural persons, and State attorney generals acting as parens patriae for persons residing within the State to bring civil actions under such Act for injury in fact, whether direct or indirect.

H.R. 8360. July 15, 1977. Judiciary. Permits Federal agencies to award fees and costs of participation of persons who contribute substantially to the agency's decisionmaking process and whose interest in the outcome is comparatively small, or who could not participate but for such an award. Permits courts of the United States to award litigation costs to parties seeking judicial review of an agency's action if such person is afforded the relief sought, an important public purpose is served by such action, and such person's economic interest in the outcome is comparatively small or such person could not bring such action but for such award.

H.R. 8361. July 15, 1977. Interstate and Foreign Commerce. Amends the Railroad Safety Act of 1970 to direct the Secretary of Transportation to establish a Railroad Safety Advisory Committee to make recommendations to the Secretary with respect to rail safety.

Authorizes State agencies to carry out investigative and surveillance activities in connection with railroad safety laws and regulations.

Authorizes such an agency, with respect to violations of railroad safety laws or regulations within such State, to apply to the United States district court in the district where such violation occurred for injunctive relief.

H.R. 8362. July 15, 1977. Ways and Means. Amends the Trade Act of 1974 to permit to be included within a group of workers certified by the Secretary of Labor as eligible for adjustment assistance thereunder individuals whose last total or partial separation from employment occurred up to two years prior to the date of the petition on which such certification was granted.

H.R. 8363. July 15, 1977. Ways and Means. Amends the Social Security Act with respect to Old-Age, Survivors, and Disability Insurance by directing the Secretary of Health, Education, and Welfare to establish procedures for expediting (1) replacement of lost, stolen or misdelivered benefit checks; (2) initial benefit payments; (3) hearings on eligibility; and (4) final determinations of eligibility.

H.R. 8364. July 15, 1977. Judiciary. Makes the United States liable, through actions in the Courts of Claims, for damages caused by persons entitled to diplomatic immunity if the claimant has no other recourse due to such immunity.

H.R. 8365. July 15, 1977. Interstate and Foreign Commerce. Amends the Hours of Service Act to reduce the hours which a railroad employee may be on duty without at least ten consecutive hours off duty.

H.R. 8366. July 15, 1977. Interior and Insular Affairs. Revises the boundaries of the John Day Fossil Beds National Monument in the State of Oregon.

H.R. 8367. July 15, 1977. Ways and Means. Amends the Tariff Act of 1930 to revise customs procedures. Amends the Tariff Schedules of the United States with respect to the importation of alcohol, tobacco, and other articles for personal use.

H.R. 8368. July 15, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to revise the method of computing OASDI benefits by requiring that the primary insurance amount be based on an individual's ten or fewer years of highest earnings.

Requires the recomputation in accordance with this Act of the primary insurance amount of an individual entitled to OASDI benefits who has wages or self-employment income after 1978.

H.R. 8369. July 15, 1977. Veterans' Affairs. Permits acceleration of monthly educational assistance payments made by the Veterans' Administration to eligible veterans and dependents. Provides alternative financial and educational assistance to peacetime post-Korean veterans affected by the expiration of their delimiting period. Provides for a conditional extension of the delimiting period for certain Vietnam era veterans. Provides for the development of additional educational, employment, and readjustment assistance programs for veterans, and for protection against abuses and misuse of veterans benefits. Revises the criteria for nonaccredited courses.

H.R. 8370. July 15, 1977. Judiciary. Amends the Clayton Antitrust Act to entitle the United States, natural persons, and State attorney generals acting as parens patriae for persons residing within the State to bring civil actions under such Act for injury in fact to business or property as a direct or indirect purchaser or seller or otherwise.

H.R. 8371. July 15, 1977. Judiciary. Declares a certain individual conditionally eligible for naturalization under the Immigration and Nationality Act.

H.R. 8372. July 15, 1977. Judiciary. Deems a certain individual to have satisfied specified provisions of the Social Security Act for purposes of determining his entitlement to disability insurance benefits under such Act.

H.R. 8373. July 15, 1977. Judiciary. Deems the services rendered by a certain individual in the Public Health Service during a specified period as active, creditable service in the Armed Forces of the United States for purposes of determining his entitlement to retired pay.

H.R. 8374. July 18, 1977. Public Works and Transportation; Interstate and Foreign Commerce. Amends the Appalachian Regional Development Act of 1965 to direct the Appalachian Regional Commission to (1) continue assistance at current levels to child development programs under such Act; and (2) conduct a study of such programs with special regard to a procedure to transfer complete sponsorship of such programs from the Commission to State or private agencies.

Directs the Commission to report its findings to the Congress within one year after enactment of this Act. Authorizes appropriations necessary to carry out this Act.

H.R. 8375. July 18, 1977. Judiciary; Education and Labor. Prohibits affirmative action programs regarding discrimination in federally assisted programs, employment discrimination, Federal grantees or contractors, or Federal employment, from requiring quotas. Prohibits a finding of discrimination to be based solely upon the composition of the work force or membership in question. Prohibits relief in certain civil rights actions unless an act of discrimination has been committed. Prohibits any remedy in a civil rights action which establishes quotas. Prohibits requiring employers or contractors to collect data applicable to discrimination except pursuant to discovery procedures.

H.R. 8376. July 18, 1977. Interstate and Foreign Commerce. Amends the Public Health Service Act to authorize the Secretary of Health, Education, and Welfare to enter into contracts and make grants for the establishment and operation of voluntary Tay-Sachs disease screening, counseling, and information services.

H.R. 8377. July 18, 1977. Ways and Means. Amends the Internal Revenue Code to provide a $5,000 tax exclusion from gross income for any amount received as an annuity, pension, or other retirement.

H.R. 8378. July 18, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to increase to $750 the amount of lump-sum death payment allowed thereunder.

H.R. 8379. July 18, 1977. Ways and Means. Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to provide payment for hearing aids and dentures under the supplementary medical insurance program.

H.R. 8380. July 18, 1977. Ways and Means. Amends the Internal Revenue Code to allow up to a $200 income tax deduction for one half of the expenses incurred for the installation and purchase of a teletypewriter for use by individuals whose sight, hearing, or speech is impaired.

H.R. 8381. July 18, 1977. Public Works and Transportation; Ways and Means. Authorizes the project for replacement of locks and dam 26 on the Mississippi River, Alton, Illinois, and Missouri. Makes certain inland and intracoastal waterways subject to this Act. Authorizes the Secretary of Transportation to study the imposition of any fuel tax on inland waterway users, alternate or supplemental charges, and related matters.

H.R. 8382. July 18, 1977. Ways and Means. Amends the Internal Revenue Code to allow certain unemployed spouses of military personnel a $900 income tax deductions for payments into retirement savings.

H.R. 8383. July 18, 1977. Education and Labor. Amends the National Labor Relations Act to include as employers for the purposes of such Act States and political subdivisions thereof.

H.R. 8384. July 18, 1977. Ways and Means. Amends the Internal Revenue Code to provide a $5,000 tax exclusion from gross income for any amount received as an annuity, pension, or other retirement benefit.

H.R. 8385. July 18, 1977. Judiciary. Revises provisions imposing penalties for the commission of rape, including carnal knowledge of a female under age 16, within the special maritime and territorial jurisdiction of the United States to (1) set forth penalties for any unconsented sexual contact or penetration; (2) proscribe sexual contact or penetration with any person under age 16; (3) detail sentencing guidelines; and (4) prohibit introduction of evidence regarding a victim's prior sexual conduct absent a ruling by the court after an in camera hearing.

H.R. 8386. July 18, 1977. Veterans' Affairs. Increases the rates of specified veterans' educational assistance allowances, makes exceptions to the "85–15" and the two-year minimum period of course operation rules, and lowers the disability rating necessary to qualified a disabled veteran for employment and training assistance.

H.R. 8387. July 18, 1977. Banking, Finance and Urban Affairs. Sets forth requirements and restrictions respecting the use of electronic funds transfers by depository institutions.

H.R. 8388. July 18, 1977. Interstate and Foreign Commerce; Public Works and Transportation. Amends the Transportation Safety Act of 1974 to require rail or motor carriers transporting hazardous materials to notify the chief executive of any State through which such materials are to be transported at least 24 hours before such shipment.

H.R. 8389. July 18, 1977. Banking, Finance and Urban Affairs. Authorizes the President to present, in the name of Congress, a gold commemorative medal to the widow of Robert F. Kennedy.

H.R. 8390. July 18, 1977. Armed Services. Authorizes supplemental appropriations for fiscal year 1978 for the procurement of aircraft and missiles by the Air Force. Authorizes supplemental appropriations for such fiscal year for research, development, test, and evaluation by the Air Force and the Defense agencies.

H.R. 8391. July 18, 1977. Banking, Finance and Urban Affairs. Amends the Federal Reserve Act to provide for Congressional review of the Federal Reserve's monetary policy.

Prohibits discrimination in the selection of the Board of Directors of the Federal Reserve System.

Prohibits Federal Reserve System officials and employees from participating in specified activities which affect personal financial interests and from lobbying with institutions subject to the regulatory authority of the Federal Reserve System.

H.R. 8392. July 18, 1977. Interstate and Foreign Commerce. Amends the Railroad Safety Act of 1970 to direct the Secretary of Transportation to issue regulations requiring that the locomotives of all trains be equipped with strobe lights for safety purposes.

H.R. 8393. July 18, 1977. Interstate and Foreign Commerce. Amends the Department of Transportation Act and the Regional Rail Reorganization Act to revise the time periods during which Federal financial assistance shall be available for rail service assistance programs under such Acts.

H.R. 8394. July 18, 1977. Merchant Marine and Fisheries. Directs the Secretary of the Interior to make additional refuse revenue sharing payments, on a fiscal year basis, to each local government unit in which entitlement lands are located. Sets forth the method for computing such payments based on the acreage of the National Wildlife Refuse System within such unit.

Directs the Secretary to make additional payments to counties wherein certain lands acquired by the United States for the National Wildlife Refuge System, which were subject to local real property taxes, are located. Requires such counties to distribute such payments to local government units which have incurred losses of such taxes due to the acquisition.

H.R. 8395. July 18, 1977. Ways and Means. Authorizes and directs the Secretary of Labor, through the Bureau of Labor Statistics, to prepare, as part of the Consumer Price Index, the Consumer Price Index for the Aged and Other Social Security Beneficiaries designed to reflect the relevant price information for individuals, as a group, who are 65 years of age or older or are otherwise entitled to monthly benefits under the program of Old-Age, Survivors, and Disability Insurance of the Social Security Act.

H.R. 8396. July 18, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to provide that the automatic cost-of-living increases in benefits be made on a semiannual basis (rather than only on annual basis as at present).

H.R. 8397. July 18, 1977. Interior and Insular Affairs. Declares a specified tract of land in Pinal County, Arizona, a part of the Papago Indian Reservation.

H.R. 8398. July 18, 1977. Ways and Means. Amends the Internal Revenue Code to allow individuals an income tax credit for the electrical fuel surcharges imposed by public utilities.

H.R. 8399. July 18, 1977. Judiciary. Expands Federal Government liability for the acts of its officers who routinely perform investigative, inspection, or law enforcement functions to include certain intentional and ministerial acts.

States that such liability shall be exclusive and preclude any remedy against officers individually.

Directs the Attorney General to pay the attorney fees incurred by such an officer in connection with a criminal investigation into such officer's official actions.

H.R. 8400. July 18, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to authorize the President to enter into agreements establishing reciprocal arrangements between the old age, survivors, and disability insurance program established by such title and the social security system of any foreign country.

Amends the Internal Revenue Code of 1954 to exempt from taxation employment income to the extent that such income is taxed by a country that is a signatory to the agreement.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2829. A letter from the Assistant Secretary of Defense (Comptroller), transmitting notice of the intention of the Department of Defense to obligate funds available in the Defense Stock Fund for war reserve stocks of bulk fuels, pursuant to section 835 of Public Law 95–111; to the Committee on Appropriations.

2830. A letter from the Assistant Secretary of the Army (Installations, Logistics and Financial Management), transmitting reports covering the transition quarter and fiscal year 1977 listing the 10 architectural engineering firms receiving the largest dollar total of contracts from the Army in the categories of civil works, military construction, and work for foreign governments, pursuant to section 604 of Public Law 94–431; to the Committee on Armed Services.

2831. A letter from the District of Columbia Auditor, transmitting two reports entitled "Failure of Agencies To Give Timely Notice to ANC's" and "Lack of Enforcement of Health and Safety Requirements at Elderly Feeding Sites," pursuant to section 455 of Public Law 93–198; to the Committee on the District of Columbia.

2832. A letter from the Executive Secretary to the Department of Health, Education, and Welfare; transmitting notice of proposed final regulations governing the National Institute of Education's education and work grants programs, pursuant to section 431 (d)(1) of the General Education Provisions Act, as amended; to the Committee on Education and Labor.

2833. A letter from the Secretary of Health, Education, and Welfare, transmitting a report covering fiscal year 1977 on personal property donated to public health and educational institutions and civil defense organizations under section 203(j) of the Federal Property and Administrative Services Act of 1949, as amended, and real property disposed of to public health and educational institutions under section 203(k) of the act, pursuant to section 203(o) of the act; to the Committee on Government Operations.

2834. A letter from the Acting Director, Office of Management and Budget, Executive Office of the President, transmitting a report on actions taken in response to the recommendations contained in the 1976 annual report of the National Advisory Council on Adult Education, pursuant to section 6(b) of the Federal Advisory Committee Act; to the Committee on Government Operations.

2835. A letter from the Acting Director, Office of Management and Budget, Executive Office of the President, transmitting a report on actions taken in response to the recommendations contained in the 1976 annual report of the National Advisory Council on the Education of Disadvantaged Children, pursuant to section 6(b) of the Federal Advisory Committee Act; to the Committee on Government Operations.

2836. A letter from the Assistant Administrator for Legislative Affairs, Agency for International Development, Department of State, transmitting the annual report for fiscal year 1977 on the Agency's disposal of foreign excess property, pursuant to section 404 (d) of the Federal Property and Administrative Services Act of 1949, as amended; to the Committee on Government Operations.

2837. A letter from the Assistant Secretary of Agriculture for Administration, transmitting notice of a proposed change in the Department's computer facilities, pursuant to 5 U.S.C. 522a(o); to the Committee on Government Operations.

2838. A letter from the General Counsel, Copyright Office, Library of Congress, transmitting notice of proposed new records systems, pursuant to 5 U.S.C. 55a(o); to the Committee on Government Operations.

By Mr. PEASE (for himself, Mr. BLOUIN, Mr. OTTINGER, Mr. COTTER, Mr. LAFALCE, Mr. D'AMOURS, Mr. FOWLER, Mr. CAPUTO, and Ms. OAKAR):

H.R. 10347. A bill to prohibit the importation of Ugandan products into the United States; to the Committee on Ways and Means.

By Mr. PEASE (for himself, Mr. HANSEN, Mr. WEISS, Mr. BONKER, Mr. EDWARDS of California, Mr. MATTOX, Mr. STUDDS, Mr. WINN, Mr. BEILENSON, Mr. ABDNOR, Mr. MINETA, Mr. RAILSBACK, Mr. MARTIN, Mr. EDGAR, Mr. PANETTA, Mr. MARKEY, Mr. ANDERSON of California, Mr. LE FANTE, Mr. BADILLO, Mr. LEVITAS, Mr. KOSTMAYER, Mr. BLANCHARD, Mr. DODD, and Mr. WALKER):

H.R. 10348. A bill to amend the Tariff Schedules of the United States in order to prohibit the importation of coffee which is the product of Uganda; to the Committee on Ways and Means.

By Mr. PEASE (for himself, Mr. OTTINGER, Mr. COTTER, Mr. LAFALCE, Mr. D'AMOURS, Mr. FOWLER, Mr. CAPUTO, and Ms. OAKAR):

H.R. 10349. A bill to amend the Tariff Schedules of the United States in order to prohibit the importation of coffee which is the product of Uganda; to the Committee on Ways and Means.

By Mr. PEPPER (for himself and Mr. RINALDO):

H.R. 10350. A bill making supplemental appropriations for the Inspector General of the Department of Health, Education, and Welfare; to the Committee on Appropriations.

By Mr. QUILLEN:

H.R. 10351. A bill to provide that local governments shall be entitled to payments from the Federal Government with respect to certain Federal lands which were owned or administered by any local government, or by any State, at the time title to such lands was conveyed to the Federal Government; to the Committee on Interior and Insular Affairs.

By Mr. ROBERTS:

H.R. 10352. A bill to amend title 38, United States Code, to clarify the intent of Congress in providing for exemption from taxation of that amount of military retirement pay paid to a veteran equal to the amount of tax-free veterans' compensation or pension benefit to which the veteran is determined to be retroactively entitled but for the receipt of such military retirement pay; to the Committee on Veterans' Affairs.

By Mr. ROBERTS (by request):

H.R. 10353. A bill to amend title 38 of the United States Code to provide certain National Service Life Insurance policyholders an opportunity to double their National Service Life Insurance coverage; to the Committee on Veterans' Affairs.

H.R. 10354. A bill to amend title 38 of the United States Code to provide certain veterans insured under the provisions of section 722(a) of title 38, United States Code (service disabled veterans' insurance), with the opportunity to purchase an additional $10,000 of such insurance; to the Committee on Veterans' Affairs.

H.R. 10355. A bill to amend title 38, United States Code, in order to provide mortgage protection life insurance to certain veterans unable to acquire commercial life insurance because of permanent and total service-connected disabilities; to the Committee on Veterans' Affairs.

By Mr. ROBERTS (for himself, Mr. BRINKLEY, and Mr. HAMMERSCHMIDT):

H.R. 10356. A bill to amend title 38, United States Code, to liberalize the eligibility requirements for home, condominium, and mobile home loans for veterans of the Vietnam era; to the Committee on Veterans' Affairs.

By Mr. ROE (for himself, Mr. LEVITAS, Mr. TUCKER, and Mr. HARKIN):

H.R. 10357. A bill to establish a grant program for safety projects at certain general aviation airports, and for other purposes; to the Committee on Public Works and Transportation.

By Mr. ROGERS (for himself and Mr. CARTER):

H.R. 10358. A bill to amend the Federal Food, Drug, and Cosmetic Act to revise and strengthen the authority of the Secretary of Health, Education, and Welfare under that act with respect to the distribution and labeling of food, and for other purposes; to the Committee on Interstate and Foreign Commerce.

Mr. SARASIN (for himself, Mr. EDGAR, Mr. FINDLEY, Mr. LUKEN, Mr. NOLAN, Mr. QUIE, Mr. RAILSBACK, and Mr. ROE):

H.R. 10359. A bill to improve the safety of products manufactured and sold in interstate commerce, to reduce the number of deaths and injuries caused by such products, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. SEIBERLING:

H.R. 10360. A bill to amend the Internal Revenue Code of 1954 to allow, as a credit against income tax, certain amounts of social security taxes paid by an employee, and to make the earned income credit permanent; to the Committee on Ways and Means.

By Mrs. SPELLMAN (for herself, Mr. BARNARD, Mr. MITCHELL of Maryland, and Mr. TSONGAS):

H.R. 10361. A bill to assist cities and States by amending section 5136 of the Revised Statutes, as amended, with respect to the authority of national banks to underwrite and deal in securities issued by State and local governments, and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

By Mr. TRIBLE (for himself, Mr. FINDLEY, Mr. HARKIN, Mr. RAILSBACK, and Mr. ROE):

H.R. 10362. A bill to amend the Internal Revenue Code of 1954 to allow individuals to compute the amount of the deduction for payments into retirement savings on the basis of the compensation of their spouses, and for other purposes; to the Committee on Ways and Means.

By Mr. VENTO:

H.R. 10363. A bill to authorize the Secretary of Housing and Urban Development to make grants to local agencies for converting surplus school facilities to efficient, alternate uses, and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

H.R. 10364. A bill to provide grants for pilot early childhood and family educational programs; to the Committee on Education and Labor.

By Mr. VENTO (for himself, Mr. ANNUNZIO, Mr. DOWNEY, Mr. EILBERG, Mr. HARRINGTON, Mr. LAFALCE, Mr. PEASE, Mr. SEIBERLING, Mrs. SPELLMAN, Mr. STEERS, and Mr. WEISS):

H.R. 10365. A bill to promote further the accountability of the Federal Reserve System; to the Committee on Banking, Finance and Urban Affairs.

By Mr. VENTO (for himself, Mr. GILMAN, Mr. LAFALCE, and Mr. MILLER of California):

H.R. 10366. A bill to amend the Atomic Energy Act of 1954 and the Energy Reorganization Act of 1974 to require the Nuclear Regulatory Commission to establish and enforce standards for the safe, long-term storage of high-level radioactive wastes, spent fuel rods, and any other radioactive wastes containing transuranic elements; to require the Energy Research and Development Administration to restore the background radiation levels at abandoned uranium mine and mill sites to levels which existed before operations commenced at the sites; to permit the States to establish and enforce nuclear waste storage standards which are more stringent than Federal standards; and for other purposes; jointly, to the Committees on Armed Services, Interior and Insular Affairs, and Interstate and Foreign Commerce.

By Mr. ALEXANDER:

H.R. 10367. A bill to amend the provision of Public Law 88-482 relating to the imposition of quotas on certain meat and meat products; to the Committee on Ways and Means.

By Mr. ANDERSON of California:

H.R. 10368. A bill to amend the Federal Aviation Act of 1958 relating to eligibility for registration of aircraft; to the Committee on Public Works and Transportation.

By Mr. BALDUS:

H.R. 10369. A bill to authorize the Small Business Administration to make grants to support the development and operation of small business development centers in order to provide small business with advice and counseling on management, development, technical information, product planning and development, and for other purposes; to the Committee on Small Business.

By Mr. BENNETT (for himself, Mr. Guyer, Mr. Kindness, Mrs. Lloyd of Tennessee, Mr. Stockman, Mr. Spence, Mr. Walker, and Mr. Whitehurst):

H.R. 10370. A bill to prohibit any act or threat of violence in a labor dispute and any conspiracy to accomplish such act or threat and to impose criminal and civil penalties therefor; to the Committee on the Judiciary.

By Mr. BIAGGI (for himself and Mr. Treen):

SENATE—*Thursday, December 15, 1977*

The Senate met at 11 a.m. and was called to order by the Acting President pro tempore (Mr. METCALF).

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

God of our fathers and our God, we remember with thankful hearts that 200 years ago this day, the new Republic kept its first national day of prayer. We thank Thee for the timely victory at Saratoga which prompted the day of Thanksgiving, for the triumph over privation and suffering at Valley Forge which followed, and for the perseverance which led to Yorktown and the firm establishment of the United States. We rejoice in Thy providential care over this Nation from generation to generation, for the measure of justice and well-being accorded all citizens and for our place in the world today. Grant now Thy grace and wisdom to the President, the Congress, and all in authority over us.

As wise men of old, may we be star-led to the manger-cradle and the place of peace and rejoice evermore in Thy great love. Guide us to that place and time in history when "the Government shall be upon His shoulder: and His name shall be called Wonderful, Counselor, the Mighty God, the Everlasting Father, the Prince of Peace." Amen.

RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from West Virginia.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of December 12, 1977, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

SENATOR FROM ARKANSAS

The ACTING PRESIDENT pro tempore. The Chair lays before the Senate a certificate of appointment to fill a vacancy caused by the death of the late Senator John L. McClellan, of the State of Arkansas.

Without objection, the reading will be waived, and the document will be printed in the RECORD.

The certificate of appointment reads as follows:

CERTIFICATE OF APPOINTMENT

To the President of the Senate of the United States:

This is to certify that, pursuant to the power vested in me by the Constitution of the United States and the laws of the State of Arkansas, I, David Pryor, the governor of said State, do hereby appoint Kaneaster Hodges, Jr., a Senator from said State to represent said State in the Senate of the United States until the vacancy therein, caused by the death of John L. McClellan, is filled by election as provided by law.

Witness: His excellency our governor David Pryor, and our seal hereto affixed at Little Rock, Arkansas, this 10th day of December, in the year of our Lord 1977.

By the governor:

DAVID PRYOR,
Governor.
WINSTON BRYANT,
Secretary of State.

The ACTING PRESIDENT pro tempore. If the Senator-designate will present himself at the desk, the oath of office will be administered to him.

Mr. Hodges, of Arkansas, escorted by Mr. BUMPERS, advanced to the desk of the Acting President pro tempore; the oath prescribed by law was administered to him by the Acting President pro tempore; and he subscribed to the oath in the official oath book.

[Applause, Senators rising.]

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be a brief period for the transaction of routine morning business, not to extend beyond 15 minutes, with a limitation on any statements by Senators of 3 minutes each, and with no resolutions coming over under the rule.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

PRIVILEGE OF THE FLOOR

Mr. BAKER. Mr. President, I ask unanimous consent that Ralph Cooper, of the staff of Senator HEINZ, have the privilege of the floor during the remainder of the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. HAYAKAWA. Mr. President, I ask unanimous consent that staff members Elvira Orly, Jan Olsen, and Peggy Haverstraw have the privilege of the floor.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. CRANSTON. Mr. President, I ask unanimous consent that Allyn Kreps and Susan Pitts have the privileges of the floor throughout the day; and also Peter Turza of Senator JAVITS' office.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. RANDOLPH. Mr. President, I ask unanimous consent that Mike Goldberg and Jerry Lindrew of the staff of the Subcommittee on Labor be granted privileges of the floor during consideration of H.R. 5322.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. NELSON. Mr. President, I ask unanimous consent that Scott Ginsburg, Laurie Hansen, and Jon Hunzinger of the Subcommittee on Manpower, Poverty, and Migratory Labor, be permitted the privileges of the floor during the consideration of the conference report on social security and the conference report on legal services.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. GOLDWATER. Mr. President, I ask unanimous consent that Mr. Robert Olds of the Armed Services Committee staff be accorded the privilege of the floor.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. HARRY F. BYRD, JR. Mr. President, I ask unanimous consent that Christopher Lehman, of my staff, have the privilege of the floor during the consideration of the supplemental appropriation bill.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EQUAL ACCESS TO COURTS ACT OF 1977—S. 2354

Mr. DOMENICI. Mr. President, I am introducing today for myself and for Senator NELSON a bill which we call Equal Access to the Courts Act of 1977.

Mr. President, approximately 2 months ago, in the course of the debate on the legal services bill, I called to the floor an unprinted amendment.

The purpose of that amendment was to compensate the average American and the small businessman for legal costs in litigation to protect his rights. It was also meant as an amendment which would put skids under arbitrary regulation and rulemaking. Individuals and small businessmen would no longer be forced to knuckle under to arbitrary or capricious interpretations and regulations, because they could not afford to take the matter to court, or to challenge the administrative action.

After a motion to table was voted down by the margin of 55 to 36, this amendment was accepted by the managers of the bill as part of the Senate version of the legal services bill.

However, this bill was sent to conference, and as oft happens, our colleagues in the House would not be persuaded to the wisdom of our inclusion.

Senator NELSON, who acted as chairman of the conference, is also chairman of the Small Business Committee and with the experience and insight the distinguished Senator from Wisconsin possesses in regard to small businesses, he indicated his support for legislation such as the amendment promised and offered suggestions to strengthen and sharpen the purpose and clarity of the language.

The consequence of our collaboration is the legislation introduced today. It is identical in scope to the amendment accepted by the Senate previously other than excluding tort cases from its purview. This exclusion was made as the legal remedies presently available to tort litigants are equitable and fair.

Mr. President, I ask unanimous consent that the bill introduced by Senator NELSON and myself be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2354

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. (a) This section may be cited as the "Equal Access to Courts Act of 1977".

(b)(1) The Congress finds that serious inequities and inequalities exist between the Federal Government and certain individuals, partnerships, corporations, and labor and other organizations in terms of the relative ease with which each is able, without suffering extreme economic hardship, to prevail or to secure the vindication of its rights in civil actions and in administrative proceedings.

(2) It is the purpose of this section to diminish such inequities and inequalities by providing for the payment of attorney fees, expert witness fees, and other costs in specified situations.

(c)(1) Section 2412 of title 28, United States Code, is amended to read as follows:

"(a)(1) A judgment for the costs specified in section 1920 of this title, for the reasonable expenses of any witness or expert witness, for the reasonable cost of any study, analysis, engineering report, test or project which the court finds necessary to the litigation of the action, and for reasonable attorney fees, shall be awarded to any party other than the United States which prevails in any civil action (including an action for judicial review of agency action) other than an action in tort, brought by or against the United States in any court having jurisdiction of that action.

"(2) Attorney fees shall be based upon the actual time expended by any attorney of a party and his staff in advising and representing such party, and determined at the usual rate of compensation of the recipient attorney, but not to exceed the lower of the prevailing market rate or $90 per hour.

"(b) In any civil action (including an action for judicial review of agency action) other than an action in tort, brought by or against the United States in which a party other than the United States—

"(1) prevails partially, that party shall be awarded a judgment for costs and fees, as provided in subsection (a), to the extent to which he prevails; or

"(2) does not prevail, that party may be awarded a judgment for costs and fees, as provided in subsection (a) in any case in which the court finds that such an award would be in the interests of justice.

"(c) A judgment for the costs specified in section 1920 of this title may be awarded to the United States in any civil action, other than an action in tort, brought by or against the United States in any court having jurisdiction of that action in which the United States is the prevailing party.

"(d) Any amount awarded for costs or fees shall be in addition to the compensation, if any, awarded in any judgment.

"(e) Any judgment against the United States for costs or fees shall be paid as provided in sections 2414 and 2517 of this title.

"(f) For the purposes of this section—

"(1) 'party' means (A) a small business concern as defined in section 2 of the Small Business Act (15 U.S.C. 632), or (B) an individual, partnership, corporation, or labor or any other private organization having assets valued at less than $1,000,000 and annual receipts or income of less than $100,000 in each of the five years immediately preceding the filing of the civil action in question; and

"(2) 'United States' includes any agency or official of the United States.".

(2) The table of sections of chapter 161 of title 28, United States Code, is amended by striking out the item relating to section 2412 and inserting the following: "2412. Attorney and witness fees and costs.".

(d) Subsection (a) of section 2517 of title 28, United States Code, is amended to read as follows:

"(a) Any final judgment, including any final judgment for costs and fees, which is rendered by the Court of Claims against the United States shall be paid out of any general appropriation therefor, on presentation to the General Accounting Office of a certification of such judgment, by the clerk and the chief judge of such court.".

(e)(1) Subchapter I of chapter 5 of title 5, United States Code, is amended by adding at the end thereof the following new section:

"504. COSTS AND FEES OF PARTIES

"(a) A party (other than the United States or any agency or official thereof) shall be paid by any agency conducting an agency proceeding an award for costs and fees incurred by that party in order to participate in that proceeding, if that party—

"(1) is successful in defending against the imposition by such agency of any sanction; or

"(2) is successful, in any agency proceeding in which the agency is the moving party, in opposing the issuance of, or in proposing an amendment to, any agency order which would—

"(A) affect the freedom of such party;

"(B) withhold relief from such party;

"(C) impose a penalty for fine on such party;

"(D) require the destruction, taking, seizure, or withholding of property of such party;

"(E) assess damages, reimbursement, restitution, compensation, costs, charges, or fees against such party;

"(F) require, revoke, or suspend a license of such party; or

"(G) otherwise compel or restrict such party; or

"(3) appeals or seeks judicial review of any agency action and substantially prevails, or is subject to the agency action appealed or reviewed.

"(b) For the purpose of this section—

"(1) the definitions in section 551 of this title apply except as otherwise provided in this section;

"(2) 'award for costs and fees' includes the reasonable expenses of any witness or expert witness, the reasonable cost of any study, analysis, engineering report, test, or project which the agency conducting any agency proceeding finds necessary to the resolution of such proceeding, and reasonable attorney or agent fees based upon the actual time expended by such attorney or agent and his staff in advising or representing any party, such fees to be determined at the usual rate of compensation of the recipient attorney or agent, but not to exceed the lower of the prevailing market rate or $90 per hour; and

"(3) 'party' means a party as defined in section 551 of this title who is also (A) a small-business concern as defined in section 2 of the Small Business Act (15 U.S.C. 632), or (B) an individual, partnership, corporation, labor or any other private organization having assets valued at less than $1,000,000 and annual receipts or income of less than $100,000 in each of the five years immediately preceding the initiation of the agency proceeding in question.".

(2) The table of sections of subchapter I of chapter 5 of title 5, United States Code, is amended by adding at the end thereof the following new item:

"504. COSTS AND FEES OF PARTIES.".

(f) The amendments made by this section shall have no effect on or after the day which is three years after the date of enactment of this Act.

Mr. DOMENICI. Mr. President, I am pleased to yield to my good friend, Senator Nelson, from Wisconsin.

Mr. NELSON. Mr. President, I do not want to impose upon the time of the Senate considering the business we must dispose of today.

Mr. President, this measure came before us as an amendment to the legal service bill offered by Senator Domenici, and we discussed it in the Chamber at that time. I made it clear then to Senator Domenici that the concept and the problem that he was addressing himself to needed to be redressed, in my judgment, by legislation.

I have gone through this bill very carefully, and I am pleased to join Senator Domenici in this legislation.

It is perfectly clear to anyone who pays any attention to it that innumerable times, day in and day out through the year, the Federal Government through its legal representative, through its agency, either makes a mistake or misconstrues the law, or misinterprets the law, ends up in court losing the case to great cost and great damage to the individual or the small business involved, and in those carefully delineated circumstances it seems to us that that small business which is defined in the act, or individual whose eligibility is defined in the act, is entitled to have his legal fees and his costs paid by the Government who was mistaken in the action.

Mr. President, I think this is a sound approach, and I would hope that we would be able to act on this legislation next year.

Mr. President, I join today with Senator Domenici to introduce legislation that would reimburse small businesses and individuals for costs and attorney's fees incurred when they prevail against the Government in a case before a Federal court or administrative agency. If enacted, this bill would represent a major step toward redressing the financial imbalance existing when individuals or small businesses find themselves the victims of arbitrary legal actions by the Federal Government.

Under this legislation, a small business concern, as defined in section 2 of the Small Business Act, or an individual, partnership, corporation, or labor or other private organization having assets valued at less than $1 million and annual receipts or income of less than $100,000 in each of the previous 5 years, which prevailed over the Federal Government in a legal or administrative action would be awarded payment of costs and reasonable attorney's fees. Attorney's fees would be awarded both for actions in the Federal courts and actions before the Federal administrative agencies. If the individual or small business enterprise prevailed only in part, it would receive a judgment for costs and fees to the extent of the victory. If the Government should prevail, the legislation lets the court award attorney's fees to the individual or small business enterprise, if the court believed such an award would be in the interests of justice. Tort actions are specifically exempted from the coverage of the bill.

Time after time, when IRS goes after an individual on a tax claim, or OSHA goes after a small business in a health and safety matter, even if the individual or small business prevail, they suffer serious economic damage, because of the attorney's fees incurred. In such a case, there is no reason why the Government should not pay the cost of the person's or businesses attorney, particularly since the taxpayer is already helping to foot the bill for the Government lawyer. This legislation provides simple justice: It would protect an innocent party from economic damage, often economic ruin, when the Government has made a mistake, exceeded its authority or misconstrued the law.

The idea for this legislation is not new. Senator Domenici introduced a bill on this subject in 1976, and in March 1977. The Senate expressed its approval of the concept on October 12 during the debate over the Legal Services Corporation by accepting Senator Domenici's legislation as an amendment to the legal services bill. As floor manager of the bill, I opposed the amendment, because it was nongermane, but I expressed my agreement with virtually everything Senator Domenici said. The Domenici amendment was deleted during the conference on the legal services bill, on germaneness grounds, but with the full recognition that the idea was important and would be explored carefully in hearings next year.

As Chairman of the Small Business Committee, I have long been aware of the deep frustrations and resentment that small business proprietors feel toward the Federal bureaucracy and its regulatory apparatus. Most small business people accept the need for a responsible Federal role to insure the health of workers and safety of the workplace; the preservation of the environment; the purity of food and drugs; and the safety of products in the marketplace. But they believe that too often regulations are trivial and are enforced in an arrogant and arbitrary manner. The horror stories coming out of our regulatory efforts are becoming all too common. In case after case, a Federal bureaucratic blitzkrieg has rolled over innocent victims, causing unjustified damage to large numbers of business enterprises and individuals.

One of the most serious cases occurred almost 4 years ago and involved a Horicon, Wis. company—Marlin Toy Products, Inc. Many of my colleagues will remember this incident, because the House and Senate passed a resolution allowing Marlin to sue the Government for its losses. In 1972, the Food and Drug Administration cited two of Marlin's toys as unsafe. The company conducted a recall at a cost of $95,000 and corrected the toys to meet the FDA's objections. Shortly thereafter, the regulation of unsafe toys was taken over by the newly formed Consumer Product Safety Commission. Just before Christmas, the CPSC published a "banned-products" list that mistakenly included the corrected Marlin toys. The list, which was distributed to thousands of toy shops across the country, caused virtually all of Marlin's customers to cancel their orders. The outcome was a $1.2 million loss to Marlin, which had to lay off all but 10 of its 85 workers—virtually a disaster for the town of Horicon. During the ensuing legal dispute with the Government, in which Marlin discovered it could not sue without enactment of a resolution by Congress, Marlin went out of business. Nicholas von Hoffman wrote a column about this incident that appeared in the June 24, 1974, Washington Post. It explains in more depth what happens when a small company is confronted in a legal battle by the vast resources of the Federal Government, and I ask unanimous consent that it be printed in the Record at the end of my statement.

The Marlin case received national media attention because it exemplified how the Federal Government can force a firm to go out of business when the firm lacks the resources to defend itself. But there are hundreds of examples that never reach the media of small businesses knuckling under to an unfair Government fine or ruling because they cannot afford the time or lawyer's expenses to put up an effective challenge. These businesses might not go under, but their ability to compete is seriously impaired.

That the Government makes serious errors is bad enough. What makes the situation unacceptable is that individuals and small businesses often have no effective way to combat the errors of the

Federal bureaucracy. A small businessman facing what he believes to be an unjust agency order will frequently find that, given the protracted nature of agency proceedings and the skyrocketing cost of legal counsel, it would cost him more money even to win against the Government than to accept the penalty. Inevitably in this situation, the businessman is forced to pay the penalty, rather than fight it, no matter how unjust the agency's action might have been.

Such a result mocks our principles of equal justice and due process. We reject the notion, in the words of the Supreme Court, that the kind of justice a person receives "depends on the amount of money he has." *Griffin* v. *Illinois*, 356 U.S. 12 (1956). These principles have prompted us in the past to provide counsel to indigent criminal defendants and to establish a legal services corporation to assure that important rights of the poor in civil proceedings can be protected. While small business people are not indigent, they may find themselves as powerless as the poor when confronted with the decision whether to oppose the inexhaustible legal resources of the Government.

The consequences of this unjust situation are dangerous and farreaching. Many small businessmen believe that the Federal bureaucracy seeks to enforce its regulations against them precisely because their businesses are small and usually do not have the financial resources to challenge the Government's decision to impose a fine or other sanctions. These beliefs are not figments of the imagination. As Dr. F. M. Scherer, former Director of the Bureau of Economics of the Federal Trade Commission testified in 1976:

> I had not fully realized until I came to Washington how unfairly the burden of Federal regulation and antitrust enforcement falls upon small business as compared to large companies. The corporate giants can and do maintain stables of highly-skilled attorneys to advise them how to stay clear of the law and defend themselves if they nevertheless run afoul. Small firms are less able to afford such counsel, and the law firm they retain typically lack the specialized knowledge needed to cope with a body of statutory, case and regulatory law as complex as Robinson-Patman. As a result, they are more likely to get into trouble and to settle by consent if a complaint is brought. . . . I had also understood little about the value system of government antitrust attorneys. What I have learned since joining the Commission staff is that many attorneys measure their own success in terms of the number of complaints brought and settlements won. In the absence of broader policy guidance, therefore, the typical attorney shies away from a complex, long, uncertain legal contest with well-represented giant corporations and tries to build up a portfolio emphasizing small, easy-to-win cases. The net result of these broad propensities is that it is the little guys, not the giants that dominate our manufacturing and trade industries, who typically get sued."

I believe that the large majority of the individuals employed by the Federal Government to regulate business enterprises are capable and well-meaning. But the bureaucracy does not always reflect the good traits of the individuals within it; often it develops habits and momentum of its own and will take the path of least resistance to justify its existence and assure its own success. If small business proprietors do not have the resources to pose an effective challenge to bureaucratic negligence or arbitrariness, that negligence or arbitrariness will go unchecked. Without legislation like this, the possibility that the bureaucracy may enforce its will in more and more questionable cases cannot be discounted.

The tendency to take action against small enterprises which cannot defend themselves, rather than the corporate giants who can afford a battalion of attorneys, may grow stronger. And a dangerous misallocation of resources can result, since it is the enormous concentration of economic and political power in the hands of a few dominant companies in each industry which most endangers the public interest, not the activities of the small businesses that account for 97 percent of the total number of enterprices in the United States.

There is another aspect to the problem. Some of the legal actions between a Government agency and a small business may create a significant precedent with far-reaching effects. There is a strong public interest in insuring that such disputes are resolved on the merits after thoughtful presentation and consideration of opposing views. We put our faith in an adversary system of justice, believing that advocates on opposing sides will bring out the most powerful arguments in support of their position, making informed resolution of the issue possible. This idea of justice is also mocked by the current situation when small businessmen facing a fine or other penalty decide that compliance is a preferable course to litigation, regardless of the merits of the case, because of the costs involved.

This legislation could radically alter this dismaying situation and help prevent future injustices. Under this legislation, if a small business or individual believes that a governmental effort to impose a penalty or other sanction against him is unjust, he would now have the realistic option of opposing the action. If he were vindicated, he would receive compensation for his costs, including the costs of expert witnesses, and reasonable attorney's fees, measured in terms of the attorney's usual rate of compensation, but not to exceed the prevailing market rate, or $90 per hour, whichever is lower. The legislation would clearly not prompt individuals or small businesses to raise frivolous defenses since they would not receive attorney's fees in such a case. Obviously, the individual or small business concern would have to make a calculation about the advisability of pursuing the action. But permitting attorney's fees to be recovered would enable the decision to be based on the merits of the issue, rather than on the costs of litigation.

In recent years, Congress has repeatedly recognized that the public interest is served when attorney's fees are awarded so that important viewpoints, which would otherwise be lost, can be heard by Federal courts and agencies. In 1975 Congress enacted the Magnuson-Moss FTC Improvements Act, which provided the Federal Trade Commission with authority and funds to make direct grants of financial assistance to individuals and groups who seek to participate in rulemaking proceedings. Last fall we authorized the Environmental Protection Agency to make these kinds of awards in proceedings conducted under the Toxic Substances Control Act. This authority covers adjudications as well as rulemakings.

In addition, Congress authorized Federal courts to make discretionary awards of attorney's fees to successful litigants in actions brought under that act for review of EPA decisions. An attorney's fees provision was included in the Consumer Product Safety Commission Act amendments of 1976. Of course, last year, Congress also passed the Civil Rights Attorney's Fees Award Act to insure that courts would have discretion to pay reasonable attorney's fees to prevailing parties in actions to enforce a chapter of the older civil rights statutes. The more recent civil rights statutes, such as the 1964 act and the 1968 Fair Housing Act, already provided for such awards. A Congressional Research Service analysis lists close to 70 other statutes, on a wide range of subjects, which also depart from the so-called "American rule" which requires a party in a legal action to pay his own attorney's fees, regardless of the outcome. This legislation carries forward the same theme.

The argument will be made that this legislation would have an adverse effect on the enforcement efforts of the Federal regulatory agencies, deterring them from pursuing those cases which do involve violations of the regulations. While the legislation will undoubtedly need substantial fine tuning, in my view this particular concern is unfounded. In a case where the agency seeks to expand its interpretation of the law in an uncharted area and the outcome is uncertain, if the agency is proceeding reasonably, it should not be deterred by the possibility that the individual or small business would receive attorney's fees. Congress should make it clear in these cases that the possible cost of attorney's fees is part of the cost of doing Government business, and a worthwhile investment of funds to resolve an important policy question. But in those situations where the Government agency goes ahead without a strong case against a business; or where it is proceeding carelessly; or where it now imposes a fine, secure in the knowledge that its action will not be challenged because of the cost involved, I would be very happy if the enactment of this legislation caused some chilling effect on Government regulatory efforts.

The Federal regulatory effort includes thousands of Federal employees, trying to enforce 70,000 pages of regulations involving thousands of diverse businesses throughout the country. In an effort of this magnitude, perhaps it is inevitable that there will be cases of Government negligence, perversity and sheer ineptitude. But it is absolutely vital that we hold the Government to the strictest standards of care in its enforcement efforts, deterring those abuses which can be prevented, and providing a mechanism for compensating individuals and businesses for those governmental mistakes which cannot.

The need for this legislation highlights a basic dilemma which the United States faces along with the other industrial democracies. Can we have a powerful national Government to enforce the laws which protect public health and safety and preserve competition in the marketplace, while avoiding a Government which is so powerful, intrusive and arbitrary that it poses a menace to individual and economic freedom? In walking this thin line, we must continually strive for instruments to keep the Government accountable for its actions. This legislation is one such instrument.

EXHIBIT 1

CAVEAT EMPTOR—AND VENDOR, TOO

(By Nicholas von Hoffman)

You might say that politically what they did was like mugging Marcus Welby or evicting The Waltons. Can you imagine an agency of government that would put a toy factory out of business when it was owned by a widow and located near Beaver Dam, Wisc., the mythical small town we all left for the sins and disappointments of the big city?

Ideally Marlin Toy Products, Inc., of Horicon, Wisc., should also have elves working for it instead of the 85 humans company vice president Ed Sohmers says it had before the Consumer Product Safety Commission went into action. Marlin's troubles date from November 1972 when the government informed it that its "Butterfly Flutter Ball" and its "Birdie Ball," both products it had been selling with success and safety for a number of years, were hazardous to children because they contained little plastic pellets infants might choke on if the transparent balls were broken apart.

Marlin took both off the market, swallowed their losses, redesigned the toys without pellets, submitted the modified balls to the commission, which found them acceptable, and then proceeded to market them. The commission, however, failed to remove the products from its new list of banned toys so that the 1973 season was a jolly wipe-out for Marlin.

All last fall Sohmers wrote letters beseeching the commission to rectify the mistake so that stores would stock the toys but the most he could get was a letter saying the mislisting "resulted from an editorial error and will be corrected on the next issue of the list."

Subsequently commission chairman Richard Simpson said he thought that should have been enough but hundreds of thousands of banned toy lists had gone out. Some state consumer agencies had put the toys on *their* lists. Birdie Ball and Butterfly Ball even got dishonorable mentions on the radio.

Yet the government which demands that companies send out letters and telegrams notifying their customers of errors and defects won't do the same thing when it booboos. Had the commission done so Ed Sohmers might not now be saying, "This is going to cost us $600,000 and for our sized business that's death . . . I can't tell you the effect of laying off 85 people in a small town . . . Damn it, I hate to close the doors on these people. Me? I can always get by robbing liquor stores, but not some of the others . . ."

"We wanted justice so we went to the Justice Department but they said 'we only prosecute people,'" says Sohmers who now understands that you may not sue the government for damages unless Congress passes a law allowing you to. No one would introduce such a bill until the Beaver Dam Citizen broke the story and Sen. Helms, the North Carolina right winger, interested himself in the case.

Recently bills have been introduced in both houses but for all this loss and aggravation Marlin isn't your ordinary tale of yawning bureaucratic indifference. This commission has a far better reputation than most commissions around here. Simpson admits the mistake and says his forces are at least willing to consider recommending passage of the law that will allow Marlin to sue. Any other office in this town and they would have said, "Tough luck, Birdie Ball, we're infallible."

Marlin shows that it's not so easy to protect the public, even if you are one of those rare ones who wants to. Simpson, for instance, says it's possible that the toys shouldn't have been put on the list in the first place. The regulations themselves are ambiguously unsusceptible to precise understanding. What does it mean that a toy shouldn't have "sharp" edges? What's sharp? Beyond that no regulation can protect a small child left alone by parents who don't love it wisely enough to watch over it.

This case shouldn't be used as an argument to abolish the commission. In an era when even children's toys are made of exotic materials and by the most advanced technologies no lay person can be an informed buyer without help. Now the question is how can public administration learn to protect the buyer and the seller too.

Mr. NELSON. I commend Senator DOMENICI for the very fine work he has done in developing this legislation.

Mr. DOMENICI. Mr. President, I thank the Senator.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider nominations on the Executive Calendar beginning with new reports with the exception of Calendar Order No. 620.

The ACTING PRESIDENT pro tempore. Is there objection?

Mr. BAKER. Mr. President, reserving the right to object, and I shall not object, I say to my friend, the majority leader, that we have cleared on our calendar all of the items, and I notice now that we can also clear the item he just identified, Calendar Order No. 620, and I believe there is one other measure that was mentioned to me by the distinguished Senator from Washington (Mr. JACKSON) which has not yet found its way onto the Calendar but which is also cleared for action if the majority leader might wish to do so.

Mr. ROBERT C. BYRD. I thank the distinguished minority leader.

Mr. President, I ask unanimous consent that the Senate proceed to the consideration in executive session of the nominations beginning with new reports without exception and also that the Senate take up the nomination which has been reported from Mr. JACKSON's committee today of Lincoln Moses, of California, to be Administrator of the Energy Information Administration.

There being no objection, the Senate proceeded to the consideration of executive business.

The ACTING PRESIDENT pro tempore. The nominations will be stated.

THE JUDICIARY

The assistant legislative clerk read the nomination of James K. Logan, of Kansas, to be U.S. circuit judge for the 10th circuit.

Mr. DOLE. Mr. President, when President Carter nominated Jim Logan for the 10th Circuit Court of Appeals, he selected a truly outstanding Kansan who will serve with distinction in that position.

Jim Logan has been honored many times as a member of his profession, as a student, educator, and as a public servant. Those of us who know him and his work have come to appreciate the high degree of ability which he brings to any new position he accepts. We know that he will be an outstanding jurist and a tremendous credit to the Federal judiciary.

His path and mine crossed briefly on the political turf of Kansas in 1968 when both of us were candidates for the Senate seat which I now occupy. As candidates seeking our respective parties' nomination for the Senate, we had frequent occasion to see each other at various candidate forums and other public events. As the Democratic primary turned out, I did not have to face Mr. Logan in the general election. However, that campaign gave me an opportunity to get to know him and learn quite a bit about him. At that time he had compiled an impressive record as dean of the Kansas University Law School. Since then, he has been active in other areas, and has added additional distinction to an already impressive career.

PUBLIC SERVICE

His race for public office in 1968 was not the first or the last time Kansans have heard from Jim Logan. At the age of 14, in 1944, he was appointed city clerk of Quenemo, Kans. As city clerk, he worked on the city budget and calculated the local taxes, a rather unusual job for a 14-year-old boy. However, this was during the war and most of the men who would normally perform the task were in the service.

Since then, he has become a prominent member of the Kansas Democratic Party. In 1968, the Kansas Democratic Convention heard him deliver the keynote address. In 1972, he served as the cochairman of the Kansas Committee on the McGovern Commission delegate selection rules. From 1970 to 1973, he chaired the third district Democratic Party. Most recently, he was the Johnson County preconvention chairman for Jimmy Carter, and a delegate to the 1976 national convention.

ACADEMIC BACKGROUND

In addition to his political background, Jim Logan's background in nonpolitical areas recommends him for the 10th Circuit Court. In 1952, he was the first straight "A" graduate in the history of the Kansas University College of Liberal Arts and Sciences. He turned down a Rhodes Scholarship to enter law school at Harvard and was the editor of the Harvard Law Review from 1953 to 1955, graduating from Harvard magna cum laude. Upon graduation from law school, he clerked for U.S. Circuit Judge Walter A. Huxman, a former Governor of the State of Kansas who served his country with distinction for many years on the Federal bench.

Six years after graduation from Harvard Law School, in 1961, he became Dean of the K. U. Law School and served until 1968, when he ran for the Senate. As dean, he made a major contribution to the quality of legal education at the University of Kansas.

After entering private practice, he remained active in legal circles as a member or chairman of various committees of the American Bar Association, the Kansas Bar Association, and the Association of American Law Schools.

In addition to his academic and political endeavors, he is active in a wide variety of civic and public affairs.

Mr. President, Kansas can be proud of this outstanding nominee for the 10th circuit judgeship. I have no doubt that he will serve his country with great distinction.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Robert S. Vance, of Alabama, to be U.S. circuit judge for the fifth circuit.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of John L. Kane, Jr., of Colorado, to be U.S. district judge for the district of Colorado.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of George C. Carr, of Florida, to be U.S. district judge for the middle district of Florida.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

DEPARTMENT OF JUSTICE

The assistant legislative clerk read the nomination of Julian K. Fite, of Oklahoma, to be U.S. attorney for the eastern district of Oklahoma.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Edward G. Warin, of Nebraska, to be U.S. attorney for the district of Nebraska.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Alexander O. Bryner, of Alaska, to be U.S. attorney for the district of Alaska.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Michael H. Walsh, of California, to be U.S. attorney for the southern district of California.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Larry R. McCord, of Arkansas, to be U.S. attorney for the western district of Arkansas.

Mr. HODGES. Mr. President, I am pleased that today the Senate has approved the President's nomination of Larry R. McCord to be U.S. attorney for the western district of Arkansas.

I have known Mr. McCord for many years and consider him a close personal friend. I deem it a privilege to have played a small role in his confirmation, and firmly believe that he will serve ably in this position for the people of Arkansas and our Nation. I extend my congratulations to him, his wife Suzanne, and their two children, Jamie and Brent.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of John H. Cary, of Tennessee, to be U.S. attorney for the eastern district of Tennessee.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Rex O. Presley, of Oklahoma, to be U.S. marshal for the eastern district of Oklahoma.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of John A. Roe, of Iowa, to be U.S. marshal for the northern district of Iowa.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Harry D. Mansfield, of Tennessee, to be U.S. marshal for the eastern district of Tennessee.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Thomas Arny Rhoden, of Mississippi, to be U.S. marshal for the southern district of Mississippi.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Andrew E. Gardner, of North Carolina, to be U.S. marshal for the western district of North Carolina.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Edward P. Gribben, of South Dakota, to be U.S. marshal for the district of South Dakota.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

ENERGY INFORMATION ADMINISTRATION

The assistant legislative clerk read the nomination of Lincoln E. Moses, of California, to be Administrator of the Energy Information Administration.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that three additional nominations that have been reported from the Committee on Human Resources, the Committee on Commerce, Science and Transportation, be considered at this time.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. The nominations will be stated.

INSTITUTE OF MUSEUM SERVICES

The assistant legislative clerk read the nomination of Leila I. Kimche, of Maryland, to be Director of the Institute of Museum Services.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

OFFICE OF RAIL PUBLIC COUNSEL

The assistant legislative clerk read the nomination of Howard A. Heffron, of Maryland, to be Director of the Office of Rail Public Counsel.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

DEPARTMENT OF COMMERCE

The assistant legislative clerk read the nomination of Andrew E. Manatos, of Maryland, to be an Assistant Secretary of Commerce.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

U.S. COAST GUARD

The assistant legislative clerk proceeded to read sundry nominations in the Coast Guard.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that those nominations be considered en bloc.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that it be in order to move to reconsider en bloc the votes by which the various nominees were confirmed.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I make that motion.

Mr. BAKER. Mr. President, I move to table the motion.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of the nominations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I am pleased to support the nominations of two fine Tennesseans and constituents of mine to new positions in the Department of Justice.

Mr. John H. Carey has been selected to serve as the U.S. attorney for the eastern district of Tennessee and Mr. Harry D. Mansfield has been nominated to be the U.S. marshal from the same district.

They follow in a long line of distinguished U.S. attorneys and marshals from that district and I have no doubt that they will uphold that tradition during their tenure.

Having practiced law for 17 years in the eastern district of Tennessee, I can assure them that they will be kept busy. It is a vital and active part of the State that deserves competent and effective attention from the Department of Jusice.

Mr. Cary and Mr. Mansfield seem well suited to their new positions and I gladly support their confirmation.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate return to the consideration of legislative business.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there continue to be a period for the transaction of routine morning business not to exceed 10 minutes under the same conditions as heretofore stated.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BAKER. Mr. President, if I could have a moment, I ask the majority leader while here in the Chamber if he will give us some insight as to what we might expect in the course of the legislative day.

LEGISLATIVE PROGRAM FOR TODAY

Mr. ROBERT C. BYRD. Mr. President, I believe that shortly the distinguished Senator from Louisiana (Mr. Long) will be prepared to take up the social security conference report, and he will also be prepared to initiate some action which, hopefully, will take care of the black lung measure which has been in conference between the two Houses for several weeks now.

Thereafter I think we ought to be able to take up the legislation that would extend into the month of February the provisions of the National Gas Emergency Act just to guard against an emergency that might occur before the Congress gets back into session.

Additionally today it is hoped the legal services conference report would be taken up and adopted, and that the clean water conference report would be ready and would be acted upon; and since the Senator is on the floor or near the floor at the moment he may wish to proceed with the matter involving the B–1.

Mr. BAKER. Mr. President, if the majority leader will yield to me briefly, I thank him for that additional insight.

I might add further bits of information that might be helpful to the majority leader in scheduling the day.

The first is there is full clearance on this side to the consideration of the emergency allocation of the Natural Gas Act. I think it is appropriate and there is no objection to proceeding with that today.

On the legal services conference report we have a notation here and it will require a record vote, probably some significant debate, and I am not sure how long it will take.

There is one other item the majority leader alluded to in his closing remarks, and that had to do with the B–1 matter.

I might say, as the majority leader knows, that we have people on this side who are very, very interested in that matter who have canceled and rearranged their schedules to be here today in the event the matter was going to come up, and we very much hope it will be presented to the Senate during the course of the day and before sine die adjournment this afternoon.

Mr. ROBERT C. BYRD. I thank the distinguished minority leader.

POLICY VERSUS REALITY IN SOUTHERN AFRICA

Mr. HARRY F. BYRD, JR. United States policy toward Southern Africa, over the years, has not been a model of consistency.

On the one hand, our Government has been accused of neglecting Southern Africa because of preoccupation with the Middle East and, earlier, Southeast Asia.

On the other hand, the United States has participated in a United Nations embargo against Rhodesia, attempting to bring down the present government.

By and large, the policy—or lack of policy—until 1977 was characterized by a general lack of concern, with spurts of interventionism.

Since the advent of the Carter administration, however, American policy toward Southern Africa has been characterized by a great deal more action, although not a great deal more wisdom or judgment.

In recent months there have been numerous efforts to push South Africa and Rhodesia toward majority rule. Pressures have been brought against both governments: Limited pressure in the case of South Africa, heavy pressure in the case of Rhodesia.

Recent events in South Africa have focused world attention on the situation in that country. The closing of opposition newspapers, the death of Steven Biko and the subsequent denial of official responsibility in the case have shown the seriousness of the human rights problem in South Africa.

To its credit the Carter administration has resisted the temptation to go along with other members of the United Nations in seeking formal U.N. economic sanctions against South Africa. However, the United States did agree to an embargo on arms trade as a sign of disapproval of South Africa's racial policies and also recalled our Ambassador and our commercial and naval attachés.

But these steps are mild indeed compared to the actions taken in the case of Rhodesia, where the United States has sought much more actively to influence events.

In March of this year the United States halted the importation of chrome from Rhodesia, thus breaking that country's last economic link with the United States. Further, the Carter administration indicated that it intended to close down the Rhodesian Information Office here in Washington.

Subsequently, the administration joined with Great Britain in seeking to force the Rhodesian Government into accepting a plan for shifting to majority rule by the end of 1978.

This so-called "Anglo-American peace plan" required the participation of the terrorist organizations, based outside Rhodesia and headed by Joshua Nkomo and Robert Mugabe, in any transfer of power.

Under the plan, Rhodesia's existing security forces (which are 80 percent black) would be disbanded and would be replaced by a new force made up largely of the terrorist groups under the control of Nkomo and Mugabe.

This is not a plan for majority rule.

Rather, this plan would insure that the future Government of Rhodesia would be in the hands of a minority—black rather than white—but still not representative of the majority of Rhodesians.

It would place in power a group of terrorist murderers who have refused to compromise and who believe that they can win control of the country by force of arms—with the support of the United States.

Prime Minister Smith has rejected this peace plan and has now come forward with a plan which may lead to a transition to a stable majority rule with adult suffrage for all Rhodesians, black and white.

Mr. Smith has begun talks with moderate Rhodesian black leaders concerning a constitutional conference to determine Rhodesia's new government. Bishop Abel Muzorewa, the Reverend Ndabaningi Sithole, and Senator Jermiah Chirau, who represent an estimated 80 percent of Rhodesia's 6.4 million blacks, have reacted favorably to the Smith initiative and talks have been proceeding.

Mr. Smith, in seeking an "internal" solution to Rhodesia's problem, has not closed the door to participation in the new government by guerilla leaders Nkomo and Mugabe.

He stated that the door would be open to "externally based organizations" if they "forsake terrorism and accept that the best thing is to work constitutionally for a peaceful settlement."

Predictably, the Patriotic Front guerrillas have rejected the Smith plan and stepped up their demands that power be immediately turned over to their guerrilla "armies."

The Carter administration, through its spokesman Andrew Young, has scorned the Smith plan and expressed doubt that an internal solution can succeed without participation by the Patriotic Front.

This preoccupation with the extremist point of view is consistent with earlier State Department actions. In October of this year moderate black Rhodesians were denied visas allowing them to visit the United States, while the Rhodesians terrorist Joshua Nkomo was granted a visa and even a meeting with Secretary of State Vance.

The denial of visas to the moderate leaders was not only ill-advised and discriminatory, but also violated the cherished American traditions of free speech and an open market place of ideas.

The present posture of our Government raises serious doubts about its real commitment: Is it a commitment to majority rule or a commitment to a band of militant radicals?

Because of the State Department's policy of supporting the black groups seeking the violent overthrow of the Rhodesian Government, the Carter administration now finds itself in the embarrassing position of being arrayed against the moderate and representative black leaders seeking a peaceful internal solution.

Recent events, however, provide a new chance for the United States to abondon its support of militant radicals and perhaps contribute constructively to a peaceful settlement in Rhodesia.

The present course deserves encouragement.

By dropping its interventionist pressure tactics and indicating support for an internal settlement based on majority rule through universal adult suffrage and free elections, the United States may yet play a constructive role in reaching a peaceful accommodation between black and white Rhodesians.

By indicating its readiness to recognize promptly a new government of Rhodesia, should such be formed as a result of the talks between Prime Minister Smith and the black moderates, and to establish diplomatic and economic relations, the United States would provide great incentive to blacks and whites to settle their differences quickly.

An end to the 10-year-old embargo and a substantial influx of Western investment capital could go a long way toward launching an economically and politically viable state in which both blacks and whites have a stake.

There will be those who will argue that there can be no settlement without the support of the Patriotic Front and the neighboring African states, but if the new government has the support of the vast majority of Rhodesians then support for the guerrilla movement would be likely to fade rapidly.

If blacks and whites in Rhodesia want to settle their differences peacefully and democratically the United States should give its strongest encouragement.

A U.S. policy of encouragement rather than intervention surely would be appropriate for South Africa as well as Rhodesia. In dealing with the whole troubled region of Southern Africa, we should proceed in a spirit of helpful goodwill, not one of meddling and compulsion.

If we follow this principle, there is yet time for the United States to erase the errors of the past and serve as a constructive partner in the effort to build a peaceful and prosperous future for Southern Africa, which for all its problems is a region of great importance and great promise.

(Additional statements submitted and routine morning business transacted will be printed later in today's Record.)

CONCLUSION OF MORNING BUSINESS

The ACTING PRESIDENT pro tempore. All time for morning business having expired, morning business is closed.

DUTY ON ISTLE

Mr. ROBERT C. BYRD. Mr. President, in an effort to expedite final action on the black lung benefits reform bill, which has been in conference since September, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 526.

Mr. BAKER. Mr. President, reserving the right to object, and I will not object, I have discussed this matter as well with my friend the majority leader. Under the circumstances, and because of the nature of the problem and the parliamentary situation as we find it, I think this is the best method for handling it, and we have no objection.

Mr. LONG. Mr. President, I ask unanimous consent that Richard Ruge, of the staff of the Joint Committee on Taxation, be granted the privilege of the floor during the debate on the black lung bill.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The bill will be stated by title.

The legislative clerk read as follows:

A bill (H.R. 5322) to provide duty-free treatment for istle.

Mr. LONG. Mr. President, H.R. 5322 as it passed the House provided for the duty-free treatment of istle. The Senate has already passed the substance of this provision as an amendment to another bill and it has been signed into law.

The Finance Committee used the bill number as a vehicle to report out our actions on social security financing. Since the House then sent the Senate a social security financing bill, there is no need for the Senate to act on H.R. 5322.

Since the committee amendment to H.R. 5322 concerns social security financing and is lengthy, there is no reason to incur the cost of printing it in the Record. I ask unanimous consent that the printing of the Committee amendment to H.R. 5322 in the Record be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

UP AMENDMENT NO. 1081

(Purpose: To impose an excise tax on coal sales, to establish a Black Lung Disability Trust Fund, and for other purposes.)

Mr. LONG. Mr. President, I send to the desk an amendment in the nature of a substitute, and ask for its immediate consideration.

The ACTING PRESIDENT pro tempore. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Louisiana (Mr. Long) proposes an unprinted amendment numbered 1081, to strike out all after the enacting clause and insert in lieu thereof new language.

The amendment is as follows:

In lieu of the language proposed to be inserted, insert the following:

"Section 1. Short Title.

"This Act may be cited as the 'Black Lung Benefits Revenue Act of 1977'.

"Sec. 2. Excise Tax on Coal.

"(a) In General.—Chapter 32 of the Internal Revenue Code of 1954 (relating to manufacturers excise taxes) is amended by inserting after subchapter A the following new subchapter:

" 'Subchapter B—Coal

" 'Sec. 4121. Imposition of tax.

" 'Sec. 4121. Imposition of Tax.

" '(a) Tax Imposed.—There is hereby imposed on coal sold by the producer a tax at the rates of—

" '(1) 50 cents per ton in the case of coal from underground mines located in the United States, and

" '(2) 25 cents per ton in the case of coal from surface mines located in the United States.

" '(b) Limitation on Tax.—The amount of tax imposed by subsection (a) with respect to a ton of coal shall not exceed 2 percent of the price at which such ton of coal is sold by the producer.

" '(c) Tax Not To Apply to Lignite.—The tax imposed by subsection (a) shall not apply in the case of lignite.

" '(d) Definitions.—For purposes of this subchapter—

" '(1) Coal from surface mines.—Coal shall be treated as produced from a surface mine if all of the geological matter above the coal being mined is removed before the coal is extracted from the earth. Coal extracted by auger shall be treated as coal from a surface mine.

" '(2) Coal from underground mines.—Coal shall be treated as produced from an underground mine if it is not produced from a surface mine.

" '(3) United States.—The term "United States" has the meaning given to it by paragraph (1) of section 638.

" '(4) Ton.—The term "ton" means 2,000 pounds.' ".

"(b) Conforming Amendments.—

"(1) Section 4218(a) of such Code (relating to use by manufacturer or importer considered sale) is amended by adding at the end thereof the following new sentence: 'For the purpose of applying the first sentence of this subsection to coal taxable under section 4121, the words "(otherwise than as material in the manufacture or production of, or as a component part of, another article taxable under this chapter to be manufactured or produced by him)" shall be disregarded.'.

"(2) Section 4221(a) of such Code (relating to certain tax-free sales) is amended by inserting '(other than under section 4121)' after 'this chapter'.

"(3) Section 4293 of such Code (relating to exemption for United States and possessions) is amended by inserting '(other than the tax imposed by section 4121)' after 'chapters 31 and 32'.

"(4) Subsection (b) of section 6416 (relating to special cases in which tax payments are considered overpayments) is amended—

"(A) by inserting '(other than coal taxable under section 4121)' immediately after 'in respect of any article' in paragraph (2), and

"(B) by inserting '(other than coal taxable under section 4121)' immediately after 'with respect to the sale of any article' in paragraph (3).

"(c) Clerical Amendment.—The table of subchapters for chapter 32 of such Code is amended by inserting after the item relating to subchapter A the following new item:

" 'Subchapter B. Coal.'.

"(d) Effective Date.—The amendments made by this section shall apply with respect to sales after March 31, 1978.

"Sec. c. Trust Fund and Operator Liability.

"(a) Establishment of Fund.—

"(1) There is hereby established on the books of the Treasury of the United States a trust fund to be known as the Black Lung Disability Trust Fund (to which reference is made elsewhere in this section as the 'fund'). The fund shall remain available without fiscal year limitation and shall consist of such amounts as may be appropriated to it or deposited in it as provided in subsection (b).

"(2) The trustees of the fund shall be the Secretary of the Treasury, the Secretary of Labor, and the Secretary of Health, Education, and Welfare. The Secretary of the Treasury shall be the managing trustee and shall hold, operate, and administer the fund.

"(b) Appropriations; Other Receipts.—

"(1) There are hereby appropriated to the fund, out of any money in the Treasury not otherwise appropriated, amounts equivalent to the taxes received in the Treasury under section 4121, and by operation of section 4952, of the Internal Revenue Code of 1954. The amounts appropriated by this paragraph shall be transferred monthly from the general fund of the Treasury to the fund on the basis of estimates made by the Secretary of the amounts of such taxes received in the Treasury. Proper adjustment shall be made in the amounts subsequently transferred to the extent prior estimates were in excess of, or less than, the amounts required to be transferred.

"(2) There are authorized to be appropriated to the fund, as repayable advances, such sums as may from time to time be necessary to meet obligations incurred under subsection (a) of section 424 of the Federal Coal Mine Health and Safety Act of 1969. Advances made pursuant to this paragraph shall be repaid, and interest on such advances shall be paid, to the general fund of the Treasury when the Secretary of the Treasury determines that moneys are available in the fund for such repayments. Interest on such advances shall be at a rate equal to the average rate of interest, computed as of the end of the calendar month next preceding the date of any such advance, borne by all marketable interest-bearing obligations of the United States then forming a part of the public debt. When such average rate is not a multiple of one-eighth of 1 percent, the rate of interest on such advances shall be the multiple of one-eighth of 1 percent nearest such average rate.

"(3) Amounts paid into the fund by a trust described in section 501(c)(21) of the Internal Revenue Code of 1954 (other than amounts paid under subsection (b) of section 424 of the Federal Coal Mine Health and Safety Act of 1969) shall be covered into the fund.

"(4) Amounts repaid or recovered under subsection (b) of section 424 of the Federal Coal Mine Health and Safety Act of 1969 shall be covered into the fund as repayments of amounts erroneously paid out.

"(5) Amounts paid as fines or penalties, or interest thereon, under section 423, 431, or 432 of such Act shall be covered into the fund as miscellaneous receipts.

"(c) Duties of the Secretary of the Treasury.—

"(1) The Secretary of the Treasury shall hold the fund and (after consultation with the other trustees of the fund) shall report to the Congress not later than the last day of March of 1979, and of each succeeding year, on the financial condition and the results of the operations of the fund during the preceding fiscal year (including a detailed statement of the expenses paid out of the fund under subsection (a)(4) of section 424 of the Federal Coal Mine Health and Safety Act of 1969) and on its expected condition and operations during the fiscal year in which the report is made. The report shall be printed as a House document of the session of the Congress to which the report is made.

"(2) It is the duty of the Secretary of the Treasury to invest such portion of the fund as is not, in his judgment, required to meet current withdrawals, including the repayment of advances made under subsection (b)(2). Such investments shall be made in public debt securities with maturities suitable for the needs of the fund and bearing interest at prevailing market rates. The income on such investments shall be credited to and form a part of the fund.

"(d) Payments From Fund.—Section 424 of the Federal Coal Mine Health and Safety Act of 1969 is amended to read as follows:

"'Sec. 424. (a) Amounts in the Black Lung Disability Trust Fund (referred to in this section as the "fund") established under section 3 of the Black Lung Benefits Revenue Act of 1977 shall be available, as provided by appropriation Acts, for—

"'(1) the payment of benefits under section 422 in any case in which the Secretary determines that—

"'(A) the operator liable for the payment of such benefits—

"'(i) has not commenced payment of such benefits within 30 days after the date of an initial determination of eligibility by the Secretary, or

"'(ii) has not made a payment within 30 days after that payment is due,

"'(B) there is no operator who is required to secure the payment of such benefits,

"'(2) the payment of obligations incurred by the Secretary with respect to all claims of miners or their survivors in which the miner's last coal mine employment was before January 1, 1970,

"'(3) the repayment into the Treasury of the United States of an amount equal to the sum of the amounts expended by the Secretary for claims under this part which were paid before April 1, 1978, except that the fund shall not be obligated to pay or reimburse for benefits paid attributable to periods of eligibility before January 1, 1974,

"'(4) the repayment of, and the payment of interest on, advances to the fund under subsection (b)(2) of section 3 of the Black Lung Benefits Revenue Act of 1977, and

"'(5) the payment of all expenses of operation and administration on and after the effective date of the Black Lung Benefits Reform Act of 1977 (or any other Act determined by the Secretary to contain substantially the same provisions) under this part (other than under section 427(a) or 433), including the administrative expenses incurred by the Department of Labor under this part, the administrative expenses incurred by the Department of the Treasury in administering subchapter B of chapter 32 of the Internal Revenue Code of 1954 and in carrying out its responsibilities with respect to the fund, and any expenses incurred by the Department of Health, Education, and Welfare in connection with the administration of this part.

"'(b)(1) If—

"'(A) an amount is paid out of the fund to an individual entitled to benefits under section 422, and

"'(B) the Secretary determines, under the provisions of sections 422 and 423, that an operator was required to secure the payment of all or a portion of such benefits,

then the operator is liable to the United States for repayment to the fund of the amount of such benefits the payment of which is properly attributed to him. No operator or representative of operators may bring any proceeding, or intervene in any proceeding, held for the purpose of determining claims for benefits to be paid by the fund, except that nothing in this section shall affect the rights, duties, or liabilities of any operator in proceedings under section 422 or section 423. In a case where no operator responsibility is assigned pursuant to sections 422 and 423, a determination by the Secretary that the fund is liable for the payment of benefits shall be final.

"'(2) If any operator liable to the fund under paragraph (1) refuses to pay, after demand, the amount of such liability (including interest), then there shall be a lien in favor of the United States for such amount upon all property and rights to property, whether real or personal, belonging to such operator. The lien arises on the date on which such liability is finally determined, and continues until it is satisfied or becomes unenforceable by reason of lapse of time.

"'(3)(A) Except as otherwise provided under this subsection, the priority of the lien shall be determined in the same manner as under section 6323 of the Internal Revenue Code of 1954. That section shall be applied for such purposes—

"'(i) by substituting "lien imposed by section 424(b)(2) of the Federal Coal Mine Health and Safety Act of 1969" for "lien imposed by section 6321"; "operator liability lien" for "tax lien"; "operator" for "taxpayer"; "lien arising under section 424(b)(2) of the Federal Coal Mine Health and Safety Act of 1969" for "assessment of the tax"; "payment of the liability is made to the Black Lung Disability Trust Fund" for "satisfaction of a levy pursuant to section 6332(b)"; and "satisfaction of operator liability" for "collection of any tax under this title" each place such terms appear; and

"'(ii) by treating all references to the 'Secretary' as references to the Secretary of Labor.

"'(B) In the case of a bankruptcy or insolvency proceeding, the lien imposed under paragraph (2) shall be treated in the same manner as a lien for taxes due and owing to the United States for purposes of the Bankruptcy Act or section 3466 of the Revised Statutes (31 U.S.C. 191).

"'(C) For purposes of applying section 6323(a) of the Internal Revenue Code of 1954 to determine the priority between the lien imposed under paragraph (2) and the Federal tax lien, each lien shall be treated as a judgment lien arising as of the time notice of such lien is filed.

"'(D) For purposes of this subsection, notice of the lien imposed under paragraph (2) shall be filed in the same manner as under subsections (f) and (g) of section 6323 of the Internal Revenue Code of 1954.

"'(4)(A) In any case where there has been a refusal or neglect to pay the liability imposed under paragraph (2), the Secretary may bring a civil action in a district court of the United States to enforce the lien of the United States under this section with respect to such liability or to subject any property, of whatever nature, of the operator, or in which he has any right, title, or interest, to the payment of such liability.

"'(B) The liability imposed by paragraph (1) may be collected at a proceeding in court if the proceeding is commenced within 6 years after the date on which the liability was finally determined, or before the expiration of any period for collection agreed upon in writing by the operator and the United States before the expiration of such 6-year period. The running of the period of limitation provided under this subparagraph shall be suspended for any period during which the assets of the operator are in the custody or control of any court of the United States, or of any State, or the District of Columbia, and for 6 months thereafter, and for any period during which the operator is outside the United States if such period of absence is for a continuous period of at least 6 months.'.

"(e) Effective Date.—This section shall take effect on April 1, 1978.

"Sec. 4. Operator's Trust for the Payment of Black Lung Benefits.

"(a) Establishment of Trust.—Section 501(c) of the Internal Revenue Code of 1954 (relating to list of exempt organizations) is amended by adding at the end thereof the following new paragraph:

"'(21) A trust or trusts established in writing, created or organized in the United States, and contributed to by any person (except an insurance company) if—

"'(A) the purpose of such trust or trusts is exclusively—

"'(i) to satisfy, in whole or in part, the liability of such person for, or with respect to, claims for compensation for disability or death due to pneumoconiosis under Black Lung Acts;

"'(ii) to pay premiums for insurance exclusively covering such liability; and

"'(iii) to pay administrative and other incidental expenses of such trust (including legal, accounting, actuarial, and trustee expenses) in connection with the operation of the trust and the processing of claims against such person under Black Lung Acts; and

"'(B) no part of the assets of the trust may be used for, or diverted to, any purpose other than—

"'(i) the purposes described in subparagraph (A), or

"'(ii) investment (but only to the extent that the trustee determines that a portion of the assets is not currently needed for the purposes described in subparagraph (A)) in—

"'(I) public debt securities of the United States.

"'(II) obligations of a State or local government which are not in default as to principal or interest, or

"'(III) time or demand deposits in a bank (as defined in section 581) or an insured credit union (within the meaning of section 101(6) of the Federal Credit Union Act, 12 U.S.C. 1752(6)) located in the United States, or

"'((iii) payment into the Black Lung Disability Trust Fund established under section 3 of the Black Lung Benefits Revenue Act of 1977, or into the general fund of the United States Treasury (other than in satisfaction of any tax or other civil or criminal liability of the person who established or contributed to the trust).

For purposes of this paragraph, the term "Black Lung Acts" means part C of title IV of the Federal Coal Mine Health and Safety Act of 1969, and any State law providing compensation for disability or death due to pneumoconiosis.'.

"(b) Allowance of Deduction.—

"(1) In general.—Part VI of subchapter B of chapter 1 of such Code (relating to itemized deductions for individuals and corporations) is amended by adding at the end thereof the following new section:

"'Sec. 192. Contributions to Black Lung Benefit Trust

"'(a) Allowance of Deduction.—There is allowed as a deduction for the taxable year an amount equal to the sum of the amounts contributed by the taxpayer during the taxable year to or under a trust or trusts described in section 501(c)(21).

"'(b) Limitation.—

"'(1) In general.—The amount of the deduction allowed by subsection (a) for any taxable year with respect to any such trust shall not exceed the amount determined under paragraph (2) or (3), whichever is greater.

"'(2) Current year obligations.—The amount determined under this paragraph for the taxable year is the amount which, when added to the fair market value of the assets of the trust as of the beginning of the taxable year, is necessary to carry out the purposes of the trust described in subparagraph (A) of section 501(c)(21) for the taxable year.

"'(3) Certain future obligations.—The amount determined under this paragraph for the taxable year is the sum of—

"'(A) the amount which is necessary to meet the expenses of the trust described in clause (iii) of section 501(c)(21)(A) for the taxable year, and

"'(B) the lesser of—

"'(i) the amount which, when added to the fair market value of the assets of the trust as of the beginning of the taxable year, is necessary to provide all expected future payments with respect to black lung benefit claims which are approved, including any such claims which have been filed and which have not been disapproved, as of the end of the taxable year, or

"'(ii) twice the amount which is necessary to provide all expected future payments with respect to the greater of—

"'(I) black lung benefit claims filed during the taxable year or any one of the 3 immediately preceding taxable years, or

"'(II) such claims approved during any one of those 4 taxable years.

"'(c) Special Rules.—

"'(1) Determination of expected future payments.—The amounts described in subsection (b) shall be determined by using reasonable actuarial assumptions which are not inconsistent with regulations prescribed by the Secretary.

"'(2) Benefit payments taken into account.—In determining the amounts described in subsection (b), only those black lung benefit claims the payment of which is expected to be made from the trust shall be taken into account.

"'(3 Time when contributions deemed made.—For purposes of this section, a taxpayer shall be deemed to have made a payment of a contribution on the last day of a taxable year if the payment is on account of that taxable year and is made not later than the time prescribed by law for filing the return for that taxable year (including extensions thereof).

"'(4) Contributions to be in cash or certain other items.—No deduction shall be allowed under subsection (a) with respect to any contribution to a trust described in section 501(c)(21) other than a contribution in cash or in items in which such trust may invest under clause (ii) of section 501(c)(21)(B).

"'(d) Carryover of Excess Contributions.—If the amount of the deduction determined under subsection (a) for the taxable year (without regard to the limitation imposed by subsection (b)) with respect to a trust exceeds the limitation imposed by subsection (b) for the taxable year, the excess shall be carried over to the succeeding taxable year and treated as contributed to the trust during that year.

"'(e) Definition of Black Lung Benefit Claim.—For purposes of this section, the term "black lung benefit claim" means a claim for compensation for disability or death due to pneumoconiosis under part C of title IV of the Federal Coal Mine Health and Safety Act of 1969 or under any State law providing for such compensation.'

"(2) Clerical amendment.—The table of sections for such part is amended by adding at the end thereof the following new item:

"'Sec. 192. Contributions to black lung benefit trust.'.

"(c) Excise Taxes on Acts of Self-Dealing, Taxable Expenditures, and Excess Contributions.—

"(1) In general.—Chapter 42 of such Code (relating to private foundations) is amended by adding at the end thereof the following new subchapter:

"'Subchapter B—Black Lung Benefit Trusts

"'Sec. 4951. Taxes on self-dealing.
"'Sec. 4952. Taxes on taxable expenditures.
"'Sec. 4953. Tax on excess contributions to black lung benefit trusts.

"'Sec. 4951. Taxes on Self-Dealing.

"'(a) Initial Taxes.—

"'(1) On self-dealer.—There is hereby imposed a tax on each act of self-dealing between a disqualified person and a trust described in section 501(c)(21). The rate of tax shall be equal to 10 percent of the amount involved with respect to the act of self-dealing for each year (or part thereof) in the taxable period. The tax imposed by this paragraph shall be paid by any disqualified person (other than a trustee acting only as a trustee of the trust) who participates in the act of self-dealing.

"'(2) On trustee.—In any case in which a tax is imposed by paragraph (1), there is hereby imposed on the participation of any trustee of such a trust in an act of self-dealing between a disqualified person and the trust, knowing that it is such an act, a tax equal to 2½ percent of the amount involved with respect to the act of self-dealing for each year (or part thereof) in the taxable period, unless such participation is not willful and is due to reasonable cause. The tax imposed by this paragraph shall be paid by any such trustee who participated in the act of self-dealing.

"'(b) Additional Taxes.—

"'(1) On self-dealer.—In any case in which an initial tax is imposed by subsection (a)(1) on an act of self-dealing by a disqualified person with a trust described in section 501(c)(21) and in which the act is not corrected within the correction period, there is hereby imposed a tax equal to 100 percent of the amount involved. The tax imposed by this paragraph shall be paid by any disqualified person (other than a trustee acting only as a trustee of such a trust) who participated in the act of self-dealing.

"'(2) On trustee.—In any case in which an additional tax is imposed by paragraph (1), if a trustee of such a trust refused to agree to part or all of the correction, there is hereby imposed a tax equal to 50 percent of the amount involved. The tax imposed by this paragraph shall be paid by any such trustee who refused to agree to part or all of the correction.

"(c) Joint and Several Liability.—If more than one person is liable under any paragraph of subsection (a) or (b) with respect to any one act of self-dealing, all such persons shall be jointly and severally liable, under such act.

"'(d) Self-Dealing.—

"'(1) In general.—For purposes of this section, the term "self-dealing" means any direct or indirect—

"'(A) sale, exchange, or leasing of real or personal property between a trust described in section 501(c)(21) and a disqualified person;

"'(B) lending of money or other extension of credit between such a trust and a disqualified person;

"'(C) furnishing of goods, services, or facilities between such a trust and a disqualified person;

"'(D) payment of compensation (or payment or reimbursement of expenses) by such a trust to a disqualified person; and

"'(E) transfer to, or use by or for the benefit of, a disqualified person of the income or assets of such a trust.

"'(2) Special rules.—For purposes of paragraph (1)—

"'(A) the transfer of personal property by a disqualified person to such a trust shall be treated as a sale or exchange if the property is subject to a mortgage or similar lien;

"'(B) the furnishing of goods, services, or facilities by a disqualified person to such a trust shall not be an act of self-dealing if the furnishing is without charge and if the goods, services, or facilities so furnished are used exclusively for the purposes specified in section 501(c)(21)(A); and

"'(C) the payment of compensation (and the payment or reimbursement of expense) by such a trust to a disqualified person for personal services which are reasonable and necessary to carrying out the exempt purpose of the trust shall not be an act of self-dealing if the compensation (or payment or reimbursement) is not excessive.

"'(e) Definitions.—For purposes of this section—

"'(1) Taxable period.—The term "taxable period" means, with respect to any act of self-dealing, the period beginning with the date on which the act of self-dealing occurs and ending on the earlier of—

"'(A) the date of mailing of a notice of deficiency with respect to the tax imposed by subsection (a)(1) under section 6212, or

"'(B) the date on which correction of the act of self-dealing is completed.

"'(2) Amount involved.—The term "amount involved" means, with respect to any act of self-dealing, the greater of the amount of money and the fair market value of the other property given or the amount of money and the fair market value of the other property received; except that in the case of services described in subsection (d)(2)(C), the amount involved shall be only the excess compensation. For purposes of the preceding sentence, the fair market value—

"'(A) in the case of the taxes imposed by subsection (a), shall be determined as of the date on which the act of self-dealing occurs; and

"'(B) in the case of taxes imposed by subsection (b), shall be the highest fair market value during the correction period.

"'(3) Correction.—The terms "correction" and "correct" mean, with respect to any act of self-dealing, undoing the transaction to the extent possible, but in any case placing the trust in a financial position not worse than that in which it would be if the disqualified person were dealing under the highest fiduciary standards.

"'(4) Correction period.—The term "correction period" means, with respect to any act of self-dealing, the period beginning with the date on which the act of self-dealing occurs and ending 90 days after the date of mailing of a notice of deficiency under section 6212 with respect to the tax imposed by subsection (b)(1), extended by—

"'(A) any period in which a deficiency cannot be assessed under section 6313(a), and

"'(B) any other period which the Secretary determines is reasonable and necessary to bring about correction of the act of self-dealing.

"'(5) Disqualified person.—The term "disqualified person" means, with respect to a trust described in section 501(c)(21), a person who is—

"'(A) a contributor to the trust,

"'(B) a trustee of the trust,

"'(C) an owner of more than 10 percent of—

"'(i) the total continued voting power of a corporation,

"'(ii) the profits interest of a partnership, or

"'(iii) the beneficial interest of a trust or unincorporated enterprise,

which is a contributor to the trust,

"'(D) an officer, director, or employee of a person who is a contributor to the trust,

"'(E) the spouse, ancestor, lineal descendant, or spouse of a lineal descendant of an individual described in subparagraph (A), (B), (C), or (D),

"'(F) a corporation of which persons described in subparagraph (A), (B), (C), (D), or (E) own more than 35 percent of the total combined voting power,

"'(G) a partnership in which persons described in subparagraph (A), (B), (C), (D), or (E), own more than 35 percent of the profits interest, or

"'(H) a trust or estate in which persons described in subparagraph (A), (B), (C), (D), or (E) hold more than 35 percent of the beneficial interest.

For purposes of subparagraphs (C)(i) and (F), there shall be taken into account indirect stockholdings which would be taken into account under section 267(c), except that, for purposes of this paragraph, section 267(c)(4) shall be treated as providing that the members of the family of an individual are only those individuals described in subparagraph (E) of this paragraph. For purposes of subparagraphs (C) (ii) and (iii) (G), and (H), the ownership of profits or beneficial interests shall be determined in accordance with the rules for constructive ownership of stock provided in section 267 (c) (other than paragraph (3) thereof), except that section 267(c)(4) shall be treated as providing that the members of the family of an individual are only those individuals described in subparagraph (E) of this paragraph.

"'(f) Payments of Benefits.—For purposes of this section, a payment, out of assets or income of a trust described in section 501(c)(21), for the purposes described in clause (i) of section 501(c)(21) (A) shall not be considered an act of self-dealing.

"'Sec. 4952. Taxes on Taxable Expenditures.

"'(a) Tax Imposed.—

"'(1) On the fund.—There is hereby imposed on each taxable expenditure (as defined in subsection (d)) from the assets or income of a trust described in section 501 (c)(21) a tax equal to 10 percent of the amount thereof. The tax imposed by this paragraph shall be paid by the trustee out of the assets of the trust.

"'(2) On the trustee.—There is hereby imposed on the agreement of any trustee of such a trust to the making of an expenditure, knowing that it is a taxable expenditure, a tax equal to 2½ percent of the amount thereof, unless such agreement is not willful and is due to reasonable cause. The tax imposed by this paragraph shall be paid by the trustee who agreed to the making of the expenditure.

"'(b) Additional Taxes.—

"'(1) On the fund.—In any case in which an initial tax is imposed by subsection (a) (1) on a taxable expenditure and such expenditure is not corrected within the correction period, there is hereby imposed a tax equal to 100 pecent of the amount of the expenditure. The tax imposed by this paragraph shall be paid by the trustee out of the assets of the trust.

"'(2) On the trustee.—In any case in which an additional tax is imposed by paragraph (1), if a trustee refused to agree to a part or all of the correction, there is hereby imposed a tax equal to 50 percent of the amount of the taxable expenditure. The tax imposed by this paragraph shall be paid by any trustee who refused to agree to part or all of the correction.

"'(c) Joint and Several Liability.—For purposes of subsections (a) and (b), if more than one person is liable under subsection (a)(2) or (b)(2) with respect to the making of a taxable expenditure, all such persons shall be jointly and severally liable under such paragraph with respect to such expenditure.

"'(d) Taxable Expenditure.—For purposes of this section, the term "taxable expenditure" means any amount paid or incurred by a trust described in section 501(c)(21) other than for a purpose specified in such section.

"'(e) Definitions.—

"'(1) Correction.—The terms "correction" and "correct" mean, with respect to any taxable expenditure, recovering part or all of the expenditure to the extent recovery is possible, and where full recovery is not possible, contributions by the person or persons whose liabilities for black lung benefit claims (as defined in section 192(e)) are to be paid out of the trust to the extent necessary to place the trust in a financial position not worse than that in which it would be if the taxable expenditure had not been made.

"'(2) Correction period.—The term "correction period" means, with respect to any taxable expenditure, the period beginning with the date on which the taxable expenditure occurs and ending 90 days after the date of mailing of a notice of deficiency under section 6212 with respect to the tax imposed by subsection (b)(1), extended by—

"'(A) any period in which a deficiency cannot be assessed under section 6213(a), and

"'(B) any other period which the Secretary determines is reasonable and necessary to bring about correction of the taxable expenditure.

"'Sec. 4953. Tax on Excess Contributions to Black Lung Benefit Trusts.

"'(a) Tax Imposed.—There is hereby imposed for each taxable year a tax in an amount equal to 5 percent of the amount of the excess contributions made by a person to or under a trust or trusts described in section 501(c)(21). The tax imposed by this subsection shall be paid by the person making the excess contribution.

"'(b) Excess Contribution.—For purposes of this section, the term "excess contribution" means the sum of—

"'(1) the amount by which the amount contributed for the taxable year to a trust or trusts described in section 501(c)(21) exceeds the amount of the deduction allowable to such person for such contributions for the taxable year under section 192, and

"'(2) the amount determined under this subsection for the preceding taxable year, reduced by the sum of—

"'(A) the excess of the maximum amount allowable as a deduction under section 192 for the taxable year over the amount contributed to the trust or trusts for the taxable year, and

"'(B) amounts distributed from the trust to the contributor which were excess contributions for the preceding taxable year.

"'(c) Treatment of Withdrawal of Excess Contributions.—Amounts distributed during the taxable year from a trust described in section 501(c)(21) to the contributor thereof the sum of which does not exceed the amount of the excess contribution made by the contributor shall not be treated as—

"'(1) an act of self-dealing (within the meaning of section 4951),

"'(2) a taxable expenditure (within the meaning of section 4952), or

"'(3) an act contrary to the purposes for which the trust is exempt from taxation under section 501(a)'.".

"(2) Clerical amendments.—

"(A) Chapter 42 of such Code is amended by striking out the chapter heading and inserting in lieu thereof the following:

"'Chapter 42—PRIVATE FOUNDATIONS;
BLACK LUNG BENEFIT TRUSTS

"'Subchapter A. Private foundations.
"'Subchapter B. Black lung benefit trusts.
"'Subchapter A—Private Foundations'

"(B) Subsections (a)(1) and (b) of section 4946 of such Code are each amended by striking out 'For purposes of this chapter' and inserting in lieu thereof 'For purposes of this subchapter'.

"(C) The table of chapters for subtitle D of such Code is amended by striking out the item relating to chapter 42 and inserting in lieu thereof the following:

"''Chapter 42. Private foundations, black lung benefit trusts.'.

"(d) Technical Amendments.—

"(1)(A) Section 6213(e) of such Code (relating to suspension of filing period for certain excises taxes) is amended—

"(i) by inserting ', 4951 (relating to taxes on self-dealing), or 4952 (relating to taxes on taxable expenditures)' after '4945 (relating to taxes on taxable expenditures)',

"(ii) by inserting '4951(e)(4), 4952(e)(2),' after 4945(i)(2),', and

"(iii) by striking out '4975(f)(4)' and inserting in lieu thereof '4975(f)(6)'.

"(2) Section 6213(f) of such Code is amended by striking out 'or chapter 42 or 43' each place it appears and inserting in lieu thereof 'or chapter 41, 42, 43, or 44'.

"(3) Section 6405(a) of such Code is amended by striking out 'private foundations and pension plans under chapters 42 and 43' and inserting in lieu thereof 'public charities, private foundations, operators' trust funds, pension plans, or real estate investment trusts under chapter 41, 42, 43, or 44'.

"(4) Section 6501(e)(3) of such Code is amended by striking out 'or 43' and inserting in lieu thereof '53, or 44'.

"(5) Section 6501(n) of such Code is amended—

"(A) by striking out 'Chapter 42 Taxes' in the caption and inserting in lieu thereof 'Chapter 42 and Similar Taxes', and

"(B) by striking out the first sentence of paragraph (1) and inserting in lieu thereof the following: 'For purposes of any tax imposed by chapter 42 (other than section 4940) or by section 4975, the return referred to in this section shall be the return filed by the private foundation, plan, or trust (as the case may be) for the year in which the act (or failure to act) giving rise to liability for such tax occurred.'.

"(6)(A) Section 6503(g) of such Code is amended by striking 'or section 507 or section 4971 or section 4975' and inserting in lieu thereof 'or section 507, 4971, 4975, 4985, or 4986'.

"(B) Section 6503(g) of such Code is amended by striking out 'or 4975(f)(4)' and inserting in lieu thereof '4975(f)(6), 4985(e)(4), or 4986(e)(2)'.

"(7) Section 7454(b) of such Code is amended by inserting 'or whether the trustee of a trust described in section 502(c)(21) has "knowingly" participated in an act of self-dealing (within the meaning of section 4951) or agreed to the making of a taxable expenditure (within the meaning of section 4952),' after 'section 4945),' ".

"(e) Publicity of Information.—Section 6104 of such Code (relating to publicity of information required from certain exempt organizations and certain trusts) is amended—

"(1) by inserting '(other than in paragraph (21) thereof)' after 'section 501(c)' in subsection (a)(1)(A), and

"(2) by adding at the end of subsection (b) thereof the following sentence: 'This subsection shall not apply to information required to be furnished by a trust described in section 501(c)(21).'

"(f) Effective Date.—The amendments made by this section shall apply with respect to contributions, acts, and expenditures made after December 31, 1977, in and for taxable years beginning after such date.

"Sec. 5. General Effective Date Reservation.

"Notwithstanding any other provision of this Act to the contrary, no provision of this Act (including any amendment made by any such provision) shall take effect or apply unless an Act, enacted after the date of enactment of this Act, contains a provision, explicitly in satisfaction of the requirements of this section, which states that it is the intent of the Congress that the provisions of this Act shall take effect.".

Amend the title so as to read: "An Act to impose an excise tax on the sale of coal by the producer, to establish a Black Lung Disability Trust Fund, and for other purposes.".

Mr. LONG. Mr. President, the amendment I am offering is the text of what was agreed to by the conferees as the tax title—title II—of the black lung bill.

PROCEDURE

On substantially all points, this agreement follows the Senate amendment to H.R. 4544. However, before I describe the provisions of the amendment, let me take a minute to talk about the procedure we are using. Although the House bill raised revenue and imposed a tax, the House chose to do so by calling its tax an "annual assessment." As a result, some people raised questions as to whether the House bill technically was a revenue bill. Now, I have no doubt that it was a revenue bill and that the Senate acted in accordance with the Constitution when we put the Senate's tax title on that bill. However, in order to ease the concerns that some people have expressed and to avoid any doubt on the subject, it was agreed by the conferees that the tax title—corresponding to title II of the Senate bill—should be passed separately by putting it on a bill that everyone would agree is a revenue bill. That is what we are doing here, today. We have written the effective date of this tax title in such a way that the tax will not go into effect unless the Congress also enacts the benefits portions of the black lung bill. In this way, there will not be a tax unless there are benefits to be paid from those tax revenues and also there will not be a revised benefits structure unless there is a tax to pay for the revised benefits structure.

PROVISIONS OF THE AMENDMENT: TAX ON COAL

Now let me briefly describe what we have in this tax amendment. This amendment imposes a tax on the sale of coal by the coal producer. The tax is imposed at the rate of 50 cents a ton on underground-mined coal and 25 cents a ton on surface-mined coal. However, in no event is the tax to be more than 2 percent of the sales price. On the whole, the agreement substantially follows the Senate bill.

In contrast to the House bill, this amendment makes it clear that the provision is a tax and brings into effect all of the regular procedures for manufacturers excise taxes. For example, this provides rules for situations where the producer uses the coal rather than selling it, such as in the case of integrated electric utilities and a number of steel companies; it provides rules for the time for payment of tax; and it gives the taxpayers the right to sue for refunds of overpayments of the tax. If this were not a tax, then corresponding rules would have to be developed from scratch in this bill.

The second thing that this provision does is to set the rates in the statute. The House bill would have allowed the Secretary of Labor and trustees elected by coal mine operators to set the tax rates and change them from time to time. Only in extreme circumstances has the Congress ever allowed the executive branch or anyone else to establish or vary tax rates, and we had no intention of departing from that very desirable standard in this case. If anyone wants to change the tax rates, then under this amendment they have to come back to the Congress and the Congress has the power to decide.

Third, this provision establishes the idea that there is a limit as to how high the tax should go as a percentage of the value of the product. An ad valorem tax has less of a distorting effect on pricing systems and competition in the marketplace than a flat per-ton tax would have. Also, an ad valorem tax is easier to administer and less expensive, both from the point of view of the taxpayer and of the Government. Basically, an ad valorem tax would not require the taxpayer to keep any records other than the same financial records that the taxpayer keeps now for income tax purposes. The simpler, ad valorem approach was what the Senate passed when it considered the black lung bill before.

Unfortunately, we were not able to get the House to agree completely with the Senate's approach and so we reached the compromise that I described to you, that the taxpayer would pay 50 cents a ton on underground-mined coal and 25 cents a ton on surface-mined coal, but not more than 2 percent ad valorem. All in all, I suggest that this is a good compromise of the differing positions.

BLACK LUNG DISABILITY BENEFITS TRUST FUND

The trust fund provisions are basically the same as those passed by the Senate earlier this year. The revenues from the tax are put into a trust fund. The trustees are the Secretary of the Treasury, the Secretary of Labor, and the Secretary of Health, Education, and Welfare, with the Secretary of the Treasury as the managing trustee. Although the tax collections are automatically appropriated to the trust fund, payments from the trust fund can be made only in accordance with appropriations acts. The benefits under what is called part C of the black lung benefits program are to be paid out of the trust fund, that is, out of the coal taxes. There is a provision permitting appropriations of "repayable advances" to the trust fund, in order to tide it over the first few years, because in the initial years, the expenditures are expected to be more than the revenues. However, those advances must be repaid, with interest, from the coal tax revenues. This program is not to be supported from the general revenues.

COAL MINE OPERATORS' TRUSTS

The amendment also includes provisions from the Senate-passed bill which provide special rules for trust funds established by coal mine operators to satisfy their obligations under the so-called "responsible operator" provisions of the black lung benefits program. Where a coal mine operator has been designated as the one responsible for payment of benefits to a miner, the coal mine operator will be permitted to fund its obligations in advance through contributions to a tax-exempt trust. These contributions will be deductible, within limits, and the amendment includes safeguards to insure that the money in the trust can be used only for the payment of these black lung benefits.

NIOSH

The last provision in the Senate-passed bill was dropped in conference, because it has already been passed on a separate bill which has been signed into law by the President. That law is Public Law 95-210, relating to rural health clinics. That provision would have allowed NIOSH—the National Institute of Occupational Safety and Health—to obtain information about taxpayers' addresses in order to warn them of health dangers that they may have been exposed to in their jobs. There, too, the Senate's objeective was achieved, even though it turned out that it was not

necessary to achieve it on this particular bill.

CONCLUSION

Mr. President, when the Senate dealt with this bill, the committee report filed by the Committee on Finance was filed with respect to S. 1538. That was debated by the Senate on July 21, 1977. Finally, the House sent us H.R. 4544 and the Senate acted on that bill on September 20, 1977. Because of the procedure that the conferees have agreed upon, we are now acting on a third bill, H.R. 5322. In order to allow people to follow the legislative history of this provision, especially since there will not be a conference report on the tax title of the black lung legislation, I ask unanimous consent to insert in the RECORD, at the end of my remarks, a detailed explanation of the amendment I am offering—that is, the tax title of the black lung legislation. This explanation is substantially the same as the Senate Finance Committee's report on S. 1538.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

(See exhibit 1.)

Mr. LONG. All in all, the results of the black lung conference have been quite successful with respect to title II of the Senate bill—the tax title. And I take this opportunity to express my thanks to the senior Senator from West Virginia (Mr. RANDOLPH), for his great work in helping us achieve a compromise so that we could move ahead in this conference.

Mr. RANDOLPH has worked in this field for many years. He has been most considerate and has helped to bring the conferees together on points which have heretofore been irreconciliable. It was in large part because of his moderating influence and ability to bring people together that we have been able to bring this measure to the Senate. I believe the passage of this will assure us that we will have a properly functioning black lung program.

I would also like to thank all the other Senate conferees for their assistance in working on this bill and I hope that we will soon have title I before us—the benefits title—so that we can complete action on the black lung legislation.

Mr. President, I urge the adoption of the amendment.

EXHIBIT 1

BLACK LUNG BENEFITS REVENUE ACT OF 1977

GENERAL EXPLANATION

Tax on Coal (sec. 2 of the bill and new sec. 4121 of the Code).

PRESENT LAW

Present law does not include any Federal tax on coal extraction or sales, as such. (Profits are, of course, subject to income taxation and, in that context, there are several provisions of particular application to coal.)

EXPLANATION OF THE PROVISION

The amendment imposes a manufacturers excise tax on the sale of coal by the producer. The tax is imposed at the rate of 50 cents per ton in the case of coal from underground mines in this country and 25 cents per ton in the case of coal from surface mines in this country. The amount of the tax per ton of coal is limited, however, to 2 percent of the sales price of the coal. This means, in effect, that coal from underground mines which sells for less than $25 per ton and coal from surface mines which sells for less than $12.50 per ton is taxed at a rate of 2 percent ad valorem rather than at a flat rate per ton. This 2-percent ad valorem limitation is intended to prevent the tax imposed by this section from being a disproportionately high percentage burden on lower-priced coal.

Coal is to be treated as produced from a surface mine if all of the geological matter (e.g., trees, earth, rock) above the coal is removed before the coal is mined. Since in some cases a single mine may be yielding coal at one time from surface mining operations and at the same time from underground mining operations, the determination of whether the 50-cent rate (underground mining) or the 25-cent rate (surface mining) applies is to be made with respect to each load of coal and not on a mine-by-mine basis. Furthermore, since operations with respect to a coal deposit may change from surface to underground (for example, where the overburden becomes too difficult to remove as the mining progresses), the rate of tax may vary even with respect to a single deposit of coal.

For purposes of this tax provision, auger mining is to be treated as surface mining.

Most of the rules generally applicable to manufacturers excise taxes, including the collection provisions, apply to this coal tax. However, the following exemptions which apply to other manufacturers excise taxes do not apply to this tax on coal: sales for further manufacturing, for export, for use as supplies for vessels or aircraft, for the use of a State or local government, or for the use of a nonprofit educational organization. Discretionary authority now granted to the Secretary of the Treasury to exempt sales for the use of the United States from this manufacturers excise tax will not be available in the case of this tax.

As under the general rule applicable to manufacturers excise taxes, use by a producer is treated as a sale by the producer.

Under the general rules applicable to manufacturers excise taxes (sec. 4216(a)), where the 2-percent ad valorem rate applies, the tax base for coal sold by a producer (rather than used by the producer, as in a manufacturing process) is the sale price f.o.b. mine (or cleaning plant). This is true even if the producer sells on the basis of a delivered price. Where a producer uses coal mined by the producer in a manufacturing process, the tax base will be a constructive price based on sales made f.o.b. mine or cleaning plant by other producers (sec. 4218(e)). For such a producer, the constructive sale price for purposes of the manufacturers excise tax will normally be the same as the constructive price used by the producer for purposes of determining the deduction for percentage depletion.

This tax does not apply to lignite, which is generally the softest and least expensive of the types of coal.

This exemption is intended to apply to "lignite" as defined in accordance with the standard specifications for the classification of coals by rank of the American Society for Testing and Materials (p. 214, 1976 Annual Book of ASTM Standards, Part 26, D 388).

EFFECTIVE DATES

This tax will apply to coal sold by a producer after March 31, 1978.

2. Black Lung Disability Trust Fund (sec. 3 of the bill)

PRESENT LAW

Present law does not include a trust fund for financing black lung benefits. The Federal Government's share of the costs of the present part C program is paid directly out of appropriations from the general fund of the Treasury.

EXPLANATION OF THE PROVISION

The amendment establishes a trust fund (the "Black Lung Disability Trust Fund") and automatically appropriates to it amounts equal to the revenues from the coal tax described above. In addition, the amendment appropriates to the trust fund any revenues from the penalty taxes imposed on coal mine operators' trusts, described below. Since those taxes are imposed only if certain statutory standards are violated by those trusts, negligible revenues can be expected from that source. Also, the trust fund is to retain reimbursements from coal mine operators whose obligations are paid by the trust fund, as well as earnings on any trust fund investments. Finally, the amendment authorizes appropriations from general revenues as advances to be repaid from later coal tax revenues. Such advances are required since the trust fund's obligations are greatest in the first few years of its existence, while the revenues from the coal tax will be lower at the beginning and will increase as time goes on. It is not intended that this authorization be viewed as permitting advances in excess of what can be expected to be repaid out of the coal tax revenues provided for under the amendment.

The fund is required to pay benefits if there is no "responsible operator," or if the operator is in default, and would be required to pay benefits with respect to all claims in which the miner's last coal mine employment was before January 1, 1970. In cases in which the Government has already paid benefits for periods of eligibility since January 1, 1974, the fund must reimburse the Government for these payments. This, in effect, transfers those costs from the Government to the industry (by way of the trust fund revenues from the tax on coal).

The expenses of the Department of Labor and the Department of the Treasury (and, to a limited extent, where appropriate, the Department of Health, Education, and Welfare) in operating and administering the claims program to be financed through the fund are to be paid by the fund. The fund also is to bear the costs of its own administration, as well as the costs incurred by the Treasury Department in collecting the coal tax and administering the provisions of the Internal Revenue Code with respect to that tax. The annual report of the fund is to include a full accounting of these administrative costs and of the personnel required for administration.

Under the amendment, if the Secretary of Labor determines (in accordance with existing procedures, which provide for administrative and judicial appeals) that a coal mine operator is responsible for the payment of certain benefits, but those benefits have in fact been paid out of the fund, then the coal mine operator is obligated to reimburse the fund. If the operator refuses to reimburse the fund, then a lien is to arise in favor of the United States for the entire amount that the operator is required to repay. This lien attaches to all the assets of the coal mine operator and is given generally the same status as a Federal tax lien. If the operator initiates administrative or judicial appeals as provided under present law, then the lien is not to attach until the termination of the review proceedings.

The amendment authorizes the Secretary of Labor to bring suit in any Federal district court to enforce this lien.

The trustees of the fund are the Secretary of the Treasury, the Secretary of Labor, and the Secretary of Health, Education, and Welfare; the Secretary of the Treasury is to be the managing trustee. Receipts of the fund in excess of amounts needed to meet current withdrawals are to be invested only in public debt securities with maturities suitable for the needs of the fund and bearing interest at prevailing market rates. The fund's earnings from these investments are to be credited to and form a part of the fund. The Secretary of the Treasury, in making such investments, is, of course, acting as fiduciary of the fund and is to focus upon the needs of the fund in choosing which investments are appropriate.

Such investments are not to be made unless the fund has sufficient assets to meet current withdrawals, including satisfaction of any obligation of the fund to repay amounts that may have been appropriated from the general fund as "repayable advances". The amendment, in authorizing the Secretary to invest in securities bearing interest at prevailing market rates, recognizes that the interest rates on investments by the fund may be different from the interest that the fund is to pay to the general fund of the Treasury on such repayable advances. By requiring that the fund repay those advances before it is free to make investments, the amendment avoids the possibility of "arbitrage situations" arising from possible differences in interest rates.

Amounts equivalent to the coal tax collections are to be transferred to the fund monthly, on the basis of estimates, with adjustments to be made annually to reconcile previous transfers with net collections.

Other amounts (penalty taxes imposed on operators' trusts, recoveries of amounts from "responsible operators," fines and penalties paid under the Federal Coal Mine Health and Safety Act of 1969, and payments from operators' trusts) are to be transferred as promptly as practical, but in any event not less often than quarterly.

EFFECTIVE DATES

The fund is to be established on April 1, 1978, and to pay out benefits on and after that date.

3. Operators' Trusts for Contingent Liabilities (sec. 4 of the bill and new secs. 501(c)(21), 192, 4951, 4952, and 4953 of the Code)

PRESENT LAW

As a general rule, the income tax law does not give a taxpayer current deductions for amounts set aside in a self-insurance fund to satisfy contingent liabilities which may arise in the future. A coal mine operator who cannot deduct amounts set aside in a trust fund or reserve account for liabilities under black lung benefits laws until such amounts are actually used to pay claims, finds that the operator generally can take current deductions for premiums paid on commercial insurance policies covering such contingent liabilities.[1]

Also under present law, a trust established to provide funds to satisfy contingent liabilities does not qualify for tax-exempt status. Thus, the tax law does not provide an exemption for income on assets set aside by a coal mine operator to satisfy liabilities for black lung benefits. By way of comparison, it should be noted that to the extent income and net short-term capital gain on reserves held under a non-cancellable accident and health insurance policy issued by a life insurance company are required to be added to the reserve in order to satisfy contingent liabilities, the income and gains are not taxed to the insurer.[2]

In general, private employee welfare plans must comply with Federal standards regarding fiduciaries, investments, and self-dealing or other prohibited transactions, pursuant to the Employee Retirement Income Security Act of 1974 (ERISA). Plans maintained for workmen's compensation or disability insurance purposes are not subject to ERISA.

EXPLANATION OF THE PROVISION

The amendment provides (1) income tax exemptions for a qualifying trust used by a coal mine operator to self-insure for liabilities under Federal and State black lung benefits laws and (2) deductions (within certain limits) for amounts contributed to the trust by the operator.

Trusts—Qualifications

The bill adds a paragraph (21) to section 501(c) of the Code, describing certain trusts which would qualify for exemption from Federal income taxation. To so qualify, the trust must be created or organized in the United States exclusively for the following purposes: (a) to satisfy in whole or in part the operator's liabilities for black lung benefits arising under Federal or State statutes;[3] (b) to purchase insurance for the purpose of covering such liabilities in whole or in part; and (c) to pay the administrative and incidental costs of the trust (such as legal, accounting, actuarial, and trustee expenses) incurred in connection with operation of the trust or the processing of black lung claims against the operator.

A section 501(c)(21) trust may pay premiums for insurance to cover the operator's black lung benefits liabilities (1) if the insurance solely covers such liabilities and no other risks or (2) if not, only to the extent of that portion of the premium which has been separately allocated and stated by the insurer as attributable solely to coverage of the operator's black lung benefits liabilities.

The administrative and incidental expenses properly payable by the trust include any excise taxes imposed on the trust under the taxable expenditures provision (discussed below), plus expenses (such as legal fees), reasonable in amount, incurred by the trust in connection with assertion against the trust of liability for these taxes. A section 501(c)(21) trust may not pay any excise taxes imposed under the self-dealing or excess contributions provisions (discussed below) or any excise taxes imposed on trustees under the taxable expenditures provisions, nor may the trust pay any expenses incurred in connection with assertions of liability for such taxes.

The trust must be irrevocable, with no right or possibility of reversion (either of corpus or income) to the coal mine operator (except for the recovery of excess contributions by the operator, as described below, under *Deductions*). The trust must be established and maintained pursuant to a written instrument. the trust instrument must provide that no part of the corpus or income may be used for purposes other than:

(*a*) those purposes described above,

(*b*) certain permitted investments (described in detail below), or

(*c*) payment into the Black Lung Disability Trust Fund or into the general fund of the Treasury.

If the trust qualifies, its income is not taxable to the operator making contributions to the trust,[4] nor is the income taxable to the trust (except to the extent it is subject to the tax imposed by section 511 on "unrelated business taxable income").

Trusts—Status under ERISA

The Finance Committee was informed by the Department of Labor that, in the Department's opinion, a section 501(c)(21) trust would be excluded from coverage under title I of ERISA (the so-called "labor law" provisions) because of ERISA section 4(b)(3), which exempts employee benefit plans "maintained solely for the purpose of complying with applicable workmen's compensation laws or * * * disability insurance laws * * *." The Finance Committee has agreed with this interpretation.

The amendment imposes certain investment limitations and prohibitions on "self-dealing" and "taxable expenditures" which are believed to be appropriate to prevent abuses of section 501(c)(21) trusts.

Investment limitations

Under the amendment, a qualifying trust may invest its funds only in the following: (a) public debt securities of the United States; (b) obligations of a State or local government, other than any such obligation which is in default as to either principal or interest; or (c) time or demand deposits in a bank (as defined in section 581) or an insured credit union (within the meaning of sec. 101(6) of the Federal Credit Uion Act). The bank or credit union, as the case may be, must be located in the United States. These investment restrictions are intended to preclude speculative or other investments of corpus or income which might jeopardize the carrying out of the trust's exempt purposes and permit the committee to simplify the self-dealing restrictions and avoid the necessity of certain other restrictions to prevent potential abuses.

Under the self-dealing restrictions applicable to these trusts, if a bank or an insured credit union is a trustee of the trust or otherwise is a "disqualified person" with respect to the trust (for example, if it owns or is owned by the coal mine operator maintaining the trust) no funds of the trust may be held or invested in checking accounts, savings accounts, certificates of deposit, or other time or demand deposits in that bank or credit union.

"Self-dealing" prohibitions

The bill prohibits any direct or indirect "self-dealing", a comprehensively defined term, between a section 501(c)(21) trust and any "disqualified person" with respect to that trust.

The following transactions are prohibited by the bill:

(1) the sale, exchange, or leasing of property between the trust and any disqualified person (including certain transfers to the trust of property subject to a lien);

(2) the lending of money or other extension of credit between the trust and any disqualified person;

(3) the furnishing of goods, services, or facilities between the trust and any disqualified person (unless furnished to the trust, without charge, exclusively for proper trust purposes);

(4) payment of compensation by the trust to any disqualified person (except for compensation, not excessive in amount, paid for personal services which are reasonable and necessary to carrying out the trust's permitted purposes); and

(5) the transfer to, or use by or for the benefit of, any disqualified person of the income or assets of the trust.

Payments by a section 501(c)(21) trust for purposes of satisfying the operator's liabilities for black lung benefits arising under Federal or State statutes, or to purchase insurance exclusively covering such liabilities, do not constitute either prohibited self-dealing or taxable expenditures (described below). Similarly, payments by an insurance company for purposes of satisfying the operator's black lung benefits liabilities do not constitute prohibited self-dealing merely because the premiums for such insurance have been paid by the trust. If an insurance company constitutes a disqualified person with respect to the trust, however, the self-dealing rules would prohibit the trust from purchasing any insurance from that company.

For purposes of the self-dealing rules, the term "disqualified person" includes (i) a coal mine operator contributing any amount to the trust; (ii) an officer, director, or employee of the operator; (iii) a trustee of the trust (or any person having powers or responsibilities with respect to the trust similar to those of trustees); (iv) a person owning more than 10 percent of an operator in category (i); (v) a member of the family of any individual described in any of the first four categories; and (vi) any entity in which persons described in any of the first five categories own or hold certain specified percentages of voting power or profits or beneficial interest.

Any violation of the prohibitions against self-dealing transactions gives rise automatically to an initial excise tax on the self-dealer (the disqualified person who violated the restrictions), equal to 10 percent of the "amount involved". In addition, an initial tax (equal to 2½ percent of the amount involved) is also to be imposed on any trustee

---

Footnotes at end of article.

or other manager of the trust who participated in the taxable act, but only if the manager participated knowing the act was taxable and if the manager's participation was willful and not due to reasonable cause. In the case of either the trust or the manager, a second level of excise tax at higher rates (100 percent and 50 percent, respectively) is to be imposed if the act is not undone or otherwise "corrected" after issuance of a deficiency notice from the Internal Revenue Service.

"Correction" consists of "undoing" the transaction or (if undoing is not possible) making the trust whole or giving the trust the benefit of the bargain within 90 days after the mailing of the deficiency notice with respect to the first level of tax. For purposes of this sanction, the amount involved is the highest fair market value of the property involved in the transaction during the period within which the transaction may be undone. This provision is intended to impose all market fluctuation risk upon the self-dealer who refuses to comply and to give the trust the benefit of the best bargain it could have made at any time during the period.

The second-level excise tax sanction, imposed only after a notice of deficiency and adequate opportunity for court review and undoing the self-dealing transaction, is intended to be sufficiently heavy to compel voluntary compliance (at least after court review). It is expected that application of this sanction will be rare, but where the parties refuse to undo the transaction, it is expected that this sanction will be applied.

These taxes are treated like income, estate, and gift taxes in the sense that the Internal Revenue Service is required to send deficiency notices to the self-dealer and the trustee who then have 90 days to petition the Tax Court. The usual statute of limitations for assessment applies—3 years unless there is a substantial omission of tax on the return filed by the trust (6-year-statute of limitations) or no return has been filed (assessment at any time). The 90-day period for petitioning the Tax Court and the statute of limitations for assessing and collecting the tax are suspended during any extension by the Service of the time for correcting the self-dealing.

Refund suits for first- or second-level taxes may be brought in the Court of Claims or in a district court (but only if there has been no prior court review of the prohibited act). Also, any refund suit is treated as disposing of all issues relating to any first- or second-level tax arising out of that prohibited act. An opportunity is provided for one court review of a self-dealing transaction, but no more than review.

The provisions in the bill as to "self-dealing" generally correspond to certain of the restrictions imposed on private foundations by section 4941 of the Code. Accordingly, authorized interpretations of the later provision may provide general guidance to interpretation of the self-dealing prohibitions under the amendment.[5]

Prohibitions on taxable expenditures

The bill prohibits any expenditures, payments, or investments by a section 501(c)(21) trust other than for proper payment of (a) black lung benefits, (b) administrative expenses, or (c) premiums for insurance covering liabilities for black lung benefits; for permitted investments of trust funds; or for transfer of assets to the Black Lung Disability Trust Fund or to the general fund of the Treasury.

Any violation of the prohibition against "taxable expenditures" will give rise automatically to an initial excise tax imposed on the trust, equal to 10 percent of the amount of the improper expenditure. Since this tax is payable by the trust, the amendment appropriates to the Black Lung Disability Fund amounts equivalent to any amount collected under this tax, and also under the 100-percent second-level tax, described below. In addition, an initial excise tax (equal to 2½ percent of the amount involved) also is to be imposed on any trustee or other manager of the trust who participated in the taxable act, but only if the manager participated knowing the act was taxable and if the manager's participation was wilful and not due to reasonable cause. In the case of either of the trust or the manager, a second level of excise tax at higher rates (100 percent and 50 percent, respectively) is to be imposed if the improper expenditure is not recaptured or otherwise "corrected" after issuance of a deficiency notice from the Internal Revenue Service.

The same correction and judicial review provisions apply under the taxable expenditures provision as apply under the self-dealing provision.

In light of the investment limitations plus the self-dealing and other restrictions which are imposed under the amendment to assure that funds held by self-insurance trusts are used exclusively for the required purposes, it is contemplated that the Secretary of Labor will give appropriate credit for amounts so held in trust in determining whether an operator satisfies the requirements of section 423 of the Federal Coal Mine Health and Safety Act of 1969, that the operator either qualify as a self-insurer or obtain insurance to cover its contingent black lung benefit liabilities.[6]

Trusts—Returns

A trust qualifying under section 501(c)(21) is required to file annual returns with the Internal Revenue Service pursuant to section 6033. Because such returns would include confidential financial data relating to coal mine operators, the amendment exempts such returns from public inspection under section 6104(b). For the same reason, the amendment exempts applications for exemption under section 501(c)(21) from public inspection pursuant to section 6104(a)(1).

Deductions for contributions to the trust

Contributions by a coal mine operator to a trust described in section 501(c)(21) will be deductible by the operator for Federal income tax purposes under new section 192, but not in excess of the maximum amount as determined under that section for the operator's taxable year. The amendment provides that, as in the case of employer contributions to qualified trusts for contingent pension plan liabilities, the operator's contributions to the section 501(c)(21) trust are deductible with respect to a particular taxable year (subject to a maximum deduction limitation) if actually made during that taxable year or if contributed on account of that taxable year and actually paid to the trust not later than the time prescribed for filing the operator's income tax return for that year (including extensions thereof).

To be deductible, the operator's contribution must be made either in cash or in property of the type which the trust is permitted to hold as an investment (e.g., public debt securities of the United States). If the operator makes a permitted contribution of property, the transfer will constitute a sale or exchange of the property for purposes of the operator's Federal income tax, and the fair market value of the property at the date of transfer will constitute the amount realized. (However, the operator's transfer of such property without consideration will not constitute a sale or exchange of property within the meaning of the self-dealing rules unless the property is subject to a mortgage or similar lien.) A contribution to the trust of the operator's note or other evidence of indebtedness of the operator to the trust does not constitute the making of a contribution by the operator and will not entitle the operator to any deduction.[7]

The operator's deduction for contributions to the trust for the taxable year cannot exceed the *greater* of the following two amounts:

(1) the amount needed for the purposes of the trust described in section 501(c)(21)(A)[8] for the operator's taxable year, reduced by the fair market value of trust assets at the beginning of that taxable year; *or*

(2) the sum of an amount equal to all proper administrative and incidental expenses of the trust for the operator's taxable year, *plus* the lesser of—

(a) the amount needed to fully fund all expected future black lung benefit payments[9] with respect to approved claims and claims filed and pending as of the end of the operator's taxable year, reduced by the fair market value of the trust assets at the beginning of said taxable year, or

(b) two times the amount needed to fully fund all expected future black lung benefit payments[10] with respect to either claims approved or claims filed during any one of the current and three preceding taxable years. Under this alternative, the operator may base the limit either on claims approved or on claims filed (and still pending as of the end of the year), whichever produces the greater contribution limit.

The amounts described shall be determined using reasonable actuarial assumptions not inconsistent with Treasury regulations. It is intended that the amount necessary to provide the expected future payments due to a claim which is pending and not approved will be determined as the amount necessary to provide the payments expected for an approved claim multiplied by the expected approval rate of pending claims. The expected approval rate of pending claims is to be consistent with the approval rate experienced by the Department of Labor or the State workmen's compensation system, depending on where the claim is pending, unless the operator or the Service can show that a different expected approval rate is justified for that operator, based on sufficient experience to justify such a different rate.

The first of these limitations above assures that the operator in any event will be permitted to contribute to the trust and deduct current expenditures in excess of trust assets at the beginning of the year.

The second limitation has two alternatives. The first of these alternatives allows full establishment of the current values of current claims, both those approved and those filed and still pending. However, in order to prevent an operator from taking a disproportionately large deduction in establishing the trust or from skipping contributions for several years for purposes of building a disproportionately large deduction, the second alternative provides that the deductible amount cannot exceed two times the amount needed to fully fund all future payments with respect to either claims approved or claims filed during the operator's current taxable year or any one of the three prior taxable years, whichever produces the largest amount.

If an operator makes otherwise deductible trust contributions which exceed the maximum limitation for that year, the following rules will apply under the amendment with respect to the amount of excess contributions:

(a) An excise tax (under new sec. 4953) equal to 5 percent of the excess contribution will be imposed on the operator.

(b) At the request of the operator, the trust shall repay to the operator an amount not exceeding the excess contribution amount (and that payment shall not constitute either an act of self-dealing or a taxable expenditure), but that repayment to the operator will not avoid the imposition of the excise tax.

Footnotes at end of article.

(c) If the operator does not recapture all of the excess contribution, the remaining excess may be carried over to succeeding taxable years and deducted at that time, subject to the maximum deduction limitation applicable to the particular carryover year.

(d) If any portion of that excess contribution cannot be deducted in the particular carryover year because of the maximum deduction limitation for that year, the 5-percent excise tax will be imposed for that carryover year on the portion that remains in excess. This tax on excess contributions is designed to eliminate the advantage the operator otherwise would have from the fact that the trust's earnings on the excess contribution are exempt from income tax.

EFFECTIVE DATE

The coal mine operators' trust provisions are effective for taxable years beginning after December 31, 1977. These provisions apply to existing trusts as well as those created after this date.

4. General Effective Date (sec. 5 of the bill)

In order to insure that the Congress does not impose the taxes under the black lung legislation without also enacting the revised black lung benefits provisions, the amendment provides that none of the above-described provision is to take effect unless the Congress later provides that they are to take effect.

It is expected that such a provision, "triggering" this bill, will be included in the conference report on the Black Lung Benefits Reform Act of 1977, or equivalent legislation.

FOOTNOTES

[1] Insurance premiums may generally be deducted as ordinary and necessary expenses of a trade or business (sec. 162). Health insurance premiums may be deducted (within limits) as medical expenses by individuals who itemize deductions (sec. 213).

[2] Net long-term capital gain is taken into account in computing life insurance company taxable income but may be wholly or partially offset by special deductions allowed to life insurance companies.

[3] A section 501(c)(21) trust may be organized and operated for the purpose of satisfying the following liabilities of a coal mine operator, and none other: (1) the operator's liabilities on or with respect to claims for compensation for disability or death due to pneumoconiosis arising under part C of title IV of the Federal Coal Mine Health and Safety Act of 1969 and (2) the operator's liabilities on or with respect to claims for compensation for disability or death due to pneumoconiosis arising under State statutes. Thus, a liability of an operator with respect to a claim for compensation for the disability or death of a miner arising under a State workmen's compensation law which provides compensation for disability or death due to other causes as well as pneumoconiosis can be satisfied out of a section 501(c)(21) trust only if and only to the extent that the liability is attributable to disability or death due to pneumoconiosis.

[4] A trust will not qualify under section 501(c)(21) if it receives any contributions from an insurance company.

[5] As noted above, it is intended that a bank-trustee may not invest the funds of a section 501(c)(21) trust in the bank's savings accounts, checking accounts, or certificates of deposit, whether or not such investments would be permitted under section 4941 to a bank-trustee of a private foundation.

[6] The provisions of this bill are not intended to derogate from the authority and responsibility of the Secretary of Labor to prescribe regulations under section 423 of the Federal Coal Mine Health and Safety Act of 1969 as to qualification of an operator as a self-insurer for purposes of that statute.

[7] The transfer to the trust of any such evidence of operator indebtedness will constitute an act of self-dealing in that it constitutes an extension of credit between the trust and a "disqualified person" (the operator).

[8] These purposes are to satisfy the operator's liabilities for black lung benefits arising under Federal or State statutes, to purchase insurance exclusively covering such liabilities in whole or in part, and to pay proper administrative and incidental costs of the trust. However, only payments with respect to amounts to be paid by the trust are to be taken into account; payments to be made directly by the operator or through insurance obtained by the operator outside the trust are not to be taken into account.

[9] For purposes of this computation, the term "black lung benefit payments" means payments to satisfy the operator's liabilities for black lung benefits arising under Federal or State statutes, taking into account only payments to be made by the trust, and does not include either payments to purchase insurance covering such liabilities in whole or in part or payments for administrative or incidental costs of the trust.

[10] See footnote 9.

Mr. LONG. Mr. President, I yield to the Senator from Nebraska.

Mr. CURTIS. Mr. President, I thank my distinguished chairman for yielding. The distinguished chairman has made a complete statement of what is involved here. I will not add to it.

I do rise for the purpose of asking unanimous consent that Mr. David Swoap, of my staff, be granted the privileges of the floor during the consideration of this bill.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. RANDOLPH. Mr. President, before sending to the desk an amendment, I desire to comment briefly on the situation outlined by the Senator from Louisiana (Mr. LONG). On December 1, House-Senate conferees secured a major breakthrough on financing provisions of the Black Lung Benefits Act of 1977. The proposal being offered by Senator LONG represents a part of the compromise plan developed by the conferees.

The conference had labored more than 5 weeks over differing versions of how to finance black lung benefits. The House proposed an assessment on tonnage mined, while the Senate version sought an ad valorem percentage tax on the price of coal sold. Our compromise contains elements of both approaches. Under the compromise, the financing provisions of the bill are being handled as a separate measure.

It was my privilege to join with Senator WILLIAMS, chairman of our Human Resources Committee; Representative CARL PERKINS, chairman of the House Education and Labor Committee, a principal sponsor of the black lung bill; Senator LONG, chairman of the Senate Finance Committee; and Representative AL ULLMAN, chairman of the House Ways and Means Committee, in agreeing to this plan. The conferees indicated they would move to implement the procedure as quickly as possible.

Representative ULLMAN has stated that once the Senate approves a revenue measure with the black lung financing provisions attached, he intends to bring it to the House and urge its acceptance.

While this process we begin today is taking place, our conference committee will remain in session at the call of the Chair. On approval of the separate financing mechanism by both Houses or assurance that this will occur, the conferees will report the substantive provisions already agreed to back to the House and Senate for final approval.

If the financing measure does not move through the Congress the conference committee can reconvene to consider a different type of financing mechanism, since the bills in conference also contain provisions for financing.

The tax provision calls for assessment of 50 cents per ton on underground coal and 25 cents a ton on surface-mined coal. The compromise provision contains a "cap," or ceiling, stipulating that the effective tax will never be more than 2 percent of the selling price at which such ton of coal is sold by the producer.

With the commitment of the principals involved in the black lung legislation, including our able majority leader, Senator BYRD, it is my belief that a final bill can be sent to President Carter in a timely manner. That is the objective of the Members who have worked so diligently to secure the compromise that was achieved on December 1. This effort, as I stated, is in process today.

I will not go into detail on the financing proposal. It has been outlined by Senator LONG. However, it is important to stress that the proposal will establish on the books of the Treasury a trust fund to be known as the Black Lung Disability Trust Fund. The trustees of the fund shall be the Secretary of the Treasury, the Secretary of Labor, and the Secretary of Health, Education, and Welfare. The Treasury Secretary will be managing trustee and will administer the fund. The fund, which will receive taxes from coal tonnage mined, will provide the mechanism under which benefits will be paid to persons affected by the authorizations contained in the black lung measure that is to be reported out of conference.

Mr. President, I am grateful for the kind remarks of the able Senator from Louisiana (Mr. LONG). He has many heavy responsibilities, but he has stayed with us on this effort.

UP AMENDMENT NO. 1082

(Purpose: To provide for the reimbursement of certain amounts paid by coal mine operators.)

Mr. RANDOLPH. Mr. President, I send to the desk an amendment and ask for its immediate consideration. It is an amendment to amendment 1081, proposed by the able Senator from Louisiana.

The ACTING PRESIDENT pro tempore. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from West Virginia (Mr. Randolph) proposes an unprinted amendment numbered 1082 to amendment No. 1081, proposed by the Senator from Louisiana (Mr. Long).

On page 9, line 15, strike out "and".

On page 10, line 4, strike out the period and insert in lieu thereof a comma and the word "and".

On page 10, between lines 4 and 5, insert the following:

"(6) the reimbursement of operators for amounts paid by such operators (other than as penalties or interest) before April 1, 1978, in satisfaction (in whole or in part) of claims of miners whose last employment in coal mines was terminated before January 1, 1970.

Mr. RANDOLPH. Mr. President, I desire to briefly address the subject matter of the amendment. It has been my privilege to confer with the manager of this bill. I believe what we are doing is in concert and he understands the reasoning behind the amendment.

The Black Lung Benefit Reform Act will amend the current part C, so that specific coal mine operators will no longer be responsible for claims based on pre-1970 coal mine employment. Under the current part C program, a number of mine operators have been paying benefits to disabled miners based on coal mine employment which ended before 1970.

Now that we are going to "change the rules" and no longer require responsible operators to pay these claims, the operators who have been paying these benefits in the past should no longer be forced to continue to pay them.

This bill requires that the trust fund assume these payments. But because so few operators actually paid benefits under the old part C—that was the less than 200 claims—and so many operators were not required to pay benefits, it seems only fair to me, and to others, including the able manager of this bill, to reimburse those few operators who paid these benefits in the past, particularly since so many operators did not—and no operator will have to pay these benefits in the future.

In the future, all approved claims based on pre-1970 employment will be paid, as I have indicated, by the trust fund. Accordingly the amendment which I have offered would authorize the trust fund to reimburse the operators who paid the benefits to disabled coal miners who stopped working before 1970.

The trust fund would reimburse these operators the amounts they have paid.

Again, I emphasize that it seems fair and valid—the right thing to do—in view of the fact, that not many operators assumed this obligation.

The Department of Labor, Mr. President, estimates that the cost of this reimbursement will be approximately $1.5 million—no more, they indicate, than $2 million. And this will be a one-time payment. It is a small amount to pay to restore equity in the matter of the benefits to the miners affected by this legislation.

Mr. President, I wish also to express appreciation to the conferees. There were members of the Finance Committee, the Human Resources Committee, the House Education and Labor Committee and the House Ways and Means Committee who worked in the conference on this legislation.

I have been, at times, very discouraged, but always, I have noted that the Senator from Louisiana, early and late, has made himself available for discussion of these matters that are contained in the proposal he presents today. Our able Majority Leader, Senator Byrd, and the distinguished chairman of the Human Resources Committee, Senator Williams, have been a part of these discussions. Those of us who have worked on this legislation are appreciative.

I remind my colleagues in the Senate that it was in 1969 that the first proposal became law to give to those who are suffering from pneumoniosis—black lung—and their widows and children that which we believe they deserve. These are persons who had, really, fueled America and given to us the energy which this country needed then and needs increasingly now.

Then, in 1972, as my colleagues will recall, we came back into this body with amendments to the original act. We had determined, during that period—not one of experimentation, though it had some element of that in it, but of practical application of the law—that the X-ray was not the only test of whether the black lung benefits should be paid. So, we amended the original act to include disabling pulmonary and respiratory ailments.

If these were a part, including X-ray, of a miners condition we would have that further evidence that black lung was present in those miners who had dug the coal and had benefited America by so doing. Now we come, in 1977, acting, of course, on the need to bring this program into what I call its third stage, another refinement stage, improving on the methodology and the benefit program.

I come back to the original words that I spoke, in reference to Senator Long and to those who worked with him. I personally know of what they have done in the effort which is taking place here this afternoon, to handle this very important subject. I thank the Senator from Louisiana for his cooperation and diligent efforts.

Mr. LONG. Mr. President, the senior Senator from West Virginia has been diligent and tireless in seeking to care adequately for those who have suffered from this industrial illness. I am happy to be able to cooperate with him and his colleagues in providing the funds to help pay for this disaster to many American workers. Again, I congratulate the very able senior Senator from West Virginia for the long, hard, and sometimes tedious work that he has undertaken to provide redress of this grievance, and to provide for the care of those who have suffered from this illness.

I have no objection to the amendment, Mr. President.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the amendment of the Senator from West Virginia.

The amendment was agreed to.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the amendment, as amended, of the Senator from Louisiana.

The amendment, as amended, was agreed to.

The ACTING PRESIDENT pro tempore. The question is now on agreeing to the committee amendment as amended.

The committee amendment, as amended, was agreed to.

The ACTING PRESIDENT pro tempore. The question is on the engrossment of the committee amendment, as amended, and third reading of the bill.

The committee amendment, as amended, was ordered to be engrossed and the bill to be read a third time.

The bill was read a third time.

The ACTING PRESIDENT pro tempore. The bill having been read the third time, the question is, Shall it pass?

So the bill (H.R. 5322) was passed.

Mr. LONG. I move to reconsider the vote by which the bill passed.

Mr. RANDOLPH. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 1083

(Later the following occurred:)

Mr. LONG. Mr. President, I ask unanimous consent that the title to H.R. 5322, which was just passed, be amended as provided for in the amendment that I send to the desk.

The ACTING PRESIDENT pro tempore. Without objection, the title will be so amended.

The title was amended so as to read:

An Act to impose an excise tax on the sale of coal by the producer, to establish a Black Lung Disability Trust Fund, and for other purposes.

Mr. LONG. Mr. President, I ask unanimous consent that the black lung tax bill—H.R. 5322—be printed with the amendments of the Senate.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I would like to take this opportunity to thank the distinguished chairman of the Finance Committee, Senator Long, as well as the ranking minority member of that committee, Senator Curtis, for their splendid cooperation in providing for the financing mechanism of the black lung bill. I also want to thank my distinguished colleague, Senator Randolph, the senior Senator from West Virginia, for his diligent efforts in this regard.

The approval today of this financing section will assure that the black lung bill will be able to be reported from the conference and considered by the Senate and the House at an early date next year.

Approval of the black lung bill will help to complete the process begun back in 1969 to assure just compensation to our old and sick miners who have been afflicted by the dread black lung disease. Since we first addressed this subject over 7 years ago, much has been learned about the diagnosis and prognosis of this disease. We found that many miners who should have received benefits all too often did not receive them or received them after long and costly efforts. Despite our attempts to make working conditions of miners safer, we still have thousands of miners who contract black lung as a result of their occupation.

In the past, I have said that one of the costs which we must bear in order to enjoy our energy-oriented lifestyles is the social costs we owe those who make such a lifestyle possible.

The ultimate passage of the black lung bill will go far in this regard.

HOUSE CONCURRENT RESOLUTION 442—ADJOURNMENT OF THE TWO HOUSES OF CONGRESS

Mr. ROBERT C. BYRD. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives on House Concurrent Resolution 442 and that the Senate proceed to its immediate consideration.

The ACTING PRESIDENT pro tempore. The resolution will be stated by title.

The legislative clerk read as follows:

A concurrent resolution (H. Con. Res. 442) providing for the sine die adjournment of the first session of the Ninety-fifth Congress.

The ACTING PRESIDENT pro tempore. Without objection, the Senate will proceed to its immediate consideration.

The concurrent resolution was considered and agreed to.

The concurrent resolution reads as follows:

Resolved by the House of Representatives (the Senate concurring), That when the two Houses adjourn on Thursday, December 15, 1977, they shall stand adjourned sine die.

SEC. 2. During the adjournment of both Houses of Congress as provided in section 1, the Secretary of the Senate and the Clerk of the House, respectively be, and they hereby are, authorized to receive messages, including veto messages, from the President of the United States.

CONVENING OF THE 2D SESSION OF THE 95TH CONGRESS

Mr. ROBERT C. BYRD. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives on House Joint Resolution 674.

The ACTING PRESIDENT pro tempore. The joint resolution will be stated by title.

The legislative clerk read as follows:

A joint resolution (H.J. Res. 674) relative to the convening of the second session of the 95th Congress, and for other purposes.

The ACTING PRESIDENT pro tempore. Without objection, the joint resolution will be considered as having been read twice by its title.

Is there objection to the immediate consideration of the joint resolution?

There being no objection, the joint resolution (H.J. Res. 674) was considered, ordered to a third reading, read the third time, and passed, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress Assembled, That the second regular session of the Ninety-fifth Congress shall begin at 12 o'clock meridian on Thursday, January 19, 1978.

SEC. 2. That (a) notwithstanding the provisions of section 201 of the Act of June 10, 1922, as amended (31 U.S.C. section 11), the President shall transmit to the Congress not later than January 23, 1978, the budget for the fiscal year 1979, and (b) notwithstanding the provisions of section 3 of the Act of February 20, 1946, as amended (15 U.S.C. section 1022), the President shall transmit to the Congress not later than January 23, 1978, the Economic Report.

SOCIAL SECURITY AMENDMENTS OF 1977—CONFERENCE REPORT

Mr. LONG. Mr. President, I submit a report of the committee of conference on H.R. 9346 and ask for its immediate consideration.

The ACTING PRESIDENT pro tempore. The report will be stated.

The legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 9346) to amend the Social Security Act and the Internal Revenue Code of 1954 to strengthen the financing of the social security system, to reduce the effect of wage and price fluctuation on the system's benefit structure, to provide for the conduct of studies with respect to coverage under the system for Federal employees and for employees of State and local governments, to increase the earnings limitations, to eliminate certain gender-based distinctions and provide for a study of proposals to eliminate dependency and sex discrimination from the social security program, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by a majority of the conferees.

The ACTING PRESIDENT pro tempore. Without objection the Senate will proceed to the consideration of the conference report.

Mr. LONG. Mr. President, the conference on the social security bill has reached an agreement which makes significant improvements in the financial soundness of the social security program.

In dealing with the social security provisions of the bill the conferees reached a reasonable compromise between the Senate and House provisions. The main objective of both Senate and House bills was to restore the program to a condition where there will be adequate funding to cover benefit costs for many years into the future, and the bill agreed to by the conferees accomplishes this objective. Both Senate and House bills also included a number of changes in the benefit structure in the program, some of which saved money and some of which would have resulted in increased expenditures. Here, too, the conference agreement represents a compromise between the two positions which has preserved most of the savings and which also includes those benefit improvements which were of highest priority. In particular, the conference agreement will substantially increase the amount of earnings and will reduce to age 70 starting in 1982 the age at which unlimited earnings are permitted.

The Senate bill also included a few provisions designed to improve the operation of our welfare programs and to provide a measure of fiscal relief for State and local welfare costs. Most of these provisions were agreed to with some changes by the House conferees. In the case of the fiscal relief provision, however, the House conferees were unwilling to accept the full amount of $374 million proposed by the Senate at this time, but did agree to a provision which provides half of that amount. The House conferees also adamantly refused to accept a provision which the Senate has passed on several occasions relating to the earned income disregard under the aid to families with dependent children program. This provision, as well as the full amount of the fiscal relief provision, is included in the bill H.R. 7200, which is on the Senate calendar. It is my hope that we will be able to have the Senate act on that bill early next year so that these issues, together with the other items in that bill, can be brought to conference again in the very near future.

The Senate social security bill also included another major provision which the Senate has passed on other occasions providing for a college tuition tax credit. As has happened in the past, the House conferees were completely adamant in their refusal to even consider this proposal. In order to obtain agreement on the social security bill the sponsor of that amendment and the other conferees finally had to agree to drop it from the bill. I would like to make clear, however, that this issue is going to be acted upon again in the very near future and that we will be in conference with the House on it once more to discuss it.

Mr. President, I ask unanimous consent that there be printed at the end of my statement a more detailed summary of the provisions of the social security bill as agreed to by the conferees.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY OF THE CONFERENCE AGREEMENT ON H.R. 9346, THE SOCIAL SECURITY AMENDMENTS OF 1977

Financing.—The bill includes a schedule of social security tax rate increases over present law in 1979, 1981, 1982 and 1990 to provide additional financing. Tax rates for the self-employed would be adjusted to restore the original level of one and one-half times the employee rate for the old-age and survivors and disability portion of the tax, effective in 1981. There would be a reallocation of income to the disability trust fund which would have been exhausted in about a year under present law. The tax rate schedule is as follows:

TAX RATES FOR THE SOCIAL SECURITY TRUST FUNDS

[In percent]

Calendar year	Present law					Conference report on H.R. 9346				
	OASI	DI	OASDI	HI	Total	OASDI	DI	OASDI	HI	Total
EMPLOYERS AND EMPLOYEES, EACH										
1977	4.375	0.575	4.95	0.90	5.85	4.375	0.575	4.95	0.90	5.85
1978	4.350	.600	4.95	1.10	6.05	4.275	.775	5.05	1.00	6.05

1990–2010	4.250	.700	4.95	1.50	5.45	5.100	1.100	6.20	1.45	7.65
2011 and later	5.100	.850	5.95	1.50	7.45	5.100	1.100	6.20	1.45	7.65
SELF-EMPLOYED PERSONS										
1977	6.185	0.815	7.0	0.90	7.9	6.1850	0.8150	7.0	0.90	7.9
1978	6.150	.850	7.0	1.10	8.1	1.0100	1.0900	7.1	1.00	8.1
1979–80	6.150	.850	7.0	1.10	8.1	6.0100	1.0400	7.05	1.05	8.1
1981	6.080	.920	7.0	1.35	8.35	6.7625	1.2375	8.00	1.30	9.30
1982–84	6.080	.920	7.0	1.35	8.35	6.8125	1.2375	8.05	1.30	9.35
1985	6.080	.920	7.0	1.35	8.35	7.1250	1.4250	8.55	1.35	9.90
1986–89	6.010	.990	7.0	1.5	8.5	7.1250	1.4250	8.55	1.45	10.00
1990–2010	6.010	.990	7.0	1.5	8.5	7.6500	1.6500	9.30	1.45	10.75
2010 and later	6.000	1.000	7.0	1.5	8.5	7.6500	1.6500	9.30	1.45	10.75

There also would be increases in the taxable wage base above present law in 1979, 1980, and 1981. After 1981, the base would be increased annually in line with wage levels as under present law. Under the Conference agreement, as under present law, the tax base would be the same for employers, employees, and self-employed. This is the new taxable base schedule for employers, employees and the self-employed:

Contribution and benefit base

Calendar year:	Under present law	Under conference agreement
1977	$16,500	$16,500
1978	17,700	17,700
1979	[1]18,900	22,900
1980	[1]20,400	25,900
1981	[1]21,900	29,700
1982	[1]23,400	[1]31,800
1983	[1]24,900	[1]33,900
1984	[1]26,400	[1]36,000
1985	[1]27,900	[1]38,100
1986	[1]29,400	[1]40,200
1987	[1]31,200	[1]42,000

[1] Estimated amount under automatic provisions.

Decoupling and new wage-indexed formula.—The conference agreement provides that the automatic cost-of-living increase provisions will in the future apply only to those already on the benefit rolls at the time of each increase. (Under present law, the increases raise the benefit formula for future retirees as well as those on the rolls.) For future retirees, the agreement adopts a new benefit formula under which benefit amounts would be related to the earnings each individual had under social security with an adjustment to reflect changing levels during his working years. The new system would index a worker's earnings to reflect annual increases in average earnings levels up to the second year before eligibility (age 62, death, or disability). The benefit level adopted for the long-term is 5 percent below estimated 1979 levels under present law. Included in the bill is a 5-year guarantee that retirement benefits will not be less than 1979 levels to provide a gradual transition to the new system for workers who will retire from 1979 through 1983. The transition provision will not be applicable to disability and survivor cases. As under present law, benefits would continue to be increased according to the increases in the cost-of-living after a person reaches age 62 or becomes disabled, or in the case of survivor's benefits, after the time of the worker's death.

Minimum.—The present minimum benefit for future beneficiaries would be frozen at its 1979 dollar amount (about $121 for an individual). The minimum benefit would be adjusted for annual cost-of-living increases only after the individual starts receiving it.

Special minimum.—This benefit, provided for long-term, low-paid workers, would be increased. Under present law this benefit is equal to $9 times the number of years coverage a worker has in excess of 10 and up to 30; this benefit is not subject to annual cost-of-living increases. The bill would increase the $9 figure to $11.50, which would provide a maximum payment of $230 a month, and would make the benefit subject to annual cost-of-living increases in the future.

Delayed retirement credit.—Present law provides that retirement benefits are increased 1 percent a year for each year that a worker continues to work beyond age 65 without taking his benefits. The bill would increase this to 3 percent; it would apply beginning in 1982.

Limitation on retroactive benefits.—Under present law a person who files an application after he is first eligible can get benefits for a retroactive period up to 12 months before the month in which the application is filed. However, this can result in some cases in a permanent reduction in his monthly benefit. The bill would eliminate retroactive payments where the result would be a permanently reduced benefit.

Cost-of-living increases for early retirees.—Under present law, a retiree who begins receiving benefits between ages 62 and 65 has his monthly payment permanently reduced on an actuarial basis to take account of the longer period that he will receive benefits. However, when a subsequent cost-of-living increase is effective, the benefit increase is based on his full (unreduced) benefit. The bill would apply to cost-of-living increases the same actuarial reduction that was applied to their original monthly benefit.

Retirement test.—The bill would raise to $4,000 in 1978, $4,500 in 1979, $5,000 in 1980, $5,500 in 1981 and $6000 in 1982 the annual amount of earnings a beneficiary age 65 to 72, may have without having any benefits withheld. After 1982, the limitation would be adjusted automatically on the basis of earnings levels as under present law. The retirement test of present law, which is to rise from $3,000 this year to $3,240 in 1978, would continue to apply to beneficiaries under age 65.

The exempt age, which fixes the point at which elderly individuals may receive full benefits without regard to their earnings, would be reduced from 72 to 70 beginning in 1982.

The bill would eliminate the monthly exception to the retirement test—the provision in present law under which full social security benefits are paid for any month in which a person earns one-twelfth of the annual retirement test amount, or less, regardless of total earnings for the year. However, the monthly measure would be retained for the first year in which a worker begins to receive retirement benefits.

Remarried widows.—Under existing law, a widow may receive a social security benefit on her deceased husband's account equal to 100 percent of the benefit he would have received if he were still alive. If the widow remarries and she is age 60 or over when she remarries, she can retain the widow's benefit but at a 50 percent rate instead of 100 percent. The conference agreement would eliminate that reduction to a 50 percent rate when a widow over age 60 remarries.

Divorced wife's benefits.—Under present law a woman can qualify for a wife's benefit on the account of her former husband (or a surviving divorced wife's benefit on the account of a deceased former husband) but only if the marriage lasted at least 20 years. The conference agreement would lower the required duration of marriage to 10 years.

Reduction in spouses' benefits for public pensions.—The bill contains a provision under which social security dependency benefits payable to spouses or surviving spouses would be reduced by the amount of any public (Federal, State, or local) retirement available to the spouse. The reduction would apply only to pension payments based on the spouse's own work in public employment which is not covered under social security. The provision would apply to applications for such dependency benefits in and after the month of the enactment of the bill. To assure that persons who have been counting on these benefits for many years and who are now at or near retirement age will not be adversely affected, the conference agreement includes a transitional exception under which certain individuals will not have their social security benefits as spouses reduced by the amount of their public pension. The exemption applies to those who are already retired under a public pension program (or who will be eligible for such retirement within the next five years) and who also would qualify for spouses benefits under social security under the law as in effect and as administered in January 1977. In the event the courts find it impermissible to afford this protection to those who anticipated receiving their spouses benefits prior to March 1977 without providing it also to those would qualify only as a result of a March 1977 court decision, the bill provides that the entire exception would become inoperative so that the reduction in benefits would be applied in all cases.

Treatment of men and women.—The Conference agreement directs the Secretary of Health, Education and Welfare, in consultation with the Justice Department Task Force on Sex Discrimination, to carry out a detailed study of proposals: (1) to eliminate dependency as a requirement for entitlement to social security spouse's benefits, and (2) to bring about the equal treatment of men and women in any and all respects. In conducting this study the Secretary shall take into account the effects of the changing role of women in today's society including such things as: (1) changes in the nature and extent of women's participation in the labor force, (2) the increasing divorce rate, and (3) the economic value of women's work in the home. The study shall include appropriate cost analyses. A full and complete report shall be submitted by the Secretary to the Congress within 6 months after enactment of the bill.

National Commission on Social Security.—The bill provides for establishment of a bipartisan National Commission on Social Security, composed of nine members—five appointed by the President and two each by the Speaker of the House and the President of the Senate—to make a broad study of the social security program including Medicare. The study would include the fiscal status of the trust funds, coverage, adequacy of benefits, possible inequities, alternatives to the current programs and to the method of financing the system, integration of the social security system with private retirement programs, and development of a special price index for the elderly. The Commission would present its full report to the President and to the Congress within 2 years after a majority of the members were appointed.

Coverage study.—The bill provides for a comprehensive study of the question of expanding coverage under social security by bringing under the system all Federal employees and the remainder of State and local government employees and employees of nonprofit organizations not now covered. The study would include methods of coordinating social security coverage with retirement systems which now apply to the public employees involved. The study would be under the direction of the Secretary of Health, Education, and Welfare who would consult with the Secretary of the Treasury, the Director of the Office of Management and Budget, and the Chairman of the Civil Service Commission. The HEW Secretary is directed to complete the study and submit a report with recommendations to the President and to Congres within 2 years after enactment of the bill.

International Social Security Agreements (Totalization).—Included in the bill is a provision which would authorize the President to enter into bilateral agreements with interested countries providing for limited coordination of the U.S. social security system with systems of other countries. The agreements, known as totalization agreements, would eliminate dual social security coverage for the same work in each country covered by an agreement, and would enable individuals who work for periods in each of the countries covered by an agreement to qualify for coordinated benefits in situations where they now are not eligible for benefits in one or both of the countries involved. The United States already has negotiated agreements with Italy and West Germany which could be put into effect under this provision. Each agreement would have to be submitted to Congress for 90 days while it is in session before it could take effect; during that period either the House or Senate could veto the agreement by majority vote.

Disability benefits for the blind.—Blind persons would be eligible for social security disability benefits up to a higher level of earnings than now permitted. Under present regulations, substantial gainful activity (SGA) is measured at $200 a month ($2,400 a year) and earnings over this amount would lead to termination of benefits. Under the bill, the SGA amount would be the same as the retirement test for persons age 65 and over—that is, $4,000 in 1978, $4,500 in 1979, $5,000 in 1980, $5,500 in 1981, $6,000 in 1982, and adjusted automatically by increases in earnings levels thereafter. The SGA level for other disabled persons is not changed.

Investment income under limited partnership.—In recent years, a growing number of businesses have advertised limited partnerships as a means of acquiring social security coverage solely through the income on investments in such partnerships. The bill excludes from social security coverage the distributive share of income or loss from the trade or business of a partnership which is received by a limited partner

Annual wage reporting.—Public Law 94–202 enacted in 1976 provided that employers would report their employees' wages for social security and income tax purposes annually on forms W–2 beginning with wages paid in 1978. But the law also required employers to report quarterly wage data on forms W–2 to enable the Social Security Administration to determine whether a worker has enough quarters of coverage to be eligible for social security benefits. The bill would change this so that annual data would be used instead of quarterly data. Under the bill, employers no longer would have to report quarterly data on forms W–2. Under present law a worker generally receives credit for a quarter of coverage for a calendar quarter in which he receives at least $50 in wages. Under the bill, a worker would receive one quarter of coverage (up to a total of four) for each $250 of earnings in a year, and the $250 amount would be automatically increased every year to take account of increases in average wages.

Employees of nonprofit organizations.—The bill contains provisions designed to correct some unintended effects of Public Law 94–563 enacted in 1976 to deal with problems of nonprofit organizations that had been paying social security taxes incorrectly because they had not filed the necessary waivers with the Internal Revenue Service to make the payments legal.

One provision in the bill would forgive back taxes due, up to June 30, 1977, on behalf of nonprofit organizations which ceased paying social security taxes after they had found they were not required to do so, but did not receive a refund of these taxes.

Another provision would extend to March 31, 1978 the period during which nonprofit organizations that had received a refund of social security taxes could file a waiver certificate and list only those employees who had wanted to be covered under social security. Under this waiver, they would owe back taxes only on the listed employees. The right to file such a waiver under Public Law 94–563 expired April 18, 1977.

Taxation of corporations.—The bill provides that a group of related corporations concurrently employing a worker would be considered as a single employer if one of the group serves as a single paymaster for the entire group. This would mean that the group of corporations would have to pay no more in social security and unemployment taxes for a single worker than a single employer pays.

Advisory Council on Social Security.—The bill would change the reporting date for the Advisory Council to be appointed in 1977 from January 1, 1979, to October 1, 1979.

Administrative law judges.—Public Law 94–202 established temporary administrative law judge positions to hear social security, medicare, and supplemental security income cases. The bill would convert these appointments to permanent status.

Benefit payment dates.—The bill provides that social security and supplemental security income benefit checks would be delivered on the preceding Friday if the regular payment date falls on a Monday which is a legal holiday. Under present regulations, checks are delivered on a Friday if the regular payment date falls on Saturday or Sunday.

Coverage of tips.—Under social security, tip income (if over $20 a month) is taxed on the employee alone. Under the bill, the employer will be taxed on tip income up to the amount that combined with the employee's salary equals the minimum wage under the Fair Labor Standards Act.

Clergymen.—The bill would permit clergymen who previously did not elect social security coverage a second opportunity to come under the system as self-employed persons.

Mississippi policemen and firemen.—The bill would authorize social security coverage for Mississippi policemen and firemen who previously were excluded from the system.

Wisconsin public employees.—The bill would authorize a consolidated public employee group in Wisconsin to continue under social security on the same terms which applied to three groups before they were merged into the consolidated organization.

New Jersey public employees.—The bill would add New Jersey to the list of States which are permitted to hold referendums among public employees for divided coverage under social security. Those voting for coverage would be brought under social security; those voting against would remain out of the system.

Illinois police and fire chiefs.—The bill would allow approximately 400 Illinois police and fire chiefs to get credits for past payments into the social security system (and future coverage) even though the applicable law did not permit such payments when they were made.

Railroad retirement system and Pension Benefit Guaranty Corporation.—The bill contains a provision to guarantee that the new social security financing provisions that increase the taxable earnings base would not increase the employer tax liability to finance tier II benefits nor would it increase the amount of those benefits under the railroad retirement system. Tier II benefits are those paid to supplement the tier I payments which correspond to basic social security benefits. Similarly, the bill provides that the ad hoc increases in the earnings base would not increase the maximum amount of pension insured by the Pension Benefit Guaranty Corporation established under the Employee Retirement Income Security Act of 1974.

Wheelchairs.—The bill would permit payment for power-operated wheelchairs under Medicare where the vehicle is determined to be medically necessary and safe.

Fiscal relief for welfare costs.—The bill provides for a one-time payment to the States of $187 million as fiscal relief for State and local welfare costs for fiscal year 1978. Half of such funds will be distributed to each State in proportion to its share of total expenditures under the AFDC program for December 1976, and half will be distributed under the general revenue sharing formula. In those States in which local units of Government are responsible for meeting part of the costs of the AFDC program the fiscal relief payments would have to be passed through to local governments. States would not be required to pass through an amount in excess of 100 percent of the amount of AFDC costs for which the local government was otherwise responsible.

Fiscal incentives for lowering AFDC error rates.—The bill would establish a system of fiscal incentives for States which have low dollar error rates (below 4 percent) as measured by the AFDC quality control findings of incorrect payments.

Under the amendment States which have dollar error rates of, or reduce their dollar error rates to, less than 4 percent but not more than 3.5 percent of the total expenditures would receive 10 percent of the Federal share of the money saved, as compared with the Federal costs of 4-percent payment error rate. This percentage would increase proportionately as shown in the following table:

If the error rate is:	Incentive percentage[1]
At least 3.5 percent but less than 4 percent	10
At least 3 percent but less than 3.5 percent	20
At least 2.5 percent but less than 3 percent	30
At least 2 percent but less than 2.5 percent	40
Less than 2 percent	50

[1] The State will retain this percent of the imputed Federal savings.

The dollar error rate of aid will include the payments to ineligibles plus overpayments plus underpayments plus the amount which would have been paid as benefits if the case had not been erroneously terminated or the application erroneously denied. The incentive would be based on Federal savings as compared with a 4-percent rate of excessive payments—that is, erroneous payments for ineligibles and overpayments.

Access by AFDC agencies to wage records.—The bill specifically authorizes State AFDC agencies to obtain wage information from the wage records maintained by the Social Security Administration and the wage records maintained by State unemployment compensation agencies for purposes of determining eligibility for (or amount of) AFDC. The Secretary of HEW would establish the necessary safeguards to prevent the improper use of such information. Effective October 1, 1979, States would be required to request and make use of this wage information either from the State unemployment compensation agency (if available there) or from the Social Security Administration.

State welfare demonstration projects.—The bill would authorize certain types of State demonstration projects related to the AFDC program to be implemented if the Secretary did not specifically disapprove the implementation of such projects within sixty days after the State applies to have the projects approved. In other words, a State could proceed with such projects either when the Secretary approved them, or sixty days after submitting them to the Secretary if no decision had been reached by HEW within that period.

Under this authority, States would be permitted to conduct not more than three demonstration projects but not more than one on a Statewide basis. Projects involving public service employment would have to pay prevailing wages and meet reasonable standards related to health, safety and other conditions, could not displace employed workers, would have to be reasonable for the individuals participating, and would have to provide appropriate workmen's compensation protection. Participation in any project by any AFDC recipient would have to be on a voluntary basis.

States would be permitted to waive ordinary statutory rules requiring statewide uniformity, administration by a single agency, and regarding participation in the work incentive program and the disregard of certain amounts of earned income. (Not more than half of all income could be disregarded under the waiver authority, however.)

AFDC matching for these demonstration projects would be limited to the amount the State would have received through AFDC if it had not implemented the demonstration project. In addition, the State's general revenue sharing funds could be used to cover the costs of salaries for participants in public service employment which are not covered by AFDC matching.

Once implemented, demonstration projects could continue for up to 2 years unless the Secretary took action to disapprove a State waiver of statutory rules before the end of the 2-year period. The provision would not apply after September 30, 1980.

The conference agreement provides that when a State submits an application it would be required to make a public announcement that such application has been made, make copies of the application available and receive public comments for at least 30 days. The Secretary would also be required to publish a summary of the proposed demonstration project and make copies of the application available.

The Secretary of HEW could deny applications by a State under this provision any time after receipt of the application, but could not approve an application until 30 days after it has been submitted.

Erroneous State supplementary payments.—The Conference agreement provides authorization and direction for the Secretary of Health, Education and Welfare to reimburse a State for erroneous State supplementary payments administered by them and paid during 1974 to the extent that an HEW audit (reviewed and concurred in by the Inspector General of the Department) determines is appropriate on the basis that the incorrect payments for the aged, blind and disabled resulted from a State's good faith reliance upon erroneous or incomplete information furnished to the States by the Department or from a State's good faith reliance on incorrect supplemental security income payments made by the Department.

Federal Election Campaign Act amendment.—The Conference agreement provides that a contribution to a tax-exempt organization selected by the payor from a list of five or more organizations named by the Government officer or employee would not be treated as an honorarium. It also provides that amounts returned to a payor before the end of the calendar year would not be treated as honoraria. The bill further provides that honoraria would be treated as accepted in the year of receipt.

Several Senators addressed the Chair.

The PRESIDING OFFICER (Mr. CRANSTON). The Senator from Arizona.

Mr. GOLDWATER. Mr. President, I ask for the yeas and nays on final passage of this conference report.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

(Mr. METCALF assumed the chair.)

Mr. CURTIS. Mr. President, I am pleased to rise in support of the distinguished chairman of the Committee on Finance (Mr. LONG) as we consider the report of the committee on conference on the Social Security Amendments of 1977.

Mr. President, may I say first of all that we all owe a debt of gratitude to the chairman for his most able leadership once again shepherding to final consideration one of the most important pieces of legislation since the enactment of the Social Security Act. This bill, which restores the fiscal soundness of the trust funds over the next 30 years, is of critical importance to the many millions of Americans who either receive benefits or contribute to the funds to make those benefits possible. Restoration of the confidence of America in the soundness of this most important program was always in forefront of the distinguished chairman's concern. That we have been able to accomplish that, and to do so in a way that retains the fundamental precepts of the social security program, is clearly attributable to his eminently capable, forthright, careful, and fair approach during the many months in which the Committee on Finance has been considering this issue. We should all be grateful that we have a man of RUSSELL LONG's stature at the helm.

I would like to express my appreciation, as well, to my other colleagues on the Committee on Finance, in the Senate as a whole, and in the House of Representatives for their diligent and thoughtful consideration of this complex issue. We have each made proposals, explored alternatives, quantified various approaches, and tested the numerous premises and constraints which one encounters in the field of social security financing. The bill before you today represents the contributions of many different Members of Congress, on both sides of the Hill, on both sides of the aisle.

And one Member is deserving, in particular, of significant commendation and accolade this afternoon. I refer to the distinguished senior Senator from Delaware (Mr. ROTH). His untiring efforts to secure long overdue tax relief for the many millions of Americans who want to send their children to college—but who may be unable to do so now, because of the rising costs of education and the rising tax burden that Government exacts from them—are a hallmark of legislative dedication and statesmanship. On three previous occasions, the Senate of the United States overwhelmingly has adopted the Roth tuition tax credit and sent it to the House for action. On each such occasion, the House Ways and Means Committee has promised that the proposal would be taken up, that hearings would be held, or that the matter would be allowed to be considered on the House floor. On each such occasion, those assurances have come to naught.

In November, this body again overwhelmingly adopted and sent to the House, as a part of H.R. 9346, the tuition tax credit proposal which the distinguished Senator from Delaware has untiringly advanced. Again, we find, the House Ways and Means Committee is unwilling to let this legislation proceed to the House floor for a vote. Rather than imperil the social security legislation, rather than jeopardize in any way this most important financing measure, the senior Senator from Delaware most graciously, and unselfishly in my opinion, but still fortunately dogged in his determination to bring the matter again before the House next session—has acceded to deletion of this particular amendment from H.R. 9346.

And next year, I hope he is successful. Next year, I hope the House committee will follow through on its promises to let the full House—which I feel confident supports tuition tax credits just as we do—vote on this matter which is of such critical importance to so many millions of taxpaying Americans. I trust the Senate will again give its colleague from Delaware its full measure of support. He deserves it, and he is eminently correct when he says that the concept of tuition tax credits for the hard-pressed middle class—or, for that matter, for members of all taxpaying classes in America—is an idea whose time has come. We should all be grateful for the leadership of the most able Senator from Delaware on this critical issue, for his thoughtful participation on the conference committee, and for his genuine statesmanship and skillful advocacy of a cause in which he deeply and correctly believes.

We have, then, Mr. President, reached agreement on the fundamental principles and details of legislation to reform the financing of the social security system. May I say at the outset that no one is more mindful than I of the wish to find solutions other than simply to increase taxes upon the American people. The American people are almost at the breaking point: We cannot, with all of the abandon of a child in a candy store, continue to pass one program after another, raise one benefit after another, with little or no thought to the final cost. What is happening here today is that, indeed, we are having to pay the piper for the excessive and often somewhat mindless generosities of past Congresses and past administrations—generosities which, I might add, I opposed on the floor of the U.S. Senate in one election year after another.

The fact is, however, that bill must be paid if we are not to break faith with all of those Americans who either now, or will at some time in the future, depend upon the social security system. The disability trust fund, under current projections, is scheduled to be exhausted in late 1978. The OASDI trust fund is scheduled to run dry in 1983. The health insurance trust fund, while having some additional reserves, is still scheduled to be depleted in 1987 or 1988. We must act; we must restore the viability of the trust funds; we must assure the integrity of the social security system for decades to come.

The legislation which is before this body today, therefore, takes several decisive steps, many of which should have been taken a long time ago. First, of course, and perhaps most critical from a fiscal point of view, we undertake decoupling; correction of the defective indexing formula which erroneously was put into the law by the Congress in 1972. Of the current long-range deficit of approximately 8 percent, we can save one-half—approximately 4 percent—simply through the device of decoupling. I would have prefered another method, one that is based upon price indexing rather than wage indexing, but it is most commendable, in my opinion, that we finally have moved to correct this problem that has had so many long-range implications since it was created.

I am pleased and gratified, as well, that the committee of conference has restored the fundamental principle of parity—equal sharing in the costs of social security by employer and employee—which is central to the integrity of this program. Equal funding for social security insures that responsibility will be maintained; that the costs of social security will not be masked: and that the most regressive tax of all—higher prices—will not ensue. It also means that the burden of social security financing will not fall inequitably on some employers just because they happen to have a disproportionate share of employees at higher wage bracket levels.

By retaining parity, we have protected the many universities, colleges, and local governments in the United States which would have incurred a massive tax increase under the bill which originally passed the Senate. We also have protected the working men and women of America from reduced job opportunities, lessened benefits, and other economic effects that inevitably would have followed destruction of parity. Retention of this principle is the most important, and the most desirable, of all of the provisions of this historic legislation.

The bill before you today also carries the sound principle of trust fund financing, not one which either raids or borrows from the general fund. The current and future beneficiaries of this program want to make sure that their dollars are real dollars, are sound dollars—not ones that emanate from the Bureau of Engraving to meet a constantly expanding Federal deficit. To depend upon, or borrow from, the general fund to meet the costs of social security is to depend upon a cupboard that already is bare: The deficit in the general fund for the current fiscal year is estimated to be $61 billion. By retaining trust fund financing, we have kept a promise to the people of America that this program will not be a welfare program; it will not be one that is subject to even greater temptations to raise benefits without raising taxes; and it will not be one that imposes yet another hidden tax: the cruel tax of inflation, through deficit spending. We have met the funding responsibility head on, and it is an historic and long overdue moment for the Congress to say "We are going to make this program whole; we are going to cure its fiscal problems; and we are going to do so in a way that is direct, aboveboard, and free of gimmickry." We should have undertaken this kind of fiscal responsibility long ago.

There are other excellent features of the bill before this body today, Mr. President; the conferees have reached accord on numerous additional features which have long been sought and which measurably will assist the integrity of the respective funds and numerous American citizens. I commend to this body the provisions of H.R. 9346 which:

Revise the earnings limitation, so that persons between the ages of 65 and 69 will have it liberalized and those over age 70 will have it eliminated completely;

Make similar adjustments for the blind;

Increase the delayed retirement bonus;

Mandate a study of the very important question of universal coverage, to be submitted no later than two years from now;

Also review—pursuant to recent Supreme Court decisions—the very critical issues of gender-based distinctions, to reexamine our premises, rather than either simply providing to men what we historically have provided to women, or depriving both groups of needed benefits in an indiscriminate fashion; and

Reduce the duration of marriage requirement, so that a person must have been married to a worker only 10 years, not twenty, to be eligible for benefits as an aged divorced spouse or a surviving divorced spouse.

I am particularly pleased that the conference adopted three amendments which I felt had particular merit: exempting persons who had already retired, or could retire (or, in the final version, who are within 5 years of retirement), from the dependency offset; making widows and widowers eligible for the delayed retirement bonus earned by their respective spouses; and permitting related corporations, of which one serves as a common paymaster and which employ a single individual, to pay the same social security tax that a single employer would pay. These bring a substantial added measure of equity to the social security program.

Finally, there are certain public assistance provisions, such as the work demonstration project and the wage base access authority, that should literally save millions of tax dollars in the more efficient design and operation of our welfare program. These are most desirable accompaniments to our revisions to the Social Security Act.

In sum, Mr. President, the bill achieves a great deal, perhaps far more than we would have hoped than when we began our deliberations last spring.

At the same time, Mr. President, there are some areas in which the bill takes an approach which I would prefer that it not take, or it is deficient in addressing some critical remaining problems, and I want to bring them to the attention of this body. First, while it makes—under current projections—the disability insurance trust fund sound for the next 30 years, and the OASI trust sound for the next 50 years, it still does not have long-range actuarial balance. It still carries a deficit over the next 75 years of approximately 1.45 percent of payroll (compared with the current deficit of approximately 8 percent).

Next spring, we could again be greeted by headlines, when the trustees file their report, that the "social security fund remains in long-range actuarial deficit." There is no reason, in my opinion, why we could not have proceeded to adopt the small additional tax rate increases for the years 1995 and beyond that were in the Senate bill when it was sent to the House. We could have made it actuarially sound. The House refused to do so, and this only means that future Congressess will have to finish the job.

Second, there is much too heavy a reliance, in my opinion, on the wage base, rather than the tax rate, as a means of solving the financing problems of the trust funds. Under the bill before you, the maximum wage base will go up to $42,600 in 1987—compared with the level of $16,500 now. Combined with the tax rate increases, that means someone at the maximum will be paying $3,046 in social security taxes, compared with $965 now. Reliance on the wage base, rather than the tax rate, has two defects: First, it creates its own further financing problems, because benefit increases are triggered by increases in the wage base; and second, and more importantly, it places a massive additional burden on middle-class taxpayers already staggering under other governmental onslaughts—when that burden could be spread out much more equitably, much more evenly, and with less overall harmful effect.

It is akin to having six houses, and asking the resident only of the sixth to meet almost all of the costs of rescuing the social security system. As the Members of this body well know, an alternative could have been adopted which simply relied upon an additional tax of one-half to 1 percent, applied across the board, with no increases in the wage base schedule. I think we will find in the future that this infinitely would have been a better approach.

Third, there were a number of critical public assistance provisions—most notably, the earned income disregard reform—which could have and should have been accepted by the House as a part of this legislation. We should move decisively on H.R. 7200 early in the next session to make sure that these provisions are enacted into law. The American taxpayers deserve, and demand, the kind of real welfare reform that is typified by many of these provisions.

And finally, of course—while I do applaud the fact that we have buckled down and met our responsibility to make this system whole—there is still the fact that we have done almost nothing to examine the system itself, to determine where its eligibility and benefit schedule may be awry, may contain inappropriate liberalizations, or may carry defects or loopholes which need to be corrected. All we have done is to raise taxes—not to revise and revamp the programs themselves. I refer not only to the disability insurance program, which everyone acknowledges is out of control. I refer also to the basic OASI program, and the HI program, which continue to confer benefits to persons in an indiscriminate and sometimes inordinately expensive fashion. What sense does it make, for example, for the age of the children for which a woman automatically qualifies for caretaker benefits in social security is 18, when in public assistance it is age 6, and under the President's welfare reform program it is age 14? What sense does it make for medicare to continue to provide a whole host of benefits to persons who well can afford to take care of themselves?

Our next task, Mr. President, is to address these eligibility and benefit questions with the same tenacity, the same determination, with which we have addressed the financing question. Only in that fashion can we complete the job and meet our responsibility to the American taxpayers. We have asked them, in this legislation, to shoulder the largest tax increase in the history of the social security system. That can very well prove, for many segments of our population, simply to be a burden which they cannot reasonably be expected to meet particularly with the wage base approach which has been taken. We owe it to them, and to future beneficiaries of Americans, to reassess the entire social security benefit and eligibility structure, and to look at all alternative systems, to make sure that our program policies are consistent with rationality—and that our taxation demands are keyed to a careful and detailed analysis of what is, in fact, required to provide a retirement program that is sound and not profligate, that is sensible and not superfluous, to meet the wishes and needs of the American people.

Mr. President, I wish to say just a few additional things.

This is a far better bill than it was when the matter was submitted by the administration. The Senate very wisely rejected the idea of paying social security funds out of general funds. It would be running away from a problem. It would turn a program into a welfare program and would not be good at all.

The Senate also rejected the idea of borrowing from the general fund because that, too, is undesirable, although maybe in a little lesser degree.

Mr. President, I am glad that we kept parity between employers and employees. This is a program for everybody. Employers, as such, draw no benefits. Employees draw benefits and, of course, the self-employed. It is their program. If they have a part in it, and an equal part, they continue to draw their benefits with dignity and with a sense of propriety.

Mr. President, I would be derelict in my duty if I did not point out that this financing of social security is not nearly as good as the Congress could have done. Too often we have raised social security revenue by increasing the wage base. At the present time, the wage base is $16,500 and in the law there are certain provisions for indexing it as costs and prices go up.

But, Mr. President, when we seek to find additional revenue by raising the wage base, we are doing a very unwise thing. We are soaking—and I mean soaking—the middle class.

The taxes under this bill in a few years are going to be very high for people who make $20,000 or $25,000. It is going to be unjustly high and it need not be so.

Mr. President, when we provide the income that we need by raising the wage base, we are applying the burden to one-sixth of the people.

Suppose that one is a landlord who has six houses, has to have more money to operate, and decides to put all of the increase on one tenant, one house. It would be an unbearable load. That is exactly what we do in social security.

A modest tax increase applied to everyone is the right way to raise money for social security. The taxes on the upper brackets are going to be unconscionably high.

Mr. President, someone might say, "Well, if you raise the tax rate, aren't you unfair to the poor?" Not at all.

If the tax rate is 6 percent—it is a little over that—and someone makes $4,000, they pay a lot less than someone that pays 6 percent on $20,000. That is one thing.

Secondly, the Congress, very appropriately, has fixed the benefits in favor of the low income. They get a much better bargain. They get a greater portion of their wages back in social security benefits than the higher paid.

There is a third reason. We have in the tax law what is called the earned income credit, that someone who earns his money, is not on welfare, works hard, gets a credit for 10 percent of his wages up to $4,000.

The individual making $4,000 gets a refundable tax credit of $400. It more than offsets his social security tax. It phases out at $8,000, but the individual making $7,000 gets a check back for $100.

That is in the law. It is there because of the leadership and the foresight and the compasson of the distinguished chairman of the Finance Committee (Mr. Long). But it serves a good purpose.

So this financial burden of ours could have been met by raising the tax rate one-half of 1 percent on employees, and one-half of 1 percent on employers. There would have been some raise, yes. It would have cost $10 for somebody making $10,000 a year. But it would not have been an excessive burden.

The way it is, we have imposed an excess burden on the middle class, particularly, and they will feel it in just a few years.

Mr. President, it does make a difference whether we meet problems fairly or whether we run away from them.

Do you realize, Mr. President, that we are raisng $75 billion of additional revenue in this bill and only $4 billion of it goes for more benefits? $71 billion of the $75 billion of additional revenue has to go to make up past losses. Why? Because in 1972 we raised benefits by 20 percent without adequately providing for them.

Mr. President, I am grateful, and I commend my colleagues for what they have done in turning back the proposal of the administration to pay benefits out of the general fund, or to borrow from the general fund or to soak the employers. That is good.

I am sorry that we are raising too much of this money by extending the wage base and having an excessive burden fall on the few, when a modest burden could have been borne by everyone. However, all in all, we must consider that this is a complex matter—some people did not take the time to understand it fully; that in this case we had to overcome the irresponsible—and I say that advisedly—position and lobbying and campaigning of an administration that was flirting with the welfare of every social security recipient now and those who will be beneficiaries in years to come.

Mr. DANFORTH. Mr. President, will the Senator yield for some questions?

Mr. CURTIS. I am happy to yield.

Mr. DANFORTH. It was my understanding when this bill was before the Finance Committee, and again when it was on the floor of the Senate, that the intention was to create a funding of the social security trust funds so that they would be in actuarial balance for the next 75 years. Is that correct?

Mr. CURTIS. That is correct.

Mr. DANFORTH. Does this bill provide for actuarial balance for the next 75 years?

Mr. CURTIS. No, it does not. It does so for about the first 30 to 50 years.

I am aware that these long-range projections have to be revised as we make changes in the law. But the fact remains that, to my knowledge, this is the first time we have advanced a bill in the face of the knowledge that the long-range financing was inadequate.

Mr. DANFORTH. It is also my understanding that the intent of the Senate when we passed this bill has not in fact been realized and that there will be an imbalance actuarily sometime after the year 2000.

Mr. CURTIS. That is correct.

Mr. DANFORTH. It is also my understanding that the rates that have been adopted are significantly higher than the rates that were adopted by either the Senate or the House during the 1980's.

For example, if the Senator will look at table 3 on page 66, it is my understanding that for the year 1981, the tax rate is higher than the House bill; that for 1982, 1983, and 1984, it is a tax rate that is higher than both the House bill and the Senate bill; that for 1985, it is a rate that is higher than the House bill; that in 1986, 1987, 1988, and 1989, it is higher than the rate that was in either the House bill or the Senate bill; and that in 1990 and thereafter, the rate is higher than the rate that was in the Senate bill.

Mr. CURTIS. Yes. I think it calls for some explanation.

I would be opposed to the conference going beyond their scope. The social security tax is in two parts—the OASDI and the HI, the health insurance. Usually, it is quoted as the combined rate. What the conference did was to take the highest rate of any of the components, in some instances, from either House, and it came up with a combined rate that is higher.

Mr. DANFORTH. However, my point is that what we are doing here is adopting a rate structure which is generally higher than that adopted by the Senate and which, for a number of years, is higher than either the Senate or the House; that despite the fact that we have higher rates, we have not achieved actuarial soundness for the next 75 years, as we set out to do.

Mr. CURTIS. That is correct. A part of the reason why the combined rate in the Senate was not as high as that agreed to by the conference was that under the Senate bill, they would have collected more money from the employers.

Mr. DANFORTH. Certainly, it is true that, so far as the working people of this country are concerned, they are going to be paying higher rates than under either the House or the Senate bill for a number of years, and still they are not going to have the assurance of actuarial soundness when at least some of them get to 65 or are of retirement age.

Mr. CURTIS. I think that is a valid criticism, yes.

Mr. DANFORTH. I am sorry that the chairman is no longer in the Chamber, but I should like to ask some questions and make some observations about a couple of amendments that were adopted by the Senate by overwhelming margins.

One is the amendment that was offered by Senator Roth, providing a $250 tuition tax credit for college students. That was adopted by the Senate by a margin of 61 to 11. Only 11 Senators voted against it.

I wonder whether Senator Long would be able to give me his views on the prospects of either that amendment or the so-called Packwood-Moynihan tuition tax credit proposal, as to whether there is any significant likelihood that these things—I think the Roth amendment has been voted by the Senate on three occasions—ever are going to become law or whether we are going to be wasting our time in the Senate by voting for this amendment.

Mr. LONG. Mr. President, from the point of view of the conference report, the administration did not prevail on two major items that the administration was recommending.

One item was the approach that the Senate did agree to accept by a margin of one vote, with the Vice President breaking the tie, that there be a heavier tax on the employer than on the employee. That was an initiative by the administration—an innovation, one might say, of major dimensions—on which the administration's position was not sustained. The conference agreed to the position of the House and provided for parity of taxation between the employer and the employee.

In addition, the administration had fought very hard for a provision that the funds to pay the benefits be borrowed out of the general fund. The point of view of the Senate was that there was not any general fund to borrow from; that the borrowing just amounted to having a printing press to print money; that you should not finance social security benefits by printing-press money because that was an unsound approach. The House conferees went along with the Senate on this. That represented another major setback in those innovations that were being recommended by the administration.

When we got to this big item of tax credits for education, it was a rider not relevant to the bill itself, but there certainly is precedent for offering a measure of that sort on a social security bill.

The administration and those who supported its position were dug in to the point that they just were not going to yield on this other item where some of us wished to compel them to see it our way.

If we could have persuaded the House of Representatives to see it our way we would have done it, but this is something that we could not do at this point. I am satisfied that before this Congress is over the Senate will again pass something along the line of the Roth amendment, that it will go to the President having been agreed to by the House of Representatives, and that the President will either sign it or veto it. I predict that the probabilities are that, by the time we get through debating this issue and having expressions on both sides, it is going to become law. If it does not become law, it will be because the President has vetoed it and the veto has been sustained.

But we were not able to enact it on this bill. That does not mean that it will not happen. It just did not happen on this particular occasion, but there will be other bills and, frankly, there will be other legislative situations where those who favor this tax credit approach will have more leverage in conference than they had at this point. I would think that if the administration had won on the two items that I mentioned, here would have been a little more leverage for the position taken by Senator Roth and those who voted for his amendment than there was when the administration had failed to prevail on some very big items that it hoped to see added to the social security program.

Mr. DANFORTH. I am encouraged by the Senator's optimism. I wish now to ask the Senator about an amendment which I offered.

Mr. LONG. I think that we could have reached an agreement, that we take something like this is the bill we just passed and send that over to the House of Representatives with the tax credit on it. There was willingness on the part of the House conferees to cooperate in letting that bill pass in this session. If that were the case, we would have every reason to think that under the existing circumstances the bill would have been vetoed, and Senator Roth decided that it would be better to renew the struggle on a measure that had a better chance of becoming law.

Mr. DANFORTH. It is certainly difficult to pass legislation over the opposition of the administration. It is not just the veto power. It is the leverage that the administration has in Congress.

Let me ask the Senator about the amendment that I offered along with a number of other Senators both in the Finance Committee and on the floor. As the Senator will remember, in the Finance Committee my amendment lost by a tie vote, and then on the floor it was adopted by a vote of 57 to 28, and it was an amendment to provide 10 percent of social security taxes for State and local governments and for nonprofit employers. I am very concerned about what happened in the conference to that amendment. I am sorry I was not present on the day that it happened.

But the theory behind this particular amendment was that between now and 10 years from now the social security tax liability for local governments, State governments, and nonprofit employers is going to be increased by $15 billion. That is just too much money to take out of the local school districts, the local hospitals, the Salvation Army, and the Boy Scouts, and we should have offered some relief for them.

That amendment was washed out in conference. The Senator has been here I think 29 years and has a great reputation for knowing how to get things done in Congress. I have been here for 1 year and have no reputation for knowing how to get things done in Congress. I wonder if the Senator could offer me his thoughts as to whether or not this concept, which was adopted by a margin of almost 30 votes on the floor of the Senate, perhaps could be brought back to life in some other form.

Mr. LONG. Of course it can, I say to the Senator. I point out that there was more compelling logic to the Senator's amendment when we were looking at a bill to put a heavier tax on the employer than it did on the employee.

That situation more strongly supported the argument that these State and local governments and nonprofit institutions should be given at least some relief because of very high initial burdens placed on them.

When the tax goes on a parity basis rather than on the basis of putting it on the employer but not on the employee, that in itself is an alternative that places a lesser burden on the employer, and it reduces the need for the type of relief the Senator has suggested.

Of course, the Senator——

Mr. DANFORTH. Mr. President, will the Senator yield?

Mr. LONG. If I might say, of course the Senator's amendment had much to recommend it even if you do have parity of approach between two.

Mr. DANFORTH. Let me interject one point just at this point.

The fact of the matter is that, when you ran the figures when you compared the actual tax burden created by the parity approach versus the disparity approach, the tax effect on this group of employers turned out to be almost identical; that is, it was a difference, as I recall, between a $15 billion annual increase by 10 years from now and a $15.2 billion annual increase. So, even under this version of the bill the consequences insofar as the Salvation Army, the hospitals, and the local governments are concerned, are almost exactly the same as they were under the administration's proposal.

Mr. LONG. Yes. I urge the Senator to keep in mind that his proposal was a relatively new legislative proposal which has merit to recommend it, and sometimes we have to pass something of that sort more times than one before it becomes law.

I am sure the Senator will bring his proposal back again and the Senate will back him on future occasions and in due course I anticipate the Senator will have the success that we hope to achieve with his amendment.

One of the problems we were compelled to face was that we had between the Senate and the House some very expensive proposals—so much so that the administration as well as some of those from both Houses were concerned about the potential of a very high additional cost if we took the high-cost amendments of the two bills, and the cost in additional taxes of the relief that the Senator had in mind came into play.

But, may I say to the Senator, he has a worthwhile proposal. It does have a lot of merit to it, and I would urge the Senator that he should continue to pursue it because I believe when the House better understands it, as I believe the Senate does, he will find there will be more support for it.

Social security is not something that is dealt with once and for all by just one bill. We will be voting on social security bills around here as long as we are Members of this body, I would think. We will probably have another significant social security bill at least once every Congress.

I do appreciate the comments of the chairman, and I certainly would on my amendment appreciate any help he could provide in the future when this comes up again. I think it is a very important point.

I would add one thing that really concerns me, and that is the vehemence of the administration's opposition both to Senator ROTH's amendment and to my amendment. I think the nature of the vehemence is more than a dollars-and-cents question. I think it goes to a basic conceptual matter; that is, when I met with Hale Champion, the Under Secretary of HEW, to describe my amendment to him, he said to me point-blank—and I appreciated his candor—that, "we"—I took that to mean the administration—"have no problem in offering financial help to State and local governments and to colleges and universities, and so on, but we would like to do it in a targeted way."

I think that use of the word "targeted" has become a real byword in Washington. I take it "targeted" means that we at the Federal level are willing to help local governments and organizations throughout the country provided we can keep strings on that money, and that the problem with the approach in the amendment that I offered was that it was string-free resources; that it allowed discretion and responsibility to be exercised at the local level and in the local school district. Maybe that is just what we in Washington do not want to happen.

Similarly I noticed an article in the Washington Post in which Secretary Califano criticized the Roth amendment, and he said:

> The most important point is that it is an absolutely incoherent way to make educational policy in this country.

Perhaps the nature of the administration's opposition to Senator ROTH's amendment is that the effect of it was to provide assistance to people who wanted to send their children to college in a way which did not allow the Federal Government to make educational policy through the leverage power of the Federal dollar.

That to me is a very important philosophical question that I think was raised by Senator ROTH's amendment, was raised by my amendment, and which really got us into a hornets' nest insofar as the administration was concerned, including heavy lobbying by very, very high levels of the administration against these two amendments, I think not on the dollars-and-cents effect but on the basis that these approaches are ones which reduce the potential of manipulation by the Federal Government and that, perhaps, the desire, not just with this administration but with almost every administration, regardless of party, is to increase the amount of manipulation that comes from Washington.

(Mr. MELCHER assumed the Chair.)

Mr. LONG. I like the approach the Senator advocated, and also that Mr. ROTH advocated, that you would provide a tax credit which would have the effect of letting the individual decide for himself what he wants to do with his money—rather than to have him go to some Federal office and fill out an application and be told to come back, send the application into Washington, and after while have somebody come back to see him and talk to him about his situation and eventually tell him that he either did get some help or he did not. In either event they will tell him there are strings attached to it, that he will have to do things somebody in Washington wants him to do, contrary to his convictions, in order for him to get the relief proposed.

I personally think it is a good idea to have a tax credit to allow individuals to decide for themselves, just as I think there is a great deal of merit in what the Senator was proposing, in saying that if we are going to pass a big tax increase which is going to impose a burden on State and local governments, that we should do it in a fashion which eases the burden on the State and local governments and on the nonprofit organizations.

If the Senator will continue to pursue his proposal, as it gets to be better known across the country, he will have more support in the House, as he now has in the Senate.

As the Senator has discovered, when one convinces the body of which he is a part that something ought to be done, and then it finally goes to conference, and especially when he has the administration fighting him, the Senator cannot prevail on the other House. This is something which I have been familiar down through the years. I think I have had more familiarity with it than the Senator from Missouri.

However, I think if he will continue to pursue it, continue to pursue the type of suggestion he has generated, since there is a lot of merit to it and it has a lot of support, it will in time come to pass.

Mr. DANFORTH. I thank the Senator.

Mr. MOYNIHAN. Mr. President, will the Senator yield?

Mr LONG. I yield to the distinguished Senator from New York.

Mr. MOYNIHAN. I would like to call attention to the fact that in this social security bill there is also included $187 million in fiscal relief for costs of welfare to the individual States, such as the States of Wisconsin, Maine, Lousiana, New York, each of the States, and this is the first installment in the President's proposal for a reform of the welfare system which involves fiscal relief to the States.

The Senator originally proposed, in accordance with an agreement with the administration, that there be $374 million.

The House proposed to put—agreed to the total sum in principle—but proposed that half be put in the bill and half in the H.R 7200 bill which they expect to receive back from the Senate sometime in the second session, and we agreed to that.

This is an important event It is the first such relief of its kind in the history of the federal system. The fact that it is here very much attests to the fidelity to this purpose and the shared concern of our distinguished chairman, and I would like to stand in tribute to him in expressing the gratitude that I have and, I think, that the State governments and local governments throughout the country have and can appropriately share.

This is not the first time that you have been a good friend of this cause, and I would like so to state and state it at this time.

Mr. LONG. I thank the distinguished Senator from New York.

As he knows, the idea of the House in reducing the figure was that this would take care of us during the first few months, and they would expect to go along with something of this sort to continue the fiscal relief thereafter.

So while there is a reduction from the amount of money the Senate approved we would anticipate that in future legislation the House would go along with continuing it at about the rate that we had agreed to in our bill when we passed it through the Senate.

This is, of course, a credit to the Senator from New York for the fine work he has done in this area. He has been the one who has pressed for this idea.

It was to fulfill a commitment that the administration made, and a promise that the Senator from New York undertook to see that the administration kept, to provide fiscal relief to the States in the welfare area.

I hope the Senator will continue to push for it. I look forward to supporting him in this because I think he is right about it. I just hope the administration will continue to remember that commitments were made along this line. I think the States are entitled to the relief, and that is especially true of the State of New York. The Senator has very ably represented the State of New York, and I think the entire United States has benefited when the Senator proposed the amendment and pursued it thereafter.

I am grateful to the Senator, and I am one of the supporters of his fiscal relief suggestion.

Mr. GOLDWATER. Mr. President, I intend to vote against this conference report measure, but I do not want that to seem a reflection of my feelings toward the chairman, who has been so instrumental in getting a decision on the social security matter.

Mr. President, while this may be a temporary solution, I do not think it is anything like a solution, and I think we will be going through the same rigors and efforts again within the next 10 years.

My personal opinion is that social security has failed, and we would be better off in this country if we pledged to every person who has ever paid a dime into the social security fund that that money would be returned, and then forget about the whole thing. There does not seem to me to be any way to have what we call social security and avoid the politics, every 2 years, of having the House feel that it must make additions to the social security payments regardless of whether the money is there.

This is going to work a terrific burden on the small- and middle-class businessman. It is going to become a burden so great that it will cause the closing of many businesses. In many instances, social security payments will be more than the annual internal revenue bill. So, Mr. President, I wanted to explain my position.

I have tried for years to call to the attention of this country and to the attention of Congress that the social security fund was getting into increasing trouble. My personal opinion is that it is bankrupt, although some argument can be made that it will not be bankrupt for another 4 or 5 years.

But I cannot, in good conscience, go home to face my people and tell them that I voted for a bill that I do not think will help them one bit, but will work irreparable damage to an already overburdened economy which in itself faces trouble.

Mr. President, having explained that, I shall vote against the bill, but I ask unanimous consent to have printed in the Record an article published in this evening's Washington Star in the form of a question-and-answer interview with a Mr. Irwin Schiff of New Haven, Conn. I do not know the gentleman; I have never heard of him before, but what he has said in answer to questions put to him by a Star reporter does make sense, so I ask unanimous consent that it be printed in the Record at this point.

There being no objection, the interview was ordered to be printed in the Record, as follows:

[From the Washington Star, Dec. 15, 1977]

Critic Knocks U.S. Social Security

(Note.—Irwin A. Schiff, a New Haven, Conn., insurance consultant and accountant, is a veteran critic of the Social Security and Internal Revenue systems who has written extensively on those subjects. He was interviewed by Washington Star Staff Writer Ron Snider.)

Question: You've criticized the Social Security system as being bankrupt. Is the new law going through Congress going to help salvage the system?

Schiff: No. Social Security is unsalvageable. First of all, it's not even a system. It's nothing more than a welfare scheme. Money comes in and money goes out. Congress went so far as to try to create the illusion that they were going to increase taxes on the employer. This is purely an indication of the deviousness and the dishonesty of Congress. Social Security taxes are an indirect labor cost. The working man must produce enough to bear the cost of his employment, both direct and indirect, so that these increased Social Security taxes must come out of the hide, or out of the productivity, of labor. So the laborer is going to pay for these taxes either in terms of lower wages or an increased cost for the goods he buys.

Q: Well, regardless of who pays, will the increased revenue help put the Social Security system on a better plane?

A: No. The Social Security system is over. It's a chain letter that's run out of chain. Basically what Congress wants to do is get some more money for one or two years before the system caves in on those already in Congress so they can get a couple more years of office, so they can get their own pensions. The system is totally unsound. The government talks about the trust funds. There are no trust funds. There never were any trust funds because the $46 billion the government says is in the trust funds are nothing else but government bonds. Bonds are simply a way of the government saying we owe ourselves $46 billion.

Q: If there were no politics involved, if you had actuaries in there looking at the Social Security system and they didn't have to worry about public reaction or votes, could they come up with a plan to modify and make Social Security work?

A: No, because if Social Security were an insured plan the way it was presented to the country, it would have to have a fund of over $4 trillion. That almost equals all of the above-ground wealth in this country. There is no way that the system can deliver the benefits that these irresponsible rascals promised. Social Security was really a way that Congress could demonstrate how generous it was going to be every two years; congressmen simply voted increased benefits without bothering to stop to think of the cost. They simply voted more benefits than those people who are working can deliver. Now they don't want to recognize this. Roughly 15 percent of the population is on Social Security and there's no trust fund. Suppose in 1937, when the Social Security system was adopted, it was suggested that 15 percent of our population immediately would begin receiving benefits. Would the system have passed? Of course not.

Q: How was it sold?

A: It was sold on the basis that it was going to be an insurance scheme. As a matter of fact it was sold on the basis that this trust fund would increase so that by the year 1980 the trust fund would reach its full maturity. It was sold on the basis that it was going to be actuarially funded. Now, it is not funded. We now have 15 percent of our population drawing benefits and there is no trust fund. Obviously, if this had been suggested in 1937, it would have been laughed out of existence. The only reason we have Social Security today was that it was declared constitutional on the basis that it was a funded plan. It's unfunded, therefore it's basically unconstitutional, and since it's unconstitutional, nobody has to take any notice of it or the laws passed to support it.

Q: All politicians from the left to the right have endorsed the concept of Social Security. Other countries have had similar plans since the 18th century. Is it feasible that Social Security can be done away with under any circumstances?

A: The reason Social Security was popular is that politicians universally like to play Santa Claus. Politicians are universally devious. Politicians are universally liars. Now there are exceptions to this, but they are the exceptions, not the rule. And that's the way politicians get votes. We have a weak economy today because we have adopted this so-called Social Security. But it's not Social Security, it's social Insecurity. The only way we can be socially secure is to produce as much goods, is to produce considerable goods at low prices. What the Social Security tax does is puts a burden on producers and drives certain producers out of business.

Q: For example?

A: Well, when Grants went out of business 65,000 employees lost their jobs. Now Grant was paying a payroll tax to the government roughly 6 percent of its payroll. Suppose Grant had in the bank, just what it had paid in payroll taxes for the previous five years, could that have staved off its bankruptcy? I think so. There are many businesses that are going bankrupt which if they had their payroll taxes would stay in business. So Social Security is actually throwing people out of work. The Social Security tax is a tax on hiring people. It artificially raises the cost of wages. Now there are many marginal businesses that simply can't afford to pay wages plus the artificial taxes. So they don't hire. What the government does is give nice names to things. In other words, how can I be against Social Security? Well, I want social security, but social security doesn't come by taxing producers and giving nonproducers an incentive not to produce. The government does it with everything. Every time the government wants to raise taxes, they talk about a tax reform package. When the government wants to pay farmers not to grow food, they don't say we want to pay farmers not to grow food, they call it soil bank payments. When the government wanted to have price controls, they called it Fair Trade laws. Who can be against things that are fair and trade. Social Security should be called Social Insecurity because that's what it creates.

Q: Even if Social Security would disappear, the government still would make some move to aid retired people who couldn't survive, who had no income, just as they have welfare payments now. Wouldn't there be some system?

A: The reason why people who are 65 may need Social Security is that the government has been confiscating their earnings all their life through taxation and inflation, so that when they get age 65 they're almost destitute because of government taxation. But assuming the government wasn't swallowing up all this money, people would have it to save on their own. The private charities would have more money, and if somebody needed money they could go to other sources. The point is: Politicians and government can't do anything. All they can do is get in the way of people who produce. Your congressmen and senators are nothing but influence peddlers. It's not their money, they get in the way of producers. Yet they want to create the illusion. It's government, with all their benefits, that has made this country inefficient producers and less competitive with foreign producers. My God, we flooded the country with radios, Singer sewing machines and tractors and cars. Now, because of OSHA because of all these government regulations and taxes and payroll taxes, we've become high cost producers and we can't afford to pay for our imports.

Q: But isn't it true a great majority of the people supports the government policy, and favors the Social Security system, welfare, the Federal Trade Commission, the Consumer Product Safety Commission. They're antibusiness. Where's your support?

A: Right now you have 10,000 of what are known as public information officers in Washington writing every day. These are propaganda officers and what they've done is they've created an illusion. The vast majority of Americans are being deluded by government. Now I'm not relying on the vast majority of Americans, but there are 5, 10, 15 million Americans who know that government is destroying this country, as government destroyed England. So it's the understanding, patriotic American who will react by refusing to pay government taxes that are not legally required. And the message will start to get across to more and more people. The only thing that knowledgeable Americans can do is not give aid and comfort to the enemy and educate other Americans. And that's what I'm doing. I'm going around the country putting on seminars. Now you've got to realize the American Revolution was won because one-third of our population was willing to risk a revolution. They didn't wait to convince the majority of Americans.

Q: And how do you figure these people will come to believe this?

A: Many Americans realize that we're getting very close to where we can have runaway inflation. What I want to point out to the people is that government is totally useless in raising their standard of living. The people may realize that when they see Social Security go bankrupt—because now they suspect government. See, the government can make promises for years. At the original hearings when Social Security was considered in 1935–36, there were people who pointed out that this would not work. And for years these people were maligned and made fun of. And now they're going to be proved right. It took two generation to prove that this chain letter wasn't going to work. And when this collapses—and people are going to see that the government is the Wizard of Oz. That when the screen falls down there's a little funny old man there who doesn't do anything.

Mr. DOLE. Mr. President, last Tuesday Vice President Mondale declared that it would be a major victory if the social security bill were passed this year. As a spokesman for an administration that has proposed more taxes in its first year than any other administration in our history, I imagine that the imposition of a $227 billion tax bill would be classified as a victory.

ECONOMIC TURMOIL

The Senator from Kansas, however, is concerned over the economic impact of this bill. The fiscal drag on the economy resulting from this bill will be serious. The bill before the Senate today will triple the tax bite for middle-income workers. Workers will sharply pay increased taxes for only a promise of increased benefits years from now.

There is no question that the social security trust fund needs an infusion of new money. However, there is considerable risk that economic incentive and traditional growth patterns will be damaged from this enormous income transfer from the working to the nonworking population.

Increases in payroll taxes of this magnitude can expect to have significant macroeconomic effect. In general, payroll tax increases, like personal income tax increases tend to have a restrictive effect on the economy. However, unlike personal income taxes, payroll tax increases are inflationary. The employer portion of payroll taxes tend to be treated as a cost of production by the firms. Increases in payroll taxes on the firm, like other cost increases, place an upward pressure on prices.

BUSINESS CONFIDENCE

A Gallup poll recently released shows that businessmen are nervous and gloomy about our economic future. A whopping 50 percent of those surveyed expect a recession within the next 2 years. Most businessmen expect the Government to do a poor job of managing the economy and fear that rising taxes will cause serious problems.

In light of the new social security tax increases, and the possibility that the useless and onerous energy taxes will be enacted, the country can ill afford to wait for the administration to decide on the composition of a tax reform package. Having listened to the President this morning in the press confernce, it seems quite certain he is not sure what the package will contain. Instead, the administration should pack a package to provide tax relief for both business and individuals. In order to provide the capital to meet the needs of today and tomorrow we must minimize the present tax burden.

CONFERENCE ACTION

Mr. President, having said that, the Senator from Kansas wishes to commend the conference committee, the conferees and the distinguished chairman, the distinguished Senator from Wisconsin, and the distinguished Senator from Nebraska, because the conference committee improved the bill passed by the Senate. The conference adopted in modified form an initiative relating to the removal of the earnings limitation sponsored by the Senator from Kansas and the Senator from Arizona, Mr. Goldwater. Under the conference bill, the earnings limitation ceiling would be removed for Americans over age 70 and phased up to $6,000 for those between the ages of 65 and 69.

EMPLOYER-EMPLOYEE PARITY

The conference committee wisely restored the employer-employee contribution parity. The unilateral employer increase in the wage base as passed by the Senate would have delivered a massive financial blow to the very sector of the economy which is charged with the responsibility of providing sufficient jobs and capital formation.

The bill also initiates decoupling and removes the horrible double indexing of benefits. Decoupling, by itself, would make a substantial reduction in the long-term cost of the social security program.

Fortunately, the conference rejected outright the administration's proposal to use general revenues to support the social security system. This measure, if enacted, would only have hidden the true costs of our social security system. Besides, almost everyone in Government knows that our present $60 billion deficit has not produced any "general revenues."

BILL FAILS TO ADDRESS REAL PROBLEM

Unfortunately, neither the House nor the Senate addressed the real problems of the social security system. In failing to address these issues, the Congress in enacting this bill will be doing a disservice to not only the present beneficiaries but also to the future ones. I fully support corrective action to make the social security system fiscally sound. However, I question whether those who now must bear the burden of financing social security—the working class—should be asked to assume such massive burdens that this legislation would propose. Constantly raising taxes, either through the tax rate or the wage base, is not the only answer to preserve the vitality of social security. The Senator from Kansas believes that we should look to the beneficiary composition, the benefit structure, and the relationship between social security and other pension programs.

The passage of this bill does not mean the Congress can walk away from its duty to improve and refine the social security system. The Senator from Kansas hopes that the Congress and particularly the Senate Finance Committee will begin immediate work on initiatives to relieve the tax burden while preserving the integrity of the social security system.

Mr. NELSON. Mr. President, I regret that the conferees did not agree with the Senate version of the funding of the social security bill, because I think it was a better approach which would not have had such a severe impact upon the vast majority of small businessmen in this country, and all or almost all of the self-employed in this country.

I also regret that we did not accept the House provision which would have used the general funds to guarantee the social security trust funds in the event that any of their reserve ratios went below a certain percentage, because that would have made it possible to have a lower reserve ratio in the fund, and thus also lower tax burdens on both individuals and businesses.

I regret, too, that neither House moved to start transferring the responsibility for paying for the hospital insurance or the disability insurance from the social security trust fund over to the general fund in a phased-in way over a period of years, because, in my judgment, neither of those programs—disability insurance or hospital insurance—should be in the social security program.

If we had done that, we would have been able to have had lower social security tax liability rates and placed the burden of supporting those two programs with general revenues where they belonged.

There is not any doubt in my mind that we will be compelled out of equity and just commonsense to proceed to shift the burden of supporting hospital insurance and disability insurance from the social security trust fund to the general fund, and very soon. I would hope we would start considering that in the next year or so.

I was rather interested—I do not have the rollcalls in front of me—in some of the comments of those who are attacking the social security system here in the Chamber because of the high cost. I believe we will find that those critics all voted in the past for the benefits which are in there, and this year proposed additional benefits which I voted against, which would have increased the burden on the social security fund. I include, for example, the elimination of the earnings limitation that was proposed by the distinguished Senator from Arizona, which would have cost another $1.1 billion a year. Yet he stands on the floor attacking the high cost of the system while taking the credit for voting benefit increases of $1 billion or $2 billion more than under present law, and thus requiring higher social security taxes. Fortunately that particular provision did not prevail in the conference.

I think sometimes the rhetoric we hear here is not justified coming from the sources who produce it when we consider the amendments they proposed or supported to increase the cost of the social security fund either this year, or in past years.

Mr. President, since its enactment, social security has become a vital component of this Nation's social and economic structure. In just over 40 years, social security has grown into a massive program providing retirement, disability, survivor and hospital insurance benefits to some 33 million Americans. To support these benefits, over 104 million Americans contribute payroll taxes to the social security trust funds.

The importance of the social security program to workers and retirees is underscored by the following statistics:

The average monthly benefits are $234 for a retired worker; $262 per month for a disabled worker; and $223 for an aged widow.

Forty percent of all American workers pay more in social security taxes than they do in Federal income taxes.

For about 70 percent of all single beneficiaries and for some 50 percent of all couples, social security benefits are their major source of income ("Major source" of income is defined as at least 50 percent of all annual income.)

One out of every four individual beneficiaries and one couple out of every 12 depend upon social security for their sole source of retirement income. ("Sole source" of income is defined as at least 90 percent of all annual income.)

Right now, the social security programs are in financial trouble, both in the short term and in the longer range. It is necessary to change present law to provide adequate financing for social security, because the social security trust funds do not have current income sufficient to meet the obligations made to beneficiaries, and the trust funds do not have sufficient reserves to carry the social security program for much longer. In 1977 and 1978, the social security trust funds will run a deficit each year of over $5 billion.

Under present law, it is projected that trust fund reserves in the disability insurance program will run out in 1979, and the old age and survivors program will exhaust its reserves in 1983.

The long run, 75-year projection of the social security program also indicates that the present social security cash benefits program is seriously underfunded. The Board of Trustees of the social security program has reported that there is a long term deficit in the old age, survivors, and disability insurance (OASDI) program of 8.20 percent of taxable payroll.

Over the 25-year period covered by the cost estimates, the hospital insurance (HI) program has an average deficit of 1.16 percent of taxable payroll. This is equivalent to $9.3 billion per year based on the 1977 taxable payroll.

To deal with social security's financial problems, the House of Representatives passed a financing bill—H.R. 9346—on October 27, 1977. The Senate also approved a social security financing bill on November 4, 1977. The goal of both of these bills was to provide enough income to meet benefit payments, and to maintain a reasonable balance in the social security trust funds as a contingency reserve to carry the program through a recessionary period. While the House and Senate bills differed as to the precise way in which to put the social security programs in a sound financial position, each House used three basic methods to reduce short range and long range deficits in the social security program:

First. Increase revenues by adjustments in the social security payroll tax and the wage base upon which these taxes are paid.

Second. Adjust social security benefits.

Third. Infuse general revenues directly into the social security programs or authorize the social security trust funds to borrow from Federal general revenues.

1. INCREASING REVENUES

The most fundamental difference between the House and Senate bills is the way in which additional revenues would be brought into the social security trust funds. The Senate and House bills each increase the amount of earnings subject to the employer tax, increase the earnings subject to either the employee or self-employed tax, and increase tax rates for employers, employees, and the self-employed.

The traditional approach to financing the social security cash benefits and HI programs has been to levy an equal tax on employers and their employees. This concept of taxation has become known as "parity." Under the Senate bill, however, the amount of wages subject to social security taxation would have been different for employers on the one hand and employees and the self-employed on the other. The Senate bill thus provided for a temporary break in the "parity" concept by placing a greater share of the social security tax burden on employers, while the House bill raised the wage base equally for employers and employees to finance social security benefits.

Under the Senate provision, the wage base subject to employer taxes would be raised to $50,000 starting in 1979. The employer base would remain at $50,000 through 1984 and then increase in 1985 to $75,000. The base would remain at $75,000 until such time as the employee tax base reached a level of $75,000, in about the year 2002. Thereafter, the two bases would be equal and would rise together in relation to increases in average wage levels throughout the economy.

The Senate and House conferees agreed to accept the House approach in which employers and employees will contribute equal amounts of taxes to the social security trust funds. This approach does adequately fund social security benefits in the future, but in my judgment the unequal employer/employee wage base would have been preferable.

Disparity in the employer/employee wage bases redresses an imbalance in the present law. Many people believe that employees and employers have been treated the same insofar as social security payroll taxes are concerned—that there is a "parity" concept that must be preserved. In fact, employers have always enjoyed an advantage not available to employees, and that is that profit-making employers can deduct their contributions as a cost of doing business when they calculate their income taxes. Employees cannot. In effect, this means that employees have been asked to bear a greater share of the cost of operating the social security programs. By raising the wage base for employers higher than for employees, employers and employees after-tax situations would be more nearly equal.

Furthermore, since future benefits are tied to the employee wage base, raising the employee wage base has cost implications for the future. In social security, today's decisions must be considered in view of their future effect. Since benefits are tied to the wage base on which employees pay into the system, raising employee contributions will mean that higher benefit payments will have to be paid in the future to these high-paid employees. Somewhere down the line workers and employers will have to have their social security taxes raised to pay for these retirement benefits. It has been calculated, for example, that with the House approach benefit payments in the future will cost 0.27 percent of payroll more than the Senate bill over the next 75 years. This additional cost is equivalent to 2.16 billion per year if based on total taxable payroll this year, and it will increase substantially in the future.

Perhaps most importantly, disparity in the employer/employee wage bases avoids increasing the wage base upon which workers contribute social security taxes or increasing the tax rates for all employers and employees.

Right now, employers already pay taxes nationally on 87 percent of all workers' earnings. Therefore, raising the amount of earnings taxed does not represent a major new expense for the vast majority of employers. In many small businesses, 100 percent of the wage base is already covered because each of its employees earn less than $16,000, the amount of earnings subject to social security taxes in 1977.

When the Senate considered the wage base disparity, Senator CURTIS offered a proposal that would have preserved equal employer and employee wage bases by raising tax rates. I opposed that proposal because it would have increased social security tax liability for low- and middle-income workers by a substantial amount, thus further increasing the regressivity of the present payroll tax. A tax rate increase also would impact on small businesses more significantly than increasing the wage base for employers only. This is because a small business would have its entire payroll affected by a tax rate increase, while it would only have to pay additional payroll taxes on workers earning high wages under the unequal employer/employee wage base proposal. Small businesses primarily do not have high-paid workers. The Senate did not accept the tax rate increase plan.

The House bill raises the employee wage base to a greater extent than does the Senate bill. The effect of these wage base increases, imposed by the House—and adopted by the conferees—is that high-paid workers and high income self-employed workers will have much larger increases in their social security tax liability when compared to the Senate bill.

To illustrate the impact that the House and Senate bills and the bill reported by the House-Senate conference committee will have on workers earning the average wage, as well as upon workers earning the maximum amount of wages subject to social security, the following two tables have been prepared:

IMPACT ON ANNUAL TAX PAYMENTS OF WORKER EARNING AVERAGE WAGE

	Wage	Taxes under present law	Increase over present law		
			Senate bill	House bill	Conference report
1977	$10,001	$585			
1978	10,812	654			
1979	11,655	705	$10	0	$9
1980	12,486	755	11	0	10
1981	13,281	837	40	$33	46
1982	14,078	887	49	49	56
1983	14,888	938	52	52	60
1984	15,744	992	55	55	63
1985	16,649	1,049	125	108	125
1986	17,606	1,136	114	114	123
1987	18,619	1,201	121	121	130

IMPACT ON ANNUAL TAX PAYMENTS OF WORKER EARNING THE MAXIMUM

	Taxes under present law	Increase over present law		
		Senate bill	House bill	Conference report
1977	$965			
1978	1,071	0	$133	0
1979	1,143	$53	252	$260
1980	1,234	54	333	353
1981	1,380	145	566	595
1982	1,474	162	640	656
1983	1,569	207	686	703
1984	1,663	212	731	749
1985	1,758	278	890	928
1986	1,986	383	958	978
1987	2,012	394	1,012	1,034

Mr. President, no matter what proposal or combination of proposals had been adopted to finance social security, this financing legislation would be controversial. The fact is that no one wants to pay more taxes. At the same time, no one wants social security benefits cut back. While I do not agree that the conferees adopted the most and advantageous method to finance future social security benefits, the conferees did take the action necessary to insure the future integrity of the social security system.

Mr. President, I ask unanimous consent that charts comparing present law tax rates, wage base, and reserve ratios in the HI and OASDI funds with the Senate bill, the House bill, and the conference report be printed at this point in the RECORD.

There being no objection, the charts were ordered to be printed in the RECORD, as follows:

COMPARISON OF FINANCING PROPOSALS

	Present law	Senate bill	House bill	Conference report
	Total (OASDHI) tax rate (employer and employee, each in percent)			
1977	5.85	5.85	5.85	5.85
1978	6.05	6.05	6.05	6.05
1979	6.05	6.135	6.05	6.13

2. THE SOCIAL SECURITY BENEFIT STRUCTURE

Mr. NELSON. The House and Senate conferees agreed on two major adjustments in the social security benefit structure. One relates to the computation of benefits for new retirees; the other relates to the social security earnings limitation.

The social security conferees agreed on a new procedure for computing benefits for new retirees. Beginning in 1979, benefits would be decoupled to solve the unintended effect in present law that overcompensates for inflation. Social security replacement rates would be established at an amount calculated to be about 43 percent of an average worker's earnings the year before retirement. These replacement rates would be held constant thereafter.

Existing law calls for automatic cost-of-living increases in benefits effective each June and for increases in the tax base (based on changes in wage levels) each January (asssuming that the Consumer Price Index rises by at least 3 percent). Each benefit increase is put into effect by a revision of the table in the law. Thus, each increase applies not only to people entitled to benefits for the month the increase is effective but also to everyone who will become entitled to benefits in the future.

The automatic "cost-of-living" benefit increase mechanism incorporated into the social security program by the 1972 amendments operates exactly as intended for persons on the benefit rolls. Once the initial benefit has been established, it is periodically increased by a percentage which restores its original purchasing power according to the official governmental index of purchasing power—the Consumer Price Index. The social security financing bill proposes no change in this concept.

The "cost-of-living" adjustment mechanism, however, has a peculiar effect on future benefits. This is because increases in the Consumer Price Index increase the percentages in the formula for determining initial benefits in the future. Future benefits, however, are based on earnings which rise, in part, as the result of increases in prices. Thus, wages which were increased to take account of rising prices are multiplied by a benefit formula which was also increased to take account of the same increase in prices.

For an example of how benefits are increased under present procedures, assume a program with a benefit equal to 50 percent of wages. In such a program, wages of $100 would produce a benefit of $50. If wages and prices both rise by 10 percent, the individual who is on the benefit rolls will have his benefit increased to $55 and the person who is still working will have his $100 wage increased to $110. If the benefit formula is left unchanged, both individuals would qualify for a $55 benefit. But under present procedures the benefit formula is also increased to 55 percent and the person who will retire in the future with wages increased from $100 to $110 will get a benefit of $60.50 (55 percent of $110).

Under most reasonable projections of future economic conditions, benefit levels determined by the present-law mechanissm will be much higher than what is necessary to simply adjust for inflation and will represent an ever-increasing percentage of the new retiree's wages in the year before he retires. For significant numbers of people, the benefits payable just after retirement would approach—and in many cases exceed—their wage levels immediately before retirement. It is this part of the current cost-of-living provisions that the bill reported by the conference committee would change.

The starting point for most proposals for dealing with the current long-term deficit of the social security system is a concept called decoupling. Decoupling means that the automatic benefit increase mechanism in present law would continue to apply to keep benefits inflation-proof after a person retires and begins to draw his benefits, but the formula for initially determining benefits at the time of retirement would no longer be automatically increased.

Decoupling by itself would make a substantial reduction in the long-term cost of the program but would also cause a significant reduction in the real value of future benefits. In order to forestall a reduction of this nature, the conference committee bill would provide that future benefits be based on "indexed" earnings, rather than the actual earnings that are used under present law. This procedure involves the adoption of a new automatic mechanism for adjusting the formula for computing initial benefits which is designed to keep replacement rates at about existing levels.

The other major adjustment in social security benefits approved by the conference committee concerns the social security earnings limitation test. Under present law, social security beneficiaries who are under age 72 have their benefits reduced if their earnings exceed a certain amount. This is referred to as the social security retirement cost. It is adjusted annually under present law to reflect changes in average wage levels.

In 1977, the amount which may be earned with no reduction in benefits is $3,000; it will increase to $3,240 in 1978 and is expected to increase to $3,480 in 1979.

Under provisions of the Senate bill, the retirement test levels would have been increased to $4,500 in 1978 and to $6,000 in 1979. After 1979, the $6,000 level would increase automatically as wage levels rise. The Senate bill also reduced the age at which a retired worker may have unlimited earnings to age 70.

The House bill, on the other hand, gradually phased out the retirement test for workers over 65. Under its provisions, the House legislation would have increased the earnings limitation between 1978 and 1981, and then totally eliminated the retirement test for beneficiaries aged 65 to 72. For beneficiaries under 65, the provisions of current law would be maintained.

In resolving the differences between the House and Senate bills, the conferees agreed to increase the earnings limitation for beneficiaries who are over 65 years old and reduce the age at which a beneficiary can have unlimited earnings. The earnings limitation would be increased to $4,000 in 1978, $4,500 in 1979, $5,000 in 1980, $5,500 in 1981, and $6,000 in 1982. Thereafter, the earnings limitation would be increased annually in proportion to increases in wages throughout the economy. Beginning in 1982, the age at which a beneficiary is no longer subject to the retirement test would be reduced from age 72 to 70. For social security beneficiaries who are under 65, the provisions of present law would continue to be applicable.

3. GENERAL REVENUES

When the social security legislation was pending before the Senate Finance Committee, I proposed that part of the payroll taxes apportioned to support the hospital insurance program be diverted to cash benefits program. This proposal would have prevented the total social security tax rate from going up to such a high level, but it also would have provided the hospital insurance fund with sufficient funding to carry it through the middle of the next decade. In this way, the issue of alternative funding sources for the hospital insurance program could be resolved in the next few years by transferring hospital insurance gradually to the general fund. The same should be done with disability insurance.

In my judgment, a distinction should be made between using general revenues for the hospital and disability insurance programs and using them for the cash benefits program. Cash benefits should and do reflect the earnings of the employee.

Right now, general revenues are used to support a portion of the medical insurance program (part B of medicare). In 1977, general revenues will be used to support 70 percent of the cost of the medical insurance program. And in 1978, general revenues will be used to support about 80 percent of the program.

For these reasons, I believe that Federal general revenues should be used in the future to support the financing of the hospital and disability insurance programs.

WELFARE PROVISIONS

Mr. President, the Senate-passed versions relating to the aid to families with dependent children (AFDC) program. At least one of these provisions—the earned income disregard—would have made a significant substantive change in current Federal AFDC law, specifically concerning the treatment of earned income for AFDC recipients. This change would have had a substantial negative impact on working AFDC recipients.

During the Finance Committee deliberations I opposed the inclusion of any welfare-related provisions with the social security bill. I did this for three reasons: First, because welfare is not in any way related to the financing questions the Congress was attempting to deal with in social security—welfare was not "germane"; second, because an appropriate vehicle for the welfare provisions existed—H.R. 7200, a bill dealing with SSI, AFDC, and child welfare services; and third, because I believe that the Senate should deal with welfare-related matters in and of themselves, not as minor parts of other major legislation which deals with a different subject matter.

The Finance Committee did hold a vote on the question of merging the various welfare provisions found in H.R. 7200 with the social security bill. The committee decided to report two separate bills—one, a social security financing bill; the other a welfare reform bill. The administration supported this approach.

Just before the Finance Committee completed action on social security financing legislation, however, Senator Long and Senator Moynihan together with HEW Secretary Califano developed a compromise package of AFDC provisions, including: Fiscal relief, access to earnings records, quality control incentive payments, and State demonstration projects. Recognizing the need for the States to have some fiscal relief to offset their AFDC costs, the members of the committee accepted this package as part of the social security amendments.

One other welfare provision, which was not part of the compromise, was also attached to the social security bill in committee—earned income disregard.

The House and Senate conferees spent a significant amount of time debating on the Senate's AFDC provisions. The House bill contained no such welfare items, and therefore, the House conferees felt strongly that any AFDC items should not be considered. The Members of the House, however, did show themselves to be eminently reasonable in terms of working out a compromise. I believe the agreements reached by the Senate and House conferees are the best possible, given the circumstances. The conferees took two very important actions. They retained fiscal relief in a modified form and dropped the earned income disregard.

FISCAL RELIEF

The conferees agreed to provide $187 million in fiscal relief to the States. This relief to the States will be based on a formula which takes into account each State's relative proportion of AFDC costs for December 1976 and each State's proportionate share of general revenue sharing. This formula is designed to recognize the tax and fiscal burdens imposed on the States by welfare costs. In Wisconsin, for example, the State will receive 2.3 percent of all funds appropriated under this fiscal relief provision. The 6-month total to be received by Wisconsin will be $4,301,000. This is $374,000 more than the State would have received if the formula had been based solely on population totals.

The Senate bill originally contained $374 million in fiscal relief. In accepting one-half of this fiscal relief, the conferees agreed that the remaining one-half—$187 million—should be considered with H.R. 7200, early next year.

EARNED INCOME DISREGARD

The conferees also agreed to eliminate the earned income disregard provision. I did not support this provision in committee, because the treatment of earned income under the AFDC program is a very important issue, an issue that deserves public hearings and thorough review by the Senate.

The rate at which AFDC benefits are reduced for each dollar earned has a very great bearing on the incentive to work. The Public Assistance Subcommittee in the House found this to be a very complicated and controversial issue. Consequently, the subcommittee has not yet been able to design a proposal that would not adversely affect the working poor, that would have a reasonable work incentive, and that would effectively remove any "high income" workers from the roles.

The administration's new welfare reform proposals place special emphasis on the effect that the treatment of earned income has on the work incentive. The Congress needs to focus on this issue in a responsible way in order to make sure that our welfare programs do provide an incentive to work, while not having unintended detrimental side effects.

The House also agreed to accept a noncontroversial component of the Senate bill, the provision enabling the States to have access to earnings records.

ADDITIONAL IMPROVEMENTS: QUALITY CONTROL INCENTIVE PAYMENTS AND STATE DEMONSTRATION PROJECTS

Quality control incentive payments. The conferees agreed to modifications to the Senate provisions concerning quality control incentive payments and State demonstration projects.

Both the House and Senate conferees decided that the Senate provision, which required the States to conduct quality control activities and which established incentive payments to States for reducing error rates on excess payments to 4 percent or less, had to be modified so as to insure a balanced approach to error rate reduction. The conferees felt that the States should encouraged to reduce their error rates on all errors—including overpayments, payments to ineligibles, underpayments, and erroneous denials and terminations of aid.

Under the provision agreed to by the conferees, the Federal Government will make incentive payments based only on all error rates. The States should take this as a clear signal that underpayment errors and incorrect denials or termination of assistance errors are equally as important and of concern as are overpayment errors.

State demonstration projects. The conferees made several improvements in this new authority for State demonstration projects. Under the conference agreement any State submitting an application to operate such a project would have to, at the time of application, first, make an effective public announcement of their application; second, make copies available to any person requesting a copy of the State's application; and third, accept public comment for at least 30 days.

The Department of Health, Education, and Welfare would be required to immediately, first, publish a notice in the Federal Register of receipt of an application with a summary of the application; second, make copies available to any person requesting a copy of a State's application; and third, receive public comments for at least 30 days. HEW would have a total of 60 days from the time of submission to approve or disapprove the application.

The conferees also specified that any work demonstration project conducted by a State must pay the prevailing wage rates where applicable.

I believe the Senate approach to funding social security was better than the House approach. I regret that we did not accept the House provision for a general fund guarantee of the reserve ratio. I also regret that neither the Senate or House measure began, as we must, to shift the cost of hospital insurance and disability insurance to the general fund.

The PRESIDING OFFICER. The Senator from Illinois.

Mr. PERCY. Mr. President, I would like to take a moment to commend the conferees on what I know has been a very difficult job. Having just returned from touring eight industrial cities, talking to labor leaders as well as business leaders all over the State of Illinois, I know that there is a tremendous concern about this bill. I have never seen so much interest in a social security bill in the 11 years I have been in the Senate. I am sure that this is also true for the distinguished chairman of the Finance Committee, Mr. Long.

I have strongly supported the 50–50 split between employer and employee contributions. It is fair and equitable, and is the best way to proceed. We all know this extra cost has to be borne someplace. To keep that parity between employer and employee is a wise thing.

It is a wise thing, also, that the increase in the wage base will not take effect until 1979. People are worried about economic recovery next year. Right now, our economy is in a perilous situation, and we want to give it every boost that we can. To take another bite out of paychecks and employer costs at this stage of economic recovery would not only be inflationary but also certainly hurt the economy.

For that reason, I was particularly glad to hear the President indicate to the business council last night that he intended to confer, I believe today, with the distinguished chairman of the Finance Committee, Senator Long, about a number of matters.

The President took a position last night at the business council which I was delighted to hear. He feels that we do need a permanent, across-the-board tax cut next year. I hope we can have that just as expeditiously as possible. I hope we do not clutter it up with a lot of debate about reform, which would be highly controversial, and which would delay it's passage. We need the stimulant and we need it soon.

I was opposed to the $50 rebate proposed earlier this year, because it would be temporary. A permanent, across-the-board tax cut will get spending immediately onstream, and I believe people will spend with the confidence that they can count on this income in the future. A $50 bill to every taxpayer did not really make much sense. I had to oppose that. I will, however, work closely with the committee in supporting an across-the-board cut.

I feel that the earnings limitation has been worked out again in a fair and equitable manner. To lower the no limit age to 70 in 1982 and increase the earnings limitations for retirees 65 to 71 to $4,000 in 1978, $4,500 in 1979, $5,000 in 1980, $5,500 in 1981, and $6,000 in 1982 offers considerable hope that many of those persons who must work after they retire will not be penalized for so doing.

I am also pleased that the bill takes an action which I have long advocated, which is decoupling. Decoupling corrects a flaw in the present law which entitled some individuals to two cost-of-living increases—one as a contributor to the social security system and one later as a beneficiary. Decoupling cuts in half the projected deficits of the system and makes benefits more equitable.

I commend Senator Roth for offering the amendment to provide for a $250 college tuition tax credit. I introduced similar legislation during the 94th Congress and wholeheartedly support this idea. I am satisfied with the conference agreement on this issue, because of my firm belief that Congress will pass a college tuition tax credit bill next year.

I will vote for this conference report. We know this is not going to be a very popular tax increase, but I believe the committee has bitten the bullet. There is no free lunch. There is no easy road. We are going to have to pay for the benefits we receive. I hope every single time we vote another benefit increase we now recognize that there will be a better educated American public as to the fact that someone will have to pay for it. That is why I think the equity, the 50–50 split, is a good thing. The taxpayers in the end have to pay for it either in inflation or in increased deductions. I believe, therefore, that we have to be extraordinarily careful that this burden be borne equitably.

I again commend the tireless work that the committee and the conferees put forth under the leadership of Chairman Long, who has had an undue burden and deserves a great holiday this year.

The PRESIDING OFFICER. The Senator from California.

Mr. HAYAKAWA. Mr. President, I ask unanimous consent for my staff member, Jeff Marston, to be granted the privileges of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, I support the conference report on H.R. 9346, the social security bill.

When this bill was enacted by the Senate, I opposed it due to the costly and unsound amendments that had been added on the floor. These amendments would have deepened the deficit by more than a half billion dollars and would almost certainly have caused the budget ceiling to be reached. I am happy to see, Mr. President, that the conferees have modified or eliminated many of the costly provisions in the Senate bill, so that it now conforms to the assumptions underlying the congressional budget.

I am also pleased to observe that the conference agreement does not provide for any 1978 tax increase above those scheduled to occur under present law. The congressional budget assumed that additional tax increases in 1978 would be avoided in order to prevent a further slowdown in the already sluggish economic recovery in that year.

Congress has to recognize that this bill imposes large tax increases beginning in 1979. These increases, which will total $78.6 billion through 1983, would, by themselves, undoubtedly have a negative effect on the economy as a whole, which may have to be dealt with by offsetting tax cuts in fiscal year 1979 or later years.

Mr. BELLMON. Mr. President, I have previously stated that special security financing legislation is necessary in order to assure the American people that the social security system is sound. The bill as reported by the conference does correct some serious problems in current law, and at least partially address some concerns which I have expressed concerning the Senate bill. I am especially pleased with the following features of the conference report:

It maintains the remedy for over-indexing of benefits.

It is consistent with the Budget Resolution in that revenue and outlay estimates are consistent with FY 1978 budget assumptions.

It maintains equity regarding the wage base for employers and employees.

It maintains an earnings limitation which is acceptable in terms of costs and which will not primarily benefit those over age 65 with high incomes.

Overall, considering what they had to work with, I feel that the conferees have done an excellent job and I express appreciation to the distinguished chairman of the Finance Committee for this effort. I would be remiss, however, Mr. President, if I did not reiterate some of my concerns that have not been adequately addressed by this legislation:

First. I fear that passage of this bill will take the pressure off Congress and the executive branch to review the benefit side of social security. There is a need for comprehensive review of spouse's benefits and the disability insurance program. The disability program is especially important as it is experiencing run away costs and is subject to widespread abuse. The interrelationships between social security and the supplemental security program also needs to be examined.

Second. I am concerned about the macroeconomic effects of a tax increase of the magnitude of this bill, particularly when coupled with other congressional action this year. Payroll taxes tend to be treated as a cost of production by business and places a strong upward (inflationary) pressures on prices. Thus, these increased taxes will result in reduced levels of GNP, increased unemployment and higher consumer prices. It will be imperative, therefore, Mr. President, that the Congress take appropriate steps to help offset the macroeconomic impact of this legislation.

Third. I am disappointed that greater consideration was not given to the possibility of using price indexing instead of wage indexing for correcting the overindexing problem. Data compiled by the Senate Finance Committee staff show that if a modified price indexing approach were used, we would need only a modest increase over present law in order to fully fund the social security system. Such an approach might have allowed for a more gradual increase in payroll taxes with more acceptable effects on the economy.

Fourth. I am still concerned that only minimal progress has been made in bringing together the numerous retirement systems financed by the Federal Government. It is essential that immediate steps be taken to correlate and integrate these programs.

Fifth. I do not believe, Mr. President, that the fiscal relief to States provisions in this bill reflect a high priority use of Federal funds. While the amount has been cut almost in half (from $324 to $187 million), we still have no assurance that these funds will be used to improve services to AFDC recipients or even used in State welfare programs at all.

Mr. President, as I have indicated, some of the objections which I previously raised concerning this bill have been addressed in conference. Unfortunately, the bill as reported still represents largely a "hasty" fix for social security financing problems. It does not adequately consider the economic and employment consequences of tax increases of this magnitude or possible benefit changes which could reduce future outlays. I intend to introduce legislation in the near future to resolve some of these benefit issues. In view of these facts, Mr. President, I must reluctantly vote against this bill. I realize that the bill will probably pass, and I urge the Finance Committee to give serious attention to the issues which I have raised.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the distinguished Senator from Missouri (Mr. EAGLETON), and the material attached thereto.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR EAGLETON

In 1971, I first became aware of what I considered to be an injustice in the Social Security law whereby a divorced woman must have been married for at least twenty years in order to receive a wife's or a widow's Social Security benefit. In my opinion, this is a serious injustice because a woman who is married less than twenty years may have spent most of her prime working years in the home taking care of the family, and as a result would be left with either no Social Security protection or a very meager benefit based on her own earnings. The law seems especially inequitable in view of the fact that a married woman may become entitled to a wife's benefit only after one year of marriage or to a widow's benefit after having been married for a minimum of nine months.

Therefore, in the 92nd, 93rd, 94th, and 95th Congresses, I introduced legislation that would reduce from twenty to ten years the period of time that a divorced woman's marriage to an individual must have lasted for her to qualify for wife's or widow's benefits. Unfortunately, none of my bills were enacted into law by Congress, but I'm happy to note that the aim or intent of my legislation is included in the Social Security Financing bill that we are presently considering. Therefore, I want to commend the House and Senate conferees on the inclusion of this important provision in the compromise agreement.

Having said that, I want to publicly state my overall displeasure with the high tax increases contained in this compromise bill. I am afraid that this bill raises Social Security taxes beyond the breaking point for the average American worker and employer. In addition, I am also very concerned as to what effect this legislation will have on our nation's unemployment and inflation rates. As my colleagues know, I strongly agree with President Carter who suggested pumping general revenues into the Social Security trust fund in times of high unemployment. However, since Congress did not go along with this proposal, it will now apparently be necessary for President Carter to propose to cut income taxes next year to compensate for this increase in Social Security taxes.

The net effect of this action is that general revenues will be diminished by the amount given back to the taxpayer in the form of a rebate or credit on income taxes, and the money collected from the wage earner in payroll taxes will be deposited into the Social Security trust fund—I submit that this is general revenue funding of the system in a very round about way. The effect of this action on our nation's economy is very uncertain, needless to say. I would like to draw my colleagues attention to an article which appeared in the New York Times of December 13th written by Tom Wicker, entitled "Payroll Tax—Up, Up, Up". The article by Mr. Wicker clearly articulates some of my deepest concerns with this legislation. Because Mr. Wicker's article is so relevant I would like to share his wisdom with my colleagues.

The article ordered to be printed in the RECORD is as follows:

PAYROLL TAX—UP, UP, UP

(By Tom Wicker)

President Carter seems eager for House-Senate conferees to break their deadlock on the minor issue of a college-tuition tax credit so they can send him a finished Social Security bill in this calendar year. But the American people would be better off if the deadlock lasted long enough for this massive tax bill to be recognized for the economic disaster it is. For example:

Long-term tax increases totaling $227 billion dollars would be imposed in regular steps between 1979 and 1987. Note that the Congress that voted this body-blow to the American wallet prudently put off the first of the increases until after its members try to get themselves re-elected next year.

These payroll tax increases are regressive and severe. Under current law, a worker paying the maximum tax in 1979 would have been hit for 6.0 percent of the first $18,900 of his earnings, or $1,143.45, which is bad enough; under the new bill, a worker at the maximum would pay 6.13 percent on $22,900, or $1,403.77, in 1979. How does a new one-year tax bite of $260.32 grab you?

By 1987, workers and employers will be taxed at 7.15 percent on the first $42,600 of income—$3,045.90 at the maximum. Thus, over the life of the bill, the payroll taxes of persons paying the maximum will be nearly tripled, as will the matching taxes of their employers.

The increases are inflationary, since it is an established economic fact that most employers pass on payroll tax increases to the consumer via higher prices. Thus, Congress has voted strong upward pressure on the price level in each of the years from 1979 through 1987.

Despite the general inflationary effect, in some cases the bill might also work against employment. Some employers might either not hire new hands or reduce their work forces as a hedge against increasing employment costs.

In addition to these effects on inflation and employment, the payroll tax increases will cut heavily into workers' buying power. At one and the same time, Congress has managed a bill that will depress the economy and fuel inflation.

President Carter's plan to cut income taxes to compensate for these effects, even if passed, won't necessarily help that much. Annual income tax reduction will certainly not stop employers from passing weekly and monthly payroll tax increases to consumers; and whether payroll deductions for income taxes can be reduced sufficiently to maintain buying power remains to be seen. Remember that Social Security comes "off the top" of the worker's weekly check, an income tax refund at the end of the year won't put food on the table day by day.

Some may ask, "But what could Congress do? How else could it save Social Security?" Well, it could have "saved" Social Security by doing what other industrialized countries do—feeding general fund revenues into tripartite system supported by employers, employees and the general revenues for 25 to 45 percent of their social insurance funding; West Germany has been using 15 to 33 percent general funding since 1891 (I am informed by Alfred Kutzik of the University of Maryland at Baltimore).

Most of the planners of the American Social Security originally envisioned, when doing their work in the 1930's, that sometime in the 1960's it would become necessary to put general fund revenues into the system. What's more, the Federal Government has been matching all medical insurance contributions, to the Medicare system since 1965. Where's the difference in principle? Yet, Congress remains wedded to the myth that to support Social Security with general revenues would convert it to "welfare."

Mr. Carter must know that's poppycock. He proposed unsuccessfully that in years when unemployment exceeds 6 percent, the Treasury should contribute the difference between Social Security taxes actually collected and what they would have totaled at 6 percent unemployment. His later proposal to lower income taxes in compensation for higher payroll taxes would indirectly divert general funds to Social Security financing. Even the original House bill provided for automatic Treasury loans to the Social Security trust funds if they fell below 25 percent of annual outlays; but this sensible beginning step toward general funding did not survive.

Mr. Carter nevertheless is eager to claim the "rescue" of Social Security as a legislative achievement. Since the system is in no immediate danger (whatever alarmists say), payroll taxpayers might welcome instead a veto of this huge, inflationary tax increase and a new start next year.

THE SOCIAL SECURITY FINANCING LEGISLATION, H.R. 9346

Mr. THURMOND. Mr. President, I rise today as a strong supporter of the social security system. In these past months we have been faced with the difficult task of determining the best and most lasting way to sustain the retirement program on which millions of Americans depend.

After numerous hearings and extensive debate we have all come to realize that we have only two choices: We can retain the current financing mechanism, which has proved inadequate in the face of inflation, unemployment, and growing retirement rolls; or we can vote to maintain a financially stable retirement fund through substantial tax increases on many hard-working, over-taxed Americans. After considerable thought, I have decided to vote for the social security financing bill, as a lesser of evils.

In the past a vote for social security legislation has come much easier for many Members of this body. This is the first social security bill which has not been centered on increasing benefits for retirees. However, I consider my vote on this social security bill to be one of the most important I have cast on this subject.

The financial condition of the social security system demands immediate and substantive action. If the Senate rejects this reform proposal in order to retain the status quo, it will indicate to all Americans that, while we recognize the urgency of the social security problem, we are not willing to take the necessary steps and make the hard decisions involved in providing an adequate remedy. Both the social security system and the economy in general would feel the damaging effects.

Mr. ROTH. Mr. President, there is no question that action must be taken to restore financial stability to the social security system. Social security is the first and major ingredient for financial security for most of our senior citizens, and it is absolutely necessary for steps to be taken to restore solvency to the system.

However, I am seriously concerned that this legislation is not the right answer to our social security problems.

It is important to recognize that the solvency of the social security system will not be threatened until at least 1982—5 years from now. A more orderly consideration of this legislation will have no impact on the stability of the social security system and will not affect the benefits of any social security recipients.

I do not believe the Congress spent enough time on this legislation to adequately consider this bill or to explore the whole range of alternatives.

For example, I proposed an amendment to use a portion of any new tax revenues to help the social security system. This amendment could have allocated billions of dollars to the social security trust fund, and reduced the need for social security taxes proportionately.

There are more than 100 million people paying taxes to support the social security system, and my amendment would have provided some tax relief to all of them while still restoring financial stability to the trust fund.

Instead, Congress is settling for a quick-fix of social security by imposing billions of dollars of tax increases on the working men and women of this country.

This bill imposes an additional $227 billion in taxes over the next 10 years, tripling the taxes imposed on the average middle-income worker.

These increased taxes on workers will reduce consumer purchasing power and put a tremendous additional burden on the economy.

In addition, the increased taxes on employers will be passed along to consumers in the form of higher prices.

The net result will be that consumers will have less money to pay for higher-priced consumer goods.

I am seriously concerned that the increased social security taxes, combined with the increased energy taxes, will have a devastating impact on the economy.

This increased tax burden will slow the economy down, resulting in increased inflation and higher levels of unemployment.

I believe Congress must live up to its commitment to our senior citizens. But I fear the higher tax burden will erode the public's support for the social security system.

Mr. WALLOP. Mr. President, the Senate and House conferees of the social security financing bill have worked diligently to reach a compromise. Although their hard work is to be commended, I must voice my disagreement with their decision to delete amendment 1058 from the bill. This amendment would repeal section 224, the workmen's compensation offset provision of the Social Security Act (42 U.S.C. 42a).

In their effort to cut the cost of the social security bill, the conferees deleted an amendment which would correct a gross inequity in the treatment of a minority of disabled workers. Under present law, a worker's monthly social security benefit must be reduced if he is also receiving workmen's compensation. Disabled workers and their families under workmen's compensation are the only category of social security beneficiaries whose benefits are reduced, because of the receipt of nonwork income.

The Finance Committee agreed to accept this amendment, indicating that the committee recognizes the injustice of section 224 and the need to change this law. In the coming year, the Finance Committee intends to examine various aspects of the social security disability programs. I request that the Finance Committee hold special hearings on section 224 and the unintended inequities of this provision. Their efforts to investigate this problem and draft corrective legislation will benefit thousands of disabled workers and end the discriminatory treatment of the workmen's compensation offset provision.

Mr. HATHAWAY. Mr. President, I urge my colleagues to support the social security conference report. No one likes to vote for higher taxes, particularly this bill which has been labeled "the largest peacetime tax increase." I know that it is not popular. However, those entrusted with national office must make the difficult decisions. We must look beyond the next election to the next generation.

The social security trust funds are seriously depleted. If this Congress takes no action, the Old Age and Survivor's Fund will be bankrupt by 1983. The Disability Fund will be bankrupt by 1979.

There is no question that there are huge additional taxes imposed by this bill. However, the trust funds are now in surplus until at least 2030.

We cannot renege on the promises and commitments which have been made to those who are retired and those who will retire.

Acceptance of the conference report will keep faith with the American people.

In a Louis Harris poll which was recently released, 55 percent of the American people felt that "Congress is showing real courage in asking that taxes for social security be raised sharply to save the system." Thirty-one percent opposed the tax increases and 14 percent were undecided. I believe the American people are committed to a social security that provides basic financial protection for the elderly and disabled.

If this is classic liberalism, then I am proud to wear the label liberal.

The system must be protected. As one example, in the State of Maine, 1976 outlays to the State totaled $1.738 billion. Total General Retirement and Disability Insurance, in other words social security, totaled $413 million. That is almost 25 percent of the Federal payments to the State and its residents.

I do not believe that we can allow the people of Maine to lose these essential benefits. Consider these facts:

> Close to 20 percent of the population in Maine are living in poverty or near poverty conditions.
>
> Maine has consistently ranked as one of the lowest average states in per capita income. Most recently, for the period 1973 through 1976, Maine has ranked 43rd, 45th, 42nd, and 44th in per capita income. That is to say, only six other states had lower per capita incomes and these were predominantly Southern states.
>
> Unemployment rates in Maine, historically and consistently, have been greater than the national average. Recent data, for June of 1977, indicated a national unemployment rate of 7 percent; the rate was 9.7 percent for Maine and five of the sixteen counties had unemployment rates in excess of 13 percent.

I cannot watch time and money run out on these people. Social security is essential and I will vote for the taxes to cover the programs which we enact.

I will say in all candor that this bill is not my first choice. I favored general revenue financing initially since I believe it is more progressive. Payroll taxes bear most heavily on those least able to afford them. However, the Senate Finance Committee members did not agree with me.

I then pursued the approach developed by my good friend and colleague Senator NELSON to move toward wage-base disparity. I believe that this cushions the shock on employees, particularly the lower and middle income worker and insulates the small businessman from the steep wage and rate increases which are necessary as we retain parity. The Senate supported this improvement in the social security financing system. But the armies of big business and the legions of the high income employees convinced the House and disparity was rejected.

Either general revenue financing or disparity in wage base would have been preferable to the bill before us.

Another point needs to be made. There are some who will vote for the benefits; for example, repealing the retirement earnings test; yet refuse to vote the taxes to cover that benefit. These are the politicians with an eye on the reelection. I believe the Members of the Senate have greater vision.

I believe the American people support the social security system. I believe that they will accept the taxes necessary to pay for that system. I believe that my colleagues will vote to support that system through the conference report now before us.

Mr. MORGAN. Mr. President, I do not rise in opposition to the conference report on the social security bill, because I do not feel that such an approach would be constructive at this time. The provisions of the bill itself have been fully debated in both Houses of Congress and elsewhere, and it would serve little purpose to go over them again. But I do want to reiterate my objection to our entire approach to social security financing, because I believe it has led to a stopgap bill, which will not do the job. I believe we will be back in 5 years or so to consider more social security financing amendments, despite the fact that the bill we have passed is being sold, nationwide, as a long-term solution to the system's problems.

The biggest step forward that we can take is to stop treating social security as a political football, and to stop engaging in misleading rhetoric as to the purposes and problems of social security. Many people believe social security to be a supplementary pension, while in reality it is more of an insurance plan, the purpose of which is to provide some basic security for the elderly and disabled. This is a significant difference, leading to different policy decisions regarding benefit levels and eligibility, mandatory coverage and financing.

Two aspects of our approach to the social security problem especially trouble me. One concerns the costs of the system, which are rising at almost double the rate of inflation even after the enactment of this bill. This I will return to later.

Another serious problem is the economic and demographic assumptions used for the bill. The following assumptions were used by the Senate: A birthrate of 2.1 children per woman, and a rapidly improving economy reaching 5 percent unemployment, 4 percent annual inflation, and a 1.75-percent increase in real wages by 1983. I ask unanimous consent that the following chart, drawn from the Finance Committee's background material relating to social security, which sets forth these assumptions in detail be entered in the RECORD at this point.

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

Calendar year	Percentage increase in average annual— Wages in covered employment	CPI	Real wages [1]	Average annual unemployment rate	Total fertility rate [2]
1977	8.4	6.0	2.4	7.1	1,709.9
1978	8.1	5.4	2.7	6.3	1,685.9
1979	7.8	5.3	2.5	5.7	1,662.0
1980	7.1	4.7	2.4	5.2	1,662.9
1981	6.4	4.1	2.3	5.0	1,688.8
1982	6.0	4.0	2.0	5.0	1,714.7
1983	5.75	4.0	1.75	5.0	1,740.5
1984 and later	5.75	4.0	1.75	5.0	[3] 2,100.0

[1] Expressed as the difference between percentage increases in average annual wages and average annual CPI.

[2] Averge number of children born per 1,000 women in their lifetime.

[3] This ultimate total fertility rate is not reached until after 1984.

SOURCE.—Senate Finance Committee, Background Material for Social Security, June 1977, page 95.

Mr. MORGAN. If the Nation holds to these goals, I will be pleased. It certainly would be a big improvement over what we have now. But I am not at all sure we will. We are betting on the success of the economic policies we certainly cannot count on as being effective, and we ignore factors beyond our control, such as the increase in the price of oil we have experienced. At stake is the solvency of the social security system.

If any of our economic assumptions are just a little too optimistic, the result, will be both increased costs and lower revenues for social security.

If we take a slightly less optimistic estimate of 5.5 percent unemployment and 5 percent annual inflation in 5 years, an estimate that is well within the range of possibility, the social security system will be about $50 billion poorer than what we now project in 10 years. So much for our long-term solution.

The past history of such economic projections as those we have used show a discouraging record. Beginning in 1973, the projections have been revised downward, that is, made more pessimistic, until this year. But this year, when Congress was finally deciding it had to take some action, all of a sudden the projections became more optimistic. By using more optimistic projections we understate the problem we are dealing with, thus making it easier to find solutions.

I might have been able to accept these optimistic estimates, if we had a safety factor incorporated. Such a safety factor used to exist; it was about equal to 0.375 percent of taxable payroll. But in 1974 it was dropped. Why? The absence of such a basic precautionary step disturbs me. When coupled with clearly optimistic projections, it is very, very worrying.

Unjustified optimism stands out clearly when one examines the birth rate figures. Last year, an estimate of 1.9 children per woman was used. This year the figure was revised to 2.1. Why? The birth rate in this country has been declining for more than 100 years, and now stands at 1.7. I understand that many experts consider the current level an aberration, and believe it will begin to rise in the near future. But will it rise by 25 percent?

If the assumption that our birth rate will suddenly soar proves false, there simply will not be the work force we are counting on to support the social security system.

We also have to begin to worry about controlling costs. We not only have to worry about current cost projections, but we must stop piling burden upon burden on the system.

Congress has 10 times expanded the eligibility for social security and increased benefits. Seven of these ten times have occurred in election years. We had better realize, with an election year coming up, that every benefit increase requires a corresponding tax increase. We should declare, as the policy of the Senate, that no future benefit increase will be approved unless there is a corresponding tax increase.

We must also be concerned about the costs under existing law. Social security costs are, according to the Finance Committee, going to rise by at least 10 percent annually over the next several years, almost double the inflation rate. There are ways to reduce these costs that are worth considering.

Social security pensions are now, when compared to wages, 35 percent higher than they were in 1972. We might consider using a price-indexed formula instead of a wage-indexed one. A formula of this type would protect the benefits against inflation, but would slowly reduce the replacement rate, that is, the percentage of benefits as compared to preretirement wages. A price-indexed formula of this type need not be permanent. It need only be maintained as long as necessary to make benefits reasonable.

Another possibility is to transfer some of those benefits that bear little relation to contributions out of the social security program. Benefits that do not really relate to contributions include medicare, spouse and dependent benefits, disability insurance, and portions of the formula concerning pensions. These programs are valuable, they serve a good purpose, but they do not belong in the social security system.

Social security was developed to be and was sold to the Nation as a supplementary retirement program. But with the many additions that have been made to social security, the retirement emphasis has suffered. What I am proposing is that we once again emphasize the retirement aspects. The only way this can be done is by reducing the number of functions the social security system itself is supposed to fulfill.

Another approach the Senate should examine is to expand coverage under the system. Social security is a program that serves the general welfare; can we justify excluding large groups of people? Can the system survive if everyone is not included?

But of all the exemptions from social security, the one that stands out is our own. This must be immediately rectified, and I have introduced a bill that would bring the legislative branch into the system. It is not right that those who set the policies of the program, that those who have created it, do not take part. If we are not prepared to join social security, how can we force our constituents to?

In conclusion, I would like to stress how important it is that the Senate take a good, hard, look at the social security system. We need to examine it in every aspect. Social security may be the most important program the government has. Thirty-three million people receive the benefits, and three times that number are currently paying into it, in the expectation of receiving the benefits in the future. We have an obligation to all these people to do a good job at running social security.

We have to come to explicit conclusions concerning the purpose of social security and how we expect it to develop. We have to face and deal with the problems of the system. If we do not do this on our own initiative, the problems of social security will be back with vengeance.

Mr. STENNIS. Mr. President, while I had grave reservations, I voted for the social security financing bill when it passed the Senate. I still have serious questions about this matter but I will vote to adopt the conference report which is now before the Senate.

My vote in favor of this legislation was and is dictated by my concern for the immediate solvency and financial integrity of the system. While the long term prospects of the system under existing law are very pessimistic, we are now confronted by the immediate problem that under current financing provisions and circumstances the social security trust funds almost certainly will be exhausted in the early 1980's. The pending legislation is primarily directed to this immediate problem.

The bleak financing difficulty which social security faces primarily arises from two important factors. In the first place, the number of active workers who are paying taxes to support the system is steadily declining in proportion to the number of beneficiaries. There are now 31 retirees per one hundred taxpaying workers and, shortly after the turn of the century, this will rise to more than 50. Since social security benefits are now being paid from current contributions, it is apparent that the increase in the ratio of beneficiaries to contributing workers necessarily calls for a prompt increase in employer and employee contributions if we are to prevent the system from collapsing of its own financial weight.

The second factor which contributes to the financial problem is the feature of the 1972 law which results in a double adjustment to or double indexing of inflation in determining the amount of benefits to be paid. This indexing problem is being eliminated as far as future retirees are concerned by the pending legislation. I am glad that this necessary corrective action is being taken.

Nevertheless the problems which have accumulated in the past have brought us to the point that we must vote heavy new taxes on both employers and employees to prevent the collapse of the system in the near future. It is on this basis alone that I will vote for the conference report. My support rests solely on the clear and essential need to take immediate action to shore up the system financially.

When the social security bill was before the Senate, I voted against all proposals to add new benefits or to increase existing benefits. I continue to oppose this. Therefore, I am pleased that the bill we are now considering provides no new benefits or general increase in benefits although it does increase the amount which retirees may earn without suffering a loss in payments.

I am also gratified that the conferees agreed to stick with the traditional parity between employer and employee contributions. I believe it would be a serious mistake to depart from the traditional concept that the burden of financing social security benefits should fall equally on employer and employee. While the prospect of requiring the employer to contribute more than the employee might seem attractive on the surface, I believe that it would have negative, unpleasant, and undesirable results in the long run.

The conferees also acted very wisely in ruling out any resort to the general fund of the Treasury to bolster or bail out the system. If we should ever authorize such resort to the general fund this action would assuredly come back to haunt us. We can be certain that once the precedent of raiding the Treasury to finance social security benefits was established the practice would snowball with the result that it would not be too long before we have a welfare rather than a retirement system.

I sincerely regret the necessity of imposing this new and heavy burden on the working people of this country. I voted for the bill only because of the imperative necessity to infuse the system with new financing or see it collapse. The alternative of raising contributions is unpleasant but it is the one course which will keep the system afloat.

There is one matter that I would emphasize very strongly as we consider this conference report. In effect the social security program is now on a pay-as-you-go basis. From this should arise the recognition that the added taxes which we are in the process of imposing are in the nature of a quick fix; all they will do is to pay for benefits provided by existing law. They are not adequate to pay for new or expanded benefits that may be voted in the future. It is imperative that this be fully understood.

When we recognize this, Mr. President, I believe that we will also recognize the great need for present and future restraint in this area. If this is not done then the solvency of the system will almost certainly be again placed in jeopardy in the future. This must not happen.

I say with great emphasis that it is my profound hope that it will be clearly understood that the increase in funding we are now considering will finance only the benefits the law now provides. There is absolutely no room to add or increase benefits without additional funding. It inevitably follows from this that any increase in benefits, expansion of coverage, or new benefits that the Congress may vote in the future must be funded by increases in contributions adopted at the time the new or additional benefits or coverage is provided. In short, Mr. President, all future legislation providing new or added benefits should contain the revenue increases which are necessary to insure that it will pay its own way.

Voting future increased or added benefits without at the same time financing them adequately would be counterproductive at best. At worst, it would sow the seed for the system's self-destruction. I hope that this will be clearly understood by this and future Congresses.

Mr. RIEGLE. Mr. President, it is with the greatest reluctance that I feel I must vote today against the conference report on the Social Security Amendments of 1977.

This bill amounts to the largest peacetime tax increase in U.S. history in the the most unfair tax we have. Under the conference bill, social security payroll taxes will increase by $227 billion over the next decade. This tax increase will retard our country's economic recovery, increase both unemployment and inflation, reduce the income of wage earners, and hurt many small businesses. Contrary to some people's belief, the conference bill will not restore the long run financial soundness of our social security system. Finally, there are other alternatives that can solve the long-term and short-term financing problems of our social security system without unfairly hurting lower and middle income persons and our Nation's economy.

I am first concerned about the unfairness of vast increases in a payroll tax that violates the basic principles of tax equity. Taxation should vary according to ability to pay, yet the social security tax is set at a flat percentage rate, up to a maximum wage base. Individuals making more than the wage base are still taxed on the wage base, and so end up actually paying less as a percentage in social security taxes than lower income persons. Under the conference bill, for example an individual making $100,000 in 1987 will pay only 3 percent in social security taxes, while someone earning $10,000 would pay over 7 percent. Furthermore, the payroll tax does not consider how many dependents a wage earner has, or any special medical or economic problems—the tax is set at the same percentage rate regardless.

Because it uses an unfair tax, this conference bill lays a greater than needed added tax burden on low and middle income persons. A wage earner making $10,000 now, for example—and who, with inflation, would be making about $18,000 in 1987—will see their social security taxes go from $585 this year to $1,331 in 1987—almost a 150-percent tax increase. If the Government is asking for tax sacrifices from middle-income Americans to keep the social security system solvent, the Government must at least ease the tax burden for lower and middle income persons by using a fair, progressive tax, and not the payroll tax.

I am also deeply concerned about the impact of this $227 billion tax hike on our sluggish economic recovery. Unemployment has not dropped over the past 8 months, remaining at the high rate of 7 percent. The rate of growth of our Nation's economy declined from 6.2 percent in the second quarter of this year to 4.7 percent in the third quarter. And yet at this time, with energy taxes and prices sure to increase soon with the President's energy bill, we are proposing to increase payroll taxes in 1979 and beyond by over $200 billion. This is hardly likely to stimulate the confidence—and spending—by consumers and businesses that we need to get our economic recovery moving, and get more people back to work.

By increasing payroll taxes for both employers and employees, the conference bill directly increases employers' labor costs by a vast degree. This amounts to an "Anti-Employment Tax," encouraging businesses to substitute machines for people whenever feasible, and discouraging businesses from hiring additional employees. Large corporations with enough demand for their products will try to increase their prices to cover their higher labor costs, leading to a higher rate of inflation. On the other hand, many labor-intensive businesses—often small, marginal businesses operating in economically depressed communities—will be unable to pass on these additional labor costs. Some will go out of business, increasing unemployment in many economically depressed larger cities and smaller communities.

Mr. President, maintaining a financially sound social security system paying adequate benefits is of the highest priority for me. The current bill, however, is simply a stop-gap measure for the next few years, and does not deal with the long-range financial problem. Under the conference bill, our social security system will still be short over the next 75 years by about 1.5 percent of taxable payroll of what is needed to pay future social security benefits. Furthermore, the bill achieves this much only by cutting back on future benefit increases. Under this bill, senior citizens will receive about $400 million less in benefits in 1978 than they otherwise would have, and about $3 billion less in 1982 than they would under current law.

If we want only a short-range solution for the social security financing problem, there are many better alternatives. Funds could be transferred from the old age and survivors' fund to the disability fund, which faces the most severe short-term financial problem. Or money could be transferred from the currently ample hospital insurance fund to both the old age and disability funds. Another possible alternative is President Carter's proposal to put enough general revenues in the social security funds to make up for the revenue short-fall when unemployment is high and payrolls are low, as they are now. I strongly support this move to begin to use some portion of general funds to finance shortfalls in social security revenues. All of these alternatives would help keep the funds solvent for several years into the future, giving us ample time to develop a sounder and fairer long-term financing solutions.

Over the long run, we should be moving to finance a portion of social security out of general tax revenues. Although our general tax system has many shortcomings and loopholes, and desperately needs reform, it is still much more progressive and fair than the social security tax. Furthermore, with the general tax system we have the advantage of not being forced to artificially encourage, regardless of economic efficiency, the use of machines by business over the use of labor, as we are with social security taxes.

Finally, by funding a portion of social security out of general revenues we can alleviate an unnecessary conflict between needy senior citizens and hard-pressed middle and lower income wage earners—both of whom have pressing needs that we should recognize. There will always be conflicts between different national goals, and we will always face the constraints of limited resources. But the present system artificially forces us to choose between increasing our present inadequate social security benefits, and preventing further increases in an unfair tax on lower and middle income wage earners. Both senior citizens and middle-income persons would be better served if a portion of social security was funded out of general revenues.

Mr. President, I fully realize that in all likelihood the conference report will pass Congress and be approved by the President. But in all good conscience, I could not vote for an unfair tax increase that hurts our economy without resolving the basic problems of financing our social security system. The present bill serves neither the interests of senior citizens nor the public as a whole. We need to make many reforms in our present system of financing social security, and I hope the Congress will look more favorably in the future on the changes I have suggested here today.

Mr. BARTLETT. Today we have passed a revision to the social security financing provisions which will have a heavy impact on both employers and employees into the next century. Although the bill addresses many other matters, its main impact will be as a tax increase proposal. This, when coupled with the already pending energy tax proposals, will amount to the largest tax increase the American taxpayer has been subjected to in 1 year.

There are obviously a number of beneficial provisions in this bill, however, they do not overshadow the impact of the legislation, and are not of a significant enough nature to allow me to support the legislation.

I would like to congratulate the conference committee for its efforts, and point out some of the essential measures that are beneficial:

First. The decoupling provision which was necessitated by previous error on the part of Congress.

Second. The provisions to analyze the discriminatory measures that are presently contained in the system in order to treat men and women equally under the Social Security Act.

Third. The expansion of the earnings limitation provision. Although I have earlier sponsored legislation to completely remove this provision, and I still feel that there is absolutely no necessity to penalize the senior citizen for attempting to earn additional money, the provision to ultimately increase the earnings limitation to $6,000 is a step in the right direction.

The social security system has become the resting place of many programs which are not related to the original intention of assisting senior citizens after retirement. There are many programs which are more related to our social welfare system which have been included under the social security program. It is my belief that to adopt the significant tax increases contained in this legislation without addressing the whole array of benefit programs under social security is sheer folly.

Before we raised the taxes on employers and employees, we should have considered separating out these programs, and making the citizens of this country aware of what they are actually paying for, and who is receiving the benefits.

With this full and complete identification, a substantive debate could have gone on, both in the appropriate committees as well as on the floor of the Senate, and determinations could have been made as to whether certain benefits should have been removed from the social security program, or whether in fact some benefits should be available at all.

There is one interesting example within this legislation of a program which might be far more detrimental to the system, if adopted, than anything we have done so far. This is the study to determine the effect of universal coverage. I do not single this out as the only problem with the legislation, but it is an example of an assumption that has continually been made as to the application of the social security system.

Congress has continually felt that the best direction of the system was to include ever-increasing numbers of previously uncovered employees.

Perhaps the reverse would be more effective. For example, should a Federal retiree, who enters the private sector, thereby becoming eligible for social security benefits, be allowed to draw social security, or even be required to contribute to social security while employed in the private sector.

Certainly the inclusion of Federal, State, and local employees under the Social Security Act would cause an immediate influx of cash to support the system, but it would also drastically increase the number of eventual eligible recipients. This continually expanding universe of recipients has been one of the contributing factors to the fiscal instability of the existing program.

As I stated at the time of the original consideration of this bill by the Senate on November 4, and as I have already pointed out in this statement, the benefits of this legislation do not overshadow the major problem. The tax increase flies in the face of general public attitudes about the system. It in no way resolves the basic problem of ever-increasing demands.

Mr. STEVENSON. Mr. President, unfortunately, the conference committee report perpetuates the popular misconception that social security is a funded pension or insurance annuity system. It is not. It is a system whereby the working population is taxed to pay for the benefits received by retired persons who previously paid social security taxes. Each working generation thus technically "earns" the right to future benefits; however, those future benefits can only be funded from taxes levied on succeeding generations of employees and employers. The taxes called for by this report are so onerous that we could see a day when future generations are unwilling to bear this burden or when the dollars required to support it are so inflated as to be meaningless.

The social security system must be funded adequately. That system is now an income transfer system, and, as such, it should be funded in part from general revenues. The reasons for doing so are compelling.

From an economic standpoint, increasing payroll taxes is the worst way to fight inflation and unemployment which continue to plague our economy. Employers will pass forward increased payroll taxes to the consuming public and will have even less incentive to hire workers, especially at lower economic levels where the unemployment problem is most tragic. Unemployment is now at a level of 40 percent for black youth. First the Congress failed to pass a youth differential minimum wage, which I and other of my colleagues sponsored, and now we raise payroll taxes making it even more expensive to hire marginal workers. I thus find it difficult to equate our rhetoric about reducing unemployment with the two most significant economic measures we have passed this year—the minimum wage and social security bills.

In the next few years the public will realize the crushing tax burden this bill imposes, and the subject will be back. It is a shortsighted Congress that acts irresponsibly this year in order to avoid irresponsible action next year, an election year. That is the only explanation for the haste with which this legislation has been approved, and it is not satisfactory. Next time, and it will not be far off, the Congress should act more deliberately and with foresight and fund social security in part from general revenues, or by other means that are not damaging to the economy and American workers.

TAXING SOCIAL SECURITY TO DEATH

Mr. HATCH. Mr. President, I realize that many of my colleagues today will vote for this massive increase in social security taxes thinking that they will be saving the system. We seldom make things worse purposefully. The harm we do follows from good intentions that are not thought out. We are simply sitting here thinking that the social security system needs more money, so if we raise the taxes there will be more money for social security. Unfortunately for the American people, this line of reasoning is wrong. The amount of money available for social security payments is not a function only of the tax rates, but also a function of the number of jobs in the private sector that are paying into the system. We cannot increase the social security tax on employment by $227 billion over the next decade, as we are about to do today, without substantially reducing the number of new jobs that will be created over the next decade. The result of this massive new tax on employment will be fewer people paying in. We are going to have a system of high rates paid by few people, instead of low rates paid by many people. Instead of breathing new life into social security, we are taxing it to death.

Joint Economic Committee staffers have computed that this $227 billion increase in taxes will mean that the economy will grow over the next decade by $345 billion less. What we are doing here today means a loss of $345 billion in GNP over the next decade. What does it mean in terms of jobs and wages to lose $345 billion in GNP? If all of the lost GNP comes out of jobs, it means that the next decade will see 19 million fewer new jobs. That means 19 million fewer people paying into social security. On the other hand, if all of the lost GNP comes out of wages, it means that the average job will pay $2,760 less than otherwise. Obviously, some of the lost GNP that this tax increase will cause will come out of new jobs and part out of higher wages. If the burden of this tax falls half on new jobs and half on pay raises, it means about 10 million lost jobs and $1,380 less pay raises per job.

Mr. President, you cannot increase taxes on employment and wages and expect to have the same amount of employment and wages. If factors of production responded to taxes in this way, the Government could raise an infinite amount of tax revenues without reducing the production of anything. It would be utopia.

Existing social security tax rate increases already scheduled will raise the taxes on employment by $2.5 billion a year starting in 1978. On top of this we are piling an average of $25 billion more a year for a decade. For many people, social security taxes will triple in the next 10 years. Even people who face more modest increases will be badly hurt, because, for many families, social security taxes are already higher than their income taxes, property taxes, or sales taxes.

These enormous tax rate increases will drive an even larger tax wedge between what a firm must pay to hire a worker, and what that worker gets to take home. This tax wedge increase will discourage both hiring and work effort. It will discourage hiring by raising labor costs. It will discourage work effort by reducing the amount of any overtime pay or wage increase that a worker will be allowed to keep.

The combined effect of these impacts will be to reduce jobs and GNP. Less output will in turn mean higher prices. And higher prices will mean higher taxes, less saving, less investment, less job formation, and so on. The whole process that we are setting off today will produce a higher rate of unemployment that will further undermine the social security system.

I am in favor of social security. But I am not in favor of unemployment. We cannot strengthen social security by increasing unemployment.

The Senate is going to make a bad mistake today, and there is no reason to make it. If instead of raising taxes on employment, we reduced taxes on employment, we would generate enough new growth in GNP that we would not need to raise the social security tax rates. We would not have to do anything but raise the ceilings on the income to which the tax is applied at the same rate that the economy grew. We would not, as we are doing today, have to increase social security taxes as a percent of wages.

The way to save the social security system is to make it more profitable to hire and to work, not less. This Congress has got to learn that when we raise taxes, we also generate disincentives throughout the system. These disincentives reduce the base on which the tax is levied, so we do not get the revenues we expect. On the other hand, when we reduce tax rates, we produce new incentives throughout the system. These incentives make the tax base grow, so we get more revenues than we expect.

Mr. President, I have to vote against this measure to raise the tax on employment by $227 billion, because I believe this measure will seriously damage employment, the economy, and the social security system.

Mr. President, no one who understands the disincentive effects of tax increases, and who also believes in the social security system, as I strongly do, can possibly vote in favor of this measure. It is because I am a strong supporter of social security that I am forced to vote against this measure that will reduce greatly the number of working people paying into the system.

The PRESIDING OFFICER. The question now is on agreeing to the conference report. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

(Senator HODGES assumed the chair.)

Mr. STEVENSON. Mr. President, on this vote, I have a pair with the Senator from Washington (Mr. MAGNUSON). If he were present and voting, he would vote "aye." If I were at liberty to vote, I would vote "nay." Therefore, I withhold my vote.

Mr. CRANSTON. I announce that the Senator from Alabama (Mr. ALLEN), the Senator from Minnesota (Mr. ANDERSON), the Senator from Florida (Mr. CHILES), the Senator from Missouri (Mr. EAGLETON), the Senator from Mississippi (Mr. EASTLAND), the Senator from Kentucky (Mr. HUDDLESTON), the Senator from Washington (Mr. MAGNUSON), the Senator from New Hampshire (Mr. MCINTYRE), the Senator from Alabama (Mr. SPARKMAN), the Senator from New Jersey (Mr. WILLIAMS), the Senator from Idaho (Mr. CHURCH), and the Senator from Minnesota (Mr. HUMPHREY) are necessarily absent.

I further announce that the Senator from Arizona (Mr. DECONCINI), the Senator from Alaska (Mr. GRAVEL), and the Senator from South Dakota (Mr. MCGOVERN) are absent on official business.

I further announce that, if present and voting, the Senator from Minnesota (Mr. HUMPHREY) would vote "yea."

On this vote, the Senator from Kentucky (Mr. HUDDLESTON) is paired with the Senator from Idaho (Mr. CHURCH). If present and voting, the Senator from Kentucky would vote "yea" and the Senator from Idaho would vote "nay."

On this vote, the Senator from Alaska (Mr. GRAVEL) is paired with the Senator from Minnesota (Mr. ANDERSON). If present and voting, the Senator from Alaska would vote "yea" and the Senator from Minnesota would vote "nay."

Mr. STEVENS. I announce that the Senator from Rhode Island (Mr. CHAFEE), the Senator from New Mexico (Mr. DOMENICI), the Senator from Michigan (Mr. GRIFFIN), the Senator from Oregon (Mr. HATFIELD), the Senator from North Carolina (Mr. HELMS), the Senator from New York (Mr. JAVITS), and the Senator from Maryland (Mr. MATHIAS) are necessarily absent.

I further announce that, if present and voting, the Senator from Oregon (Mr. HATFIELD) and the Senator from New York (Mr. JAVITS) would each vote "yea."

The result was announced—yeas 56, nays 21, as follows:

[Rollcall Vote No. 636 Leg.]

So the conference report was agreed to.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from Louisiana.

Mr. LONG. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, may we have order in the Senate?

Mr. STONE. Mr. President, I voted for the conference report on the social security financing bill reluctantly, because of the insufficient attention given to the work penalties and because of the rather steep and unphased or insufficiently phased increase in required contributions; but I voted for it on the basis that one cannot represent oneself as being for the soundness of the social security fund, and yet vote nay when the only opportunity of the year is presented to make sure that the fund does not go bankrupt.

I certainly hope and urge further study both of the increased required contributions and of the penalties that are still being charged and would still be charged under this conference report for social security recipients who work.

Finally, I would urge my colleagues and the administration to consider, in next year's proposals for tax reduction, that the tax reductions should go, if possible dollar for dollar, to compensate for the increased social security contributions required by this bill, so that the pay envelopes of people who work, younger people who are now called on to support our oldsters, will not be adversely penalized and reduced. It seems to me that the $20 billion plus being suggested for tax reduction could best go to maintain the present purchasing power of the workers who contribute and who will by this bill be required to increase their contributions to social security. That would help us head off the feelings of anger and pain at the increased social security payments by younger people, and it seems to me the best way to use the tax reduction money, on a dollar-for-dollar basis, so that people's purchasing power will be maintained after the increased social security contribution as it was before.

I thank the Chair for permission to make these remarks.

Mr. ROBERT C. BYRD. Mr. President, when the social security financing amendments were considered earlier this year on the Senate floor, I stressed the need for us to act in this session to protect the financial soundness of the social security system. The Senate by its favorable action this afternoon on the conference report on social security has insured that benefits under the system will continue to be secure for the current and next generation of beneficiaries. It is no exaggeration to say that some 33 million retirees, dependents, and disabled persons who are currently receiving benefits under the system owe a debt of gratitude to the distinguished chairman of the Finance Committee who managed the bill on the part of the Senate at the recently completed conference. It is through the dint of his efforts, his untiring efforts, that the conference was brought to a successful completion.

I would be remiss if I were not also to point to the major contribution on every step along the way which has been made by Senator NELSON. On all matters relating to social security he serves the committee, as well as the Senate, as the respected expert. Last, I am pleased to be able to say that there would have been no social security bill this year without the diligent service of Senator CURTIS.

Mr. President, social security is one of the most important pieces of social legislation ever passed by Congress, with almost every American intimately connected with the system in one way or the other. I believe that by our action today to place the social security system on a firm financial footing we have met our collective responsibility to the American people.

I do not underestimate the impact on the American economy of the tax increases the bill will provide. They are expected to be substantial. Tax stimulative measures which will be taken up next year by Congress will certainly need to take these increases into account.

Mr. JAVITS subsequently said: Mr. President, we are today considering the conference report on the social security amendments The Senate version of this bill had included a nongermane amendment on tuition tax credits. This provision was originally debated on the Senate floor on November 4.

My staff picked up, during its normal and routine review of the CONGRESSIONAL RECORD, that my vote on the amendment relating to the tuition tax credits, which appears on page 37156, of the date of November 4, 1977, was apparently recorded—and apparently this is confirmed by the secretary on this side of the aisle—as being in favor of the amendment.

That is incorrect, Mr. President, because it was inherently inconsistent with a speech I made at page 37148 of the RECORD, stating I would vote with Senator KENNEDY, who is recorded as having voted in the negative. I should have been recorded as voting in the negative. I really do not understand how this came about, but these things happen.

Accordingly, I ask unanimous consent that the permanent RECORD be changed to accurately reflect my vote as "no" on the tuition tax credit amendment, rollcall No. 626, appearing on page 37156 of the CONGRESSIONAL RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS. Mr. President, I would like to continue briefly.

The vote was 61 to 11, so my change would not matter, making it 60 to 12.

My reason for not being present this morning and not voting on the conference report was the fact that a very close friend of mine died. A memorial service was held this morning at which I had to deliver one of the memorial addresses. Again, my vote was not needed anyhow.

I would like to note, Mr. President, in this same connection, that there is a real problem of college costs, and that it is necessary for us to do some thinking about a solution for really the people of middle income, as contrasted with the people of lower income. The middle class really faces something of a problem. I think it is very wrong to correct it by the tax route, which, in one basket, includes those who can afford to pay the tuition of private colleges. I will apply myself to the need for finding some solution in view of the widespread support for this amendment, which has now been laid over until next year. I will do my utmost, as ranking minority member of the committee which handles such legislation, to come up with some solution which will make sense, and will, at the same time, follow the traditional pattern of our country relating to the capacity to pay.

DEATH OF LAURENCE WOODWORTH

Mr. LONG. Mr. President, I wish to pause a moment in sorrow at the passing of a man who was very special to many of us in both Houses of Congress.

Last week we were all stunned and grief-stricken at the death of Larry Woodworth, who possessed both brilliance of mind and gentleness of soul, an irreplaceable human being.

For over three decades Larry worked for the Joint Committee on Taxation, serving as its chief of staff for 13 years. All of us who serve on the tax-writing committees of Congress leaned heavily on his knowledge and guidance.

Earlier this year President Carter appointed Larry to the post of Assistant Secretary of the Treasury for Tax Policy where he continued his work, under another branch of Government, with the same drive and dedication.

No one knew the tax code more thoroughly and no one was more dedicated to improving and refining that system. It was more than a job to him; it was a mission.

This was a man who could have left Government to accept any one of many high-paying jobs offered to him. He could have become a very wealthy man. But he chose to remain in Government and work himself to an early death because he wanted to make a contribution to his Nation and his fellow man.

Larry was once asked why he did not move into the private sector where he could have, at the very least, tripled his net income. He replied:

> I just wasn't interested. I guess it is because I'm trying to improve the tax laws, and it's more fun than working on a tiny segment of the tax law as I'd be doing in private practice.

In fact, when Larry moved over to Treasury he took a cut in salary.

Larry Woodworth was one of the most dedicated servants of the people that it has ever been my privilege to know. Honesty, integrity, reliability, and truthfulness were traits that Larry possessed in the greatest abundance. This Nation has truly lost one of its finest servants.

Mr. President, I ask unanimous consent to insert in the RECORD at this point some tributes printed about Larry Woodworth.

And I ask my colleagues to join with me in expressing our deepest sympathy to Margaret and Larry's children.

There being no objection, the tributes were ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, Dec. 9, 1977]

LARRY WOODWORTH: DULCE ET DECORUM * * *

(By John Pierson)

WASHINGTON.—Sen. Bob Packwood remembers Larry Woodworth this way.

Last year, as the Senate Finance Committee wrestled with what later became the Tax Reform Act of 1976, Sen. Packwood was wrestling with a more personal problem: He was growing blind. Cataract surgery later restored much of the Oregon Republican's sight. In the meantime, all he could read were brief notes, printed in giant letters by his staff. Reading amendments to the Internal Revenue Code was out of the question.

Then, early one morning, Larry Woodworth, Congress's staff expert on taxes, came to Sen. Packwood's office, unbidden, and explained what the committee would be taking up that day—the law as it was, the law's shortcoming and the possible solutions. Mr. Woodworth came again the next day and the next and every day until the committee had finished with the tax bill, ultimately giving hours of his time to a junior, minority member of the 18-man Finance Committee.

"He didn't try to sell me," recalls Sen. Packwood. "He just wanted to make sure I was informed."

Mr. Woodworth was then chief of staff of the Joint Committee on Internal Revenue Taxation and chief draftsman of the major tax bills passed by Congress in recent years. When he died Wednesday at the age of 59, he was Assistant Secretary of the Treasury for tax policy and in charge of pulling together the tax revision plan that President Carter has promised to submit early next year.

The Packwood story is revealing of Larry Woodworth in many ways. He was a kind and gentle man. In a town where cruelty often tries to pass for courage, he did numberless little deeds of kindness for Senators, Congressmen, lobbyists, lawyers and reporters.

He was a modest man. Even Mr. Woodworth's chief assistant and successor, Bob Shapiro, didn't know of the Packwood briefings until he read about them in a newspaper. Indeed Mr. Woodworth's passion for anonymity was so great that he refused to allow his biography to appear in the congressional staff directory.

He was fair. Although he had his own dearly-held views about how the tax code could be improved, he took great pains to present all sides of an issue. In fact, liberals, who regarded him as one of their own, sometimes grumbled that at crucial points in his 33 years with the joint committee, Mr. Woodworth failed to come down on the side of "reform." "A lifetime of straddling the fence," observed one liberal last January when President Carter picked Mr. Woodworth for the Treasury post.

Others who knew him well weren't so sure. "I haven't the faintest idea of his views," said Rep. Barber Conable of New York, ranking Republican on the House Ways and Means Committee. "I always felt he was trying to bring out the best in me, rather than explaining himself."

The other thing the Packwood story reveals was Mr. Woodworth's stamina. At a time when one younger member of the staff broke under the physical strain of getting out the tax bill, Mr. Woodworth had the extra strength, day after day, to brief a Senator whose vote was by no means crucial to the outcome.

Over the years, reporters too, came to appreciate this last quality, when, at the end of a grueling day, "Larry," as everyone called him would patiently reveal the mysteries that had taken place before their often unseeing eyes.

He could have, commanded a six-figure salary as a private tax consultant. But he often said that when he retired from the joint committee staff, he'd like to teach. As a matter of fact, Larry Woodworth was one of the finest teachers around.

Several generations of reporters from this newspaper learned their taxes at Larry Woodworth's knee. And through them, one hopes, the public learned something, too.

Some say that Mr. Woodworth's ability to grasp and unravel the complexities of the tax code came from the fact that he wasn't a lawyer. His degrees were in public administration. (When he got his Ph.D. in 1960 from New York University, one of his friends put a sign on his desk: "Old Doc Woodworth, Loopholes Opened and Closed.")

"Public administration" sounds dry enough, but to Larry Woodworth it was science, art and duty. Son of a Baptist minister, Mr. Woodworth seemed to have inherited a strong streak of altruism. With all his responsibilities on Capitol Hill, he still made time to serve for nine years as a member of the town council of Cheverly, Md., the suburban Washington community where he lived, and for six years as its mayor. He also taught Sunday School.

Mr. Woodworth wasn't without faults. He was at best an indifferent administrator. A loving joke among the joint committee staff was: "Anytime you give Larry a piece of paper, keep a copy yourself; he's sure to lose it."

Mr. Woodworth may have lost pieces of paper but he never lost his humor or his devotion to duty.

Dulce et decorum est pro patria mori.

[From the Washington Post, Dec. 10, 1977]

LAURENCE NEAL WOODWORTH

For all of its infinite and tedious complexity, the federal tax code maintains a sense of decency and reason. It has a coherent architecture. You might wonder how that happens since, notoriously, every major tax bill is finally enacted in an atmosphere of extreme confusion, haste, passion and anxiety. For the past 15 years one leading reason for the tax system's integrity was the vigilance of Laurence Neal Woodworth, who died this week. He had joined the Carter administration earlier this year as Assistant Secretary of the Treasury for tax policy, but previously he had been the staff director of the Joint Committee on Taxation.

A tax system is a nation's definition of social equity—its answer to the great question of what's fair. In taxation, the large philosophic issues never lie far behind the niggling legalistic details. The role of the congressional staff experts on taxation is not a comfortable one. The tax committees are generally led by tough and strong-willed men; stakes run high, and no bills are more fiercely lobbied. Under weak leadership, the Joint Committee's staff would have been ground to powder long ago between its two masters in the House and Senate. Under Mr. Woodworth, it built a monumental reputation for impartial and authoritative judgment. When, for example, Congress needed an unimpeachable expert for the ugly job of auditing Mr. Nixon's tax returns, it turned automatically to Mr. Woodworth.

To work effectively, the congressional system requires enormous talent and industry among its staffs. Those qualities are very unevenly distributed through the labyrinths of the congressional offices. But the staff of the Joint Committee on Taxation has become an acknowledged model. Mr. Woodworth always left the political decisions to the politicians, and never tried to undercut them with technical obfuscation. But he worked long into the nights after the committee meetings to ensure that the politicians understood the consequences of their votes. Even the most flamboyant of senators was unlikely to press an idea in the face of Mr. Woodworth's warning that it wouldn't work. His death now is a double misfortune to the Carter administration. He was the key figure in the drafting of the President's tax-revision bills. But he was also the administration's principal ambassador to Congress on this delicate subject, and he had earned a degree of trust and respect there that no other person at the Treasury enjoys.

He was a remarkable example of a certain style of public servant—one who is rarely a noted public figure, but who acquires a profound influence through sheer intellectual force and honesty. His subject was one that touches all of us every day. It is an American custom to complain about the tax system's vices while taking its virtues for granted. They are not accidental, but were written into law by a small number of people—among whom Mr. Woodworth was eminent—who labored with learning and skill in pursuit of the just balance between public and private interests.

[From the Washington Post, Dec. 7, 1977]

LAURENCE WOODWORTH, EXPERT ON U.S. TAX LAWS, DIES AT 59

(By Art Pine)

Laurence N. Woodworth, 59, a self-effacing minister's son under whose quiet guidance most of the federal tax laws of the past 15 years were written, died yesterday in a Newport News, Va., hospital.

Mr. Woodworth, who at the time of his death was assistant Treasury secretary for tax policy and President Carter's ranking adviser on tax matters, suffered a stroke during breakfast last Sunday while attending a tax conference at the College of William and Mary in Williamsburg, Va.

Before joining the administration last February, he had spent 32 years on the staff of Congress' Joint Committee on Internal Revenue Taxation, the last 14 years as its director.

That little-known joint committee, whose staff is one of the most respected at the Capitol, drafts all tax legislation for both House and Senate.

Mr. Woodworth, however, was more than a draftsman. Though it pained him to have it said in public, he guided the tax-writing committees of House and Senate at least as much as he followed their direction.

Mr. Woodworth's method, when a major bill came before one of the tax committees, was to consult privately and in advance with the chairman and other leading members, then present the legislation to the committee with a series of "suggestions." His stature and reputation for fairness were such that these suggestions frequently became the law.

He knew the tax code cold, and would sometimes use that knowledge to help a member who became tangled in one of his own proposals. But he would also use it—always politely—to shoot down a member whose proposals he thought excessive.

Mr. Woodworth was fond of reporters as a group, and it became a tradition that after every meeting of a tax committee, he would hold an impromptu news conference to explain what the committee had done. But he wanted almost always to remain anonymous.

House-Senate conferees on the energy tax bill paused in prayer yesterday at the news that Mr. Woodworth had died. House Ways and Means Committee Chairman Al Ullman (D.-Ore.) said in a statement: "In his quiet way, he was as much an influence in shaping tax policy in this country as any committee chairman or Treasury secretary or President in recent memory."

President Carter also issued a statement, mourning Mr. Woodworth as one of the country's "most dedicated public servants."

Mr. Woodworth, who never regained consciousness after suffering the stroke in Williamsburg, had in recent months been working nearly nonstop on the administration's various tax bills, including the "reform" bill that Carter intends to send to Congress for action early next year.

Born in Loudenville, Ohio, on March 22, 1918, the son of a Baptist minister, Laurence Neal Woodworth was a studious man who was fascinated with the tax system and dedicated to tax law.

Frequently working 16-hour days, he led the Congressional Joint Committee on Internal Revenue Taxation to a high degree of professional and nonpartisan performance that ultimately became a standard in both houses of Congress.

It was under his direction that the Committee staff developed its detailed report on former President Nixon's tax returns in 1974—a document that was praised for its thoroughness and fairness by both Democrats and Republicans.

Mr. Woodworth graduated from Ohio Northern University in 1940, and earned a master of science degree in public administration from the University of Denver in 1942.

In 1960, while working for the Joint Committee, he earned a doctoral degree in public administration and economics from New York University.

Often turning down well paying offers from private firms, Mr. Woodworth preferred government service, where he was able to satisfy a long line of sometimes demanding committee chairmen. It was Mr. Woodworth who engineered most of the major compromises on tax legislation in recent years.

As a congressional tax expert, Mr. Woodworth was cited several times for public service, receiving both the Rockefeller Award sponsored by the Woodrow Wilson Foundation and the National Civil Service League award.

In his spare time, he was active in local civic affairs, serving as mayor of Cheverly from 1959 to 1965, and before that as a City Council member for nine years. He told a friend once that after a long debate on a tax bill, "It just does me good to walk around and talk to people about local problems."

He was also active in the Methodist Church, serving as a Sunday school teacher, and in the Boy Scouts.

Survivors include his wife, the former Margaret Bretz, of the home in Cheverly, and four children, Laurence S., of Greenbelt, Joseph Ray, of Albuquerque, N.M., Melissa, of Syracuse, N.Y., and Esther, of the Washington area.

The family suggests that expressions of sympathy be in the form of contributions to the Laurence N. Woodworth Memorial Scholarship Fund at Ohio Northern University, Ada, Ohio 45805.

[From the Washington Star, Dec. 8, 1977]

TREASURY'S WOODWORTH FOUGHT FOR INTEGRITY OF INCOME TAX SYSTEM

(By Lee M. Cohn)

Laurence N. Woodworth, in his quiet way, was furious at Richard Nixon.

Nixon's tax manipulations were deepening the public's cynicism about the federal income tax system. Woodworth had spent his career trying to improve the system and build up public confidence.

So Woodworth and his staff of congressional tax experts put Nixon through the toughest audit in history to prove than not even a president can get away with cheating. Woodworth admitted that the 1974 audit was extraordinarily strict, but his report said:

"So many questions have been raised about the tax returns of the president for these years that the committee believed the general public can only be satisfied by a thorough examination of the president's taxes.

"From the standpoint of the tax system alone, this confidence of the general public is essential since ours is basically a voluntary assessment system which has maintained its high level of effectiveness only because the general public has confidence in the basic fairness of the collection system. . . .

"The staff has not withheld recommendations because of the office of the taxpayer involved."

Documenting dozens of big and little instances of tax cheating, the devastating report by the staff of the Joint Committee on Internal Revenue Taxation concluded that Nixon owed $476,431 in taxes and interest. The Internal Revenue Service, prodded by Woodworth's investigation, billed Nixon for more than $465,000, which the embattled president grudgingly promised to pay.

The integrity of the tax system, which Woodworth considered a keystone of the Republic, had been vindicated, he believed.

Woodworth, 59, died yesterday in a Newport News, Va., hospital after suffering a stroke Sunday while attending a tax conference at the College of William and Mary, Williamsburg.

Following cremation, a memorial service is scheduled for 10 a.m. Saturday at the Cheverly (Md.) United Methodist Church, where Woodworth was an active member and taught Sunday school for many years.

The family requested that expressions of sympathy be in the form of contributions to the Laurence N. Woodworth Memorial Scholarship Fund, Ohio Northern University, Ada, Ohio.

Hoping for new opportunities to strengthen the tax system, Woodworth left Congress after a 33-year career to join the Carter administration as assistant secretary of the Treasury for tax policy. His main assignment was to draft a tax reform program to redeem one of President Carter's basic campaign pledges.

The president has been pulling back from major tax reform, at least for 1978, mainly because he worries about upsetting business leaders and impeding action on tax cuts to spur the economy. Though Woodworth was too loyal to object publicly, he was disappointed.

He intended to keep plugging, as he had for all those years with the joint taxation committee on the Hill. Reformers were always complaining that progress was too slow. Woodworth, counseling patience, was pleased to improve the tax system one slice at a time when broader efforts fizzled.

Carter had called the system "a disgrace to the human race." Since Woodworth was largely responsible for provisions of the Internal Revenue Code, his selection to lead the reform effort drew some criticism. The more general reaction was that he was an ideal choice for the job because he knew so much about the code and where the bodies were buried.

As much more than a tax technician, he had a keen sense of congressional politics and strategy. He probably knew better than anyone else what could be accomplished on tax legislation and what was impractical.

Some White House staffers complained earlier this year that the Treasury's reform proposals were too timid and demanded bolder ideas. As drafting of the program continued, the White House pulled back to milder reform plans than Woodworth had advocated initially.

Although Woodworth had drafted large sections of the Internal Revenue Code, and in that sense was responsible for many of its defects, his authorship did not necessarily indicate his approval. He was a congressional staff man who believed it was his duty to achieve the objectives of the tax-writing committees as effectively as possible.

He would draft legislation he opposed, but insisted on explaining the consequences, including who would be helped or hurt. Members of the tax committees were not allowed to fool themselves or pretend that they did not understand what they had done.

Often this made life difficult for Sen. Russell B. Long, D-La., chairman of the Senate Finance Committee, Rep. Wilbur D. Mills, D-Ark., for many years chairman of the House Ways and Means Committee, and other members of those tax panels. Without looking for fights, Woodworth stood up to them.

Congressional superpowers accepted his independence because they respected his integrity and needed his skills. He often helped devise the parliamentary strategies that made Long and Mills look like wizards.

Woodworth built up the non-partisan staff of the joint committee, which serves both the Senate Finance and House Ways and Means committees, to a unique position of prestige in Congress. The staff's influence matches or exceeds that of the committee members.

Most tax specialists are lawyers, but Woodworth was an economist with a doctorate in that field and in public administration from New York University. He learned all about tax laws by writing them. His education also included a master of science degree in government management from the University of Denver and a bachelor of arts degree from Ohio Northern University.

Woodworth was chief of staff of the Joint Committee on Internal Revenue Taxation (now the Joint Taxation Committee) from 1964 until he joined the Treasury early this year. He had been on the joint committee staff for 20 years before becoming its chief.

Besides drafting and advising on tax legislation, Woodworth, a patient, schoolmasterish person, was a talented educator. As members of Congress and reporters felt themselves sinking into the complexities of tax issues, he rescued them with skillful explanations.

He also conducted wide-ranging tax research and often was required to produce extensive data and analyses at crucial stages of legislative debate. Members of Congress seldom argued with him on matters of fact or interpretation.

Among his professional honors were the National Civil Service League Career Service Award and the Rockefeller Federal Government Public Service Award, both in 1972.

President Carter in a statement, said: "The death of Laurence Woodworth is a personal loss to me, and a loss to our nation of one of its most dedicated public servants."

Rep. Al Ullman, D-Ore., chairman of the House Ways and Means Committee, said Woodworth's "guidance to tax writers over the decades has been enormous. In his quiet way, he was as much an influence in shaping tax policy in this country as any committee chairman or treasury secretary or president in recent memory."

Senate Finance Committee Chairman Long said "the nation has truly lost one of its finest servants."

Woodworth was born in Loudonville, Ohio, the son of a Baptist minister, and lived in Cheverly, where he had been mayor. He also had been president of the Maryland Municipal League.

Surviving are his wife, the former Margaret Bretz, and four children, Laurence, 31, a Treasury employee, of Greenbelt; Joseph, 29, of Albuquerque, N.M.; Esther, 23, of the Washington area, and Melissa, 19, of Syracuse, N.Y.

[From the New York Times, Dec. 8, 1977]

LAURENCE WOODWORTH DIES AT 59; ADMINISTRATION TAX POLICY EXPERT

(By Marjorie Hunter)

WASHINGTON, December 7,—Laurence N. Woodworth, the Assistant Secretary of the Treasury for Tax Policy and chief draftsman of the tax proposals that President Carter plans to send to Congress next month, died today in Riverside Hospital, Newport News, Va. He was 59 years old.

Dr. Woodworth had been hospitalized and unconscious since suffering a stroke Sunday morning in Williamsburg, Va., while participating in a tax conference at the College of William and Mary. A Treasury spokesman said that Dr. Woodworth suffered a 'spontaneous cerebral hemorrhage" this morning.

From the White House to Congress, official Washington praised Dr. Woodworth, an economist, as a talented and dedicated public servant.

PRAISE FROM CARTER

President Carter said: "His understanding of our tax system was matched only by his determination to improve the system and by his patience in dealing with those who knew far less than he."

Representative Al Ullman of Oregon, chairman of the House Ways and Means Committee, announced Dr. Woodworth's death on the House floor. Earlier, Mr. Ullman led the House-Senate conferees in a moment of silent prayer for Dr. Woodworth.

Before joining the Carter Administration early this year, Dr. Woodworth worked for the Congressional Joint Committtee on Taxation for 30 years, the last 14 of them as staff director. In these years he became well-known to and respected by the members of the tax-writing committees, Ways and Means in the House and Finance in the Senate.

"ONE OF THE FINEST"

Senator Russell B. Long of Louisiana, chairman of the Finance Committee, called Dr. Woodworth "one of the nation's finest servants."

"He chose to remain in government and work himself into an early grave because he wanted to make a contribution to his nation and fellow men," Senator Long said today.

For many months, Dr. Woodworth had been working intensely as he supervised the drafting within the Treasury of the tax reduction and revision bill that Mr. Carter plans to submit to Congress. Dr. Woodworth was to have been the Administration's principal witness, just as he was when he spent many days testifying in behalf of the Administration's energy tax proposals.

DEPUTY IS DESIGNATED

It appeared unlikely that the Administration would be able to find someone of equal stature in the tax field who could be ready by February to testify in support of the tax bill, even with quick Senate confirmation. One of Dr. Woodworth's deputies, Donald C. Lubick, a 51-year-old lawyer from Buffalo, was designated Acting Assistant Secretary on Monday.

Dr. Woodworth was President Carter's Principal link to influential members of the Senate and House tax-writing committees.

Indeed, it was because of Mr. Woodworth's intimate knowledge of tax laws and of the Congressional mechanisms for writing such laws that Mr. Carter chose him to help implement a major campaign promise, tax reform.

When he was nominated for the Treasury post, Mr. Woodworth was staff director of the Joint Committee on Internal Revenue Taxation, a committee that assists both the House Ways and Means Committee and the Senate Finance Committee in devising tax policy and writing tax laws.

In his 13 years at staff director, Mr. Woodworth became a widely respected tax expert.

He was a close associate of Senator Russell B. Long of Louisiana, chairman of the Senate Finance Committee, and Wilbur D. Mills of Arkansas, the former chairman of the House Ways and Means Committee, but even their foes on the committees praised his fairness and expertise. Both Senator Long and Repsentative Al Ullman of Oregon, now the Ways and Means chairman, strongly endorsed Mr. Woodworth for the Treasury post.

TWELVE-HOUR WORK DAYS

A prodigious worker, Dr. Woodworth had been working 12-hour days, preparing a tax reform package acceptable both to his new boss, President Carter, and to the men he once served in Congress.

In a recent interview in his spacious office overlooking Pennsylvania Avenue, Mr. Woodworth said that he found his new job "in many ways more confining" than the job he had held at the Capitol.

"There are lots of differences between the two jobs," he said. "But the subject matter, taxes, is the same. On the Hill, I was developing tax material Congress might like and accept. Now, I am not looking first of all at what Congress will accept, though it is needless to say that I take that into account."

One of his major goals, he said, was to simplify tax forms for the average taxpayer, and he had hoped to work on that project as soon as he wrapped up the Administration's tax reform package.

SOME CALLED HIM 'YES MAN'

Some critics had complained that he had been too much of a "yes man" while working with members of Congress on tax matters, that he had followed a policy of "anticipatory surrender" instead of pushing for real tax reform.

"I may be overcautious," he said recently. "But I feel I have made a contribution to tax reform over the years. I am interested in tax equity, but I'm also interested in stimulating business growth."

One of his most laborious and widely praised projects while working with Congress was the 1974–73 study that he and his committee staff made of President Nixon's tax returns. The study, showing that Mr. Nixon had underpaid his taxes from 1969 to 1972 by $476,431.

Watergate the climate that led to Mr. Nixon's resignation as a result of the Watergate scandals.

Dr. Woodworth received a number of job offers from the private sector over the years and could have earned perhaps three times his Government salary had he become a private tax lawyer.

'MORE FUN' IN GOVERNMENT

"I just wasn't interested" he said recently. "I guess it's because I'm trying to improve the tax laws, and it's more fun than working on a tiny segment of the tax law as I'd be doing in private practice."

While the job at Treasury carried a more prestigious title, he took a salary decrease in accepting it. As chairman of the Joint Committee on Internal Revenue Taxation, he would have been making $52,500 a year under a recent pay raise. At Treasury, his salary was $50,000.

Dr. Woodworth was born March 22, 1918, in Loudonville, Ohio, the son of a Baptist minister. He was graduated from Ohio Northern University, received a master's degree in public administration from the University of Denver and a doctorate from New York University.

Before joining the Joint Committee staff in 1944, he worked for the Tax Foundation in New York.

His one hobby was town government, and he served as councilman and later as mayor of Cheverly, Md., a small town in the Washington suburbs.

He was winner of the Rockefeller Award of the Woodrow Wilson School of Government at Princeton University and of the National Civil Service League award for outstanding career service.

He is survived by his wife, Margaret Bretz Woodworth; two sons, Laurence S., of Greenbelt, Md., and Joseph R., of Albuquerque, N.M.; two daughters, Esther M. and Melissa M., both of Maryland; a sister, Esther, of Cleveland; a brother, Hermon, and a grandson.

A memorial service will be held at 10 A.M. Saturday at the United Methodist Church, Cheverly, Md., where Dr. Woodworth taught Sunday School. The family asked that in lieu of flowers, contributions be sent to the Laurence N. Woodworth Memorial Scholarship Fund at Ohio Northern University, Ada, Ohio, 45805.

FEDERAL PROGRAM INFORMATION ACT

Mr. KENNEDY. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on S. 904.

The Presiding Officer laid before the Senate the following message from the House of Representatives:

Resolved, That the bill from the Senate (S. 904) entitled "An Act to provide for the efficient and regular distribution of current information on Federal domestic assistance programs", do pass with the following amendment:

Strike out all after the enacting clause, and insert: That this Act may be cited as the "Federal Program Information Act".

DEFINITIONS

SEC. 2. For the purpose of this Act, the term—

(1) "assistance" refers to the transfer of money, property, services, or anything of value; the principal purpose of which is to accomplish a public purpose of support or stimulation authorized by Federal statute. Assistance includes, but is not limited to, grants, loans, loan guarantees, scholarships, mortgage loans, insurance or other types of financial assistance; provision or donation of Federal facilities, goods, services, property, technical assistance, and counseling, statistical and other expert information, and service activities of regulatory agencies; but does not include provision of conventional public information services;

(2) "Federal agency" means an agency as defined by section 551(1) of title 5, United States Code;

(3) "Federal domestic assistance program" means any function of a Federal agency

which provides assistance or benefits for a State or States, territorial possession, county, city, other political subdivision, grouping, or instrumentality thereof; any domestic profit or nonprofit corporation, institution, or individual, other than an agency of the Federal Government; and

(4) "administering office" means the lowest subdivision of any Federal agency that has direct operational responsibility for managing a Federal domestic assistance program.

DUTIES OF THE DIRECTOR

SEC. 3. The Director of the Office of Management and Budget (hereinafter referred to as the "Director") shall identify all existing Federal domestic assistance programs and provide information on each such program to the general public through electronic media as authorized under section 5 of this Act and through a printed catalog as authorized under section 6 of this Act.

INFORMATION REQUIREMENTS

SEC. 4. (a) The Director shall prepare and maintain a Federal Assistance Information Data Base (hereinafter referred to in this Act as the "data base"). For each Federal domestic assistance program the data base shall—

(1) identify each such program by title, by authorizing statute, by administering office, and by an identifying number assigned by the Director;

(2) describe the program, the objectives of the program, and the types of activities which have been funded under the program;

(3) describe the eligibility requirements, the formulas governing the distribution of funds, the types of assistance, the uses and restrictions on the use of assistance, and the obligations and duties of recipients under the program;

(4) provide financial information, including the amount of funds appropriated for the current fiscal year or, if unavailable, the amount of funds requested by the President, and the amounts obligated, and the average amounts of awards made in past years;

(5) identify information contacts including the administering office and regional and local offices and their addresses and telephone numbers;

(6) provide a general description of any application requirements and procedures and, to the extent practical, an estimate of the time required to process the application.

(b)(1) Each Federal agency shall furnish to the Director, at such times as the Director may determine, current information on all domestic assistance programs administered by such Federal agency.

(2) The Director shall on a regular basis incorporate into the data base all relevant information received under paragraph (1) of this subsection.

COMPUTERIZED PROGRAM INFORMATION SYSTEM

SEC. 5. (a) The Director shall establish and maintain a computerized information system to provide access to the data base.

(b) The Director, to the greatest extent practicable, shall provide for the widespread availability of information contained in the data base, by computer terminals wherever available.

(c) The Director, notwithstanding any other provision of law to the contrary, when he determines the efficiency of the information system established pursuant to subsection (a) of this section requires it, may enter into contracts with private organizations to obtain computer time-sharing services including, but not limited to, computer telecommunications networks, computer software, and associated services.

(d) The Director shall insure that the information available under this Act is made available to the public at a reasonable price.

(e) The Director may develop information services to further assist State and local government officials identify or obtain sources of Federal assistance.

CATALOG OF FEDERAL DOMESTIC ASSISTANCE PROGRAMS

SEC. 6. (a) The Director shall prepare and publish each year a catalog of Federal Domestic Assistance Programs (hereinafter referred to in this Act as the "catalog").

(b) The Director shall prepare and publish supplements to the catalog as necessary.

(c) The Director may prepare and publish specialized compilations of the information in the catalog by function as necessary.

(d) The catalog shall contain, in such form as the Director determines—

(1) all substantive information on Federal domestic assistance programs that is in the data base at the time that the calalog is prepared;

(2) any other information which the Director considers may be helpful to potential applicants for beneficiaries under such programs; and

(3) a detailed index.

(e)(1) The Director shall make each catalog available to the public at a reasonable price.

(2) There are authorized to be distributed, without cost, catalogs to Members of Congress, Delegates, Resident Commissioners, agencies, State, and general purpose units of local government, federally recognized Indian tribes, Federal deposits libraries, and local repositories designated by the Director.

TRANSFER PROVISION

SEC. 7. The Director is authorized to transfer to the Office of Management and Budget all personnel, books, records, and other documents of the Department of Agriculture of any kind or description which he determines to be principally held or engaged in the operation and function of the Federal Assistance Program Retrieval System (FAPRS).

AUTHORIZATION OF APPROPRIATIONS

SEC. 8 There are hereby authorized to be appropriated $900,000 for fiscal year 1978, $1,000,000 for fiscal year 1979, and $1,000,000 for fiscal year 1980.

FEDERAL INFORMATION SYSTEMS STUDY

SEC. 9. The Director of the Office of Management and Budget shall conduct a study of existing Federal information systems that provide fiscal, budgetary, and program-related data, statistics, and information on grant awards and shall report to the Congress, within one year from the date of enactment of this Act, his recommendations for appropriate dissemination of Federal financial information, a summary of all executive branch actions taken within the year to consolidate, reorganize, and improve the existing financial information system, and his recommendations for statutory changes necessary to further develop and improve methods for the dissemination of Federal financial information, using modern communications technology.

Mr. MUSKIE. Mr. President, I am always happy to witness the passage of legislation that is designed to simplify the maze of Federal assistance programs for recipients. S. 904 is an important step in that direction in helping potential recipients of Federal grants identify the programs for which they are eligible, and which are best suited to their needs. It will be of special importance to small communities, which cannot afford the kind of professional grantsmanship that is now required to locate sources of Federal funds.

I am pleased to be associated with this legislation, and I commend my colleagues, Senator ROTH and Senator KENNEDY, for their efforts in making this legislation a reality.

FEDERAL PROGRAM INFORMATION ACT

Mr. ROTH. Mr. President, it gives me great pleasure this morning to bring before the Senate S. 904, the Federal Program Information Act, for its consideration and final passage. The bill, which I have sponsored with Senators KENNEDY, MUSKIE, PERCY, CHILES, GRAVEL, and NUNN, returns for final Senate approval after having been considered by the House.

This legislation is of key importance to anyone involved with the use of Federal funds as a source of revenue for important national needs. Indeed, every American citizen will indirectly benefit from the improved access and distribution of program information about Federal programs. For too long, the Federal Government has left the recipient of grants to his or her own devices in identifying sources of Federal funds. This indifference has worked a profound inequity among those eligible to compete for grant awards. Smaller communities, colleges, hospitals, and schools have been put at a serious competitive disadvantage often because they were unaware or ill informed about opportunities open to them.

The skill of locating sources of Federal funds has become a virtual art form in this country today. There is a premium on hustle, sophistication, and specialization. The local official with a hundred other responsibilities has neither the time nor inclination to engage in the game of grantsmanship. The Program Information Act is a giant step forward in achieving basic equity among grant recipients. It is a matter of basic fairness to provide equally to all potential applicants adequate information about Federal grant opportunities. I believe potential beneficiaries have a right to the full, fair, and timely disclosure of program information and that the Federal Government has a responsibility to make such information readily available.

S. 904 provides for the development and maintenance of a central source of information about Federal programs. The information would be published annually in a thoroughly indexed volume. In addition, the data would be continually revised and made accessible to smaller cities, towns or individuals through the use of modern computer technology.

The act requires the disclosure of complete program information including a full description of the program and its objectives, eligibility requirements and restrictions on the use of funds, obligations under the program, identification of appropriate officials to contact, a description of the application process, deadlines, and closely related programs. The information is to be maintained in machine-readable form. A potential applicant will be able to identify programs suited to his particular needs by using a computer to cross-reference needs with available programs. The user would receive a printed summary listing all programs which have funds available for the specified needs of the applicant. The data files would be open to any citizen. Organizations with computer equipment could access the data file and help assure a wide distribution to the public. For example, a State government, timesharing company, or trade association could provide computer access to State and local officials or to other potential applicants using the basic information provided by the Federal Government.

There are more than 1,000 Federal programs with funds available for important national purposes. It is impossible for the local officials to track down these funds through layers of redtape and a maze of administrative channels in Washington without some clue as to what is available. We intend with S. 904 that the Federal Government provide a fair basis for all would-be applicants to locate sources and apply for Federal funds.

The bill represents for me the fruition of nearly a decade of effort to open the door to the public on the hundreds of Federal grant programs. When I first arrived in Washington, no one knew how many programs there were much less where to go to find one. My staff singlehandedly produced a catalog of information identifying programs and how to apply. The Roth catalog, first published as a House document, was continued by the Office of Management and Budget as the Catalog of Federal Domestic Assistance. S. 904 provides for annual publication of the catalog by statute rather than by agency discretion.

The Senate has passed legislation similar to S. 904 to establish a published catalog during four consecutive Congresses. S. 60 passed the Senate in October 1970; S. 718 was passed in September 1972; S. 928 passed the Senate in November 1973; and S. 3281 passed the Senate in June 1976. In each case, the House failed to act on the legislation. This year I am pleased to see that the House has responded favorably and by Senate concurrence with the House-passed bill, this legislation can be forwarded to the President's desk for signature.

The House version of S. 904 which is before us today does not go as far as the Senate-passed version. I am persuaded, however, that the House bill is a giant step forward and provides a basis for future refinements. The area of greatest disagreement between House and Senate versions is over the disclosure of financial information. We had provided in the Senate version of S. 904 for disclosure of draw-down information so that an applicant would know in advance whether funds were available to apply for. We also sought to improve the disclosure of awards after grants have been announced so that State governments and budget officials would know what Federal funds were being spent with their respective States and for what purposes. The legislation calls for a complete study of Federal financial information systems to be made within 1 year by the Office of Management and Budget to determine how information can best be disseminated. Of course, the executive branch already provides postaward information under Treasury circular TC-1082. This system can be improved and made more comprehensive by executive action. Furthermore, there are no legal barriers to improve disclosure about the availability of program funds. This is largely a question of accounting practice, technical capability, and cost. Again, I am hopeful that advances in the executive branch can develop improved methods of disclosure. The Congress will continue vigorous oversight of the development of the program information center within the Office of Management and Budget and will await its rceommendations for refinements in the law.

I am submitting for the Record letters of endorsement for S. 904 which the Subcommittee on Intergovernmental Relations received that highlight the need for improved financial information. I will continue my efforts to upgrade the disclosure and dissemination of Federal program information and assure that State and local governments do not engage in a fruitless exercise.

I submit for the Record a statement supplied by Senator Edmund Muskie. Also, I would like to submit my statements upon introduction of S. 904 last March and during the subcommittee hearing in April.

Today, I particularly want to express my appreciation to Senator Kennedy for his cooperation in this legislation. His interest in improved data systems extends back over a decade. This bill reflects for both of us years of effort to ask the Government to follow a commonsense approach to the disclosure of program information. I also wish to express special thanks to Senator Muskie for the cooperation and guidance that have marked the development and passage of this legislation in the Senate.

Mr. President, I ask unanimous consent that the material to which I have referred may be printed in the Record.

There being no objection, the material was ordered to be printed in the Record, as follows:

National Governors' Association,
Washington, D.C., October 25, 1977.
Hon. Edmund S. Muskie,
Russell Senate Office Building,
Washington, D.C.

Dear Senator Muskie: The National Governors' Association is pleased that S. 904, the Federal Program Information Act of 1977, has received favorable consideration in both the House and Senate.

Governors and their central management staff have been particularly interested in developing a comprehensive fiscal information reporting system. The Governors recently identified this as a necessary reform for improving management of intergovernmental programs.

In view of our interest in a meaningful federal budget information system on grant awards, the Association wishes to express support for the notice requirements for grant and budget information provided by Section 201 of S. 904. The House version of the bill deletes this important provision and in our judgment weakens considerably the value of the legislation to Governors. We urge you to restore the notice requirements of the Senate version before final passage of S. 904.

Sincerely,
Stephen B. Farber.

The National Association
of State Budget Officers,
Washington, D.C., October 28, 1977.
Hon. Edmund Muskie,
Chairman, Senate Subcommittee on Intergovernmental Relations, U.S. Senate, Washington, D.C.

Dear Senator Muskie: The National Association of State Budget Officers has long been concerned with improvements in intergovernmental management of State-Federal programs. The Association's Executive Committee has noted favorably the contribution of S. 904, the Federal Program Information Act, to furthering the worthwhile objective of developing a comprehensive and reliable fiscal information reporting system. As President of the Association, I wish to reaffirm our endorsement of the principles contained in S. 904, to express support for the notice requirements contained in Section 201 and to urge retention of this section in final passage. Thank you for your continuing personal interest in the advancement of intergovernmental management.

Sincerely yours,
Thomas E. LaVelle,
President, National Association of State Budget Officers.

National Conference of
State Legislatures,
Washington, D.C., October 18, 1977.
Hon. Edmund Muskie,
Chairman, Subcommittee on Intergovernmental Relations, Senate Committee on Governmental Affairs, Russell Senate Office Building, Washington, D.C.

Dear Senator Muskie: As President of the National Conference of State Legislatures, I would like to affirm the Conference's support for the Senate version of S. 904, the Federal Program Information Act. We are especially interested in Title II, Section 201 of the Senate bill which provides for the disclosure of federal domestic assistance information to the Governor or State legislature concerning the purpose and amounts of assistance to State and local governments. This section, which is omitted from the House version of S. 904 (H.R. 6257), recognizes the need of state legislatures across the country to have ready access to all information available on federal domestic assistance programs which would affect their state and local governments. It is our hope that this particular provision will remain in the final version of the bill.

The Conference believes that this computerized cataloguing system would be a great asset to state and local governments in readily identifying sources of federal assistance and requirements for specific assistance, in addition to eliminating bureaucratic redtape. This system would also provide timely dissemination of important financial and technical aid that would assure full participation by eligible recipients in federal programs.

The growth of federal assistance programs to state and local governments, whether in categorical grants-in-aid or in shared revenues, dramatically increases the need for accurate and timely intergovernmental program and fiscal information. We believe that the Senate version of S. 904 fulfills this vital need, and we hope that the Senate and House can agree on suitable amendments to bring this important piece of legislation to fruition.

Sincerely,
Fred E. Anderson,
President, National Conference of State Legislatures and President of the Colorado Senate.

National League of Cities,
Washington, D.C., November 18, 1977.
Hon. Edmund S. Muskie,
Chairman, Subcommittee on Intergovernmental Relations, Washington, D.C.

Dear Senator Muskie: I want to express strong support from the National League of Cities' for two provisions of the Senate version of the Program Information Act.

We think it is essential that the amount of funds remaining for award be included in the information available on a grant program. Without this information an interested applicant cannot make a sound decision about whether or not to apply, and the savings in time, energy and money made possible by this service would be seriously jeopardized.

We also think that the Senate authorization of $1.2 billion with annual increments of $500 million, is close to what will be required to effectively implement this program. The House figure, I fear, is simply not enough to do the job right.

Thank you for your efforts on behalf of this legislation; they are appreciated by city officials. If there is anything we can do to assist you, please let me know.

Sincerely,

ALAN BEALS,
Executive Director.

NATIONAL ASSOCIATION OF COUNTIES,
Washington, D.C., October 24, 1977.

Hon. EDMUND S. MUSKIE,
U.S. Senate,
Russell Senate Office Building,
Washington, D.C.

DEAR SENATOR MUSKIE: The National Association of Counties has long supported the concept embodied in the Federal Program Information Act (S. 904 and H.R. 6257). We have testified this past year in support of this legislation before both House and Senate Committees. The dissemination of available information on federal assistance programs will mean more efficient management of the $72 billion disbursed to states, counties and cities in FY '78, and will provide the opportunity for a more equitable dispersement of available resources to all needy jurisdictions regardless of grantsmanship sophistication.

Within the past decade, the federal grants-in-aid system has grown extremely complex, not only in the development of 500 to 1,000 federal assistance programs, but also in the multiple application procedures and requirements established by these programs. Many of our nation's counties do not have the financial and/or manpower resources to participate in this complex system. The data base established by this legislation would eliminate many of the local resources required to seek needed federal financial assistance to meet their jurisdiction's needs.

However, it is crucial that this data base include financial information on funds not already obligated or otherwise committed. Without this information, counties may commit local resources to develop project proposals, expend local monies to hire consultants to conduct costly environmental impact statements, etc., expend local staff time to monitor a proposal through the multiple local, state and federal review process, only to discover that the end result is there are no funds presently available. It would be impossible for a county to recover these costs. Such a situation would not be uncommon or unlikely. To place a financially hard-pressed local government in such a situation is contrary to the intent of this legislation, that is to provide up-to-date and useful information and to encourage active participation and use of federal assistance. Moreover, it would create a disservice to the people these jurisdictions represent.

S. 904, under Title I, Section 102(4), provides that financial information regarding unobligated or otherwise uncommitted funds be included in the data base. The National Association of Counties supports this provision. In addition, we support other provisions provided under the Senate version.

Because of the complexities of the grants-in-aid system, the large number of federal programs and the multiplicity of information carried, financial and otherwise, we support the authorization level established under Section 106 of S. 904.

In addition, we realize that the development of an efficient and workable information system will not take place overnight. It may become necessary to make some modifications in the system as it is developed. For this reason, we realize the need for evaluation and review as the system develops and support Section 203 of S. 904 which provides for reports to Congress on evaluation and review of steps taken to implement this major undertaking.

S. 904 will provide an efficient and useable information system, and will encourage local governments' participation in federal assistance programs. It will eliminate many of the frustrations county governments experience in seeking federal assistance to offset local costs. Moreover, S. 904 will provide a useable information system available to all jurisdictions, regardless of affluence, to better manage its own local resources, as well as more efficient management of federal dollars. Such a system will encourage better government and services for the people we represent.

Our testimony before the Senate Subcommittee on International Relations in support of S. 904 is attached. Should you have any questions regarding our position, please contact either Aliceann Fritschler or Linda Church of our staff.

The National Association of Counties commends the work of your committee and its commitment to a federal information system. We join in your efforts to develop a workable and efficient information system and hope that S. 904 will soon become law.

Sincerely,

BERNARD F. HILLENBRAND,
Executive Director.

[From the CONGRESSIONAL RECORD, Mar. 3, 1977]

FEDERAL PROGRAM INFORMATION ACT

Mr. ROTH. Mr. President, I am introducing important legislation with Senators KENNEDY, MUSKIE, PERCY, and CHILES to improve the availability of information about Federal programs to the general public. This legislation will benefit citizens and communities throughout the Nation by making it easier to match local needs with forms of financial and technical assistance available from the Federal Government.

The Federal Program Information Act would establish a center to serve as a central reference service for information about program purposes, funding availability, application procedures, and program requirements. The center would make use of recent techniques in computer data systems and telecommunications services to provide detailed, up to date, and easily understandable information about Federal programs and assistance to individuals or communities seeking sources of Federal aid. The information would be stored in a computer data bank and distributed to communities and individuals using modern telecommunications equipment. The data base could also be distributed in printed form as a comprehensive catalog or in abridged versions grouped by program function.

GRANTSMANSHIP

The art of Federal grantsmanship—the ability to identify, apply for, and receive Federal grant awards—has become a major impediment to small or disadvantaged communities, school systems, and colleges trying to obtain a fair share of Federal grant money.

There are hundreds of Federal programs which provide financial and technical aid to State and local governments and other eligible recipients, but there is no easy way at the present time to identify the programs and assure full participation by those eligible.

Rural communities, small cities, towns, hospitals, and colleges have been particularly disadvantaged, when trying to compete for Federal grants that require sophisticated applications.

There are more than 1,000 Federal domestic aid programs listed in the Federal Domestic Assistance Catalog. It requires considerable time and effort to select a program which meets the needs of a community. The application process can be long, complicated and costly. Many States and cities spend a considerable amount of money simply to keep abreast of program opportunities and changes. The present situation imposes a heavy administrative burden on those cities and States able to afford a grantsman and it unfairly disadvantages applicants unable to afford full-time professional help in securing Federal assistance funds. Neither situation is satisfactory.

SUNSHINE FOR FEDERAL ASSISTANCE

This legislation will not remove every weakness in the existing Federal categorical aid system. It will not increase the availability of funds; it will not reduce program restrictions; it will not eliminate the application process for aid. However, it will give local budget planners more tools to find the aid which is made available to local governments for special purposes. And, it will give all communities an equal search capacity with which to locate aid.

It is a matter of basic fairness to provide equally to all potential applicants who may be eligible adequate information about Federal grant money. I believe beneficiaries of Federal grant programs have a right to the full, fair, and timely disclosure of program information and that the Federal Government has a responsibility to make such information readily available.

NEED FOR PROGRAM INFORMATION

During the past two decades the dependence of State and local governments on Federal sources of revenues has continued to grow. In 1950 Federal grants to State and local governments totaled $2.2 billion. For fiscal year 1978 the total is expected to exceed $71 billion. As a percentage of general revenues from State and local sources the Federal aid has gradually increased from 10 to 25 percent today.

A large portion of the total amount of intergovernmental aid to State and local governments is in the form of payments to individuals—about 35 percent. Despite the recent trend for general-purpose aid with "no strings attached" such as general revenue sharing and broad-based block grants with no State matching requirements, there continues to be considerable reliance on Federal categorical or special purpose sources of aid. In 1977 categorical grants comprised 73 percent of the total aid to State and local governments.

During the past two decades the number of Federal programs has grown rapidly as well. There are now some 1,040 identifiable Federal programs which make money available to communities and individuals for special projects and development needs. Aid is available in many forms, including direct cash awards, loans and loan guarantees, technical assistance, insurance, scholarships, and donation of surplus property. These forms of assistance require an individual or community to apply directly to the Federal department or agency for the assistance. The entire application process for Federal assistance places a premium on the applicant's familiarity with the Federal programs and his ability to compete with sophisticated professionals whose stock in trade is grant application techniques.

I believe the entire process of applying for aid from the Federal Government is demeaning to the States and their elected local officials. It is unconscionable that information about program funding and availability have remained shrouded in secrecy for years by the Federal Government.

I speak from personal experience of the battle to unlock information about Federal programs. When I first came to Congress 10 years ago no one knew how many programs existed. There was no place that the State and local government officials could turn for full and complete information on Federal categorical programs. I conducted a study in 1968 and 1969 with a small staff to identify and describe for the first time every Federal program by name and department. The product of my investigation was published in 1969 as the fisrt detailed and comprehensive catalogue of domestic assistance programs. The Office of Management and Budget has continued to publish the Catalogue of Federal Domestic Assistance annually pursuant to OMB Circular No. A–89. Today, the Catalog is still the primary resource for program information available to the public.

HELP FOR LOCAL OFFICIALS

With the development of this information system a local official will be able to select a particular community project such as sewer construction, soil conservation, public housing or recreation facilities and request a listing of all Federal programs which make grants for that purpose. The center will furnish applicants with information about who to contact, where to apply, what restrictions are imposed, and whether any funds are available for the program.

The advantage to the use of a computerized catalog is that a local official is guided to the specific programs which have aid for certain purposes. The user does not have to page through the catalog trying to determine what each program offers.

A potential applicant would feed into the computer some basic information on his project needs and he would provide a simple profile of his community. The computer would then furnish a listing of all programs for which the individual meets the basic eligibility criteria. Thus, the local official would use the computer information center to specify what his needs are and he would receive a printed summary of available programs. The computer, will conduct a search in minutes that has often taken hours of the local official's time.

This comprehensive, quick and easy-to-use system offers a significant improvement over the cumbersome methods now in use. The difficulty that people have identifying programs which may prove to be a source of funds is often the most frustrating aspect of applying for Federal aid programs. Many local officials simply do not bother applying in locating funds and the administrative redtape.

The computerized information system which would be established by this legislation could be linked to States and communities throughout the Nation. Telecommunications technology is available today that permits data developed and stored in a central file to be transmitted to almost any other geographic location where there is compatible terminal equipment. If there are no terminals in a community it would be relatively easy to gain access to one in a neighboring community or county. A local official could telephone his request into a distribution center 20, 50, or 200 miles away in order to obtain access through a terminal to the central computer. The request would be processed in seconds and the printed summary of program information can then be mailed back to the outlying community official.

These distribution centers could include many types of Federal agency offices, State government offices, or private organizations. The bill imposes no restrictions on the types of offices which could provide access for the program information. Thus the terminal equipment may be located in a county office, a U.S. Department of Agriculture office. Governor's office, a Congressman's or Senator's office, a university office, a social security office, or a private business office. The intent of the legislation is to make the distribution as broad as possible.

INFORMATION REQUIREMENTS IMPROVED

Information on Federal programs will be collected and stored in a central information bank. This legislation specifies what information should be included.

The bill also requires disclosure of financial information including the amounts of funds appropriated for the current fiscal year, the amounts obligated in past years, the average amount of awards in past years, and current information on the amount of funds not already obligated nor otherwise committed. One of the weaknesses in the present domestic assistance catalog is that applicants often do not know whether any funds are actually still available for a program. The legislation mandates the center to provide accurate information on funds which are neither obligated nor committed and are therefore still available to applicants.

The legislation also provides for publication of the Federal Domestic Assistance Catalog with periodic supplements. The catalog would be published from the information contained in the data base maintained by the center.

ACTION DURING 94TH CONGRESS

The Program Information Act (S. 3281) passed the Senate on June 11, 1976, unanimously by voice vote. The Senate-passed bill (H.R. 14740) was introduced by Representative JACK BROOKS in the House of Representatives, and referred to the House Government Operations Committee. A companion bill (H.R. 13186) was also introduced by Representative CHARLES ROSE during the last Congress. No action was taken by the House, however, and the bill died with the October adjournment of Congress.

KEY PROVISIONS OF PROGRAM INFORMATION ACT

The key provisions of the Program Information Act are as follows:

Section 2 is a definitions section. Assistance is broadly defined to include transfers made to support activities with a general public purpose.

Section 3 establishes a Federal Program Information Center within the Office of Management and Budget and provides for a director.

Section 4 identifies the duties of the director to identify Federal programs and maintain information about them for the public.

Section 5 specifies the information requirements to be maintained for each program in the data base, and requires the director to maintain the data base with accurate and timely information.

Section 6 provides for establishing a computerized information system to provide wide public access to the information about programs in the data base.

Section 7 provides for annual publication cf a comprehensive catalog and specialized abridged versions for programs with similar functions.

Section 8 provides for the transfers to the center of current operation of the Federal Assistance Programs Retrieval System—FAPRS—in the Department of Agriculture and the Catalog of Federal Domestic Assistance in OMB.

Section 9 provides for a 3-year authorization with a total of $2.8 million to be authorized to be appropriated for the development of the center.

REVISIONS IN THE BILL

Several changes have been made in the bill that we are reintroducing today to strengthen its purposes and administrative provisions.

LOCATION OF CENTER

The bill establishes the Office of Management and Budget as the agency with administrative authority. OMB is closely involved in the coordination of intergovernmental relations with State and local governments. The functions of the center would be an important element of the vigorous central management role that OMB is intended to play in Federal-State relations.

FINANCIAL DATA

The information requirement for public disclosure about the availability of funds has been strengthened. The amount of funds requested by the President and the amounts expended in past years have been added as requirements. In addition a section has been added to provide for financial information on current awards identified by amount and geographic location of the recipient. These sections would provide for drawdown information for programs so that local officials will know whether there are actually funds remaining to be applied for. Congressmen, State planning officials, and Federal budget planners will also be able to determine the amounts of aid awarded to a particular jurisdiction or for a particular purpose. This financial information will be a great improvement over the inadequate methods of tracking funds and grant awards that are in use today.

INFORMATION SERVICES

The center will have added authority to develop information services with telecommunications equipment to further assist State and local governments obtain Federal assistance.

CATALOG OF PROGRAMS BY FUNCTION

The bill provides for the publication of an abridged catalog based on programs with related functions. This will permit user catalogs to be developed for programs for education, community development, housing, health, technical assistance, etc.

THE DEVELOPMENT OF FEDERAL INFORMATION SYSTEMS

There have been several experiments in the Federal Government to develop information systems to improve the coordination and management of the intergovernmental aid budget. Unfortunately, these experiments were never given sufficient commitment and direction from managers with government-wide responsibilities.

The most comprehensive was the Regional Management Information System which was developed in 1971 to provide for interagency and intergovernmental tracking of the status of grant applications and the dissemination of information to State and local governments on Federal programs and outlays. Later, a Budget Information System was proposed to provide a geographic and program breakdown of the annual budget. In 1973 the OMB, Census, and the Federal Regional Councils cooperated briefly to develop a computerized system—Socio-Economic Demographic System—to collect socio-economic data which would be shared across department lines.

In 1972 a proposal was made by the Dallas Regional Council to develop a computerized method for collecting Federal grant data from preapplication to award stages and for sharing the information with State and local governments. This plan was known as the Regional Grant Information System and became operational in the Dallas and Boston regions before being discontinued by OMB in 1974.

The most recent computerized information system is the Federal Assistance Programs Retrieval System developed in the Rural Development Service at the Department of Agriculture. FAPRS is a computerized program information system which provides information on Federal programs to local communities on rural development. The data on Federal programs stored in the computer is retrieved by any person or organization, by specifying basic characteristics such as population size and geographic location. These qualifying traits are matched with program eligibility requirements stored by the computer.

The Program Information Act would transfer the FAPRS System to the Program Information Center to be established at OMB and expand the data bank to include all Federal programs.

VALUE TO CONGRESSIONAL OFFICES

The information system envisioned by this bill would provide a valuable resource to congressional office as well as to citizens and State and local officials. Constituents who contact a Congressman seeking information about potential sources of funds for a district project could receive a complete list of programs for which they may be eligible and the amounts of funds remaining in the program yet to be obligated. This list could be provided in a matter of minutes by the congressional office by using simple terminal-printer equipment.

I urge my colleagues to examine this important legislation and support its passage. This bill is an important step in our efforts to make Government more manageable, more effective, and more responsive to the public, and it continues our commitment to open Government.

STATEMENT BY SENATOR WILLIAM V. ROTH, JR., APRIL 5, 1977, AT HEARING ON S. 904, THE FEDERAL PROGRAM INFORMATION ACT

This hearing is convened today to examine the feasibility and desirability of legislation intended to provide computerized access to information about Federal aid programs.

TRUTH IN GOVERNMENT

Last year the Senate approved sunshine legislation to open the door of government in the Departments and the Congress to the public. S. 904 which I have introduced with Senators Kennedy, Muskie, Percy, and Chiles extends our commitment to open government by upgrading public access to program information.

It is a matter of basic fairness to provide equally to all potential applicants who may be eligible adequate information about Federal grant money. I believe beneficiaries of Federal grant programs have a right to the full, fair and timely disclosure of program information and that the Federal government has a responsibility to make such information readily available.

This legislation would revolutionize the government way of doing business with Federal grant programs because it will mean that every citizen from the Mayor of Smyrna, Delaware to the President of Harvard University will have access to the same information about programs and funding availability at the same time.

It is hard to believe that citizens and local officials are prevented today from finding out what grants are available, what purposes they are supposed to serve, and whether funds actually remain for the potential recipient to apply for. But this is often the case.

Truth in government demands that citizens have equal access to information about how government spends their tax dollars. This bill is an important step forward in giving every citizen full and equal access to government information on Federal grants. Open government reforms will be meaningless if the door opens to government jargon, misleading statistics and bureaucratic hieroglyphics about programs. Access to misleading information is worse than having no information at all. We intend with this legislation that for the first time we will be opening not just the door to government but the government books on the dispersal of grant money to states and localities.

This truth in government legislation would establish an information center in the Office of Management and Budget to serve as a central reference service for information about program purposes, funding availability, application procedures, and program requirements. The center would provide computerized, up-to-date information to any-one—individuals, organizations, schools, communities, and local officials—on sources of federal aid and the availability of funds. This will be a tremendous service to local officials.

PROGRAM FRAGMENTATION

One of the central concerns in intergovernmental relations in recent years has been with Federal assistance programs. During the past two decades there has been astonishing growth and proliferation of special purpose aid programs. In 1950 the Federal expenditure for grants-in-aid was $2 billion. This year we will spend more than $70 billion. A comprehensive survey of the actual number of Federal programs just completed by this subcommittee in conjunction with the General Accounting Office shows that there are more than 1200 identifiable Federal programs.

In 1949 the Hoover Commission on government reorganization noted with certain alarm that there was "excessive fragmentation" in the Federal assistance effort to states and local governments. Its report noted that: "There are now at least three separate and distinct grants in the realm of education, at least three in public assistance, and ten in public health." Today, by way of comparison, there are more than 250 identifiable health programs and more than 150 Federal assistance programs for education.

The government has created a grants system intended to help serve our citizens by matching local needs with resources earmarked for special high priority purposes. The performance record in accomplishing this goal has been frustrated for years, however, by the red tape, complexity, and absence of information about assistance opportunities.

Last year in a report by the National Governors' Conference entitled, "Federal Roadblocks to Efficient State Government," the governors expressed their frustration with the needless administrative complexity in Federal grant programs. Program implementation is repeatedly delayed by the long approval process, the absence of program guidelines, a lack of coordination, and excessive paperwork requirements. Many local officials do not even bother trying to locate sources of Federal aid because they have neither the time nor resources to compete with professional grantsmen for limited financial resources. Their return on investment is too low to justify the paper chase with Washington.

The Advisory Commission on Intergovernmental Relations recently completed the most comprehensive examination of the Federal grant system ever conducted. It has made a thorough assessment of Federal grants management and published its findings and recommendations in a volume entitled, "Improving Federal Grants Management." The study documents the areas of weak coordination and management of Federal domestic programs and offers many recommendations for improving intergovernmental relations. The Commission documents major areas of weakness in the communication and consultation between Federal and local officials and recommends that Federal grant information systems be upgraded.

BREAKTHROUGHS IN TECHNOLOGY

Despite the recent history of growth in intergovernmental assistance, we have not witnessed a corresponding improvement in grants management and information systems. The tremendous breakthroughs in information technology of the past decade have not been utilized effectively to improve information systems in Federal grant administration.

It seems incredible that an airline firm can determine whether a seat has been booked for a ten o'clock flight two months in advance, but that the Federal government cannot tell the City of Seaford, Delaware whether there is money available to apply for in developing a community health facility. Yet this is true today.

How is it that any small town bank can provide a detailed record of your personal checking account each month but that the Federal government cannot provide your Governor with an accurate list of grants awarded to the communities in your state? It would surprise me if the number of grants awarded by the Federal government each year exceeds the number of transactions processed by the American Express Co. Yet, American Express can identify each transaction by location, date, and amount. What makes it unreasonable to expect the Federal government to account to the American public with a simple balance sheet of funding transactions showing the balance remaining?

This legislation would modernize the management of Federal assistance grants by providing, in effect, a bank statement on Federal programs to the public. In the absence of a profit motive for efficiency in government, this legislation mandates several management reforms which most businesses have long since adopted for their inventory and accounting departments.

S. 904 would be a giant step forward in improving both the access and the quality of information available to citizens and state and local officials.

The *Catalog of Federal Domestic Assistance* is the primary tool today for local officials trying to locate federal assistance. The catalog contains descriptions of the more than one thousand domestic aid programs. However the information is often outdated by the time a local official tries to use it. The local official must spend hours pouring over indexes, eligibility requirements, and program descriptions.

Once a prospect is identified, the applicant spends more hours preparing an application to document the need for a project. Months later, after the application is completed and processed, the local official may discover that all of the funds for the program have been committed and no funds are available. The time and money spent on the application is completely wasted. The American taxpayer pays twice for the same project—once through the Federal tax dollar to fund the program and again through the State and local tax dollars to pay for the time spent locating and applying for the Federal funds.

This type of Federal assistance using special purpose categorical grants has many shortcomings. Some of the administrative confusion can be reduced by improving the communication and coordination between Federal and local officials. However, the recurring management roadblocks to efficient and equitable distribution of categorical aid argues forcefully for further simplification and consolidation in grant programs.

FINANCIAL TRACKING DEMONSTRATION

For several years I have introduced legislation similar to S. 904 which would require the inclusion of budget information about program funding to be published in the catalog and its supplements. This legislation has passed the Senate four times but has never been approved by the House of Representatives. Throughout this period—now nearly seven years—the Office of Management and Budget has repeatedly raised technical objections against the inclusion of detailed budget information about Federal programs. OMB has never developed a means to overcome the problems of providing up-to-date budget information.

Last year, during hearings on similar legislation, I asked Paul Kugler of the Rural Development Service in the Department of

Agriculture whether he believed it was technically feasible to devise a financial reporting system for Federal programs. Paul is back today and is prepared to demonstrate a working model for a financial reporting system. This system would integrate funding decisions made in each agency into a computerized data system that can be accessed by state and local officials. He has developed this system largely on his own initiative. I am very proud of Paul and his staff for their persistence, determination, and enthusiasm. The model that he will demonstrate today may require considerable refinement before it could be implemented on a government-wide basis. However, the feasibility of such a tracking system has been proven. I congratulate Paul for his ingenuity and dedication. Much of his work on this system has taken place on his own time with very limited resources. In my estimation Paul's efforts exemplify the best in public service.

The disclosure of funding availability and grant awards envisioned by this legislation will reduce the opportunity for political favoritism and inequitable distribution of Federal assistance by opening the entire process to public scrutiny.

The financial tracking system would provide a series of reports which track spending activity and the flow of Federal program funds. The data that would be tracked includes the allocation of program funds, obligations against those allocations, the number and dollar amount of applications that have been accepted by program officials, the outlays that have been made, and the location of the grant recipient by town, city, county, Congressional District, or State. This information could be summarized in reports prepared for use by program managers, budget officers, local officials, citizens, or by Congressmen and Senators.

The information on the availability of funds will be extremely helpful to anyone planning to apply for a grant. Computerized access to program data by local officials will go a long way to assure that time and resources are not wasted in a fruitless search for Federal funds.

Senators and Congressmen will be greatly assisted by these advances in computerized data systems. For the first time, they would be in a position to respond quickly to constituent inquiries about programs for District projects. The access to programs and funding data through a computer terminal located in a congressional office will short cut the tedious and time-consuming telephone search required when looking for a program with funds available.

The computerized program data bank, such as the one demonstrated here today, will be an invaluable resource to the planning and budget process for Federal, State, and local officials. Furthermore, it promises to open Federal budget accounts to public scrutiny for inequities and favoritism.

This legislation is a logical step forward in fulfilling our commitment to open government and in making government more manageable, more effective, and more responsive to the public.

Mr. KENNEDY. Mr. President, I move that the Senate concur in the House amendment.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Massachusetts.

The motion was agreed to.

EXTENSION OF THE EMERGENCY NATURAL GAS ACT OF 1977

Mr. GLENN. Mr. President, I send to the desk a bill and ask for its immediate consideration.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Ohio?

There being no objection, the Senate proceeded to consider the bill (S. 2355) to extend the Emergency Natural Gas Act of 1977, which was read the first time by title and the second time at length.

Mr. GLENN. Mr. President, I ask unanimous consent that two members of my staff, Len Bickwit and Lyle Morris, be granted privilege of the floor during the consideration of this bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GLENN. Mr. President, this bill is very simple. I think it is needed.

If I might have the attention of my colleagues, I believe we can dispose of it in very short order.

We are aware of the problem we got into last winter during a very severe winter, particularly in the upper Midwestern States. At that time we encountered natural gas shortages that required emergency legislation.

Even after forecasts this fall of a very mild winter, we have already had about 3 weeks of very tough winter weather in the upper Midwest. We had thought that the conferees on the energy conference would have been able to pass a bill by this time which includes emergency gas legislation. But we cannot rely on that now.

The conferees are in agreement that they probably will not be able to complete their work before the holidays. Knowing the vagaries of the weather and not being able to predict it accurately, we feel that this Emergency Natural Gas Act, which we passed earlier in the year but which expired last summer should be reinstituted.

Most people, including many Members of this body, probably are not aware that the emergency authorities that were in the President's hands last winter are not in existence now. So we go into this winter not more prepared, not better able to cope with an emergency situation, but less prepared than we were last winter.

The bill I have sent to the desk—which I believe has been cleared on both sides of the aisle and with all the principals who were interested in the emergency natural gas legislation—is simple. It would reinstitute the old Emergency Natural Gas Act and put it into effect only until February 15. It would reinstitute the authority that we had in the Emergency Natural Gas Act. It would make no changes in it—no amendments, no differences whatsoever. It would put it into effect only until February 15, 1978, with the idea that Congress will be absent until January 19. When we return, we should have a better idea of whether we are in for a tough winter so far as natural gas is concerned.

I hope the bill will be voted on favorably and that he will have no objection to it. The bill would provide additional protection which is needed in this interim period, and a number of States are vitally interested in this.

In introducing this measure, I point out a few things about the subject of Hinshaw pipelines. Senator Johnston and I have talked about this subject, and he is in support of this legislation with the legislative history that I am about to make on it. First of all, although I was not the prime sponsor of the original Emergency Natural Gas Act of 1977, I did participate in its enactment. It was not my intention that the allocation provisions of section 4 of that act were to apply to allocation out of Hinshaw pipelines. I ask unanimous consent to have printed in the Record at this point some legislative history which was made on that act relating to gas flowing through Hinshaw pipelines and other intrastate gas which clarifies the position of those who were more prominently involved.

There being no objection, the material was ordered to be printed in the Record, as follows:

Mr. Johnston. On page 4, subsection (B), the President has the authority to require an intrastate pipeline to transport interstate natural gas from any interstate pipeline to another interstate pipeline or to any local distribution company served by an interstate pipeline for purposes of meeting such requirements.

My question is this: Does that power to order transportation of the gas in any way give the President the power to order the sale of intrastate gas or to order an allocation of intrastate gas?

Mr. Stevenson. No, this does absolutely nothing to permit a Presidential allocation of intrastate gas. As the Senator will remember, the Senate earlier today voted down an amendment that would have given the President such authority.

Mr. GLENN. Mr. President, in proposing to extend that act today, it is not my intention that Hinshaw pipelines be covered by the allocation provisions of the act. Further I have been told by Secretary Schlesinger that the administration does not intend to use the legislation which we are considering today to allocate gas out of Hinshaw pipelines. I ask unanimous consent to have printed in the Record at this point a letter from Walter Wurfel, Deputy Press Secretary at the White House, to Senator Johnston outlining the Secretary's position last year with respect to the whole subject to allocation of intrastate gas. He has made clear to me that the statement included in that letter is applicable as far as he is concerned to the administration's activities under the bill we are considering today.

There being no objection, the letter was ordered to be printed in the Record, as follows:

Dear Senator Johnston: Dr. James Schlesinger has asked me to release the following statement and provide it to you. In his words: "It has come to my attention that certain members of Congress from producing states have voiced concern that technical amendments inserted in the conference committee report would be used to allocate to interstate pipelines intrastate gas, produced in a state and sold in traditional intrastate markets in that state. I do not believe anything in the bill authorizes such action and we do not intend to allocate such intrastate gas under the bill."

Sincerely,

Walter Wurfel,
Deputy Press Secretary.

Mr. GLENN. Finally, Mr. President, let me state clearly my intention that the passage of this bill should not pre-empt the conferees on the natural gas provisions of the National Energy Plan legislation in any way. Most specifically, it should not preclude action by the conferees either to include or exclude Hinshaw pipelines from the reach of the emergency natural gas provisions that are contained in the final version of the legislation.

Mr. BAKER. Mr. President, I point out, for the benefit of my colleagues, that the distinguished Senator from Ohio checked with me before this matter was scheduled for action; and I, in turn, checked with the ranking member of our jurisdictional committee, who also agrees that this is an appropriate and desirable economic measure.

This is similar in all respects to the action that was taken at the very beginning of this session of Congress to deal with an emergency situation. I believe it is appropriate that we should do so again today, under these circumstances.

Mr. GLENN. I appreciate the remarks of the distinguished minority leader.

Mr. DURKIN. Mr. President, will the Senator yield for a question?

Mr. GLENN. I yield.

Mr. DURKIN. As the Senator from Ohio knows, last year, when this same piece of legislation was on the floor, I entered into a colloquy with the then author, the Senator from Illinois (Mr. STEVENSON).

We in New Hampshire get about 4 percent of our energy from natural gas, but that 4 percent is very vital, and that would be interrupted when there would be interstate pipelines in the western part of the country that had surplus or excess gas.

It is my understanding that the same colloquy that I had with Senator STEVENSON will be included in the RECORD in conjunction with the measure of the Senator from Ohio. I ask unanimous consent that that colloquy be printed in the RECORD as part of the debate on this measure.

I commend the Senator from Ohio for moving on something that could be very important before we reconvene.

Mr. GLENN. I thank the Senator from New Hampshire for his comments.

It is my understanding that any colloquy that occurred which gave illumination to an understanding of the previous legislation, when it was passed originally, would apply to this legislation.

I am not trying to change it in any way; only to reinstitute the act until February 15, 1978, so that we have some protection this winter.

Mr. DURKIN. I did not hear objection, so I gather that unanimous consent has been obtained to insert last year's colloquy in the RECORD at this point.

The PRESIDING OFFICER. Without objection, it is so ordered.

There being no objection, the colloquy was ordered to be printed in the RECORD, as follows:

UP AMENDMENT NO 13

Mr. DURKIN. Mr. President, I have an amendment at the desk cosponsored by Mr. Hathaway, Mr. McIntyre, and Mr. Abourezk.

The PRESIDING OFFICER. The clerk will state the amendment.

The legislative clerk read as follows:

The Senator from New Hampshire (Mr. Durkin) proposes unprinted amendment No. 13:

On page 5, after line 2, insert the following:

"(3) No order may be issued under this subsection unless it provides for emergency deliveries of natural gas from those pipelines delivering, directly or indirectly, to lowest priority users at the time of the order, and unless the President has determined that emergency purchases under Section 6 cannot be made to meet essential requirements for high-priority uses."

Mr. DURKIN. I thank the Chair.

Mr. President, I offer this amendment because the language of the technical amendment which appears in section (B) at the top of page 5 addresses this problem in a rather general way. The impact of this amendment, my amendment, would be taking into consideration the fact that we are not going to go into the intrastate market.

As I understand it, we are not going to take the gas that is properly available in the intrastate market. Rather, we are going to allocate or reallocate from interstate pipeline to interstate pipeline.

The effect of my amendment is to require that the President take the gas from the pipelines which are serving the lowest priority before moving to those that are serving a higher priority. For example, if one of the pipelines in the West is providing gas for priority 3, 4, 5, or 6, allocation orders would affect the pipelines providing the lower priority gas before ordering a pipeline that was providing gas to a higher priority user. The President would take gas from a priority 5 provider before they went to a pipeline that was providing gas for priority 4. In this way it would prevent what some of us feel would be a problem.

I think it was a mistake that this bill does not allocate gas in the intrastate market, but I think that mistake can be ameliorated to a certain extent by the adoption of my amendment, taking into consideration that otherwise the gas from interstate pipelines such as those serving New Hampshire and New England may be diverted, while some other pipeline in the western part of the country has excess gas that is being given and provided to a much lower priority user for boiler fuel or other such purpose.

The floor manager of the bill indicates that he feels much of that language he has made as a technical amendment at the top of page 5 incorporates my amendment. But if it is the opinion of the floor manager of the bill that my amendment is already incorporated therein, I will urge him to accept it and then we can proceed.

Mr. STEVENSON. Mr. President, I sympathize with the purpose of this amendment. However, the intent is accomplished in section 4(A)(2)(B) on page 5.

The only problem I have with the amendment offered by the distinguished Senator from New Hampshire is that it is so specific and so rigid, that it may be impossible to comply with. The provisions in the bill on page 5 in subsection (B) are intended to require the President, in the exercise of his allocation authority, to take gas from pipelines fairly and proportionately so that one is not required to give more than another, or permitted to serve lower priority customers than the next.

But to say that no order may be issued unless it provides for emergency deliveries from those pipelines delivering to the lowest priority users at the time of the order may be impossible to perform, since the actual facts can vary from day to day.

It also says that the President will have to determine that purchases under section 6 cannot be made to meet essential requirements for high-priority uses before he makes his allocations. That is exactly the intention of the legislation. There is no intention of exercising the allocation authority except in those cases where emergency purchases have failed to produce the supplies of gas that are necessary to serve the highest priority users.

That, too, it seems to me, is unnecessarily tight and burdensome.

For those reasons, and because it is the intention of the bill to require fair distribution of gas from the donating pipelines only after emergency purchases have failed, I hope the Senator will consider withdrawing his amendment. This might prove, in practice, to be an impossible test. I believe the language of the bill as it is written is enough to accomplish the Senator's objective.

Mr. DURKIN. Well, can the Senator elaborate for the record what he means by "disproportionate share"? What does the Senator mean by a disproportionate share?

Mr. STEVENSON. There are colloquies in the record on this subject already. But what the President would do would be to look at the totality of the gas in a pipeline and other pipelines and require each pipeline to basically give up the same percentages. That is what is intended by disproportionate share. They would give up the same proportionate shares of their total gas, and to do that he will have to take some from one and some from another in order to equalize the contributions.

Mr. DURKIN. It is my understanding there are interstate pipelines in the West with excess gas. Would he be required by the Senator's understanding of the language of the intent to take that excess gas from the West before curtailing by an even percentage the gas at the remaining lines?

Mr. STEVENSON. Yes. The language also requires the President to consider the levels of curtailments so that if a pipeline were already in curtailment, the President would not go to that pipeline first; he would go to the pipeline that has the surplus. It is intended to take into account both considerations. In the Senator's situation, if there is a pipeline with a surplus of gas and another pipeline that is in curtailment, he would take the surplus first.

Mr. DURKIN. It is the Senator's feeling and opinion, is it not, that, say, pipeline x has extra gas, he would take all that extra gas, and then the five remaining pipelines would all give up an equal percentage of gas?

Mr. STEVENSON. If they started out on the same level of curtailments.

Mr. DURKIN. What is the Senator's opinion with respect to section (b) as he amended it by his technical amendment this morning? How does that impact on interstate pipelines that are providing several priorities now and are providing more than one priority level?

Mr. STEVENSON. I am not sure I understand the question fully. It is difficult for me to postulate a given situation that is not before us. I cannot tell the Senator what the effect would be on one specific pipeline or another. The President is going to be faced with a situation at a given time and have to make allocations on the basis of the amount of gas that is available to the pipelines and their levels of curtailments, with the end result under this language that they are all going to be treated fairly and those with surplus gas will be the first to lose gas. I cannot tell the Senator which pipeline is going to be affected. Nor can anyone else.

Mr. DURKIN. I gather, then, we really have to take the Senator on faith that each pipeline will be treated fairly. "Disproportionate" is not defined by virtue of any percentage.

Mr. STEVENSON. If the President abuses his authority, there are procedures for hearings and for judicial review established in the bill.

Mr. DURKIN. But, nonetheless, the leeway is such that "disproportionate" is left sufficiently broad so that it seems to me to be analogous to overturning a Federal judge for abuse of discretion or proper use of discretion. There is no effective standard for disproportionate.

Mr. STEVENSON. The President under this provision is required to consider the proportionate shares of deliveries and also the curtailments that result from his allocations. I do not know how to make it more explicit than that. To go further I fear will tie his hands and result in conditions so restrictive that they are impossible to comply with.

Mr. DURKIN. I do not think anyone is trying to tie his hands, but if I can be assured of the intent of the act I will be satisfied. Is it the Senator's understanding that the gas must be taken from the pipelines with a surplus—we understand the West has excess gas—before they start disrupting long-term contracts in other areas of their curtailments in order to spread the I will feel comfortable in withdrawing the amendment and getting on to final passage and getting the bill to the House of Representatives as soon as possible. But we have a problem. Tenneco supplies New Hampshire. We have long-term contracts. New Hampshire industry is taking steps to make sure that they have a sufficient supply of gas for their contracts. I would hate to see that gas diverted to some other area before the gas is taken from the Western and Southwestern pipelines where it is my understanding there is excess gas. If I can have that assurance from the distinguished floor manager, then I do not think there is necessity to press language which could cause difficulties for the President or his designee in carrying out the intent of the act.

Mr. STEVENSON. The Senator has my assurance. It would be unwise and it would be unfair to acquire allocations in the situations that the Senator has postulated. That is not the intention and that will not be the result of this language, first allocation will come from pipelines with a surplus. They will take into acount the proportionate share of allocation contributed by all pipelines and levels of their curtailments in order to spread the burdens equitably after having first used up any surplus gas.

Mr. DURKIN. In other words, will the floor manager indicate his opinion that to act in the manner that I have expressed reservations about would in fact produce a disproportionate result?

It is an easy "yes."

Mr. STEVENSON. The answer is yes.

Mr. DURKIN. I thank the Senator.

Mr. President, in light of the explanation of the floor manager that the excess gas in pipelines will be taken from the West before contracts such as ours at home are interrupted, I withdraw my amendment.

Mr. GLENN. Mr. President, additional cosponsors of this measure are Mr. HEINZ, Mr. HOLLINGS, Mr. JOHNSTON, Mr. MORGAN, and Mr. SCHWEIKER.

Mr. RANDOLPH. Mr. President, will the Senator yield?

Mr. GLENN. I yield.

Mr. RANDOLPH. Mr. President, I ask unanimous consent that my name be added as a cosponsor of the measure.

The PRESIDING OFFICER. Without objection, it is ordered.

Mr. RANDOLPH. Mr. President, I use this opportunity not at length but in substance to express genuine appreciation for the continuing leadership of the Senator from Ohio in this area of insuring a sound industrial base in the State of Ohio and the furnishing of needed heating facilities not only for the business sector of his State but also for the men and women who work in the plants. The Senator from Ohio has done a good job, and I commend him.

I support passage of this bill (S. 2355) introduced by Senator GLENN which extends the provisions of the Emergency Natural Gas Act of 1977 to deal with natural gas shortages, should they occur this winter. This legislation expired on August 1, 1977. The legislation before us would extend its provisions until February 1, 1978.

Curtailments of natural gas which began about 6 years ago increased to a point where interstate pipeline deliveries according to the American Gas Association were curtailed nationally last year by an average of 19 percent. This is roughly the equivalent to 1.5 million barrels of oil per day.

In our State of West Virginia natural gas supplies at least 21 percent of our energy needs and over 70 percent of the homes use natural gas.

Many industries dependent on natural gas in West Virginia have, in the past experienced severe curtailments—last winter 11,804 thousand cubic feet of industrial gas.

This year's curtailments are hoped to be less severe—possibly 5,807 thousand cubic feet—due to forecasts of a milder winter.

Any curtailment in gas transmission and distribution are undesirable but if emergency shortages do occur we must, as a Nation be able to respond. We must make sure that priority users receive allocations which will permit them to keep producing. Important among these are the steel and glass industries which could not economically change over in a short period of time to alternative fuel sources. Hardest hit would be the industrial sector producing stone, clay, and gas products, chemical and allied products, and primary metals.

Mr. President, I feel that it is necessary that while Senate and House conferees work to establish new procedures for natural gas pricing that we have a safeguard against unrestricted and unwise curtailments in the industrial sector, while also assuring our residents of continued and adequate amounts of gas for their home heating needs.

Senator GLENN's legislation will extend emergency relief measures enacted last winter which helped us to offset the effects of severe natural gas shortages. I urge my colleagues to support the passage of this extension.

Mr. GLENN. I thank the distinguished Senator for his comments.

Mr. MORGAN. Mr. President, I support the extension of the Emergency Natural Gas Act of 1977.

My State of North Carolina is one of the most vulnerable if a winter such as last year's strikes the Nation again. We are served by but a single pipeline. That is our sole supplier of natural gas.

Last year, when one very cold day followed another, the supply of natural gas available to North Carolina was sufficient to heat our homes, but not sufficient to serve all of our industrial needs.

Owners of plants that use gas in their operations became panicky as the prospect of having to shut down faced them. Many people were threatened with unemployment as gas supplies dwindled. I don't want that to happen again if a protracted cold spell comes again this winter.

Retaining the power of the Government to make emergency allocations and shift gas supplies to where they are needed worst will remove a part of the threat. This action will allow the Government to retain that emergency power.

The portion of the 1977 act which permits the purchase of intrastate gas for transmission through the interstate pipelines is also badly needed by industry. Some of our plants have arranged for alternative energy sources if gas becomes available, but there are some industries in our State which can use no other fuel than gas. The threat that they might have to close in an emergency would be greatly lessened by extension of this section of the Gas Act.

We do not know what this winter will bring. But unless the power to make emergency allocations by the Government is retained and unless the pipelines are given permission to purchase intrastate gas, North Carolina and several other vulnerable States may suffer.

Mr. President, passage of this legislation would do much to remove a threat to the economy and I hope the Senate will act swiftly to approve this extension of the Natural Gas Act.

Mr. GLENN. Mr. President, I ask unanimous consent that the name of the Senator from Maine (Mr. MUSKIE) be added as a cosponsor of this bill, in addition to the others I mentioned a moment ago.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GLENN. Mr. President, I am prepared to vote on this matter. I will be happy to accept a voice vote.

Mr. STEVENS. Mr. President, I want to make one comment about this bill.

I supported and helped work on it the last time, and I understand the reason why it has been offered now. But the implication is there that if the bill that the administration sought had come out of the conference committee, any possible emergency that arose this winter would have been met by that bill. That is not correct.

I support this bill because it is necessary to help these areas if in fact there is a bad winter and they need additional gas, and this mechanism did work before. But I do not believe the record should have the implication that the administration's bill was not passed. In my opinion, the administration's bill would not have gotten any gas out to meet the emergency had it occurred during this winter period. I say that with due respect to my good friend from Ohio, who I think is entirely in order in seeking the extension of this emergency authority. But I do not believe the implication should be there that had the conference committee succeeded as the administration sought to have the bill framed, this action would have been unnecessary by Congress.

Mr. GLENN. Mr. President, I respond to the Senator from Alaska by saying that it was not my intent to criticize one side or the other in the conference committee. I am not taking sides on that issue. I wish to stay out of that. I know the problems involved there.

If my previous remarks indicated my preference one way or the other, or if this bill addressed one side or the other in the conference committee, I hope I did not give that impression. If I did, I want to correct it. I am only trying to get this authority, which I think the President needs. If the conferees agree on whatever they agree on, then it will be their option to wipe this out at that time—if it were passed in the next few days, for example.

I only want to get this emergency authority in the hands of the President, so that if we do have a tough winter, it can protect us all.

I thank the Senator from Alaska for pointing that out.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

S. 2355

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Emergency Natural Gas Extension Act of 1977".

SEC. 2. The Emergency Natural Gas Act of 1977 is amended as follows:

(a) in section 4(a)(1), by striking out "April 30, 1977" and inserting in lieu thereof "February 15, 1978";

(b) in section 4(f)(2)(A), by striking out "by August 1, 1977, to the maximum extent practicable";

(c) in section 6(a), by striking out "August 1, 1977" and inserting in lieu thereof "February 15, 1978"; and

(d) in section 9(c), by striking out "August 1, 1977" and inserting in lieu thereof "February 15, 1978".

Mr. GLENN. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I compliment the distinguished Senator from Ohio (Mr. GLENN) for his thoughtfulness, foresight, and vision in taking the action today to extend the emergency authority which might be needed in the event of a national emergency before Congress reconvenes in January.

He is to be highly commended, and I am sure that the Senate and the people of the country are in his debt.

Also, while I am on my feet, Mr. President, I compliment the new Senator from Arkansas for the diligence, skill, and equanimity with which he presides over the Senate at this particular time. It is his first day in the Senate. He has just been sworn in a few hours earlier, and he is acquitting himself as a Presiding Officer as any veteran Senator should and would.

Mr. THURMOND. Mr. President, I ask unanimous consent that Mr. Mike Mishoe, of my staff, and Mr. Ken Fish, of the staff of the Committee on Armed Services, be accorded the privilege of the floor today during consideration of all legislative matters.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

APPOINTMENTS BY THE VICE PRESIDENT

The PRESIDING OFFICER. The Chair, on behalf of the Vice President, pursuant to Public Law 86-42, appoints the Senator from Maine (Mr. HATHAWAY) as chairman to the Canada-United States Interparliamentary Conference, to be held in New Orleans, La., February 9–13, 1978.

The Chair, on behalf of the Vice President, appoints the following Senators to be delegates to the U.S.-U.S.S.R. Parliamentary Visit, to be held in Washington, D.C., January 22–26, 1978: the Senator from California (Mr. CRANSTON), chairman; the Senator from Alabama (Mr. SPARKMAN); the Senator from Idaho (Mr. CHURCH); the Senator from Connecticut (Mr. RIBICOFF); the Senator from Minnesota (Mr. HUMPHREY); the Senator from Iowa (Mr. CLARK); the Senator from Iowa (Mr. CULVER); the Senator from North Carolina (Mr. MORGAN); the Senator from Colorado (Mr. HART); the Senator from Vermont (Mr. LEAHY); the Senator from Nebraska (Mr. ZORINSKY); the Senator from Ohio (Mr. METZENBAUM); the Senator from New York (Mr. JAVITS), cochairman; the Senator from Illinois (Mr. PERCY); the Senator from Delaware (Mr. ROTH); the Senator from Connecticut (Mr. WEICKER); the Senator from Vermont (Mr. STAFFORD); the Senator from Virginia (Mr. SCOTT); the Senator from Rhode Island (Mr. CHAFEE); the Senator from California (Mr. HAYAKAWA); and the Senator from Wyoming (Mr. WALLOP).

THE B-1

Mr. GOLDWATER. Mr. President, might I have the attention of the majority leader?

Because both the chairman of the Armed Services Committee and the ranking member of the Appropriations Committee are in the Chamber, I ask about what time we could expect to have the matter of the B-1 brought up?

Mr. STENNIS. Mr. President, if the Senator will yield to me, I just conferred with the floor leader here, and he can speak for me if he wishes.

Mr. ROBERT C. BYRD. Mr. President, no one can speak for the Senator from Mississippi. I prefer that he proceed.

Mr. STENNIS. Mr. President, I just make this point this way. Of course, we are trying to get ready to proceed on the B-1. However, there are complications. I think within 20 to 25 minutes for my part I will have all the information I need to make a recommendation about it, but I cannot do it just now.

Another point I make is if we are going into this by a unanimous-consent vote, we have to reach an agreement, as I see it, to have limited time and vote on all of the items that might be brought up about the B-1, for instance, in the motion to concur with the House of Representatives, and if that did not prevail, then I would have a motion to reject the House's position, and there could be a motion to reconsider, and so forth. If it got to the point of final passage of the report, we would have an agreement on that.

I think those agreements would almost have to all be made at the same time; otherwise, we will not know where we are.

Mr. GOLDWATER. Mr. President, I shall make a further inquiry. Many of us have traveled across the United States for this one matter, and if we had some rough idea of when the subject would be brought up—I do not think it will take long in discussing—it would be of benefit to all of us. We do not like to stay around the Chamber hoping and praying and then wind up without any action.

Mr. STENNIS. I think the Senator must be talking to someone else. I just said that I have been doing everything I can possibly do to get this matter to a place where I can make a recommendation and then others may have other recommendations. This I do not know. But I have in mind trying to reach the point where we can agree on the vote.

Mr. ROBERT C. BYRD. Mr. President, may I substantiate what the distinguished chairman has just said, not that it needs any verification or substantiation from me, but the Senator from Mississippi has just indicated to me that within 20 to 30 minutes he feels he will be in possession of such information as he hopes to have before he makes a decision as to whether or not to proceed. So Senators will not be kept waiting.

Mr. GOLDWATER. That is what I wanted to know, and I thank both the Senators.

PRIVILEGE OF THE FLOOR—H.R. 3199

Mr. MUSKIE. Mr. President. I ask unanimous consent that during consideration and voting on the conference report on H.R. 3199, the following staff members be granted privilege of the floor: John Yago, Leon Billings, Bailey Guard, Richard Harris, Sally Walker, Wes Hayden, James Range, and Hal Brayman from the Committee on Environment and Public Works; Victor Maerki of Senator ROBERT STAFFORD's office; and Mimi Feller of Senator JOHN CHAFEE's office.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION FOR APPOINTMENT OF SPECIAL DELEGATION TO HOST SOVIET DELEGATION

Mr. CRANSTON. Mr. President, I send a resolution to the desk and ask for its immediate consideration.

THE PRESIDING OFFICER. The clerk will state the resolution by title.

The assistant legislative clerk read as follows:

Authorization for the appointment for a special delegation to host a delegation of members of the Supreme Soviet of the U.S.S.R.

The PRESIDING OFFICER. The Senate will proceed to its immediate consideration.

Mr. CRANSTON. Mr. President, this resolution has been cleared on all sides with the leadership. It follows through on the activities of the delegation that has just been appointed by the Senate to meet with representatives of the Soviet Union who will be here in January, representatives from their Supreme Soviet, and it authorizes those activities and provides funding therefor.

Mr. President, this resolution authorizes the President of the Senate to appoint a special Senate delegation to host a delegation of parliamentarians from the Supreme Soviet of the U.S.S.R. The resolution further stipulates that the expenses of our Senate delegation will be paid from the contingency fund of the Senate and will not exceed $25,000.

Earlier this year, the congressional leadership extended an invitation to members of the Supreme Soviet to visit the United States. The invitation was accepted and I am pleased to announce that on January 22, 10 members of the Supreme Soviet will be arriving in Washington. Mr. President, the delegation consists of 10 distinguished members of the Supreme Soviet, of whom 7 are from the Soviet of the Nationalities and 3 from the Soviet of the Union. The visiting delegates will be:

1. Boris N. Ponomarev, head of delegation; Deputy, Soviet of Nationalities; Chairman, Foreign Affairs Committee, Soviet of Nationalities, Supreme Soviet of the USSR; Alternate Member of the Politburo of the Central Committee of the CPSU; Secretary of the Central Committee of the CPSU.

2. Georgi A. Arbatov, Deputy, Soviet of Nationalities; Member, Foreign Affairs Committee, Soviet of Nationalities, Supreme Soviet of the USSR; Director, Institute of American and Canadian Studies of the Academy of Sciences of the USSR.

3. Victor I. Dovbish, Deputy, Soviet of the Union; Member, Committee on Education, Science and Culture, Soviet of the Union, Supreme Soviet of the USSR; miner from Donbass.

4. Georgi A. Zhukov, Deputy, Soviet of Nationalities; Member, Foreign Affairs Committee, Soviet of Nationalities, Supreme Soviet of the USSR; Political observer of the newspaper "Pravda".

5. Leonid M. Zamyatin, Deputy, Soviet of Nationalities; Member, Foreign Affairs Committee, Soviet of Nationalities, Supreme Soviet of the USSR; General Director of TASS (Telegraph Agency of the Soviet Union).

6. Nickolai N. Inozemtsev, Deputy, Soviet of the Union; Member, Foreign Affairs Committee, Soviet of the Union, Supreme Soviet of the USSR; Director, Institute of World Economy and International Relations of the Academy of Sciences of the USSR.

7. Zoya P. Pukhova (Mrs.), Deputy, Soviet of the Union; Member of the Presidium of the Supreme Soviet of the USSR; Manager textile factory, City of Ivanovo, Russian SFSR.

8. Boris I. Stukalin, Deputy, Soviet of Nationalities, Supreme Soviet of the USSR; Chairman, State Committee of the USSR Council of Ministers on Publishing, Printing and Book Trade.

9. Alexander B. Chakovsky, Deputy, Soviet of Nationalities; Member, Foreign Affairs Committee, Soviet of Nationalities; Supreme Soviet of USSR; Editor-in-Chief of "Literaturnaya Gazeta".

10. Lev B. Shapiro, Deputy, Soviet of Nationalities; Member, Foreign Affairs Committee, Soviet of Nationalities, Supreme Soviet of the USSR; First Secretary of the Regional Committee of the Jewish Autonomous Region.

During that week of January 22, both Senate and House delegates will be afforded an opportunity to engage in frank and informal discussions with their counterparts from the Soviet Union. These discussions may cover a broad range of issues of mutual concern as well as issues that divide our two nations such as the implementation of the Helsinki agreement, arms control initiatives, and developments in the Middle East, Africa, and other parts of the Third World. I look forward to meeting and getting to know all the members of the Soviet delegation and trust that the visit will be both candid and productive.

Mr. President, I ask unanimous consent that the Senate agree to this resolution.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 334) was agreed to as follows:

Resolved, that the President of the Senate is authorized to appoint a special delegation of members of the Senate to host a delegation of members of the Supreme Soviet of the U.S.S.R. and to designate the co-chairmen of said delegation.

Sec. 2. (a) The expenses of the delegation, including staff members designated by the co-chairmen to assist said delegation, shall not exceed $25,000, and shall be paid from the contingent fund of the Senate upon vouchers approved by the co-chairmen of said delegation.

(b) The expenses of the delegation shall include such special expenses as the co-chairmen may deem appropriate, including reimbursements to any agency of the Government for (1) expenses incurred on behalf of the delegation, (2) compensation (including overtime) of employees officially detailed to the delegation, and (3) expenses incurred in connection with providing appropriate hospitality.

(c) The Secretary of the Senate is authorized to advance funds to the co-chairmen of the delegation in the same manner provided for committees of the Senate under the authority of Public Law 118, Eighty-first Congress, approved June 22, 1949.

PRIVILEGE OF THE FLOOR

Mr. HAYAKAWA. Mr. President, I ask unanimous consent that my staff member Jan Olson, and the staff member of the Steering Committee, Margo Carlisle, have the privileges of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

DISTRICT OF COLUMBIA SELF-GOVERNMENT ACT AMENDMENT

Mr. ROBERT C. BYRD. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on S. 1063. This request has been cleared on all sides.

The PRESIDING OFFICER laid before the Senate the following message from the House of Representatives:

Resolved, That the bill from the Senate (S. 1063) entitled "An Act to amend the District of Columbia Self-Government and Governmental Reorganization Act", do pass with the following amendments:

Strike out all after the enacting clause, and insert: That section 490 of the District of Columbia Self-Government and Governmental Reorganization Act, relating to revenue bonds and other obligations, is amended by adding at the end thereof the following new subsection:

"(f) The fourth sentence of section 446 shall not apply to (1) the transfer to a private college or university of funds derived from the sale of any revenue bond, note, or other obligation issued pursuant to an act under this section solely to finance, or assist in the financing of, facilities for such college or university, or (2) the payment (as to either principal or interest or both) of any such bond, note, or other obligation.".

Amend the title so as to read: "An Act to amend the District of Columbia Self-Government and Governmental Reorganization Act with respect to the payment of certain revenue bonds issued by the Council of the District of Columbia.".

Mr. ROBERT C. BYRD. Mr. President, I move the Senate concur in the House amendments.

The motion was agreed to.

TECHNICAL CORRECTIONS TO H.R. 7738

Mr. ROBERT C. BYRD. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives on House Concurrent Resolution 443.

The Presiding Officer laid before the Senate a message on House Concurrent Resolution 443 requesting the President to return the enrolled bill (H.R. 7738) with respect to the powers of the President in time of war or national emergency, and providing for its enrollment with technical corrections.

There being no objection, the resolution was considered and agreed to.

CHARLES P. BAILEY

Mr. ROBERT C. BYRD. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on H.R. 8212. This request has been cleared with Senator Long with the minority leader and Senator Curtis, and all the way around.

The Presiding Officer laid before the Senate H.R. 8212, an act for the relief of Charles P. Bailey, which was read twice by its title.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

The bill was ordered to a third reading, was read the third time, and passed.

ORDER INDEFINITELY POSTPONING S. RES. 293

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Calendar Order No. 556 be indefinitely postponed.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum while awaiting papers from the House on the clean water conference report.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE MEETING

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Subcommittee on the Constitution of the Committee on the Judiciary be authorized to meet during the session of the Senate today to consider S. 2300, the Civil Rights Commission Act of 1978.

This request has been cleared all the way around.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STONE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

YEAREND REPORT OF THE MINORITY—ORDER FOR PRINTING AS A SENATE DOCUMENT

Mr. BAKER. Mr. President, I ask unanimous consent that my yearend report as minority leader be printed in the RECORD at this point.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT OF THE MINORITY

Ten years ago another Senator stood where I stand today and presented to the Senate the traditional end-of-the-year Report of the Minority.

The Minority Leader was concerned about the direction America was going in that troubled year of 1967, when our Nation numbered among its troubles the war in Vietnam, riots in American cities, a six-day war in the Middle East, an alarming increase in violent crime, serious strains in the NATO alliance, and the ominous force of inflation in a "guns and butter" economy.

Senator Dirksen, seeing all of these difficulties and finding little hope of improvement, asked the Senate, as only he could, "Quo vadis? Whither America?"

In the decade that has passed since then, America's path has been strewn with shattered illusions and darkened by near-constant adversity.

The war in Vietnam raged on for eight more destructive years. Two of this Nation's most dynamic leaders were struck down by assassins' bullets, and a third was wounded so gravely he may never walk again.

An ambitious war on poverty was waged and lost by a massive army of bureaucrats, and the casualties of that losing battle included not only the disillusioned and desperate poor but the overburdened middle class, as well.

America learned that there are limits even to the great store of natural resources with which this Nation has been so richly blessed.

Our national economy suffered the worst recession in forty years and the worst inflation in fifty—at the same time. The most traumatic political scandal in our history forced a President of the United States to resign his office—a scandal that shook the foundation of trust on which our system of government is based.

But all through this journey of sorrow, America survived—sustained by the character of our people, the strength of our institutions, and the grace of God.

The leadership of the Nation has changed dramatically in this tumultuous decade. In the past ten years we have been governed by four President, five Vice Presidents and 968 different Members of Congress.

The issues have changed with the years, as well. War has been replaced by its "moral equivalent" as the number one topic of national debate. We have spent most of this year talking about energy, perhaps because the word was hardly mentioned at all a decade ago.

Thanks in no small measure to the strong and steady leadership of Gerald Ford over two and a half crucial years, the heavy atmosphere of unrelenting crisis in our land has been dispelled. The country got back to normal. The Senate has gotten down to an agenda of important work we have neglected too long.

It is this sweeping transition—this changing of the guard, this redirection of interests, this latter-day "return to normalcy"—which, more than anything else, tells the story and defines the importance of the year 1977.

We have, of course, a new President and a new Administration. But the transition can also be vividly seen in the Senate itself.

We have a new presiding officer, our distinguished former colleague from Minnesota, Vice President Mondale.

We have a new Majority Leader, the remarkable Robert Byrd, with whom I have enjoyed a flawless relationship this year, and whose performance has been a model of accommodation, parliamentary skill, courage, and devotion to the Senate above all.

We have a new Majority Whip, the wise and diligent gentleman from California, Alan Cranston. We have even created a new leadership position for the most beloved and admired man in this chamber, Hubert Humphrey.

On this side of the aisle, I am giving the Minority Leader's report for the first time. Ted Stevens has done a truly outstanding job in his first year as Assistant Minority Leader, and I take this opportunity to thank him for the valuable and talented service he has performed this year.

Both Senator Stevens and I are indebted to Carl Curtis for so deftly managing the Republican Conference; to Clifford Hansen, the able Secretary of the Conference; and to John Tower and the Policy Committee for developing some very imaginative and comprehensive policy initiatives this year.

I wish to add a special word of commendation for the freshman class of Republican Senators, who constitute the most promising group of political leaders I have seen in a long time, and who have added immeasurably to both the effectiveness of the Minority and the work of the Senate.

So much has changed, it is as difficult to believe as it is dismaying to report that Republicans in this first session of the 95th Congress have been badly outnumbered. The score this year reads: Democrats 61, Republicans 38, Harry Byrd 1.

But I am proud to report that, despite our numerical disadvantage, the Republican Minority has compiled a record of formidable legislative accomplishment in 1977.

We have exerted a positive force on such major issues as energy development and economic stimulus, and we have performed with equal zeal the important role of ensuring the defeat of legislation that was unwise, unnecessary, uneconomical, or otherwise unacceptable.

The secret to our success has been in the remarkable degree of unity and cohesion that Republican Senators have found this year. As representatives of a political party which has produced its own version of Star Wars in the recent past, we in the Senate have found that there is far more that unites us as Republicans than divides us, and in this unity we have found great strength.

We have used this strength, we hope, constructively. We and our colleagues on the other side of the aisle share many common goals, and while we have our differences on how to reach those goals, we do our best to disagree agreeably.

The Senate has been pulled in a hundred directions this year, with Administration pronouncements and proposals on energy, human rights, economic stimulus, strategic arms limitation, election reform, government reorganization, and more.

But the quantity of issues addressed does not define the quality of the programs. There has been no discernible pattern to these Administration proposals, and one is reminded of Winston Churchill's fabled complaint: "This pudding has no theme."

In both domestic and foreign policy, the Carter Administration seems to have scattered its seeds to the wind, and finds itself after one year's labor with a meager harvest, indeed.

On the issue of energy, despite expert testimony indicating a sizable reserve of domestic oil and gas—a reserve whose recovery will be increasingly difficult and expensive—the new Administration has dismissed the possibility of substantially increasing domestic energy production and has concentrated to an inordinate degree on conservation of resources already at hand.

This energy policy proved ill-conceived and inadequate to the Nation's needs. Energy lobbyists may make a convenient scapegoat but the real reason the Carter energy program ran into trouble is simple enough: it was a bad program eminently worthy of defeat.

Item: To achieve his conservation goals, Mr. Carter proposed some eighty billion dollars in new energy taxes this year, the largest tax increase proposal in the history of the United States.

Item: The ultimate fate of these tax revenues was always something of a mystery. One day the Administration would say the money was to be returned to the people who paid it in the first place—minus a charge for shipping and handling by the Washington bureaucracy.

Another day, the funds were earmarked for a complicated income redistribution plan, with rebates for some but not for others. Still another day, there would be vague hints that this revenue windfall would be used to redeem the President's pledge to balance the federal budget, or to finance new government programs still on the drawing boards.

Item: The only certainty was that little, if any, of this money was to go to increased energy production. Thus the Administration would have given the American people the worst of both worlds—the high price but not the product.

There is little wonder that such proposals met with well-disguised enthusiasm in the Senate. Still, it should be noted that Republicans proved far more responsive to President Carter's call for a national energy policy than our Democratic colleagues were to similar calls from President Ford.

While Democrats in the 94th Congress simply "pigeon-holed" the numerous energy proposals of President Ford in 1975 and 1976, Republicans in the 95th Congress met President Carter more than halfway with a comprehensive energy initiative of our own.

Recognizing the inherent weakness of the Administration approach, but determined to be more than a chorus of nay-sayers, Republican Senators formulated an energy program placing much greater emphasis on production and on the reform of outdated, self-defeating government energy policies.

We proposed a major reform of the archaic system of government pricing regulations for petroleum and natural gas. These regulations have kept energy prices at artificially low levels in a time of sharply increasing energy costs, defeating all efforts at conservation and seriously discouraging new energy production.

We proposed that these government-regulated prices be decontrolled over a period of years, rising only gradually to protect the American family from sudden shocks to its household budget, but giving a clear signal to energy producers that we recognize a higher price must be paid for the higher cost of energy production.

As a safeguard, we also proposed a "windfall profits" tax to insure that a policy to meet a public need did not become a boon to private greed.

Thirty-five of the 38 Republican Senators supported these proposals when the Senate considered legislation on natural gas this year, and with the support of 17 of our colleagues from the other side of the aisle, this sound policy prevailed in the Senate.

It prevailed despite the fact that the Administration opposed the deregulation of natural gas prices, ignoring a campaign promise of Mr. Carter and forcing the Senate into a long and bitter filibuster.

Republicans did support the President's proposal to establish a Cabinet-level Department of Energy this year. But we know that the Nation dare not rely on government efforts alone to solve America's energy crisis.

Unfortunately, we have taken a step toward greater government involvement this year—despite the opposition of 32 Republican Senators—with legislation permitting the Secretary of the Interior to contract for exploratory oil and gas drilling—at taxpayer expense—on the Outer Continental Shelf.

We believe the government has no place in this phase of the energy business, taking risks with the taxpayers' money when private companies are willing, even eager, to pay for the opportunity to take those risks themselves.

But if government control is not the answer, neither is a casual reliance on the private energy industry itself.

Surely the industry has proven itself a remarkably efficient producer, with a handful of corporations controlling—individually and collectively—every phase of energy production from exploration to marketing.

But the price of this monumental efficiency has been a dense concentration of enormous economic power. Perhaps it was unavoidable, given the nature of the energy business with its immense requirements of investment capital, that such an economic concentration would develop.

Under the circumstances, with competition more a theory than a fact with government regulations abounding, with an international oil cartel fixing the price of half the oil we use every day, it can hardly be said that free enterprise exists in the energy industry today.

And yet I believe it is in the restoration of free market conditions, in loosening the grip of the international cartel, in reforming the regulatory powers of government, in increasing competition among domestic energy producers, that the ultimate solution to America's energy problems will be found.

This means allowing the price of energy to rise sufficiently to cover its increasing cost, permit a margin of profit sufficient to stimulate greater conservation, and let the higher price serve as a natural inducement to conservation.

It means moving away from regulated prices, whether they be regulated by government, by a foreign oil cartel, or by a domestic one. It means staying away from arbitrary and artificial taxes on energy use which will only make matters worse.

It means looking to the future, making investments now in research and development that will yield the primary sources of energy in the next century.

It also means maximizing our use of alternative sources of energy already available today—including coal and nuclear power.

There is more coal in the United States than in any other Nation or earth—at least one hundred years' worth. There is technology in existence today which can make coal a versatile, environmentally sound energy resource. There are economic and social advantages in the increased production and use of coal, including a major stimulus to the long-depressed Appalachian region. There is no reason to deny ourselves the benefits of this plentiful fuel source.

Nor is there any reason to deny ourselves the use of nuclear energy, that most basic dynamic of nature which is almost infinite in it potential as an energy resources.

Notwithstanding the Carter Administration's stated plans to facilitate nuclear power development by streamlining licensing procedures, we find this process further behind schedule now than a year ago.

Questions have been raised about the safety of nuclear energy, despite the fact that not one death or serious injury has been related to a nuclear accident at any of the more than 65 nuclear reactors in operation in this country.

The Carter Administration has sought this year to put severe limits on nuclear energy use, despite its enormous promise and despite the rapid depletion of more traditional energy resources.

The President says he is concerned that terrorists might gain access to nuclear fuel and put the safety of the world at risk. Such speculation ignores the impressive record of security associated with nuclear production, and it has failed to dissuade other governments from developing breeder reactors of their own.

If improvements can be made in nuclear safety and security, by all means let us make them. But let us not abandon nuclear energy and all its constructive potential to unjustified fears and irrational demands and other, less careful nations.

At least we can say that the Senate has at last taken the energy issue seriously in 1977, and this alone is a most encouraging sign that it is a problem we can solve before our time runs out.

Another major accomplishment of the Senate this year—and another unfortunate misstep for the Carter Administration—was in the area of economic stimulus.

One of President Carter's first acts in office was to increase the deficit of this year's federal budget by 19 billion dollars, and we have seen the inflation rate rise from 4.5 percent in January to 6.6 percent today.

The President then proposed—and withdrew at the eleventh hour—a $50 rebate plan which failed to address the fundamental cause of our economic problems. In the words of my distinguished coleague Russel Long, it was more like "throwing money out of an airplane window."

Again, Senate Republicans did more than criticize the weakness of the Administration's proposal, devising a comprehensive economic stimulus package of our own.

We recognized, first of all, that the chronic high rate of unemployment in America would not yield simply to a larger infusion of borrowed government money into the national economy.

Republicans knew that a shortage of private investment capital was stifling economic growth and the generation of new jobs, and that the President's decision to increase the federal deficit—to borrow 19 billion more dollars in the private money market—would only make the investment crisis worse.

But the problem was even more complicated than that. Only about 1.5 to 2 percent of the work force was still out of work this year because of cyclical unemployment, the lingering result of the 1975 recession.

As much as 3 percent of the work force was idle in 1977 because of structural unemployment—the lack of job-related skills or the mismatch of skills and labor market demands—or because of induced unemployment, the attractiveness of generous, long-term unemployment compensation benefits.

The other two percent of the roughly 7 percent unemployment rate represents frictional unemployment—a generally brief loss of jobs reflecting the dynamics of a free economy and the changing demands and desires of both employers and employees.

So the objective of the Republican economic stimulus package was to target government activity and resources where the need was greatest, and to initiate a program which could inspire and sustain the confidence of private industry.

Rather than a one-shot $50 rebate, we proposed permanent personal tax reductions of $17.3 billion in fiscal 1977 and 1978, a tax saving of $180 to $210 a year from a middle-income family of four.

We proposed a $3.1 billion youth employment and training program. We proposed a youth differential to the minimum wage, to allow employers to pay a somewhat smaller wage to teen-age workers as an inducement to hire the unskilled, inexperienced young people—particularly those in the inner cities—who only want a chance to work and who have been denied that chance too long.

We proposed a $2.3 billion employment tax credit to encourage private industry to hire people who had been unemployed for more than 26 weeks.

We proposed a two-year, $2.8 billion long-term investment tax incentive for small businesses and small investors.

We proposed a $200 million housing rehabilitation program through the Government National Mortgage Administration.

We proposed a 30 percent investment tax credit on the first $750 of home insulation, to encourage both energy conservation and new jobs in the energy industry.

This package would have created between 1.8 million and 2.3 million new jobs by the end of 1978, reducing the national unemployment rate to 5.5 percent, at a net cost to the government of $21.1 billion. The long-term investment incentives would insure sustained growth through 1979 and beyond.

It is difficult for the minority party to push through a comprehensive legislative package. We do not control the committees. We do not control the legislative calendar. But the roll call votes on those provisions we did get before the Senate demonstrate a fundamental Republican commitment to more and better jobs for the American people.

Thirty-four of 38 Republican Senators voted for the investment tax incentive on April 21. It passed.

Twenty-six Republican Senators voted for an 85 percent youth differential on the minimum wage on October 7. It failed.

Thirty-three Republican Senators voted for the tax credit to hire those unemployed longer than 26 weeks. It lost.

Thirty-five Republican Senators voted in favor of the permanent tax cut on April 27. It was defeated.

The last two measures were defeated by 53 and 56 Democrats, respectively. It seems to me the unemployed worker and the overburdened wage earner in this country should take a good look at these votes and think again about who their friends in the Congress really are.

And when they see the sinister symmetry of 7 percent unemployment and 7 percent inflation, they can also see that the new Administration's economic policies have not yet matched its promises.

Consumers, too, have found the Administration more successful in making promises than in making progress.

Deserting the precedent of the Ford Administration, which required every Federal department and agency to weigh its every decision for its effect on the consumer, the Carter Administration has sought to centralize its consumer activities in a single Consumer Protection Agency, variously known as the Agency for Consumer Advocacy and in its latest incarnation, the Office of Consumer Representation.

The Congress has not acted on establishing a consumer agency this year because more and more members of Congress, on both sides of the Hill and both sides of the aisle, have grown skeptical of the idea that another Federal bureaucracy can solve the problems created by existing bureaucracies.

But there does remain an urgent need to make government, as well as business, more responsive to consumer interests.

We must push ahead with regulatory reform, cutting back the overgrown jungle of federal rules and regulations that have driven up consumer costs in air travel, ground transportation and business in general. We have made progress this year with legislation easing restrictions on the airline industry, but there is much yet to be done.

The American people will not look kindly on a federal bureaucracy that seeks the power to rule their lives, making their decisions on everything from the food they eat to the equipment they put in their cars.

Government assistance and government interference are two distinctly different concepts, and it is the wise public servant who will discern the difference, as the consumer does.

A Senate vote this year on legislation to reform the Occupational Safety and Health Administration demonstrates that Republican Senators perceive that difference far better than some of our Democratic colleagues.

An amendment offered by the distinguished Senator from Kansas, Mr. Dole, would have required OSHA officials to consult with employers about possible job hazards before taking the extreme step of levying fines against them.

Thirty of 38 Republican Senators voted in favor of this amendment; and, with the support of about half of the 61 Democratic Senators, the amendment was agreed to. Unfortunately, this victory for the small businessman was short-lived, as the amendment was later killed in a Democratic-dominated conference committee.

Closely tied to consumer interests are the interests of America's farmers, the miracle workers of the 20th Century. One of the major pieces of legislation passed by the 95th Congress was a new farm bill, the Food and Agriculture Act of 1977.

Although none of us found that legislation perfectly acceptable, and surely no farmer does, it demonstrates our continuing concern for keeping the farmer in business, as an absolutely indispensable foundation for our Nation's economic and social welfare.

Business has not been good for the farmer this year. All farmers, but especially wheat and grain producers, have been caught in a severe inflation at the same time that their crop prices have fallen.

The cost of food has increased, but the profits have not gone to those who work from sunup to sundown in the fields, orchards, and ranches of America.

It would have been helpful, frankly, if the Carter Administration had shown a greater spirit of cooperation and concern as the Congress labored on this year's farm bill. Instead, we worked on that legislation under constant threats of a presidential veto.

Fortunately for the farmer, the final bill was not vetoed.

But even with the new farm bill, the future is not all roses for American farmers. That is not news to the farmers, whose tractors have thundered through many American cities this year in a demonstration of frustration and anger.

Many of these farmers are being forced to refinance their loans or to give up hope of repayment. Some of them are stopping production altogether. Adding to their problems, at least for some, is the continuing uncertainty about the new Administration's water policies in the Western states.

All of these problems can be dealt with, as long as there is trust and mutual respect between the Federal government and the farmers of America. But it is up to the Administration to earn that trust and to merit that respect.

One sure-fire way not to do so is to appoint an Assistant Secretary of Agriculture who would indicate to a group of farm editors that Rhode Island Red chickens are a source of red meat, as one of Mr. Carter's appointees did this year. The farmers of America have good reason, then, to wonder what is being hatched within this Administration.

One thing that was hatched this year, as unrelated to agriculture as possible, was a series of so-called "election reforms," the ultimate result of which would have been to reform the American political system from a two-party system to a one-party system.

With a Democratic Administration proposing these "reforms" and a Democratic majority in the Congress considering them, there is little question which of the two parties stood to gain, and which stood to lose.

The real losers, of course, would have been the American people, for it is the preservation of the two-party system, in the free competition of ideas and candidates, that the vitality and strength of our government must lie.

Fortunately, Republican unity was able to forestall these "reforms" for at least another year.

The President proposed the public financing of all federal elections, including not only Presidential campaigns, but all 535 races for the House and Senate.

Public financing is a noble-sounding idea, fostering the belief that special interests will be rooted out of politics if their campaign donations are no longer required.

But public financing means taxpayer financing. It is the taxpayer who would pay for every Congressional campaign in America, both for the candidate he supports and the candidate he opposes in his own state or district, and also for every other candidate in every other federal election throughout the nation. The total bill for all these races in 1976 came to $114 million.

Although this considerable expense would be placed on the shoulders of the taxpayers, not all special interests would be excluded by these public financing proposals. Specifically, organized labor would be free to supply manpower and other services to the candidates of its choice, although professional associations and even small businesses would be denied that right.

This, of course, gives a tremendous advantage to those candidates supported by organized labor, and it is no coincidence that those candidates are the very Democrats pressing hardest for this particular "reform."

Thirty-five of 38 Republican Senators voted against considering public financing this year, enough to demonstrate that Republicans generally do not favor making the taxpayer foot every campaign bill in every federal election in America.

It should also be enough to convince President Carter that he should preserve the true spirit of bipartisanship which is essential to the success of the Federal Elections Commission and which the last Administration studiously observed.

The President also proposed this year, in the name of reform, politicizing the Civil Service by amending the Hatch Act to permit political donations and campaign activity among government workers.

It took many years to rid the federal bureaucracy of political influence, to ensure that a qualified civil servant in a non-policy making job would not lose that job to the "spoils system" just because he supported the "wrong" candidate in an election.

Putting politics back into the Civil Service makes about as much sense as putting a fox back into a chicken coop after you've spent a good many years chasing him out.

Republicans led the fight against this proposal, and fortunately the Hatch Act is still intact.

The third "reform" proposed by the President called for voter registration by postcard, or, if that was not enough, registration at the polls on election day. The possibilities for election fraud seem almost endless with the post-card registration alone, but whatever possibilities it misses would surely be covered by election-day registration.

Once again, Republicans took the lead in declining this ill-conceived invitation to fraud.

But we also took the lead in proposing some major election reforms of our own, including provisions for much more comprehensive public disclosure of campaign donations and their sources.

In all of these issues—energy, the economy, consumerism, regulatory reform, agriculture, election reform, and more—the Carter Administration has displayed a curious pattern of policy-making, one that often results in proposals which create more problems than they solve.

This style of policy-making is disruptive enough on domestic issues, but is doubly so when applied to foreign policy.

On January 20, the day President Carter took office, the world was at peace. Our relations with the Soviet Union had never been better. We were very close to a new strategic arms limitation agreement.

In the Middle East, our step-by-step diplomacy had won the respect and confidence of both the Arabs and Israelis, and we were well on the way toward permanent settlement of that ancient dispute.

In southern Africa, an American initiative had brought the warring factions much closer to a negotiated settlement that would ensure majority rule, guarantee minority rights, and—above all—avoid bloodshed.

In western Europe, our oldest alliances had never been stronger. In the far east, trade negotiations with Japan were progressing very well, and political negotiations with China were going forward, despite our refusal to betray our old allies on Taiwan.

Our military strength had never been greater, and plans for a new generation of defensive weapons were being laid by the best defense expert to sit in the Oval Office since General Eisenhower.

Where are we now, after almost a year of Carter diplomacy?

Relations with the Soviet Union have been worse this year than at any time in the last decade. The deadline for a new strategic arms limitation agreement came and went on October first, with no agreement in sight.

In the Middle East, we endured a long and dangerous season of strained relations and diplomatic misadventure—threatening our old friend in Israel with "total isolation," in the words of Foreign Minister Moshe Dayan, and bringing the Soviet Union back into the thick of that sensitive situation despite its long history of provocative influence in the region.

In southern Africa, the reckless rhetoric of the new U.S. ambassador to the United Nations stirred the coals of old passions and inflamed an already volatile situation.

In western Europe, we read that our new defense policy is to concede most of West Germany right away in the event of invasion and try to hold France.

In the far east, as the Administration withdraws ground forces from South Korea, Japan watches and wonders if the United States is pulling in its oars in the Pacific.

The leaders of China say their relations with the United States have taken a giant step backward since the Carter Administration came to power.

Our military strength is being called into question following a Presidential decision to scrap the B–1 bomber and stick with a B–52 that is older than most of its pilots and a cruise missile whose effectiveness is being undermined by our own SALT negotiators.

President Sadat of Egypt goes boldly to the Knesset in Israel seeking peace, risking his political career and even his life. It is an act of courage that inspires the world. Today, one day after the convening of the Cairo conference, I wish to congratulate the two brave leaders of Egypt and Israel, and wish them well in the difficult negotiations they have begun. I also applaud the Carter Administration for its role in support of this courageous effort.

But even as we welcome the initiatives which statesmen of the world have displayed in recent weeks, we see that events in the world are slipping from our control and even beyond our influence, and we cannot help but wonder what would have happened if this kind of extraordinary courage had not emerged.

1978 will be a difficult year for the President, for the Congress, and perhaps the country.

Among the hard issues we must face are inflation, jobs, welfare reform, the Middle East, Africa, the Panama Canal and SALT treaties, national health insurance, international trade policy, and many more.

These issues demand the best that is in us. Many of them are issues of historic importance, by which this new generation of leadership may well be judged.

We have a year's worth of experience, a year's worth of working with one another, of learning to live with each other's strengths and weaknesses. But if 1977 has been a year of transition, 1978 may well be a year of trial.

We can only hope and pray we will prove equal to the challenge. This is not an idle hope, for in this chamber and throughout the land there are thoughtful people who care deeply about their country and who believe, as I do, that America is at its best when the challenge is greatest.

It is true the new Administration has made its mistakes this year, and it is the responsibility of the opposition to call the Administration to account for its failures.

But we all live in the same country. We all love it. We all want what is best for it, though we may disagree on what that is.

Ten months ago, I told our new President that I would support him when he was right and oppose him when he was wrong, and hope he was right more often. I promised him I would lead a responsible opposition in the Senate, one that would create as well as criticize.

I have tried to keep that pledge in 1977, and I will do my best to keep it in 1978.

Mr. BAKER. I ask unanimous consent that the report, as is the usual custom, may be printed as a Senate document.

The PRESIDING OFFICER. Without objection, it is so ordered.

CLEAN WATER ACT OF 1977—CONFERENCE REPORT

Mr. MUSKIE. Mr. President, I submit a report of the committee of conference on H.R. 3199 and ask for its immediate consideration.

The PRESIDING OFFICER. The report will be stated.

The legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 3199) to amend the Federal Water Pollution Control Act to provide for additional authorizations, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by all of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the Record of December 6, 1977.)

Mr. MUSKIE. Mr. President, it is not my impression that final disposition of the Clean Water Act will take much time. I find no disposition to ask for a rollcall vote, so I gather that there is widespread understanding of what the conference has produced by way of the resolution of differences between the House and Senate versions. I think that formal consideration of the conference report should take a minimum amount of time, I say to my colleagues who may be interested in other matters we shall consider, especially my good friend from Wisconsin (Mr. Nelson).

Mr. President, this legislation represents the culmination of 2 years' of effort to extend the Clean Water Act. It represents the midcourse correction that was promised during consideration of the landmark 1972 amendments to the Federal Water Pollution Control Act.

The thrust of this legislation is twofold—first, to improve the tools available to the Administrator of EPA to deal with increasingly complex water pollution problems and, second, to make much more flexible those requirements of the act which would otherwise demand a greater investment in regulatory resources and economic investment than benefits derived from the effluent reductions would achieve.

This bill was not easy to put together. In some respects it was more difficult than the 1972 act because the political environment is very different today than in 1972. But, as in 1972, a good faith effort on the part of both bodies, combined with an intense desire to get this legislation behind us so that the water pollution program could get back on track produced the result.

Mr. President, my complete statement describing the results of the conference report consumes 100 pages. I shall be happy to get into any aspect of this bill that any Member of the Senate would like before we act finally on it. This bill has had careful consideration. I know that, over the months since the Senate first gave consideration to this legislation, because of constituent interests, to one or another aspects of the clean water policy of this country and what this bill would do to that policy. So I am confident that there is widespread understanding of what we have done.

Mr. President, at this point, I wish to express my appreciation to several of my colleagues, Members of the other House, and staffs who have made possible our consideration of this bill today. As some of you know, I was not available, for reasons of health, to participate in the conference as fully as I would have liked. I was unable to be in attendance, but I undertook to follow developments in the conference.

Because I was not present, special gratitude is owed by the Senate to Senators Burdick and Stafford, who committed so many hours in the final days of conference to achieve this result. They were joined by Senators Randolph, Culver, Anderson, Chafee, and McClure, and by Senators Hart, Gravel, Wallop, Dominici, and Baker. And even then there might not have been any bill if the chairman of the full committee, Senator Randolph, had not, in the end, come to the conference and appealed to the House conferees to accept a compromise proposed by the Senate as a means of breaking the final deadlock.

As is so often the case, Senator Randolph's personal powers of persuasion were essential to final agreement.

Mr. President, it is appropriate to recognize the important contribution of Representative Ray Roberts of Texas and his fellow House conferees. Representative Roberts pressed hard for this agreement. His good humor and willingness to compromise made final action possible. The distinguished chairman of the House committee, Mr. Johnson of California, can take great satisfaction in the role Representative Roberts played.

I would also like to recognize the hard work of each of the other House conferees who were untiring in their attendance and participation: Congressmen Anderson, Roe, McCormack, Breaux, Ginn, Oberstar, Nowak; Congressmen Harsha, Cleveland, Clausen, and Snyder, and Congressman Foley. Each of these men made a contribution to this bill and can be proud of their effort to keep the Nation's clean water program on track.

Finally, I would be remiss if I did not recognize the long hours of work of the staff of the two committees. The joint staffs put together recommendations for the conferees which birdged areas of significant disagreement. They worked nights and weekends to develop workable proposals for the conferees' consideration. Each of the staff deserves special recognition from the Senate and the House for their efforts. I would like to specifically mention for the record the following staff: John Yago, Leon G. Billings, Phil Cummings, Sally Walker, John Freshman, Jackee Schafer, Mimi Feller, and Jim Range from the Senate, and from the House, Richard Sullivan, Lester Edelman, Gordon Wood, Bill Corcoran, Joan Kovalic, Jack Schenendorf, Erroll Tyler, and Mike Toohey.

I would like to single out for recognition the House legislative counsel. Mr. Robert Mowson has been working as counsel to the House Committee on Public Works and Transportation for as long as I can remember. He has been counsel to conferences on water pollution since we first began meeting with the House committee in 1963. He has always served as counsel to the conference as a whole and not just to the House. Again this year, in a time of great stress and pressure, Bob Mowson has served us well. But more important, Bob Mowson has continued to write legislation in a straightforward and understandable manner, a fact which all Members of Congress should appreciate. I want to personally thank Bob and his young associate, Arnie Havens, for their help again this year.

Mr. President, in 1972, Congress established as an objective the restoration of the chemical, physical, and biological integrity of the Nation's waters. That is still the objective.

Congress established a national goal of the elimination of the discharge of pollutants. Congress established an interim water quality goal which was to be achieved where possible by 1983. These are still the national goals.

In 1972, the Congress declared it to be national policy to eliminate toxic pollutants in toxic amounts. This bill, unlike the 1972 act, intends to make that objective a reality. And, Mr. President, in 1972, Congress declared that recycling and reuse would be the primary objective of the waste treatment construction grant program. This bill says that the Congress really meant what it said in 1972.

In every respect, the conference agreement underscores the basic thrust of the Senate bill—the application of technology to reduce the flow of waste to streams. However, the cost of high technology, capital-intensive waste water treatment systems is so great that utilization of less costly alternative waste treatment systems must be given high priority for Federal funding.

This is a comprehensive bill, Mr. President. It has nearly 80 provisions. As I said at the outset, it provides the Administrator new tools and, at the same time, provides additional flexibility so that he may maximize his resources for high priority objectives.

Here is a bill which will more sharply focus EPA's limited resources on priority water pollution problems.

Here is a bill which extends our pollution control capability to the limits of the resource jurisdiction of the United States—so that oil and hazardous material spills which threaten our fishery resources can be cleaned up, and the spiller can be forced to pay the cost of clean-up and any damages to natural resources.

Here is a bill which authorizes the Administrator of EPA to require industry to adopt practices which will avoid the Kepone-kind of runoff that has made the James River an ecological disaster.

Here is a bill which extends for 5 years the Federal construction grant program for water pollution and keeps intact the requirement that industries which use these systems pay their fair share of the costs of mantaining those systems.

Perhaps most significantly, Mr. President, here is a bill which includes pervasive requirements to find and apply methods to recycle, reclaim and reuse wastes and waste water. While this was intended in 1972, the 1977 amendments say emphatically that the Congress really means to eliminate the discharge of pollutants as rapidly as possible.

This is not to say that the bill does not ease prior requirements. It does. Deadlines for the next phase of controls have been extended 1 year.

But the ability of the Administrator to get toxics out of water has been measurably improved. And the ability to challenge the level of control required for so-called conventional pollutants has been greatly reduced. At the same time, the water quality impacts of these pollutants will be diminished, both as a result of advanced controls and as a result of improved water quality standards.

The conference did provide a safety valve for other pollutants. Should the Administrator decide to regulate pollutants which are not toxic or conventional, a polluter has a chance under these amendments to prove no adverse environmental effects relating to a particular pollutant, and after making such a showing, escape regulation.

Let me first discuss the concessions which have been made to the practical limitations of the Environmental Protection Agency. This bill directs the Administrator to emphasize the removal of potentially toxic pollutants from waste streams. It directs the Administrator to reduce the discharge of other pollutants about which a great deal is known as rapidly as possible within the constraint of a reasonable relationship between cost and effluent reduction benefits.

The bill does not require that the effluent reduction achieved be equated to the specific water quality benefit because that test is no more realistic in 1977 than it was in 1972. But it does recognize that in establishing limitations for conventional pollutants for categories and classes of industries, the best available technology may not be the most appropriate technology in terms of the relationship of the cost of achieving a particular level of reduction and the amount of reduction actually achieved.

Under the amendments to section 304 effluent guidelines for conventional pollutants are subject to a new cost effectiveness test. Effluent guidelines for toxic and nonconventional pollutants, however, are not subject to any test of cost in relation to effluent reduction benefits or any form of cost/benefit analysis.

This is a fine line. It is one that the conferees believe the Administrator can walk. We are satisfied that he has the capacity to relate cost of effluent reduction to the effluent reduction benefits, and we have provided him with some guidance. The bill provides as a basis comparison of the costs for industry to the costs for municipalities. Clearly, if the cost of achieving a certain level of reduction of conventional pollutants for industry is less than the cost of achieving a similar level of reduction for a community, it would be reasonable. Thus, in the language of the amendments, best conventional control would, and often will, be identical to best available control. The result of the cost test could be a 1984 requirement which is no more than that which would result for best practicable technology but also could result in effluent reductions equal to that required in application of best available technology.

The contrary is not necessarily so. One could well pose a case the cost of achieving a reduction of a conventional pollutant from an industrial category might greatly exceed the cost for the municipal category. In that case, the Administrator might determine such reduction to be unreasonable at this time and thus modify the requirement in accordance with regulatory authority.

It is important to note that the Senate provision which used a complex modification mechanism for making this kind of determination for conventional pollutants has been deleted. The establishment of regulations applicable to conventional pollutants continues to be the effluent guideline approach of the 1972 act.

Thomas C. Jorling, Assistant Administrator of the Environmental Protection Agency for Water and Hazardous Materials, testified before the Committee on Environment and Public Works this past June. He said:

> There will be some industries for which best practicable technology controls for conventional pollutants have achieved all that can reasonably be expected for the immediate future. However, there will be a number of cases where this will not be so. For example, there currently are some industries where the estimated costs of best available technology (BAT) increment of control for BOD is far below even the cost of secondary treatment for municipal systems in terms of cost per pound of pollutant removed. Clearly this is not a hard and fast test of what BAT should be for industry, but it tends to substantiate the point that in some industries additional controls for conventional pollutants can be obtained under BAT for very reasonable costs. Accordingly, the Agency is in the process of reviewing its existing BAT standards for conventional pollutants to insure their overall reasonableness. Where the BAT standards result in additional costs that appear to be unrealistic in light of the associated incremental reductions in pollutant loadings, the standards will be appropriately modified. We believe the Act clearly allows for such a test of 'reasonableness,' especially in the absence of any toxic pollutant problems. As our analysis continues, should we find that the existing legislation does not provide suitable flexibility we will offer appropriate legislative amendments.

Another area of flexibility relates to deep ocean discharges of municipal waste. It has been alleged that a municipality can discharge its waste into ocean waters after something less than secondary treatment without causing any ecological perturbation. Witnesses from Honolulu, Seattle, and Los Angeles have alleged that they have accumulated sufficient evidence to prove no adverse effect on water quality and aquatic ecosystems from such discharges.

The conference provision is identical to the Senate bill in this respect. It does not change the Senate bill in any way. The Administrator should look to the legislative history in the Senate for guidance on this provision.

As was the case in the Senate bill, this provision is intended to provide a very narrow opportunity for certain municipal dischargers, if they can meet a specific burden of proof, to qualify for a modification of the secondary treatment requirement.

Mr. President, a second area of flexibility in this bill deals with the concept introduced by the House which makes a distinction between those pollutants about which we know a great deal—the so-called conventional pollutants—and those about which we are increasingly concerned, the so-called toxic pollutants. The conference bill recognizes a third area of pollutants—the grey area or nonconventional pollutants. It is these contaminants to which EPA can direct only limited, if any, resources in the near future. It is these contaminants about which there is the most to be learned, and it is these contaminants for which industry contends regulation may be inappropriate.

Under existing law, nonconventional pollutants would be subject to the regulatory scheme defined by best available technology—that is, effluent guidelines applicable to classes and categories of industrial dischargers. I did not think that a procedure for modification of the best available technology applicable to these nonconventional pollutants was appropriate or necessary at this time. But the House Conferees insisted that such a procedure be written in the law in order to provide a safety valve for the future, and the Senate concurred in order to obtain action on this legislation.

I suspect that, as a practical matter, most of these pollutants will not be subject to best available technology but, rather, will be regulated as surrogates to conventional and toxic parameters. To the extent that nonconventional pollutants are not specifically regulated by best available technology, the procedure for modification from best available technology is not available. To the extent that they are specifically regulated by best available technology, the modification procedure cannot act to affect any other requirement regarding a conventional or toxic pollutant.

Mr. President, this provision will work to improve both the knowledge of the effects of pollutants and their capacity for regulation. The Administrator may, instead of adding to the toxics list a pollutant about which he has doubt, determine instead that the pollutant should be regulated by best available technology. This determination would then trigger the process by which an industrial class or category would make the kind of investment necessary to prove that the discharge of a particular pollutant will not interfere with the balanced population of fish, shellfish, and wildlife as defined and to show that the pollutant poses no risk to aquatic life, public health, et cetera. However, any doubts as to a pollutant's toxicity should be resolved on the side of protection and margin of safety and therefore listed as a toxic. The changes made to section 307 are to facilitate this discretionary authority.

The procedures for modification place specific burdens on the person seeking the modification, and it is expected that a considerable level of investment and a considerable period of time will be required to make these showings. The result of these studies will add greatly to the level of knowledge of the impacts of pollutants in the environment. Herein lies an important point.

It is not acceptable to allege absence of harm solely on the basis of the loss of the pollutant in the environment. The absence of harm test as specified in this bill, including the secondary treatment modification provision, will require the applicant for modification to show the pathway of the pollutant through the environment and its ultimate disposition in the environment. Only in that way can there be any real demonstration that the discharge of that pollutant will not interfere with a balanced population of aquatic life.

For example, it is possible that a pollutant may be discharged in a freshwater environment and not taken up by any organisms in that environment. However, that pollutant may eventually end up in the ocean environment where more sensitive organisms will be affected.

I only make this point to indicate the extent of the burden which this provision places on the applicant. Any simple allegation that the absence of knowledge is evidence of absence of harm is simply unacceptable. I ask unanimous consent that an article from the December issue of Science which underscores this point be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHEMICAL PLANTS LEAVE UNEXPECTED LEGACY FOR TWO VIRGINIA RIVERS

(By Luther J. Carter)

The tourist passing through Virginia enjoys what for the most part is still a fine scene—the soft outlines of distant mountains, the sweep of lush valleys, and splendid pastoral vistas and riverscapes are all there to please the eye. Indeed, the official slogan "Virginia is for lovers" is credible enough, for, besides the state's natural blessings, relatively little of it has been touched by the kind of industrial development that grossly pollutes or defaces. This being so, it is surprising and disconcerting to learn that three Virginia rivers are now so badly contaminated by toxic substances that well over 300 stream miles have been closed to fishing, or at least to the taking of fish for eating.

One of these rivers is of course the James, on which most commercial fishing is now prohibited from Richmond to the Chesapeake Bay because of contamination by Kepone. But equally remarkable, though little attention has been given to it outside Virginia, is the contamination of much of the Shenandoah River and the North Fork of the Holston River by mercury.

In fact, this latter problem seems of special significance, both with respect to its persistence—which is extraordinary—and to the questions of regulatory philosophy and practice to which it gives rise.

Not all of the Shenandoah River is contaminated, only the South Fork, which many regard as the best of it. Indeed, if it had been the conscious intent of some malevolent force to do mischief to an exceptional natural treasure, the South Fork of the Shenandoah could have served well as the object of such perverse designs.

Flowing over a bed of limestone and frequent ledges, the South Fork runs northward in a series of great loops between the Blue Ridge Mountains on the east and the Massanutten Mountain on the west. For the canoeist or the float fisherman (the South Fork is famed for its smallmouth bass fishing), the scene is ever-changing but is always good and sometimes spectacular, especially when the winding river turns toward the steeply rising slopes of the Massanutten. Along with the rest of the Shenandoah, the South Fork has long been a prime candidate for consideration as part of the national system of wild and scenic rivers, and was so listed in President Carter's environmental message of last May.

Although the Shenandoah was known to have some water quality problems, especially overfertilization from the runoff from farmland and other sources, it was not until this spring that state officials got word that part of the river might be heavily polluted with mercury. On 14 April a delegation from E. I. duPont de Nemours and Company, which has been manufacturing synthetic fibers at Waynesboro, Virginia, since 1929, called on Governor Mills Godwin and Virginia health and pollution control officials and brought the bad news.

Visible if minute globules of mercury had been discovered the previous September in the course of repairing a leaking water pipe beneath the Waynesboro facility's "old chemical building," where mercuric sulfate was used as a catalyst in the manufacture of acetate fiber between 1929 and 1950. Subsequently, analysis of sediment samples taken downstream from the plant in the South River showed that the sediment was heavily contaminated with mercury.

The readings for several samples exceeded 240 parts per million (ppm), compared to readings of less than 1 ppm for sediments tested upstream from the plant. Worse still, the one fish that DuPont had had analyzed for mercury contained 0.86 ppm, or substantially above the Food and Drug Administration (FDA) "action level" of 0.5 ppm which cannot be exceeded in fish that are to be marketed. Although of no legal force in relation to freshwater game fish, which would not be sold commercially in any event, the FDA action level represented a standard by which Virginia health authorities would surely judge whether the fish were too contaminated to be eaten.

The disclosures made by DuPont to state officials were reported skimpily and almost routinely in the Virginia press, but their significance was soon to become more evident. On 6 June Governor Godwin announced, on the basis of sediment and fish samples collected and analyzed by the State Water Control Board (SWCB), that the South River below Waynesboro and the entire South Fork were closed to the taking of fish for eating. The mercury content in bass caught as much as 77 miles downstream from the DuPont plant had been found to be more than twice as high as the FDA standard.[1]

---

[1] Actual or potential supplies of drinking water, for which Virginia has adopted a safety standard of 2 parts per billion (ppb), are not threatened. No mercury has been found in samples of either raw or filtered water taken at the town of Shenandoah, 50 miles downstream from the DuPont plant and the only community in the area that gets its water from the river (the limit of the Virginia State Department of Health's detection capability is 0.5 ppb). The SWCB failed to discover the Shenandoah's contamination during the nationwide mercury scare of the early 1970's only because it confined its investigation of this river to the taking and analysis of water samples.

The extraordinary thing about this contamination problem is that it has been 27 years since mercury has been used in any manufacturing processes at Waynesboro, for in 1950 DuPont abandoned the particular acetate production process in which mercuric sulfate served as a catalyst. Moreover, from its sampling of soil and groundwater on the plant site. DuPont is now convinced that, although a few pockets of contaminated soil have been found, no mercury has escaped from the site into the river for many years. (The SWCB's director of enforcement, David S. Bailey, is "guardedly optimistic" that this will prove to be the case.)

As best anyone could tell, most if not all of the contamination of the river had taken place during the 1930's and 1940's as the result of spills of metallic mercury that occurred at the old chemical building. One likely possibility is that some of the spilled mercury was flushed into the river through storm drains. Normally, all mercury was recycled and the volume kept in active inventory, in 75-pound flasks, was never large. Edward T. Ruehl, the Waynesboro plant's manager for health, safety, and environmental affairs, believes that, all told, probably not much more mercury escaped to the river than could be put in a "Volkswagen gas tank."

Thus it seems that a relatively small quantity of mercury which got into the river between 1929 and 1950 has kept the river contaminated for a period of maybe 40 years or longer and may continue to contaminate it for decades to come. Major floods, such as the one that followed Tropical Storm Agnes in 1972, have repeatedly scoured the river bottom but, while some of the mercury in bottom sediments undoubtedly has been moved about, it has not been swept away.

INTO THE NOOKS AND CREVICES

Because of its great weight (it is 13½ times as heavy as water) and its liquid form, metallic mercury seems to find its way into sheltered nooks and crevices—of which the South River, with its irregular limestone bottom, has plenty—and is not easily dislodged. In fact, high concentrations of mercury are still found in sediment samples taken just below the DuPont plant from the natural trap formed by the remnants of a small dam.

Fifteen miles or so downstream from Waynesboro the mercury concentrations in sediments seem to fall off sharply. But they remain at above natural background levels all the way down the South Fork to Front Royal, 130 miles from the DuPont plant, and for at least 30 miles down the Shenandoah's main stem.

Over a period of years and decades, metallic mercury in bottom sediments can be converted at varying rates to ionic inorganic mercury and to organic or methyl mercury, both of which can be easily transported downstream by river currents. Although relatively insolube in water, some metallic mercury does dissolve, and part of this dissolved mercury becomes attached to suspended soil particles and part remains in solution.

But more important to the uptake of mercury by aquatic life is the fact that microorganisms abundant in the sediments can convert virtually any form of inorganic mercury to methyl mercury. In this form mercury is taken up rapidly by aquatic plants and animals and—of particular significance to its potential for attaining high concentrations (especially in older and larger fish)—it is excreted slowly, having a "biological half-life" of months or even years.

It is in its methylated form that mercury is particularly toxic to humans. If ingested in sufficient amount through a heavy diet of fish (as has happened in Japan), methyl mercury can cause Minimata disease, a severe disorder of the nervous system that can be fatal. By good fortune, no cases of Minimata disease are known to have occurred in Virginia, although epidemiological data are too limited to rule out all possibility of instances of mercury poisoning.

The mercury problem in southwest Virginia on the North Fork of the Holston River, which is far removed from the Shenandoah watershed and is actually part of the Tennessee River system, is in some important respects more frustrating to SWCB officials than the one on the Shenandoah.

The essential difference between the two situations is that, whereas there is as yet no evidence that the Shenandoah is being further contaminated by more mercury from DuPont's Waynesboro facility, the Holston is constantly receiving more mercury from the site of the now closed and dismantled chlorine plant which the Olin Corporation of Stamford, Connecticut, operated at the town of Saltville until the spring of 1972. Moreover, the situation at Saltville is such that the inflow of mercury into the river may never be stopped entirely, whatever the plan of remedial action ultimately agreed to by Olin and the SWCB.

Coincidentally, it was in 1950, the year DuPont stopped using mercury at Waynesboro, that Olin (or rather one of its corporate progenitors, the Mathieson Chemical Company) began using mercury at Saltville, which is noted for its huge underlying salt deposit. For the next 22 years, until the plant was finally shut down (partly because of the pollution control requirements that were to be imposed), mercury served as an electrode in the electrolytic process used to break down sodium chloride to produce chlorine and caustic soda.

In contrast to the situation at the DuPont plant, where mercury was needed in relatively small amounts, the Olin plant used it in huge volume, with the electrolytic cells containing more than 1 million pounds of the metal. As was true of chlorine plants elsewhere, this one at Saltville lost mercury in prodigious amounts, although the aim was supposedly to recycle as much of it as possible.[2] Until 1970 and the big nationwide scare over mercury that led to restrictions on the catching or sale of mercury-contaminated fish in nearly a score of states, up to 100 pounds of mercury was lost every day of plant operation. Some of it was lost as vapor, but much of it was lost as liquid mercury spilled on cell room floors or carried away in various waste streams, at least one of which went directly into the river.

Neither Olin nor state health and pollution control officials had been aware of the hazards to human health resulting from loss of mercury to the river. For it was not until the late 1960's that the methylation phenomenon by which mercury is made more readily available to aquatic life was discovered by Swedish researchers. Once the danger was realized, the changes brought about at the Saltville plant as well as at other chlorine plants around the country were remarkable. Losses were reduced to as little as a quarter of a pound of mercury a day.

Nevertheless, the cumulative effect of the reckless practices of the past (the health hazards of mercury vapor at least had long been known) had led to what may be an almost hopeless bad problem of environmental contamination. How much mercury has gone into the river is beyond calculation; all one knows is that the mercury concentration in both sediments and fish are high today and are likely to remain high for decades, if not generations, to come.

Three-fourths of the fish samples taken in July 1976 at six stations along nearly 70 miles of river showed concentrations at least twice as high as the FDA action level. There is in fact evidence that the contamination extends far down the main stem of the Holston to the Tennessee Valley Authority's big Cherokee Reservoir, more than 100 river miles from Saltville. Eight fish collected this past May from the reservoir's far upper reaches all showed concentrations exceeding the FDA limit. While the sample was too small to justify a ban on the eating of fish from the reservoir—in the case of the North Fork such a ban was imposed by Virginia and Tennessee health authorities in 1970—it was an ominous sign.

Mercury continues to enter the Holston both from the site of the old chlorine plant and from the two big "muck ponds" which were used for disposal of the primary waste stream from the Olin complex. The grounds on which the "cell building" once stood contains an astonishing amount of mercury: according to an Olin consultant, there are some 220,000 pounds of it.

Although the mercury is believed to be present in the soil profile to depths of as much as 30 feet, it is also found near the surface. Sizeable globules of it can be seen along the eroded bank of the river, and during this reporter's recent visit there, a small clod taken from the bank virtually at random contained a globule larger than a dime. Anytime the Holston is in flood, significant amounts of the metal are swept into the stream.

Serious as it is, the problem at the old plant site can perhaps be corrected either by excavating the contaminated soil and extracting the mercury, or, as Olin is now proposing, by sealing off the site from the river with a shield of impervious clay and riprapping. (In 1973, Olin tried to clean up the site by removing the top foot or so of soil, but, as is now evident to all, this was pathetically inadequate.) As for the muck ponds, it has become increasingly apparent that this problem can never be fully overcome; anything short of gargantuan engineering remedies, undertaken at costs that might run into the hundreds of millions, may bring nothing better than a modest, perhaps trifling, amelioration.

The ponds, which cover about 120 acres and extend along the river for more than a mile, contain an accumulation of salts and other wastes that is up to 80 feet thick. Although not much water stands in these basins now, enough water enters them from direct rainfall and from runoff from the adjacent mountainside to make for a problem of mercury-contaminated chloride solutions seeping into the river. The discharge of mercury to the river from this source is estimated to average about 100 grams a day, year in and year out. Given the Holston's present grossly contaminated condition, any additional inflow of mercury would be considered intolerable were there any practical means of preventing it. So far, Olin and its consultants have come up with nothing better than a plan to dig a ditch along the mountainside to intercept the surface runoff; but this would at best reduce the seepage into the river by only half, and, if the SWCB staff is correct in its assessment, the reduction would be much less than that.

However severe and pressing the problems at Saltville, the SWCB has generally shown little sense of urgency in dealing with them. Even the matter of finding a prophylactic remedy for the problem at the chloride plant site continues to drag on. "We haven't been balls of fire on this thing," acknowledges Richard Hill, an aide to one of the top SWCB officials. In part, the situation at Saltville seems to reflect the fact that, absent an imminent health threat or economic loss (both present in the Kepone affair), something such as a ban on eating fish from a mercury-contaminated river does not appear to bring a public outcry in Virginia. Scarcely anyone showed up either at the public hearing which the State Department of Health held in 1973 on the Holston ban or at the one it conducted recently on the Shenandoah situation. In light of the sharp decline in fishing on the famed Shenandoah, the poor turnout for the hearing on the ban there—no local officials were present and only two citizens—was astonishing.

---

[2] According to the 1976 report of the National Commission on Supplies and Shortages, during the period 1964 to 1973 chlorine plants in the United States required 463 metric tons of mercury annually to make up for losses. This figure was stated as a yearly average for the period, however, and the actual losses after 1970, when production processes were tightened up drastically, were probably much less.

Actually, from a regulatory standpoint, the mercury pollution problem poses several hard questions that deserve the public's thoughtful attention. Especially is this true in the Holston River case where there is clearly an opportunity to go beyond measuring the extent of the contamination and to reduce the sources of further pollution.

For instance, how far should the state go in holding Olin accountable for the problem at Saltville? After shutting down the plant, Olin gave most of its property there to the town and state, and at present retains title chiefly to some mineral rights and to the muck ponds (which it wanted to give away but could not). Although town council members praise Olin for treating Saltville fairly and generously, the company clearly does not feel that it has an open-ended obligation to see that the mess which is created on the Holston is cleaned up.

Although willing enough to assist in trying to seal off the site of the chlorine plant from the river, Olin wants the SWCB and the town to agree that once a plan of remedial action has been approved and carried out, its obligation with respect to the problem will end. Yet there may not be complete assurance that the plan will succeed. Certainly the efficacy of any remedies tried at the muck ponds will be in doubt. Bailey, the SWCB enforcement chief, indicates that, in his view, the burden of ultimate responsibility is Olin's forever. "I don't think it would be in the state's best interest to enter into a final, blanket agreement," he says.

Another question is, should the state expect some compensation from Olin and DuPont for the contaminatoin of the two rivers? In the Kepone episode, the Allied Chemical Corporation, found to have committed gross violations of law, has been ordered to pay the state and federal governments $18.5 million in penalties, including $5 million which go for research on Kepone in the environment; yet the company remains open to millions in damage claims by individuals and to demands by the state in the future for a massive and costly cleanup of the James River if this should be feasible.

As A. H. Paessler, the SWCB's deputy executive secretary, has observed, the mercury contamination of the Shenandoah and the Holston "resulted from no flouting of state or federal law by DuPont and Olin, and neither has been so accused." Nevertheless, as Paessler also acknowledges, the contamination is a fact and those companies are the cause of it. To measure the damage in precise dollar terms would be impossible, but it is clear that the sports fisheris that existed on the Shenandoah and the Holston (the latter was a resource of at least local significance) were of considerable value and that they have been hurt severely. Some informal discussion of the matter of compensation has gone on within the SWCB staff, but there is no sign that it will be pursued.

Closely related to the compensation issue is the question of whether something might be done to rehabilitate the river—or at least shorten the period of contamination. One idea sometimes mentioned is to try to identify and remove some of the more heavily contaminated sediments. The SWCB staff has searched the relevant literature for possibilities, but thus far has found nothing that looks promising.

The agency is now soliciting help in this matter from the Environmental Protection Agency, which so far has left the mercury problem to the state, and from the U.S. Army Corps of Engineers, the Tennessee Valley Authority, and the Oak Ridge National Laboratory. But should any plan for partial rehabilitation of the Shenandoah or Holston be proposed, the question will then surely arise as to who shall pay for carrying it out—the state, the federal government, the company, or all three?

Still another regulatory question raised by the mercury problem has to do with the FDA action level. R. V. Davis, the SWCB's executive secretary, has suggested that the action level perhaps should be raised. Although this suggestion might at first glance be likened to the one somebody once made with respect to Vietnam—declare victory and withdraw—it finds some support in scientific circles.

In Sweden, where extensive research has been done on mercury problems, the action level is twice as high as the one in this country, and some American scientists (such as Peter Krenkel of the Tennessee Valley Authority) believe the FDA limit is needlessly stringent. James B. Kenley, Virginia's commissioner of health, has rejected Davis' suggestion, however. He observes that the action level for mercury is based on "a far larger amount of information and a far lower safety factor" than the action level for Kepone.

In truth, the mercury contamination of the Shenandoah and the Holston appears to have been one of those bad turns of fate about which not much can be done—or at least not much of certain efficacy. But this is not to say that the best response is simply to adjust to the problem and leave the solution to the ages.

Mr. MUSKIE. Mr. President, during the course of debate on this conference report in this and the other body, attempts will be made to bind the Administrator by creating legislative history describing specific situations. The conferees did not examine specific cases for exemptions, extensions or modifications.

The conference report provides a general framework for the Administrator to make judgments. The Administrator should be guided by the framework of the statute and the statement of managers and other appropriate legislative history, and should not feel bound by attempts to legislate by colloquy special cases which are contrary to the letter and intent of the law.

Mr. President, the conference bill is similar to the Senate-passed bill (S. 1952) in many respects. Since the legislative history of the conference report itself is minimal, the conferees expect that the intent expressed in the Senate report be looked to for guidance.

I would like at this point to review several aspects of the conference agreement in order to provide a fuller understanding of the intent of Congress.

TRAINING GRANTS

This section increases the limit of a grant for a training facility from $250,000 to $500,000, exempts any such grant from the priority list requirement of section 204(a)(3), and increases the uses of these funds.

The language which amends section 109(b)(2) of the Federal Water Pollution Control Act is intended to authorize the Administrator in any case where a grant has already been made for a facility to serve two or more States to make an additional grant for individual facilities within any of the participating States. These additional facilities would be supplemental to the multi-State facility. It is not intended that there would be duplication of effort. For example, the States of New Hampshire, Massachusetts, and Maine are planning construction of training facilities within each of their States.

The State facilities would be utilized to train or retrain personnel already operating at treatment facilities. In addition, the six New England States and the State of New York are considering the construction of a regional training facility to be utilized by each of the seven States for the training of new operational personnel. Thus, under this section, the multi-State facility and individual facility in each State could be funded under section 109 of the act if there is no significant duplication of effort.

These authorizations do not provide support for graduate training (master and Ph. D. levels) or State agency fellowships in water quality control curricula as authorized in sections 104(a)(1), 104(g)(3)(A), or 104(g)(3)(B).

Funding authorizations for water quality graduate training grants (masters and Ph. D. levels) to institutions of higher education and State agency fellowships are included in section 104(u)(1).

GRANTS FOR ALTERNATIVE AND INNOVATIVE TECHNOLOGY

The conference agreement emphasizes the need to use alternative technologies instead of conventional secondary treatment plants and encourages the development of new and innovative systems. To accomplish this, the bill requires republication of cost-effective guidelines to reflect the long-term benefits of reclaiming and recycling, creates a special set-aside for rural and lightly populated areas to be used for alternative technologies, and authorizes a special set-asides for increasing to 85-percent grants for the use of alternative and innovative technologies. The bill also includes a provision for extension of deadlines for industries which use innovative technologies.

The conferees intend to underscore the requirements of the 1972 amendments that all of those involved in implementing the program—the Environmental Protection Agency, States, communities, and consulting engineers—direct the program away from the conventional collection and secondary treatment approach and toward the use of alternative technologies, especially those which rely on controlled natural processes, such as land or lagoons or marshes, in order to make use of the nutrients in the waste waters.

More than any other issue concerning the construction grant program, the conferees are concerned with the need to encourage alternative and innovative systems. The problems of small communities coping with expensive capital-intensive waste treatment systems and the wastefulness of discharging valuable nutrient resources to the Nation's waters were stressed throughout the country. The need for new industrial processes which produce no waste was emphasized.

The conference bill, in every possible way, attempts to reinforce the specific statement of the 1972 act with respect to innovation, use of alternatives, and the adoption of policies which would lead to the confined and contained disposal of waste, utilization of the values of waste, and the elimination of the discharge of pollutants to the Nation's waters.

This agreement recognizes that sludge, which is a burden to many communities, can be usefully applied as a soil conditioner, as a source of nutrients, and as a fertilizer. But the agreement also recognizes that often sludge is so contaminated by the chemicals and metals which find their way into municipal waste treatment systems that it is useless. These amendments are intended to reverse the waste of this important resource. The Administrator is expected to heed that emphasis of this legislation.

There is no defense for the practice of dumping all of the waste that this country generates into rivers, lakes, and streams. The 1972 act stipulated that the Nation's fresh and marine waters would not be an element of the waste treatment process. That continues to be national policy. For communities and industries, the discharge of waste directly into the Nation's waters and oceans is permitted only where there will be no interference with attainment and maintenance of that water quality which assures protection of water supplies and the protection and propagation of a balanced, indigenous population of fish, shellfish, and wildlife, and allows recreational activities, in and on the water: that is only where ecological balance can be assured. The Agency should expedite promulgation of the criteria in section 403.

Thus, alternative technologies for dealing with waste, particularly land treatment options which will take advantage of the valuable nutrients in the waste stream, and other waste recycling options should become the highest priority for funding under this act wherever these are feasible or available.

The conference agreement provides for a bonus grant, raising the Federal share to 85 percent, for projects which utilize alternative and innovative waste treatment processes.

Sections 9, 12, 13, 15, 16, 17, 21, 28, 37, 38, 39, 49, 60, and 72 of the conference report expand the treatment works construction grant program utilization of innovative and alternative waste water treatment processes and techniques. These sections generally follow a series of provisions in H.R. 9464. They are intended to result in a major reorientation of the construction grant program.

The 1972 amendments redirected the water pollution program to municipal waste treatment alternatives which would lead to the confined and contained disposal of wastes so that pollutants would not migrate to cause environmental pollution. Little was done to achieve this result. The purpose of this and related amendments is to underscore that 1972 intent by providing supplemental assistance for innovative and alternative waste treatment processes which might not otherwise be cost-effective.

The conferees intend that EPA shall require consideration and application of demonstrated alternatives which meet the objectives of section 201 funded from the regular grant program. This supplemental assistance program is intended to force technology so that new and better alternatives which have not been demonstrated can become available. As they are available, funding should come from the regular grant program.

The administration has been provided all of the legislative tools needed to require the utilization of such innovative and alternative waste water treatment processes and techniques.

Care should be taken in the evaluation of grant applications to avoid unnecessary studies, investigations, or analyses which are irrelevant to, and unaffected by, application of new technology, recycle, reuse, or land treatment.

The provisions for increased grants for publicly owned treatment works utilizing innovative and alternative technology has been specifically phased in to avoid delays in ongoing step 1 and step 2 projects. The Administrator is cautioned in promulgation of regulations and implementation of these sections not to cause delays in the construction grant program. The environmental benefits to be realized from these sections on innovative and alternative technology should not be vitiated by such delays.

While treatment works construction grant funds are authorized for 5 years by section 30 of this act, it is to be noted that section 17 provides for increased grants for treatment works using alternative and innovative technology for 3 years only. This provision is not applicable to grants made from funds authorized from either the first or the last year for which grant funds are available. It is expected that Congress will evaluate the program at the same time Congress considers an allotment formula for the grant funds authorized for fiscal year 1982.

While funds to increase construction grants to 85 percent are made available only for fiscal years 1979, 1980, and 1981, it is important to recognize that while 2 percent of the construction grant funds are set aside for fiscal years 1979 and 1980 to carry out this program, 3 percent is set aside for fiscal year 1981. This underscores the intent of Congress to increase the number of projects utilizing innovative and alternative technology. During fiscal year 1981, over 25 percent of new grant awards should utilize such technology.

However, nothing in this section is intended to reduce the current emphasis on funding cost-effective alternatives to conventional treatment under the basic grant program.

It is not intended that conventional processes including advanced biological treatment processes or advanced waste treatment systems utilizing distillation, nitrification, and denitrification or breakpoint chlorination be eligible for the increased Federal share. In addition to improved methods for conventional treatment, innovative technology should include such techniques as nutrient utilization and reclaiming or recycling of water.

The Administrator is expected to coordinate promptly with the other heads of departments, agencies, or instrumentalities of the Federal Government which have jurisdiction over any property or facility utilizing federally owned waste water facilities. The Federal Government is expected to be a leader in the use of alternative and innovative treatment processes and techniques. The cost-effectiveness provision of section 60 is a mechanism for forcing the use of such processes and techniques. Section 60 allows the Administrator to waive the application of such processes and techniques where he determines it to be in the public interest. This authority is not intended to be a means for negating the 15 percent cost-effectiveness provision. The Administrator is not expected to waive this requirement unless there is a clear showing that ongoing projects would be delayed or that important public interest considerations cannot be met.

Several criteria should be relied upon to evaluate the innovative character of technology. The criteria include cost reduction, improved reliability, energy conservation or reclamation, recycling or reclamation of effluents, sludges or beneficial wastewater constituents, better management of toxic materials, and environmental benefits. Where technology does not produce benefits in line with the criteria, the Administrator should not consider the technology to be innovative or alternative under these provisions.

A certain percentage of the State's allotment is set aside for 85-percent grants for innovative and alternative technology. Those moneys are not exclusive of, but can overlap, the 4-percent set-aside for alternative or unconventional systems for small communities.

INDIVIDUAL SYSTEMS

The authority under this provision is to be exercised in accordance with cost-effectiveness guidelines for the construction grants program. Alternatives including septic tanks and other onsite systems, small systems serving cluster households, pressure and vacuum sewers and the like should be compared to determine relative costs and environmental impacts of each. The cost-effective solution should be chosen.

Collection of moneys under this provision for commercial user cost recovery should be carried out in a manner similar to the collection of moneys for industrial cost recovery, subject to all the requirements of section 204, as amended by other provisions of the new amendments. There is, however, no moratorium of this requirement during the period of the industrial cost recovery study, nor does the 25,000-gallon-per-day exemption apply to commercial users of projects assisted under this authority.

USER CHARGES

The compromise on user charges is, in many respects, similar to the Senate-passed bill. It requires each industrial and commercial user of federally assisted waste treatment services to pay its proportionate share of the cost of operation and maintenance of waste treatment. Unlike the Senate bill which required all users to pay operation and maintenance costs in proportion to actual use, this bill has an exception. In those cases in which existing systems on date of enactment already have systems of charges for operation and maintenance costs based on the use of dedicated levies against property values, that system can continue to be applied so long as residential users, as a class, pay no more than the cost of operation and maintenance attributable to that class of use.

The grant recipient must show that this kind of class proportionality exists. Among all classes of users, it must also show that each individual nonresidential user, unless exempt by regulation as a small user, pay its proportionate share. The grant recipient must show that major nonresidential users actually meter their system input as to quantity, strength and constituents of the waste contributed.

The need for these amendments would have been lessened had the Administrator not adopted a policy which permitted partial grants for communities which refused to adopt user charge systems. The Agency's initial determination to make a grant pending adoption of the system was wise. The later determination to make subsequent grants, withholding only a portion for failure to comply, was not. The Administrator is expected to cease to make grants of any kind, to any grant recipient which has not, by the end of the current fiscal year, adopted an approvable user charge system for all its sources. And the Administrator must continue to withhold the remainder of any grant to any community until the modified user charge system is implemented.

The bill contains a Senate provision which indicates that metering is not required for residential users in order to determine exact proportionality. This means that metering is required for nonresidential users. And, it includes a recognition that, in the past and in the future, ad valorem taxes can be the basis for user charge system if such taxes meet the test of proportionality for each user. It is recognized that this will be difficult because property values bear little, if any, relationship to sewage treatment needs. However, if the Administrator is satisfied that proportionality among individual residential or exempt nonresidential users does in fact exist, an ad valorem tax system can be approved.

Finally, the conference agreement includes a requirement that each recipient of waste treatment services be notified as to the cost of the service received. The purpose of this is twofold: First, to create a public understanding of the cost of providing adequate water pollution control; and second, to stimulate conservation.

The conference agreement stresses water conservation as an important public value. This is one reason the Senate insisted on maintaining that where there is a direct relationship between cost and use, there will be the greatest incentive for water conservation.

Finally, the conference compromise keeps in place a basic objective of the 1972 act: the achievement of utility-like management of publicly-owned treatment systems. It is important that these municipal waste treatment systems operate on a utility-like basis. They must begin to develop the capacity to finance their own expansion. They must be self-financing. The Federal Government cannot be forever expected to meet the needs of growing communities. This act does not provide funds for new growth, and it is not likely Congress will provide funds for this purpose in the future.

The 1977 amendments, like the 1972 act, are designed to deal primarily with the backlog of waste treatment needs. It is not intended to deal with the growth needs of communities. Those waste treatment systems which are operating on a utility basis will have the capacity to finance their own growth. Those which are operating on an already overburdened property tax basis will be under constant pressure to seek subsidies for future expansion as the property-tax payers reject increased levies to pay the cost of new development.

In this vein, it should be noted that any system which inequitably distributes operation and maintenance costs among users, in either the commercial or industrial class, or as between those classes and residential users, cannot be approved.

The user charge system should apply to charge back selectively to a source or sources discharging into a publicly-owned treatment works those increased costs in the management of either effluent or sludge caused by the discharge of any toxic pollutant by such source or sources into such publicly-owned treatment works. Thus, for instance, if an identifiable source discharges a toxic pollutant or pollutants which have the effect of preventing a low cost sludge management program such as land spreading and requiring incineration of such sludge, the user charge system shall charge back against the responsible discharge sources the increment of costs over the land spreading systems to carry out such incineration.

The Administrator is authorized to identify "small nonresidential users" which can be exempt from the actual use-user charge requirement. This is intended to provide a mechanism for eliminating small dischargers from the cost of establishing and collecting user charges. The Conference agreement anticipates that these will be commercial and small industrial establishments which contribute only domestic toilet and kitchen waste to the system—or very small quantities of the equivalent of domestic waste.

The Administrator is expected to promulgate these regulations on a categorical rather than volumetric basis in order to avoid forcing each system to pay the cost of making a determination of whether it falls within that category. Small nonresidential users which could be excluded from user charge requirements by regulation are those with smaller flows of essentially domestic waste. Examples would be warehouses, small grocery and dry goods stores, small laundries, museums, and small hotels and motels. Large commercial establishments (e.g., urban trade centers) or "wet commercial establishments" (e.g., photo processing) would require separate metering. Certainly, service stations, repair shops, and other kinds of establishments which have the potential for contributing oil or metals to the system would not. Also, small metal manufacturing shops, printing operations and other nonresidential users which use toxic materials would not be exempt.

It should also be noted that any class or category of industrial or commercial user which has a volume and strength wasteload which in no way correlates to proportionate costs of treatment under an ad volorem tax system, either because of the character of the waste or because of low waste flow relative to the ad valorem tax, should not be determined to be a "small nonresidential" user by the Administrator.

No portion of a grant which has been withheld for noncompliance with this section can be made available unless the Administrator determines that each new requirement of these amendments was complied with prior to enactment.

All recipients being held at the 80 percent payment level as of enactment of this provision must establish an approved user charge system within 1 year of enactment of this provision. Likewise those who apply for grants within 1 year of enactment of this provision must establish an approved user charge system by the end of that year. In both cases the Administrator is to terminate grants of those who fail to establish approved user charge systems by the end of the year. During the one year period it is expected that full payment will be made on grants.

Beginning one year after enactment of this provision, no applicant which has received a grant and has not established an approved user charge system shall receive a substantial grant.

If a system in general fulfills the requirements of the provision as of enactment of the provision, adjustments can be made to the system within the year to make it comply strictly with the requirements of the provision. However, an ad valorem system must be dedicated on enactment for an ad valorem system to fulfill the user charge requirement.

Adjustments can be made within a reasonable time (no more than one year) to achieve full compliance with the requirement of the amendment if the grantee's revenue system in general meets these requirements. Clearly it is intended for example that grantees have an opportunity to adjust their charges to major industries and other large nonresidential users to comply with the proportionality of the requirements of the new amendments. Adjustments may also be necessary to comply with other details, including the requirements for proportionality among user classes, but dedication of revenues must exist on enactment.

INDUSTRIAL COST RECOVERY

The Senate conferees acceded to the House proposal to declare a moratorium on the collection of those costs of treating industrial wastes which under existing law are required to be returned to the Treasury. During the moratorium, a study is to be conducted by EPA of the implications of industrial cost recovery. The study is to be completed within 1 year, with an additional 6 months for Congress to consider the results of that study and take any appropriate action.

This moratorium will accomplish two purposes. First, it will free up any withheld portions of grants to the extent that portions of grants have been withheld solely for the purpose of developing an industrial cost-recovery system. (The bill does not authorize the payment of withheld grants to applicants which have not adopted approvable user charge system.)

The fact that grants will no longer be withheld and that repayment of 50 percent of the cost of treating industrial wastes will be delayed for 18 months in no way removes the requirement that the grant recipient establish a system of industrial cost recovery. The amendment only delays payment to the Treasury (and possibly recovery to the grant recipient if he so desires) for the period of review and 6-month congressional consideration of any findings. At the end of the 18-month period, if Congress has not acted, the community must immediately begin to repay industrial costs, which costs can be spread out over the remaining useful life of the system. In other words, there will be no lump sum payment requirement.

The conferees did agree that any industrial user which contributed the sanitary waste equivalent of 25,000 gallons or less on a daily basis would not be required to repay the Federal share of the grant attributable to treatment for that source. This decision relates in part to the fact that these kinds of industrial or commercial users would ordinarily not construct a separate waste treatment facility—that they are captive to a municipal system. As such, no inequity occurs among communities by the fact that the Federal Government is subsidizing treatment of these users' waste.

It is recognized that the study performed by the Agency may well show that the 25,000 gallons of sanitary waste equivalent is too high, and that the Congress should reduce that amount in order to assure more efficient cost recovery. But no user of a system which contributes the equivalent of 25,000 gallons of sanitary waste or less per day would in any way be liable for any costs occurred prior to a subsequent change in the law.

Also, it is important to note that the 25,000-gallon exemption applies only to the equivalent of sanitary waste and would not be available to any source of waste regardless of quantity which contributes wastes which are toxic or which pass through, interfere with, or contaminate the sludge of any municipal system.

Among the industrial costs which would be required to be recovered would be any costs associated with any federally assisted sludge disposal system. The operation and maintenance of those systems would also be subject to the user charge provision. Both user charges and industrial cost recovery would necessarily reflect any costs incurred by the system for sludge disposal solely because of the failure of an industrial user to remove pollutants which would otherwise contaminate, the sludge, thus making sludge management more expensive.

The Environmental Protection Agency is expected to initiate the study mandated by this amendment as quickly as possible. Among the issues the administrator should address in this review is the exemption in EPA's current regulations of "dry industry" from the industrial cost recovery requirements. The Administrator should look at the size of dry industry sources which are exempt from industrial cost recovery and their contribution to municipal systems.

The General Accounting Office is currently reviewing EPA's implementation of the industrial cost recovery provision of existing law. The conferees expect that this review be completed on an expeditious basis so that it can be made available to the Administrator in ample time to be of use for the study required by this act. The results of this GAO review should be helpful to EPA's analysis of the current program and provide a basis for EPA's study.

Existing law is specific in listing the type of costs which are to be included in the "cost of constructon" for the purpose of industrial cost recovery. This definition has not been changed. The costs of developing a system for industrial cost recovery should be included as part of those contruction costs which the industrial contributors may repay. System development costs would be included under the definition of "construction" in section 212 of the act and are therefore eligible for a 75-percent Federal grant. Such development costs then should be included as part of the cost of construction which a participating industry would be required to repay. Failure to include development costs of industrial cost recovery systems for small grants often results in situations where costs of managing the industrial cost recovery system exceed the revenues derived.

This amendment specifically provides for the inclusion of administrative costs as recoverable costs for the purpose of industrial cost recovery. This amplifies current law which would provide for the recovery of development and other costs which were paid for by a 75-percent Federal grant.

STATE MANAGEMENT ASSISTANCE

The conference agreement adopts the Senate amendment which authorizes the Environmental Protection Agency to assist financially the States to whom he has authorized certain management functions including the construction grant program, the 402 program, the 208 program, and small community grants. These funds would be reserved from the State's yearly allotment of construction grant program's funds. In no case would the funds exceed 2 percent and no State would be eligible for less than $400,000.

The policy of authorizing the States to manage the construction grant program is being implemented by the Environmental Protection Agency under existing statutory authority. California already manages the full program from approval of design to approval of selection among bidders through disbursement of funds. Twenty-eight States have taken over the permit program, and States are carrying on statewide 208 planning. Other States conduct certain portions of the review process in the construction grant program. Because of State resource constraints, they need funds to perform these functions on behalf of the Federal Government.

The bill authorizes the Administrator to distribute up to 2 percent of the grant funds in proportion to the functions of the construction grant program that the State is conducting, whether or not the State has the 402 permit program, whether or not the State manages the permit program, whether or not the State has a statewide 208 program, and whether or not the State has the capability to manage construction grants to small communities. Each of these functions requires manpower and expertise at the State level, and Federal resources should be available in proportion to the amount of the functions conducted and therefore the needs of the program.

This provision is similar to a request by the administration that the bill authorize the Administrator to distribute the funds according to the above criteria.

The purpose of certifying the States and providing commensurate resources is to reduce duplication of effort by State and Federal levels of government, a major complaint in the program; to avoid unnecessary enlargement in the number of Federal personnel needed for program implementation; and to carry out the policy in Public Law 92–500 "to recognize, preserve, and protect the primary responsibilities and rights of States to prevent, reduce, and eliminate pollution."

The Administrator is expected to only make available the full amount when the State has assumed full capabilities. When a State has taken on their full responsibilities, all the funds should not be available unless the State can justify that level of funding.

Sums reserved under this amendment are available for making the type of grants just described for the same period as sums are available from an allotment under subsection (b) of this section, and any grant shall be available for obligation only during that period. Reserve funds that are not obligated by the end of the period for which they are available will be added to the amounts last allotted to a State under section 205 and would be immediately available for obligation in the same manner and to the same extent as such last allotment.

Any reserve funds reverting to a State's general allotment will remain available for a reasonable period of time as determined by the Administrator through regulation before reallotment. In a similar vein, it should be noted that in those cases where a State is granted less than the entire 2 percent of its allotment funds for the purposes of this section, the unobligated funds will revert to the State's general allotment funds as soon as the Administrator determines what percent to grant to any State in any year.

Further, the intent of this provision is that the sums not be used to reduce the level of Federal or State expenditures to administer water pollution control programs as provided in section 106 of the act. However, a grant under this provision may require the reprograming of those amounts of Federal and State funds earmarked for management of municipal facilities construction into other State program elements such as enforcement and monitoring.

Paragraph (d)(2) of this subsection provides that a State assisting the Environment Protection Agency in the implementation of its responsibilities under sections 201, 203, 204, and 212 may receive grants to cover the reasonable cost of that assistance. The activities include infiltration studies, review of preliminary plans to evaluate the size and scope of the project, review of operation and maintenance programs, review of plans and specifications, determination of consistency with section 208 plans and review of priorities.

Technical assistance and information for grantees relate to the activities outlined above.

The Administrator shall determine the size of the grant made to a State based on an assessment of the State's capability to assist with the activities outlined above. The assessment should take into account factors such as the State's capability and performance in reviewing facility plans and design plans and specifications, capacity to provide technical assistance, and availability and adequacy of necessary technically and professionally qualified personnel and other necessary resources.

Further, it is understood that no grant would be made under this provision until the State has demonstrated a commitment to acquiring the capability to manage grant awards to small communities. This would include acquiring the capability to be the contract agency for any engineering design or construction agreements. Most important, the States would have acquired resources to review plans and advise small communities on cost-effective alternatives.

The objective of this policy is to effect a more efficient means for expediting the municipal construction program, the scope and complexity of which has so increased as to make its full implementation at the local level achievable only through reliance on private contractors whose primary objectives may not be minimizing local short- and long-term costs while maximizing environmental benefits.

Two other primary responsibilities in existing law which many States have assumed are the permit program and implementation of statewide section 208 management plans and programs.

Management of the permit program is a difficult responsibility. It requires issuance of permits that are consistent with applicable effluent requirements and water quality standards, review of monitoring reports, and necessary enforcement actions. Each of these activities is resource intensive and requires manpower.

States are finally beginning to assume their responsibilities under the section 208 program. These activities also are resource intensive. A State must integrate the section 303 water quality information, develop best management practices for nonpoint sources, develop plans for siting for industrial and municipal facilities, and review industrial permits and municipal plants to determne their consistency with the 208 effort.

The Congress expects the State to assume more and more of the responsibilities of the water pollution program. It has therefore fashioned a program which increase Federal resources available as responsibilities increase.

GRANT ELIGIBLE CATEGORIES

The conference substitute adds two new subsections to secton 211 of the act. The first provides that if population density is used as a test of eligibility of a collector sewer for assistance, population density shall only be used for the purpose of evaluating alternatives and in determining the needs for the collection system in relation to ground or surface water quality impact. The second provides that no grant may be made under title II from funds for fiscal years 1978 through 1982 for treatment works for control of pollutant discharges from separate storm sewer systems.

The conference agreement deletes the Senate provision which amends section 211 of existing law relating to major sewer rehabilitation and collector sewer eligibility. This leaves in place existing law. Collector sewer eligibility is thus limited to communities in existence on October 18, 1972, with sufficient existing or planned capacity adequate to treat such collected sewage.

By its actions, the conferees reaffirmed the intent of the 1972 act. The purpose of these funds is not to finance the future growth needs of the United States; rather, the purpose is to eliminate the backlog of waste treatment needs with a limited provision for increased capacity to recognize the cost-effectiveness factors and to achieve a balance between the pressures for economic development and the need for environmental improvement.

A community may be a geographic or jurisdictional area less than the municipality that applies for the grant. The determination of what is a community is based in part on occupied residences in sufficient numbers to justify contruction of collector sewers. An existing community for the purposes of section 211 is those residences occupied as of the date of enactment of the 1972 act.

When evaluating the eligibility of collector sewer systems, the Administrator shall bear in mind the preference given to alternative systems for sparsely populated areas by other provisions of the act.

PRIORITIES

The conferees were disturbed by the fact that there seemed to be little relationship between the enforceable requirements of the act and the distribution of public funds for this program.

Again, to underscore that the purpose of the program is to reduce the backlog of waste treatment facilities needs and not to finance the requirements of future growth, the conference agreement specifically requires that State priority lists reflect the enforceable requirements of the act—the deadlines for municipalities and for those industries which will discharge through those municipalities. Any project on the State list which does not comply with this requirement will be removed, and the list shall be revised accordingly.

The Administrator may not approve a grant award for a facility designed to meet new growth. He may only approve a grant for that portion of any facility which meets the specific criteria of this act. Nor may the Administrator approve a grant for a project primarily designed to deliver more waste to a receiving water.

The availability of a 75-percent grant has encouraged the construction of collectors. For example, a town in Wisconsin installed an entirely new collection and treatment system to replace existing septic tanks and ended up spending $500 per household per year for debt service and operation and maintenance. A similar situation in Maine has produced costs of $220 per household per year for debt service and operation and maintenance. In a county neighboring Washington, D.C., the State and the county had proposed to construct a $400 million advanced waste treatment facility whose capacity was at least four times that needed by the existing population. Meanwhile, 43 other cities in that same State which would have gone without funds to construct needed secondary treatment facilities are potentially subject to abatement action for failure to comply with minimum treatment standards.

The sections of the act setting out enforceable requirements include sections 201, 208, 301, 309, 402, and 405. These requirements can normally be met by projects for construction of treatment plants, correction of excessive infiltration and inflow into the sewer system, and/or control of pollutant discharges from combined sewer overflows and bypasses. Construction of collector sewers, interceptor sewers and major rehabilitation of sewers (except where necessary to correct excessive infiltration and inflow) ordinarily would not be necessary to meet the enforceable requirements of the law.

The States are expected to continue to give priority to projects within each category of projects on the basis of the severity of the pollution problem to be corrected and related factors such as the size of existing population to be served.

MODIFICATION OF SECONDARY TREATMENT REQUIREMENT

The Senate-passed bill contained a provision permitting a modification of the secondary treatment requirement for deep ocean municipal discharges. The conference agreement is identical to the Senate-passed bill.

Some communities located along the Nation's coasts have argued that there is no need to require secondary treatment for municipalities which discharge into ocean waters. The Congress determined, after much analysis, that there should be a mechanism by which communities making this argument can test their case in the administrative process. No such contention was made for freshwater discharges. There seems to be general acceptance of the need to achieve a high degree of municipal waste treatment for discharges into the Nation's river, lakes, and streams. But with respect to marine discharges, this bill provides a limited exception.

The Administrator may, on a case-by-case basis, modify the requirements of secondary treatment for marine discharges from publicly owned waste treatment plants where specific conditions are met. Water quality standards must exist for the waters into which the discharge is made and the modification must be limited to pollutants which are covered by those water quality standards. In this case, those pollutants are also limited by the parameters which define secondary treatment. Thus, a waiver could be granted only for the specific effluent parameters which are included in the definition of secondary treatment under existing law. The Administrator would be required to establish an enforceable effluent limit for such works adequate to assure maintenance of ocean ecosystems.

Where applicable water quality standards exist specific to a pollutant in a discharge, the municipal source can apply for a waiver from the secondary requirement for that pollutant if a showing is made that the applicable water quality standard will be maintained, there will not be interference with the national water quality standard for that pollutant, if indirect sources which discharge into that system meet all applicable pretreatment requirements, if no other point or nonpoint source will be required to meet additional requirements because of a modification of the secondary treatment requirement, and if the volume of discharge of the pollutant will not increase beyond that specified in the modified permit for the period during which the waiver is granted.

This provision for modification would be available only to systems which are providing waste treatment services to users which contribute primarily domestic-type wastes or which have sufficient control over industrial input so as to prohibit any 307-type pollutants from entering the system.

Any complex system which is treating wastes for a myriad of industrial and commercial establishments within a metropolitan area could never meet the requirements of this modification procedure unless the control of industrial input was thorough enough to assure that no toxics or other incompatible pollutants pass directly into the ocean environment.

Primary treatment does not deal with these kinds of constituents. Therefore, their presence as an input into municipal waste streams is a prima facie indication that the secondary treatment modification provision is not applicable.

Additionally, the discharger must be able to establish that there is no interference with the attainment and maintenance of water quality which will support a balanced indigenous population of fish, shellfish, and wildlife in all stages of their life cycle. This burden is difficult, but in most cases these outfalls have been in place for many years. Comparative ecosystems exist in nearby ocean waters. Evidence should be available and furnished as a part of an application to determine whether or not the ecosystems which exists in the areas of these outfalls are identical to those which live in unpolluted environments.

There was a great deal of discussion of the term "indigenous" as used in the phrase "balanced indigenous population of fish, shellfish and wildlife." The legislative history reflects an understanding of what is required by this national water quality standard in its application to specific receiving waters.

As in 1972, it was intended that the interim water quality standard be that condition of aquatic life which existed in the absence of pollution. There is no question that man's activities have radically altered receiving water ecosystems in this country and that alteration is continuing at an accelerated pace in many areas. Restoration of aquatic ecosystems which existed prior to the introduction of pollution from man's activities is an important element of the restoration and maintenance of the biological, physical, and chemical integrity of receiving waters. It is an essential aspect of assuring that future generations will have an adequate supply of basic life support resources.

The concept of indigenous does not anticipate the removal of structures from waterways. It does not anticipate the existence of ecosystems which existed in the absence of those structures. But it does fully anticipate the analysis of aquatic populations in terms of man's activities prior to, and subsequent to, pollution.

The secondary treatment modification is not intended to engender the delays created by prior modification provisions such as section 316(a). Procedures are to be as expeditious as practicable. To be approved, applications for modifications must be filed within the time limit provided and must, on their face, provide sufficient justification for granting the application. The burden of demonstrating entitlement to a modification is solely on the application and must be met in the application.

The requirements of section 403, which the Administrator should promulgate immediately, must be met as a condition of the granting of a modification under this provision. It is expected that in evaluating modification applications, the Administrator will pay particular attention to any combined sewer or storm sewer overflows or limitations in treatment plant capacity which result in periodic bypasses. A modification under this provision shall be effective for the full term of the permit.

Mr. President, I ask unanimous consent that a letter I have received from Thomas C. Jorling, Assistant Administrator of the Environmental Protection Agency for Water and Hazardous Materials, on the secondary treatment modification provision be printed in the Record at this point.

There being no objection, the letter was ordered to be printed in the Record, as follows:

U.S. Environmental
Protection Agency,
Washington, D.C., December 7, 1977.
Hon. Edmund S. Muskie,
Chairman, House-Senate Conference Committee on Amendments to the Federal Water Pollution Control Act, U.S. Senate, Washington, D.C.

Dear Mr. Chairman and Members of the Conference: as you know, there were some unfortunate delays in the EPA implementation of important sections of the Federal Water Pollution Control Act Amendments of 1972. To some extent these delays were due to confusion surrounding the interpretation of the complicated new sections added to the law by those amendments. To avoid similar problems in implementing the 1977 amendments, I am taking the liberty of addressing one of the major amendments of the bills before Congress that covering requirements for municipal outfalls which discharge into deep marine waters—and stating EPA's interpretation of that proposal.

We interpret the provision for modification of secondary treatment requirements for municipal outfalls to limit its application to very special circumstances: those few existing outfalls into very deep waters or very high tide fluctuation areas. Only under these unusual temperature and high energy conditions can conditions exist which allow waters to receive oxygen-demanding wastes without effect on indigenous populations.

In addition, when EPA determines whether modified discharges will interfere with the indigenous population, etc., of an area, we intend to consider the effects of such discharges over the life expectancy of any project that could result from such modification. In other words, our modification decision, even though any modification will be limited to 5 years, would be made on the basis of long term effects, since such chronic effects are of greatest concern in protecting the integrity of the oceans.

The Conference's adoption of the proposed definitons and criteria restricts the possibility of modification under this provision to a limited number of areas: California (list enclosed), San Juan, American Samoa, the Virgin Islands, Honolulu, Seattle, and Anchorage. I would note that this listing does not in any way prejudge the question of whether outfalls in these areas would, in fact, qualify under this section.

Adoption of another, broader set of criteria—which in our opinion the Conferees wisely did not accept—would prompt many municipalities to seek modification of secondary treatment requirements under this provision simply to delay compliance with the law. This would create an extraordinary drain on Agency resources, and effectively suspend secondary treatment requirements for an indeterminate period. Furthermore, because of our limited understanding of the effects of effluents on oceans, decisions would necessarily be highly judgmental and would, of course, be appealable in the courts. The net effect of this process would be a return to the requirement of proof of harm to receiving waters before controls can be required.

Several additional points should be made with regard to our interpretation of the proposed provisions:

1. Modification of secondary treatment requirements is allowed only where applicable water quality standards exist. We will interpret that language, of course, as applying only to standards for the discharge of conventional pollutants regulated by the secondary treatment definition. We will vigorously apply controls on other pollutants, especially toxics, in these circumstances.

2. Our preliminary review indicates there are few ocean outfalls for which any evidence has been accumulated to support an application for modification of the requirements for secondary treatment with regard to biochem-

ical oxygen demand and total suspended solids. Although there are studies that could have the effect of justifying discharges of a higher level of oxygen-demanding substances, we are suspicious of these studies as they relate to discharges of other pollutants associated with municipal discharges. We interpret the action of the conferees to reemphasize the overall objectives of P.L. 92–500 applicable to municipalities.

3. We intend to apply the requirement that the burden of proof be placed on an applicant to show no interference with indigenous population, and we will assure that the criteria developed under section 403 are satisfied as well.

4. Senate provision (e)(6), which in our opinion the Conferees have wisely retained, ties modification to a requirement that a discharge source has acted to eliminate the entrance of toxics into the municipal system. This will permit the recycling and reclamation of water and the confining and containment of pollutants in the future. We will interpret this provision to require facilities planning during the initial time extension to achieve those objectives.

5. We endorse the concept of limiting any modification to flows existing on the date of issuance of such modification. Only in this way will the municipality be induced to do the type of planning and implementation which will achieve the objectives of P.L. 92–500.

It should be noted, Mr. Chairman, that while much attention has been focused on the dumping of sewage sludge into the oceans, which the Congress has voted to terminate by 1981 (P.L. 95–153), a comparable or more adverse impact on ocean waters is caused by the discharge of sewage effluents into the ocean through outfalls. We know little about the effect of continued release of persistent pollutants to the oceans, but we know that oceans are vital to the biosphere that supports all life. Prudence dictates that we apply controls as rigorously as possible in order to protect the oceans. Therefore, any modification of pollution controls applicable to the oceans occasioned by short term needs should and, as we interpret the conference agreement, is quite limited in scope.

Sincerely yours,

Thomas C. Jorling,
Assistant Administrator.

Orange County Sanitation District, Laguna Beach, South Laguna, Dana Point, San Clemente, Oceanside, Encinitas, Cardiff, San Diego, Carlsbad-Buena Vista.

Mr. MUSKIE. Mr. President, with regard to municipal extensions, the conferees approved a case-by-case extension for municipalities which were unable to meet the July 1, 1977, requirements, in part as a result of recognition of the impact of impounded funds. These extensions are available only to municipalities which would require substantial construction and for which Federal funds were not available, if they agree to establish and maintain an interim compliance schedule.

Of 12,500 treatment plants now in operation, 4,150 or one-third meet the 1977 requirements of Public Law 92–500. These plants serve about 52 million persons. Plants that do not meet the deadline serve about 92 million persons. EPA has provided the following estimates as to ultimate municipal compliance:

EPA estimates the cumulative number of facilities currently in operation that would achieve secondary or more stringent treatment levels:

Fiscal year:	*Meet level*	*Not meet level*
1977	4,150	8,370
1980	4,260	7,260
1985	8,250	4,270
1990	11,200	
1993	12,500	

Although there is no precise estimate of the number of present industrial hookups to municipal wastewater systems, roughly 50,000 industries, most of which are relatively small, is an EPA approximation. Based on a survey this year of major industrial dischargers in the paper industry, the total number of major industries—flow greater than 50,000 gallons per day—in all categories desiring hookups to municipal systems would be in the order of 70 to 100. There is no estimate of potential hookups for the small industries, but EPA believes that several thousand such industries may find hookups to be advantageous.

The purpose of this amendment is to allow the permitting agency to extend the date of compliance for those treatment works, and industries with contracts to tie in to treatment works, which have made all possible good faith efforts to meet the July 1, 1977, deadline and whose failure to do so is primarily the fault of the Federal Government.

For those industrial and municipal sources which are unable to meet this statutory deadline due to their unwillingness to take appropriate actions and spend necessary amounts of money at the earliest possible time, the conferees intend that no extension be granted and that enforcement actions be undertaken under section 309.

In determining whether or not to grant the extension, the permitting agency must consider whether the delays in construction were due to EPA's inability to make available appropriate construction grant moneys promptly or whether the fault lies with the municipalities' unwillingness to move as fast as possible with all available resources toward the achievement of the requirements of secondary treatment.

Subsection 301(i)(2)(A)(iii) would allow an extension in a permit to an industrial discharger proposing to connect to a municipal treatment system if "engineering or achitectural plans or working drawings made before July 1, 1977, for a publicly owned treatment works" indicate such connection and other criteria of the new subsection are met. This test is intended to establish that plans or drawings to discharge to a municipal treatment system were in existence prior to July 1, 1977, and were not concocted after that date merely to frustrate enforcement of the act's requirements. Accordingly, plans or drawings that have been discarded or superseded or submitted in a grant application that was determined ineligible should not be considered sufficient to support an extension. To support an extension, such plans or drawings generally should be those accompanying an eligible grant application.

PROCEDURES FOR MODIFICATION

This amendment establishes a procedure for filing application for a modification of the requirements of the act for secondary treatment for publicly owned treatment works which discharge into marine waters, and for a modification of the best available technology requirement for nonconventional pollutants.

The amendment requires that any publicly owned system or industrial discharger which wants a modification must file his application to that effect with the Administrator within 9 months of enactment of the 1977 amendments (or in the event that EPA has not promulgated effluent guidelines for the pollutant in question, within 9 months of such a promulgation).

The amendment makes clear that the mere application for a modification does not stay any requirement to achieve BAT by the applicant, unless the Administrator determines that there is a substantial likelihood that the applicant will qualify for the modification on the merits of his application. In the case of a modification of the best available technology requirement for a nonconventional pollutant, the Administrator may condition a stay on the filing of a bond or other appropriate security, such as a line of credit, which will assure timely compliance with the requirements for which a modification is sought.

This provision is intended to discourage the use of the modification procedures for delay by dischargers which have no reasonable chance of qualifying for a modification. Otherwise, the exemptions would provide an opportunity to "buy time" and result in failure to meet the deadlines in the act.

Although numerous changes have been made to sections 301 and 304, effluent limitations and guidelines developed pursuant to these sections remain technology-based standards. Except to the extent expressly provided in the statute, such limitations cannot be varied or modified due to the nature or quality of receiving waters.

Whenever judicial review is sought of the Administrator's action with regard to any modification to or waiver or variance from an effluent limitation, it is expected that such review will be in the courts of appeals pursuant to section 509.

INNOVATIVE TECHNOLOGY

States with approved permit programs under section 402 of the act are to make determinations of whether a claim of innovative technology supports an extension in consultation with and pursuant to guidance from the Administrator. This does not supersede, of course, the Administrator's ability under section 402(d) of the act to object to a permit proposed to be issued by such a State on the basis that an extension contained in the permit was improvidently granted by the State under the new section 301 (k).

The Administrator is expected to approve as innovative techniques those systems which provide for productive use of nutrients and reclaiming and recycling water.

BEST MANAGEMENT PRACTICES FOR INDUSTRY

The amendment to section 304, adding a new subsection (e), authorizes the Administrator to publish regulations for ancillary industrial activities of point source dischargers which contribute pollutants designated as toxic under section 307 to navigable waters. For these ancillary activities, the regulations will specify treatment requirements, operating procedures, and other management practices by classes and categories of point source dischargers. Once promulgated, the requirements, procedures, and practices established in the regulations must be included in section 402 permits where applicable, being considered as requirements of sections 301, 302, 306, 307, or 403. Of course, prior to promulgation, the same type of controls could be imposed in permits through case-by-case determinations under section 402(a)(1).

This amendment closes a gap in the current regulation of toxic pollutants through the permit program. Under the Federal Water Pollution Control Act of 1972, management and operating practices to abate the discharge of pollutants may only be imposed in permits indirectly; for example, through sections 402 (a)(2), 401(d), 208(e), or 301(b)(1)(C). Where such direct authority is unavailable, the result may be control of only a part of the total "toxic pollutant picture" for a given industrial site or process. Limiting pollution control in this manner may often serve to undermine overall water pollution abatement efforts. For example, wastes containing toxic pollutants may be removed from a point source discharge by treatment, only to cause another form of water pollution problem due to improper onsite management, storage, or disposal practices.

Under the terms of the amendment, direct regulation of the totality of a toxic pollutant problem through management requirements in permits would be available. Increased water pollution control would be provided for such concerns as site runoff, spillage or leaks, lagoons, sludge or waste disposal, and drainage from raw materials storage, as they relate to the processes of an industrial point source discharger.

The following example serves to illustrate the possible use of the amendment's provisions for control of ancillary industrial activities. In the case of an industrial plant that stores materials in open areas, the permit, in addition to specifying effluent limitations for the point source discharge, could prescribe procedures for the protection of materials from rainfall and runoff, or the collection and treatment of such runoff. The same permit could prescribe methods for the handling and onsite transport of raw materials, waste sludges, lagoons, or byproducts to minimize spillage or accidental release of toxic pollutants that could flow or be washed into navigable waters.

Some recent environmentally devastating incidents underscore the need for this authority:

The carbon tetrachloride spill into the Ohio River was the result of an improper storage practice. Had proper storage practices been specified, that spill might have been avoided.

The toxic chemical mirex from the Hooker Plant in Niagara, which contaminated Lake Erie, was not an intentional discharge. It was a leak. Had the Administrator specified practices to avoid leaks, that also could have been avoided.

The runoff of kepone into the James River from outdoor storage areas could have been prevented.

Effective use of this authority should reduce significantly a major and potentially disastrous source of serious water pollution. Wherever possible the Environmental Protection Agency should specify alternative practices or control measures that will achieve the intended results. In specifying discharge permit conditions, the Environmental Protection Agency or the State should allow the point source to substitute other control measures or practices where equivalent results can be obtained.

It is the intent of the conferees that the Environmental Protection Agency be vigorous in exercising this new responsibility. The pollutants subject to this authority are the most hazardous to water ecosystems and public health.

The new section 304(e) enables the Administrator to specify best management practices in effluent guidelines to supplement effluent limitations in those guidelines under the criteria set forth in the new section. The Administrator has some authority to include best management practices requirements in permits under appropriate circumstances whether or not such practices are specified in effluent guidelines *NRDC* v. *Costle*, f2 (D.C.C. 1977) D.D.C. Nos. 75-2056). This new section does not impair that authority.

TOXICS AND MODIFICATION OF BEST AVAILABLE TECHNOLOGY

The seriousness of the toxics problem is just beginning to be understood. New cases are reported each day of unacceptable concentrations of materials in the aquatic environment, in fish and shellfish, and even in mother's milk. Empirical evidence has shown a statistical correlation between materials in New Orleans' drinking water and cancer mortality rates; Kepone has destroyed the James River, one of America's most productive, and most historic rivers; PCB's are pervasive and have ruined the fishing in the Hudson River and the Great Lakes; carbon tetrachloride is only the most recent material to contaminate the Ohio River; the pesticide endrin has been found in the Mississippi; perhaps worst of all, are the ones we do not know of yet.

The more we find out, the more cause there is for concern. It is imperative that these materials be controlled. The 1977 requirements have made a beginning, but much more is required.

The Congress has reaffirmed the commitment made in 1972 to achieve a second phase of technology based controls on industrial point sources aimed at toxic and potentially toxic materials which remain after achievement of the 1977 requirements. Considerable testimony was taken on the 1983 requirements based upon best available technology, more than on any other subject. The issue was pursued by all committee members in the House and Senate with great interest.

The conference agreement is clear in indicating that requirement based on best available technology in Public Law 92-500, supplemented by earlier limitations under section 307(a), provide the most effective mechanism in the act for dealing with toxic pollutant discharges. Not only is BAT a technology-based requirement as recommended by the National Commission on Water Quality, but it also calls for heavy reliance on advanced technology and in-process controls which are appropriate for dealing with the majority of toxic discharges. More importantly, the nature of the toxics problem is so pervasive that the most effective approach in dealing with it is on an industry-by-industry basis.

Studies over the past year have identified large numbers of pollutants that have known or strongly suspected toxic effects, many of which are carcinogens. Past experience has shown that the only practical way of dealing with such a problem is to examine each industry category or subcategory. In this manner control options can be developed that deal most effectively with the entire waste stream of an industry. This is the approach called for by best available technology.

Another, and possibly more important, reason for maintaining the BAT requirements is that the Agency currently has a major program underway of using BAT to control toxics. Technology-based effluent limitations are being developed which will place limits on toxic pollutants which pose or are likely to pose human health and ecological hazards.

The conference agreement was specifically designed to codify the so-called "Flannery decision", which set forth 65 families of pollutants which are to be regulated by BAT, and EPA has been implementing this consent decree. To take a different course for dealing with toxics at this point would require a major reprograming of EPA resources. Such a delay, whether it be to allow utilization of a different section of the act or in order to implement this section, would only cause confusion and add still more delay to efforts to solve the toxics problem. The discharge of toxic pollutants should be eliminated as soon as possible. Because EPA is already embarked upon a program to control toxics using a proven mechanism, technology-based effluent limitations, and because of the urgency to control toxics, prudent public policy demands that this strategy be maintained.

The conference agreement amends section 301(b) of the act to require that all toxic pollutants actually listed in table 1 of House Public Works and Transportation Committee Print No. 95–30 must comply with effluent limitations which require the application of best available technology no later than July 1, 1984. For all other toxic pollutants, compliance must be achieved no later than 3 years after the limitation is established. For all pollutants other than toxic pollutants or conventional pollutants, compliance with effluent limitations requiring best available technology must be achieved not later than 3 years after the limitation is established or not later than July 1, 1984, whichever is later, but in no case later than July 1, 1987.

The earliest date for which compliance is required is the same as the date for compliance with the requirements of sections 301(b)(2) (C) and (E); that is, not later than July 1, 1984.

For conventional pollutants, effluent limitations shall be achieved no later than July 1, 1984, which require application of "best conventional pollutant control technology" determined in accordance with regulations issued by the Administrator.

For nonconventional pollutants, the conference agreement amends section 301 by adding a new subsection (g) which authorizes the Administrator—with concurrence of the State—to modify BAT requirements with respect to any pollutant—except toxic pollutants, conventional pollutants, and heat—upon a showing satisfactory to the Administrator that the modified requirements will result at least in compliance with section 301(b)(1) (A) or (C), whichever is applicable, that the modified requirements will not result in additional requirements on any other source and will not interfere with attaining or maintaining water quality which assures protection of public water supplies and protection and propagation of a balanced population of fish, shellfish, and wildlife, and allow recreational activities, in and on the water and will not result in the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable risk to human health or the environment because of bioaccumulation, persistency in the environment, acute toxicity, chronic toxicity—including carcinogenicity, mutagenicity or teratogenicity—or synergistic propensities. If an owner or operator of a point source applies for a modification under new subsection (g) with respect to the discharge of any pollutant, the owner or operator shall be eligible to apply for modification under section 301(c) with respect to that pollutant only during the same time period as the owner or operator is eligible to apply for a modification under subsection (g).

The Administrator is expected to expedite these determinations. Whenever he determines that there is substantial likelihood that a petition for a modification will not prevail on the merits, the conferees expect the Administrator to reject the application so that the process of compliance can begin.

The conference agreement specifically excludes heat—the thermal component of a discharge—from the definition of conventional pollutants and from the category of non-conventional pollutants. This was done to avoid further confusion and delay in the regulation of thermal discharges.

The 1972 act provided a procedure whereby the thermal component of discharges could obtain a modified effluent limitation upon a demonstration of noninterference with the balanced indigenous species of fish, shellfish, and wildlife. That procedure has been utilized; demonstrations are in the process of being made; effluent limitations have been delayed as a result of that procedure. The conferees did not want further delay. The conferees did not want to provide additional opportunities for modification or waiver.

Heat is the one pollutant for which nothing has changed since enactment of the 1972 act. Heat is still subject to best available technology as defined in section 304(b)(2). Heat is still subject to the 1983 deadline.

The conferees are aware of the administrative and judicial implications of modifications of a law as complex as the Clean Water Act. There was only one exception provided in the 1972 act and, in that case, there had been great abuse. More than 100 steam electric powerplants applied for modification of thermal effluent limits. None have yet been placed on a compliance schedule to meet effluent limitations because of extensive delay as a result of this exception. And there is little question that after the adminiistrative process there will be extensive litigation. Heat has become an unregulated pollutant, clearly not the intent of the Congress. The Congress intended that there be a very limited waiver for those major sources of thermal effluents which could establish beyond any question the lack of relationship between federally established effluent limitations and the national water quality standard. That limited exemption has been turned into a gaping loophole.

The cumbersome process which the Agency initiated resulted in part in a decision to avoid any application of 1977 regulatory requirements for steam electric powerplants. There is no basis for that decision in the law. The Agency also concluded that the 1972 act was preemptive with respect to the application of State water quality standards and effluent limits for heat. This is a determination for which there is no substance in law and which is wholly contrary to the committee's long-held view that the States are free to establish any more strict standards of effluent limitations, as specifically set forth in section 510 of the act.

It should be noted that, as was indicated during debate on the Senate floor and as is noted in the Senate committee report, the provisions of this act with respect to any pollutant—heat, a nonconventional pollutant, a toxic or a conventional pollutant—is not preemptive of any applicable State or local requirement standard limitation or deadline.

Even without the State water quality standards/effluent limits question, the delays in section 316(a) would be unfortunate and indefensible. Similar delays under the modifications of this act would be disastrous to this program. The conferees expect the Administrator to establish an expeditious process for determining the validity of applications for exceptions, and to proceed swiftly to enforce effluent limitations applicable to pollutants for which there are no water quality standards or which would clearly interfere with attainment and maintenance of that water quality which provides for the protection of public water supplies and provides for the protection and propagation of a balanced population of fish, shellfish, and wildlife and provides for recreation, in and on the water. Only in this way can these modifications be useful, both to the source which needs to know as early as possible what will be required and to the environment which will benefit from an entire reduction of discharges of pollutants.

The Administrator is required to review, within 90 days, best available technology guidelines for any industrial categories other than the 21 industrial categories subject to NRDC versus Train. When the Administrator completes that review, in the publication of his finding he should promulgate these effluent limits as best conventional pollutant control technology. By the fact of having completed the review, the Administrator will have applied the new cost test and thus any determination as to effluent limits will be a best conventional pollutant control technology determination.

The Administrator's judgment is final unless it is determined that his action was arbitrary and capricious. Congress has given the Administrator a very brief period for review. The Administrator has testified that his standard for conventional pollutants has been similar to that which the new law requires.

It is intended that best conventional pollutant control technology codify that standard. His review of existing best available technology limits should focus on any categories where there is a possibility that best available technology actually requires more than best conventional pollutant control technology. In many cases no change or only a modest change may be required.

The conferees did not expect this review to be exhaustive or extensive. EPA's resources are limited. To direct maximum resources to removal of toxics, pretreatment, enforcement, and proper implementation of the construction grant program, this is intended to be a very limited review. The data on which these best available technology guidelines are based already exists. No new information need be developed. The Administrator must determine whether or not the cost of achieving reductions of conventional effluent bears a reasonable relationship to the amount of effluent reduction achieved. In making this determination, the Administrator is to compare the costs of industrial effluent reduction to the cost of municipal waste treatment.

The Administrator may also evaluate the effluent reduction cost/effluent reduction benefit on other cost bases including comparison with other industries. The Administrator should consider costs of process change as well as end-of-pipe treatment. Where the former is more economical, process change, not treatment, should be the basis for both the effluent limit and the cost comparison.

Best conventional pollution technology effluent guidelines are, from a regulatory standpoint, in most respects identical to best available technology except for the cost test in establishing effluent guidelines. The dates are identical, the procedure for 5-year review and update is identical, and the requirement that the Administrator consider process change as well as treatment techniques in establishing the guidelines is identical. Best conventional technology-based effluent limitations are not subject to a modification on the basis of a plant-by-plant test of economic feasibility (301(c)) receiving water quality (301(g)).

The 1972 act provided an opportunity under section 301(c) for specific sources to obtain a modification of best available technology effluent limitations on a showing that the required effluent limitations were economically unachievable for that particular source and that a modified effluent limitation would represent reasonable further progress toward the goal of elimination of discharge of pollutants.

Like toxic pollutants for which there are no waivers or modifications, there are no potential waivers or modifications for conventional pollutants. An adequate consideration of cost is made at the time of promulgation of the effluent guidelines. The statute specifically relates the economic waiver to those pollutants which remain in the best available technology category and which are not toxic—that is nonconventional pollutants. Because conventional pollutants are no longer in the best available technology category, they are not affected by any waivers or modifications, either on the basis of cost or on the basis of the test of attainment and maintenance of water quality based on protection and propagation of fish, shellfish, and wildlife.

One purpose for establishing a separate category for conventional pollutants was to assure periodic review and revision of the effluent guidelines applicable thereto. Effluent guidelines for best practicable technology were not required to be revised and reviewed because they were a time-limited requirement. Best available technology to be achieved under the 1972 act by 1983 was not intended to be the final degree of control to be applied to existing facilities.

There is and will continue to be a need to press technology to improve the degree of control on both best available technology and best conventional technology. Failure to revise and reissue guidelines on a 5-year basis for best conventional technology could lead to technological stagnation. Worse, available information indicates that growth alone could wipe out the gains made by best practicable technology. Thus, there is no reason to believe that the progress achieved by conventional pollutant control, which will be considerably greater than best practicable technology, will not also be eliminated if the degree of control remains unchanged. Thus, the conferees left in place the requirement that conventional pollutants be updated every 5 years.

The new toxics provision greatly enhances the ability of the Administrator to regulate pollutants which are suspected of having toxic potential. And, the Administrator should add pollutants to the list of toxics whenever he has reason to suspect that they may fall into this category.

The conferees intend the Administrator to have the widest latitude in adding pollutants to the list of toxic pollutants under section 307. He will not be required to justify the relative advantages of listing one pollutant or group of pollutants over another. In determining the toxicity of pollutants, the Administrator must consider the definition of toxic pollutants contained in section 502(13). While he would similarly have latitude in deleting pollutants, no pollutant listed in House Report 95-30 should be deleted without a clear finding that delisting will not compromise adequate control over the discharge of toxic pollutants. Review of the Administrator's action will be in the courts of appeals pursuant to section 509.

Moreover, it should be obvious that the fact that a pollutant listed under section 307(a) has oxygen demanding or other characteristics similar to those of conventional pollutants shall not affect the status of such pollutant as a toxic pollutant.

This provision is not intended to require extensive documentation of toxicity as is the case of toxic effluent standards. It is intended to be more closely akin to the general concept of the 1972 act—that is, that ecological protection will more likely be achieved through the elimination of discharge of all pollutants rather than requiring that the Government bear the burden of establishing a precise relationship between each pollutant in each effluent stream to a particular receiving water quality impact.

The control requirement for any pollutant placed on the toxic list is still best available technology unless the Administrator determines that there is sufficient information on toxicity to establish a separate nationwide effluent standard for that pollutant.

That is an important distinction. The toxic effluent limitation is a best available technology-based control requirement. A toxic effluent standard is a control requirement based on an established relationship between a toxic pollutant and a receiving water/ecosystem impact. A best available technology effluent limitation applies to industrial classes and categories. A toxic effluent standard applies to the pollutant per se, and cannot be exceeded by any source of that pollutant unless the Administrator makes a separate categorical determination. Thus, for example, toxic effluent standards must be achieved by all municipal treatment plants, whereas best available technology limits apply to industrial point source categories.

The conference agreement includes only the list of toxic pollutants for which the Administrator is currently planning to promulgate best available technology effluent limitations for 21 industrial categories. This list, of course, is in terms of families of pollutants. There are within each of those families numerous chemical compounds, all of which are presumed to be listed by statute as a result of listing the family category. This was clearly the intent of the consent agreement which this legislation codifies, and that fact is in no way changed. However, it is not the intent of this amendment, in any way, to restrict the addition of toxic pollutants to that list. The Administrator is expected to expand that list as rapidly as possible to assure maximum regulation of the discharge of potentially toxic pollutants to the aquatic environment.

The Administrator is expected to rely on other evidence of suspected toxicity. For example, there is no question that if a pollutant is determined toxic under the Federal Insecticide, Fungicide, Rodenticide Act, then that pollutant should also be on the toxic list under 307. A pollutant which is determined to be unacceptable in drinking water should be immediately added to the toxic list, because, after all, drinking water is often derived from sources which are affected by point source discharges of pollutants.

There is significant Federal investment in toxicity determinations. The Administrator should not duplicate this effort. He should rely on the efforts of other sections of EPA and other agencies of the Government such as the Occupational Safety and Health Administration and the Food and Drug Administration and outside sources of information. As indicated above, suspicion of toxicity is an adequate basis for adding a pollutant to a list because, after all, such an addition only makes that pollutant subject to best available technology effluent limitations—a control requirement to which it would have been subject prior to these amendments.

These amendments are intended to improve the Administrator's ability to reduce and eliminate the discharge of pollutants. They are not intended to make that process more difficult. In fact, these amendments reduce the evidentiary burden of establishing a toxic effluent standard. While the Administrator will have to carry out further testing and have more than suspicion on which to base his determination, his decision to establish a standard will only be subject to a judicial review test of substantial evidence.

The Administrator is required by sections 301 and 307 to engage in an ambitious regulatory program. In order to carry out this vital effort, it is expected that he will make extensive use of section 308. When using section 308 for this purpose, he will not be subject to the requirements of the Federal Reports Act, 44 U.S.C. 3501–3512.

Once the review of existing best available technology guidelines for conventional pollutants has occurred and any necessary changes have been made, the reviewed and, if appropriate, adequate guidelines will no longer be considered best available technology. Instead, such guidelines will be considered "best conventional pollutant control technology" pursuant to sections 301(b)(2)(E) and 304(b)(4). The variance under section 301(c) accordingly is not available for such pollutants after the review.

As under prior law, implementation of the act need not be delayed pending promulgation of regulations. Under section 402(a)(1), State and Federal permit issuers have authority to implement the requirements of the act in permits whenever pertinent regulations are not in existence at the time of permit issuance. Of course, the Administrator retains authority under section 402(d) to assure that all permits will carry out the purposes of the act—particularly with regard to control of toxic pollutants—and will not prevent timely compliance with any effluent limitations which the Administrator will subsequently promulgate.

PRETREATMENT

The agreement reached by the conferees on pretreatment requires EPA to establish technology-based pretreatment standards under section 307 (b) and (c). The standards will at least include 21 industries and 65 toxic pollutants; additional industries and pollutants may be added later. Where set, national pretreatment standards will be developed by applying best available technology—used for setting direct discharge effluent limits—to the indirect dischargers.

The Agency will encourage local enforcement of the national pretreatment standards initially, and as municipal permits are revised, require a local compliance program as a condition of the section 402 permit. Local compliance programs will be approved by EPA or by the permitting States with EPA review. Where local compliance programs have been approved, local governments will be responsible for enforcing national and local pretreatment standards. And such standards will be conditions on applicable permits. EPA or permitting States will initiate enforcement procedures wherever local governments do not assume enforcement authority and wherever needed to back up local authorities or to protect the environment.

Where a local compliance program is approved, EPA and the permitting States may approve case-by-case modifications of the national pretreatment standards—or local credits—for documented pollutant removals attained by a publicly owned treatment works. To receive a local credit, there must be a demonstration that the pollutant is degraded or treated; credits will not be given for dilution. Such credit approvals will be conditioned initially upon municipal compliance with Resource Conservation and Recovery Act requirements under subtitles C and D, and in 1983 upon the treatment works being capable of making beneficial use of its municipal sludge as established under subsection 405—unless such use is shown to be infeasible. National standards will not permit local credits for pollutants which are bioaccumulative or persistent toxics. Tying local credits to local compliance programs not only provides an incentive for local participation, but more importantly, it provides assurance that the removal levels which justified the local credits will be maintained by a publicly-owned treatment works committed to operating a sound pretreatment program.

In addition to the local credit incentive, Federal encouragement of local pretreatment programs will include, but not be limited to, financial incentives—funding of State and local program development costs through section 106, 201 and 208. Regulatory incentives will include requiring a local compliance program. Construction grant recipients will be required to have user charge programs which, in combination with other revenue sources, are capable of supporting an approved local pretreatment program. All construction grant recipients will be required to have approved local pretreatment programs as a condition of their grants.

The conference agreement requires that States with permit programs approved prior to enactment must conform their programs to the new pretreatment requirements no sooner than 1 year after enactment or, if new State law is required to do so, no sooner than 2 years after enactment. Such States obviously may not be accorded an unlimited time to conform their programs to these new requirements. The Administrator is expected to establish by regulation a reasonable time by which such States conform their programs to these new requirements or face withdrawal of the approval of their permit programs.

INDUSTRIAL DEADLINES

With respect to the industrial program, the Congress recognizes and applauds the significant success that most of the Nation's major industries have attained. And, for those who have begun, made the investment in waste treatment facilities, and complied with the 1977 requirements, there will be significant economic as well as environmental benefits. There will be environmental benefit to receiving waters, and economic benefit to those companies which bought pollution control when pollution control was considerably less expensive than it will be as result of inflationary patterns.

Between 80 and 90 percent of the Nation's industries meet the 1977 requirements of the 1972 act. A good portion of those who do not, have failed for what appear to be legitimate reasons. And about half of those who have failed, according to the Environmental Protection Agency, have not complied because of lack of diligence, lack of good faith, or lack of interest in the success of this program.

As of July 1, 1977, only a small percentage of sources within a few major industrial categories were out of compliance with the 1977 requirements and subject to enforcement actions. Of 4,000 major industrial dischargers, only 633 or 15 percent failed to meet the deadlines. Of these, only 300 are candidates for enforcement. Of the remainder, more than 100-plus are powerplants awaiting 316 exemption decisions; 100 are in adjudicatory hearings contesting legitimate issues; and 100 are tied into municipal systems. Some of the 300 will end up in court if the enforcement order is contested. There are 94 district courts in the country; there is no danger of the courts being overlooked by enforcement actions, and EPA is trying to negotiate enforcement orders without going to court.

For those industrial dischargers not in compliance, the bill provides the Administrator with yet another tool by, in effect, sanctioning what has been a policy of dubious legality with respect to delays in compliance. Three new enforcement tools are provided. First, these amendments provide the Administrator with authority to issue enforcement orders which specify a reasonable time for compliance with final deadline. Current law limits the Administrator to issuing orders of 30 days duration.

Second, these amendments allow the Administrator, at his initiative, to grant a simple extension of up to 18 months to a source whose facilities are under construction but could not have been completed by July 1, 1977. This is simply a codification of the enforcement compliance schedule letter process which the Administrator has used for sources which, in good faith, have tried to comply with the law.

Third, if a source is in violation of the law but does not meet the test outlined above, and the source intends to discharge into a publicly-owned treatment works, the Administrator may grant a compliance order requiring compliance by the earliest practicable date, but no later than July 1, 1983, if the treatment works concurs.

The Environmental Protection Agency has developed an enforcement strategy under current authority to initiate enforcement actions only against recalcitrant major dischargers. Dischargers who miss the July 1, 1977, deadline through no fault of their own will not be subject to enforcement actions; instead, they will receive enforcement compliance schedule letters, stating a specific date by which they must comply with a final deadline and an interim compliance schedule. The conference bill, essentially, codifies this policy.

The act requires industry to take extraordinary efforts if the vital and ambitious goals of the Congress are to be met. This means that business-as-usual is not enough. Prompt, vigorous, and in many cases expensive pollution control measures must be initiated and completed as promptly as possible. In assessing the good faith of a discharger, the discharger is to be judged against these criteria. Moreover, it is an established principle, which applies to this act, that administrative and judicial review are sought on a discharger's own time.

The conferees believe that a case has been made that some relief from penalties must be granted for those sources which have made a good faith attempt to comply with the deadlines in the statute but for justifiable reasons have been unable to do so.

The conferees considered but rejected the alternative in the House-passed bill of providing a case-by-case extension of the deadlines set out in the statute. That alternative was rejected because such a case-by-case extension would not only burden the administrative process but would also provide further opportunity for delay for those sources which are otherwise unable to make a legitimate case for additional time. Consequently, decisions by the Administrator pursuant to this new provision of law should not be the subject of administrative hearings and appeals but, rather, if the Administrator feels he cannot determine that a source meets the requirements of section 309(a)(5)(B) or 309(a)(6), he will immediately proceed under any of the other enforcement options set out in section 309. This authorization of limited flexibility granted to the Administrator will maintain the pressure for compliance while at the same time enabling the Administrator to use his discretion to grant any justifiable extension.

Section 309 is amended to authorize the Administrator to use his enforcement discretion in three new ways in the issuance of administrative orders: First, to require compliance with final permit requirements within a reasonable and expeditious time; second, to require compliance with the requirements of section 301(b)(1)(A) of the act by industrial dischargers meeting specified criteria by April 1, 1979; and third, to require compliance by an industrial discharger not meeting all of the criteria for an extension under the new section 501(i)(2) by discharging its wastes by July 1, 1983, to a publicly owned treatment works that will meet the requirements of section 301(b)(1) (B) and (C) of the act after receiving the wastes from the industrial discharger by July 1, 1983.

These remedies are all at the discretion of the Administrator. No discharger has any right to compel the Administrator to provide a particular remedy. These remedies are in addition to and not exclusive of existing remedies. The Administrator, for instance, in appropriate cases may seek a civil penalty as well as issuing an administrative order. He is expected, however, not to seek penalties in instances from a discharger to which he issues an administrative order under the new section 309(a)(5)(B) as long as the discharger is in compliance with that order, since that new section was designed in part to remove the stigma of noncompliance from dischargers meeting the criteria of that section not in compliance because of circumstances entirely beyond their control. It should be noted that the extensions available to industrial dischargers in administrative orders in the new section 309(a)(5)(B) and in permits in the new section 301(i)(2)(B) are available only to dischargers that have acted in good faith. The Administrator is not expected to grant comparable extensions in administrative orders under the new section 309(a)(5)(A) or (C) to industrial dischargers that have not been in good faith.

It must be emphasized that the Administrator is expected to utilize section 309(a)(6) only in those few cases where the discharger has acted in good faith and the Administrator finds that such means of compliance would result in more rapid and effective reduction of the amount of pollutants discharged than any other alternative means of compliance. The fact that use of a publicly owned treatment works would be less expensive than treatment by the discharger is not relevant to the exercise of the Administrator's discretion to use this enforcement alternative.

In providing the Administrator with additional flexibility to issue enforcement orders where compliance with statutory deadlines would be impracticable, the conferees do not intend to undermine the fundamental concept of strict liability which underlies the act's enforcement provisions. In particular, the Administrator and the courts should not be burdened in enforcement proceedings with determinations of whether a discharger was negligent, not exercising due care, or otherwise at fault.

OIL SPILL LIABILITY

The conference bill makes some changes in the liability scheme for discharges of oil and hazardous substances. The changes made, while limited, are of considerable importance in the overall implementation of this provision.

First, the language of the bill would permit the expenditure of funds from the section 311 fund for the purpose of mitigating the effects of a spill of a nonremovable hazardous substance. The effect of this amendment would be to place the financial burden of protecting persons and property from the harmful effects of discharges of hazardous substances upon those who are responsible for the discharges, and to thereby provide an incentive to such dischargers to take every reasonable step to mitigate the effects thereof.

Under the current wording of the statute, while it appears that such costs can be recovered in cases of discharges of substances determined to be nonremovable, the language is somewhat ambiguous, and the purpose of this amendment is to remove any ambiguity by making clear the intention that such costs can be recovered, regardless of whether the substance is determined to be removable or nonremovable. In addition, the amendment would make clear that the section 311(k) revolving fund could be used to pay for the mitigation effort. Such authority is essential to insure prompt action to protect public health and safety, including, for example, protection of drinking water supplies in the event of a discharge of a hazardous substance.

The bill also removes the total dollar ceiling on liability for oil spills from vessels except for inland oil barges. The ceiling served no useful purpose, inadvertently subsidizing large tankers and thus enhancing their competitive position over smaller vessels. According to testimony, the $150 per-ton limit should be adequate for cleanup of all but the most catastrophic spills. The $14 million limit in existing law is totally inadequate to deal with an oil spill of any magnitude from the size of tanker that is expected to be plying the waters of the United States.

The conference bill establishes a minimum liability for small vessels carrying oil as cargo of $150 per gross ton or $250,000 whichever is greater. For inland oil barges, the liability is $125 per gross ton or $125,000, whichever is greater.

According to testimony from the Coast Guard—the Agency charged with the responsibility for cleaning up oil spills—very often spills from small tankers and other sources are among the most difficult to clean up because they occur in areas where the water is moving and the urgency of the application of cleanup techniques is most pronounced. Additionally, the first cost of any cleanup activity is most costly. The current per-ton limit on smaller vessels is not adequate to provide liability commensurate with the costs of cleanup which have been experienced with such spills.

The Congress is particularly concerned with the soundness of the contingency fund. As a result of the 1970 act, $35 million was appropriated to that fund. Most of that has now been depleted. While there are over $26 million in pending claims and while liability payments and penalties have been returned to the fund, depletion has resulted from cleanup from unknown sources, cleanup where costs exceeded liability, and cleanup of spills where a defense to liability was raised. The new minimum liability for smaller oil tankers and the removal of the upper limit should make the fund more sound.

The conference bill contains a provision which assures that, in most cases, the government can pursue the insurer or the spiller to recover cleanup costs without awaiting final disposition of all third-party damage claims. This provision was adopted as a result of discussions with the Justice Department which indicated that the greatest limit on speedy cleanup cost recovery was the joining of cleanup liability suits with third-party negligence actions. This will no longer be the case.

The conference bill extends authority for cleanup and liability out to the 200-mile limit of the fisheries management zone. The many recent incidents of tanker spills, especially the disaster caused by the *Argo Merchant* off the coast of New England, underscores the immediate need for improved protection from and jurisdiction over marine pollution. The absence of clear legal authority to deal with oil spills beyond the territorial seas is indefensible.

The bill contains language that would permit costs expended by the Federal Government or any State government for the restoration or replacement of natural resources damaged by a spill of oil or hazardous substance to be paid by the contingency fund. This provision authorizes the President, or a State representative to act on behalf of the public as trustee of natural resources to recover such costs. This in an important protection for these natural resources, and this particular provision is fashioned after a similar one in the Deepwater Ports Act.

The Senate committee considered amendments to section 311 to establish liability for damages occurring outside the jurisdiction of any State as a result of an oil spill, including compensation for income loss due to damage to property or natural resources.

The limits for ocean-going vessels are close to the Senate provision in that the outside limit of liability has been removed, thus eliminating the subsidy inherent in a maximum liability for super tankers.

As in the Senate bill, the jurisdiction of the United States to clean up oil spills and assess liability for those spills has been extended to the limits of the jurisdiction of the United States. The language has been modified to reflect the fact that this is an extension of jurisdiction for the purpose of protecting the resources over which the United States exercises jurisdiction rather than an extension of jurisdiction over waters beyond the contiguous zone.

The Senate committee considered amendments to section 311 to establish liability for damages occurring outside the jurisdiction of any State as a result of an oil spill, including compensation for income loss due to damage to property or natural resources. A related amendment creating a new compensation fund covering claims for damages above the spiller's limits of liability and funded by a 3-cent-per-barrel throughput fee on oil not already subject to the fees associated with the existing compensation funds, was also considered. The committee deferred action on these proposals and will consider them as part of the comprehensive oil spill liability legislation, which will be taken up after enactment of this bill. In that context, a provision of liability for damages and a compensation fund which does not preempt State liability requirement will be included in any committee action.

The Senate conferees are committed to consideration in this Congress of pending legislation authorizing creation of an oil spill superfund. Legislation to create such a fund has passed the House—H.R. 6803—and has been referred to the Senate Environment and Public Works Committee along with a similar bill reported from the Senate Commerce, Science and Transportation Committee—S. 2083.

These amendments to section 311 will provide interim assurance that adequate funds will be available to clean up most oil spills and will provide a basis against which the Senate committee can consider the superfund legislation.

The conferees expect that matters raised in this section will be further reviewed in conjunction with consideration of the superfund legislation and of any international agreements on pollution beyond the territorial seas.

The conference agreement is not intended to disrupt the process of negotiation of international environmental protection agreements. It is intended rather to indicate the degree of protection which the United States believes is a minimum.

The massive amount of oil which is being moved on the oceans presents a continuing threat to the capacity of the oceans to generate food and oxygen. There is little disagreement that once polluted to the degree where these resources are in danger, the process may be irreversible. Unlike a lake or a river which man can abandon, the oceans are elemental to man's life support system. Thus, a greater environmental ethic must be applied to protection of ocean resources than might otherwise be applied to inland waters.

The international community needs to understand the importance which the United States places on ocean resources. And the international community needs to understand the limits which the Congress imposes on those international agreements intended to make uniform laws which affect the oceans.

Mr. President, I have, as chairman of the Subcommittee on Environmental Pollution, communicated these deep concerns to Secretary of State Cyrus Vance and Law of the Seas Ambassador Elliot Richardson. I ask unnamious consent that copies of my correspondence on these issues be printed at this point in the legislative history in order that the purpose of these amendments will be absolutely clear.

There being no objection, the letters were ordered to be printed in the Record as follows:

Washington, D.C., *March 22, 1977.*

Hon. Elliot Richardson,
Ambassador,
U.S. Department of State,
Washington, D.C.

Dear Ambassador Richardson: I have written to Secretary of State Vance to express my concerns about certain aspects of the current Law of the Sea Negotiations. I am enclosing a copy of that letter for your information.

I am particularly concerned by the preemptive nature of the Revised Single Negotiating Text with respect to the vessel pollution area. As currently written, this proposal would limit the rights of coastal states, such as the United States, to establish and enforce standards under existing United States environmental statutes. As I stated in my letter to Secretary Vance, many of us have worked long and hard to see these environmental statutes enacted, and I would have serious reservations about a Law of the Sea Treaty which would affect the applicability of those statutes.

As a New Englander, I am sure you understand the importance of adequate protection of both marine and recreational resources. I hope the United States delegation will share my concern in this area as negotiations continue. I wish you and your colleagues the best of success.

Sincerely,

Edmund S. Muskie,
Chairman,
Subcommittee on Environmental Pollution.

Washington, D.C., *March 21, 1977.*

Hon. Cyrus R. Vance,
Secretary of State, U.S. Department of State,
Washington, D.C.

Dear Secretary Vance: I have followed closely, over these last five years, the progress at the Law of the Sea negotiations because of my deep interest in a variety of issues being considered. Since I have been actively involved in the development of U.S. environmental legislation and am the Chairman of the Environmental Pollution Subcommittee of the Senate Committee on Environment and Public Works, I have watched the formulation of the environmental provisions of the Treaty with particular interest.

I would like to bring you up to date on my position on the pollution issues involved in the Law of the Sea negotiations. I think my position is fully supported by the recent series of tanker accidents, the result of which may be long-term damage to marine ecosystems.

I am committed to seeing that this country takes measures to assure that our oceans and well-being do not continue to suffer this harm in the future. To this end, I have introduced legislation which would extend our pollution control jurisdiction out 200 miles, and I have also introduced other legislation to assure that effective standards are adopted for vessels entering United States ports or traveling near our coastline.

The Law of the Sea Treaty should be an instrument to establish a system to eliminate environmental degradation. Certainly such a Treaty should not include provisions which would impede our efforts to move in the direction of sound marine environmental policy. However, the current negotiating text does, in fact, include such provisions.

As such, the Revised Single Negotiating Text in the vessel source pollution area is not acceptabe. In particular, it would pre-empt the rights of coastal states, like the United States, to establish and enforce standards relating to vessel source pollution of coastal areas. Another article would prevent the United States from promulgating national environmental requirements affecting vessels in the territorial sea with respect to design, construction, manning or equipment (and even other matters, such as discharges, if these are covered by international treaty unless coastal state standard setting is specifically authorized). Also, if a vessel were to cause substantial damage to the coast of Maine or any other seaboard state, the United States would not be able to enforce our own domestic laws or international laws against that vessel if the flag state were to commence enforcement proceedings.

If the above vessel source pollution provisions are permitted to remain, they would be inconsistent with existing United States environmental policy; they would be contrary to United States laws including the Ports and Waterways Safety Act and the Federal Water Pollution Control Act; and they could result in more pollution of United States coastal areas and the oceans. While other Members of the Senate and I will want to examine closely all aspects of any final agreed-upon Law of the Sea Treaty and would not, at this point, prejudge what our position on advise and consent to ratification should be, many of us will have serious reservations about the Treaty if the United States will be prevented from establishing and enforcing all standards in its territorial sea—that is, if the Treaty pre-empts existing U.S. environmental legislation. Many of us in Congress have worked long to secure enactment of meaningful United States environmental protection legislation. We would not be prepared to have those years of effort and success pre-empted by less than adequate international treaties.

Finally, with respect to the establishment of a 200 mile economic zone, it seems to me eminently sensible that the United States and other coastal states should have the right to enforce environmental standards for vessels within that economic zone. Such right should be exercisable when any pollution violations occur and should not be limited only to cases of imminent and severe environmental damage (since these are always difficult, if not impossible, to prove). Nor should this right to be subject to preemption by flag states. In the past, our delegation, for reasons which I believe are not defensible, has not been prepared to advocate such extended enforcement. I believe that the United States delegation should insist on the inclusion of this right in the Treaty.

The Law of the Sea negotiations are important to the international community and the United States for a variety of reasons, not the least of which is the protection of the ocean environment. I hope that the United States delegation will vigorously seek the protection of coastal state environmental laws in order to assure fulfillment of that commitment.

Sincerely yours,

EDMUND S. MUSKIE,
Chairman, Subcommittee on Environmental Pollution.

Mr. MUSKIE. Mr. President, I would hope that in negotiation, either with respect to the Law of the Seas Treaty or any international maritime consultative organization agreements, spokesmen for the United States will view this legislation as the baseline from which they will negotiate and not, as has been the case, in the past, a starting position from which the United States will bargain.

I also hope that U.S. representatives to these negotiations will consult more closely with the Senate to assure that positions taken are consistent with domestic law. I would hope that these consultations take place at a time sufficiently prior to the formulation of a U.S. position so that the advise of the Senate can be meaningful. I, for one, am not prepared to support international agreements, the effect of which would compromise the interest of the United States in protecting ocean resources.

The amendments to section 311 underscore the importance of this section and the need for completion of long-delayed regulatory action with respect to hazardous substances. There is no reason for further delay. While designation of hazardous substances and determination of removability, harmful quantities and rates of penalty are major actions, the Administrator is expected only to make a reasonable effort to make these judgments. These are nationally applicable, before-the-fact decisions and are not expected to reflect the myriad of actual circumstances that may occur.

Judicial review should not unnecessarily prevent implementation of these regulations. Burdensome discovery should not be necessary so long as notice and opportunity to comment was provided. Review should also be consolidated as much as possible.

It is also expected that costs of mitigation actions designed to properly dispose of pollutants removed from the water or shorelines will be deemed costs properly included in section 311(c).

FEDERAL FACILITY COMPLIANCE

The phrase "particular effluent source" in the amendment to section 313 is not intended to suggest any limitation on the President's power under the general exemption provision to exempt any Federal activity, such as the strategic petroleum reserve program, from the requirements described in section 313.

ENVIRONMENTAL PROTECTION AGENCY ISSUANCE OF PERMITS

Section 402(d) as amended provides a process for the issuance of National Pollutant Discharge Elimination System permits by the Administrator after he objects to a State-proposed permit. It is intended that this process be utilized to insure the rapid issuance of an effective, valid permit. The Administrator's action in objecting to a permit would generally not be subject to judicial review since it will always be followed by further administrative action. The final issuance of a permit by EPA would be subject to judicial review pursuant to section 509 (b)(1)(F).

Furthermore, in order to insure the effectiveness of this provision, the Administrator may develop flexible procedural rules to provide for rapid permit issuance. When the record developed by the State is adequate for instance, the Administrator need not provide for public comment or a public hearing. When the record developed by the State is inadequate to support a permit determination by the Administrator, he may remand the permit proceedings to the State with instructions to develop an adequate record or he may develop such record himself.

DREDGE AND FILL PERMIT PROGRAM

The provisions of the conference report dealing with discharge of dredged or fill material amend sections 404 and 208(b)(4) of the act. These amendments are essentially the same approach as taken in the Senate-passed bill, and the Senate report and floor statements at the time of Senate passage are still adequate reflections of legislative intent with respect to this program.

The conference bill follows the Senate bill by maintaining the full scope of Federal regulatory authority over all discharges of dredged or fill material into any of the Nation's waters. It provides for the substitution of adequate State programs for permit issuance by the Corps of Engineers, and for general permits to be issued by the corps or under approved State programs. The bill also provides the exemptions from the permit requirement for certain specified activities as provided in the Senate-passed bill.

The two major changes from the Senate version are a greater degree of specificity about the type of "best management practice" regulation under section 208(b)(4) which qualifies an activity for exemption from the section 404 permit requirement, and a restatement of the exemption for Federal projects.

The conference bill amends section 208(b)(4) to authorize the Administrator to approve statewide regulatory programs to control those discharges of dredged or fill material that are better handled through imposition of best management practice requirements. The section 208(b)(4)(B) program is intended to complement State permit programs approved under section 404. Once a State has an approved section 404 permit program and an approved section 208(b)(4)(B) regulatory program, the Administrator may approve best management practices imposed by the State to control an activity which he determines will have only minor individual or cumulative effects on the aquatic environment. If the Administrator approves best management practices as adequate to control a specific activity without additional permit review, providing a degree of protection comparable to that from section 404(b)(1) guideline review, Federal permits should not be required. Best management practices will not be appropriate as the sole means of control for activities such as channelization and site development fills that can impair the circulation or reduce the reach of navigable waters. Such activities, by their very nature, will continue to require individual attention through a permit review process, as will all discharges involving any toxic pollutant listed under section 307(a)(1).

Of course, best management practices may be required for such activities as permit conditions. It is not expected that the section 208(b)(4)(C) exemption from permit requirements will be available for whole classes of activity, such as silviculture. While the intent of section 208(b)(4) is to encourage States to develop best management practice requirements for all such activities, as part of a general forestry practices act or otherwise, each individual activity or practice must be scrutinized in light of the section 404(b)(1) guidelines and approved by the Administrator before the permit exemption is available.

A section 208(b)(4)(B) is not a substitute for the section 404 program, and the Administrator cannot approve best management practices to replace the State's permit review process in its entirety. This is consistent with the principal that section 208(b) programs generally, at the State or area wide level, do not duplicate the permit programs for point sources under sections 402 and 404, but incorporate them in a broader effort to attain the water quality objective of the act.

The Administrator must assure that an approved best management practice is specific enough to inform each person conducting an activity what is specifically required of him. The conferees expect that any approved section 208(b)(4)(B) program will include an active enforcement process with demonstrated capability and adequate resources.

New subsection 404(r) provides an exemption from the permit requirement for discharges of dredged and fill materials associated with the construction of certain Federal projects. Only fully Federal projects which are specifically authorized by the Congress may qualify for this exemption. Federally assisted projects, such as watershed improvement plans under the Soil Conservation Service, do not qualify even if authorized by name. Projects which are authorized by congressional committee resolution and projects which do not belong to the Federal Government but are financed in whole or in part with Federal funds are not eligible for the exemption. Maintenance of existing Federal projects is not covered by the exemption either.

A Federal project may be exempted from the requirement for a permit under section 404 or an approved State section 404 permit program only if the Congress had adequate information on the effects of the discharge of dredged or fill material at the time of authorization, or at the time of a specific appropriation of funds for the construction involving the discharge. This information must be in the form of an environmental impact statement which specifically addresses the effects of the discharge of dredged or fill material, providing an evaluation of those effects equivalent to that required under the section 404(b)(1) guidelines. It is unlikely that environmental impact statements prepared before the passage of this legislation or promulgation of those guidelines would satisfy this requirement.

The Congress must have adequate siting, engineering, and environmental information and analysis on each proposed Federal project, as well as modifications recommended by reviewing agencies, in order to review the available alternatives to and potential adverse impacts of the proposed discharges. The Administrator will be expected to see that the section 404(b)(1) guidelines are sufficiently explicit to focus attention on those aspects of Federal project dredge and fill material discharges that could result in environmental degradation. And the Administrator must assist other agencies by carefully reviewing draft environmental impact statements to assure that the guidelines are being interpreted and implemented properly.

Mr. President, the Senator from Arkansas, Mr. Bumpers, has written to me as chairman of the conference committee, on the question of Federal projects exemption. I ask unanimous consent that his letter be printed in the Record at this point.

There being no objection, the letter was ordered to be printed in the Record, as follows:

Washington, D.C., *December 14, 1977.*

Hon. Edmund Muskie,
Chairman, Subcommittee on Environmental Pollution, Committee on Environment and Public Works, Washington, D.C.

Dear Ed: I am especially concerned about the effect that the conference report on H.R. 3199 may have on Section 404 of the Water Pollution Control Act. As you know, this provision of law, now codified as 33 U.S.C. Section 1344, places upon the Secretary of the Army, acting through the Chief of Engineers, the authority to issue permits for the discharge of dredged or fill material into the navigable waters at specified disposal sites. Under subsection (c), however, the Administrator of the Environmental Protection Agency is authorized to prohibit or restrict the use of any disposal site for dredged or fill material if he determines that the discharge of such materials at that site will have an unacceptable adverse effect on municipal water supplies, shell-fish beds and fishery areas (including spawning and breeding areas), wildlife, or recreational areas. The Administrator is required to set forth in writing and make public his findings and his reasons for making any such determination.

This provision has played an important part in the orderly development of federal water-resource projects. The power which it grants the Administrator of EPA is especially important in connection with Corps of Engineers projects. In those instances, without subsection (c) of Section 404, the Corps of Engineers would, in effect, be granting itself a permit for the disposal of dredged and fill material. Subsection (c) has provided a valuable check. It has prevented the Corps from being judge in its own cause.

The pending conference report would change this aspect of Section 404 rather significantly. Section 67(b) of H.R. 3199, as agreed to by the conferees, would add a new subsection (r) to Section 404. This new provision would apply to federal projects specifically authorized by Congress. The discharge of dredged or fill material as part of the construction of such projects could not be prohibited by or regulated under Section 404 if certain rather specific conditions are met. If the project is to qualify for this exemption, information on the effects of the discharge, including consideration of the guidelines developed under subsection (b)(1) of Section 404, must be included in an environmental impact statement, and such impact statement must have been submitted to Congress before the actual discharge of dredged or fill material in connection with the construction of such project and prior to either authorization of such project or an appropriation of funds for such construction.

I would like to ask you, as manager of the bill, whether you concur in my construction of subsection (r). The explicit requirement that environmental impact statements include information on the effects of the discharge, including consideration of the guidelines developed under subsection (b)(1) of Section 404, is of course entirely new to the law. It seems clear, therefore, that to qualify for this exemption environmental impact statements prepared before the pending conference report becomes law may well need to be amended or updated, with any amendments or changes going through the customary process of circulation of a draft impact statement.

The depth and quality of discussion of the effects of discharges, including consideration of the (b)(1) guidelines, are crucial to new subsection (r). The filing of an impact statement adequately exploring these issues in depth is a condition precedent to the operation of subsection (r). It is my understanding that until and unless such impact statements, or amendments to statements, are circulated and filed in accordance with the guidelines of the Council on Environmental Quality and other applicable laws and regulations, the Section 404 permit requirements as it existed before the passage of the presently pending bill will remain in full force and effect as to any given project in question.

Your attention to these issues is greatly appreciated. Many thanks for all your courtesies.

Sincerely yours,

Dale Bumpers.

Mr. MUSKIE. Mr. President, the Senator from Arkansas' letter addresses an important issue. The depth and quality of discussion of the effects of discharges, including consideration of the (b)(1) guidelines, are crucial to the operation of new subsection (r). The filing of an impact statement adequately exploring these issues is a condition precedent to the operation of subsection (r). Until and unless adequate impact statements, or amendments to statements, are circulated and filed in accordance with the National Environmental Policy Act and the (b)(1) guidelines, the permit requirements of section 404 which existed before the passage of the presently pending bill will remain in full force and effect as to any given project in question.

The process of review of environmental impact statements by other agencies should provide the same degree of coordination now provided in the interagency review of permit applications.

In addition, I want to stress that any State permit program for the discharge of fill material approved by the Administrator must have demonstrated itself capable of accomplishing the same objectives as the Federal permit program. The State program must include enforcement authority comparable to the Federal program, with adequate resources including staff and funds, and must assure coordination with all related Federal, State, and local programs. A State permit program must include substantive decisionmaking criteria as stringent as the section 404(b)(1) guidelines.

The conferees agreed to adopt the Senate amendment that legislatively clarifies the exclusion of certain activities that do not typically involve point source discharges of dredged or fill material and will be adequately controlled by best management practices and performance standards. The conferees have adopted the Senate's explicit approach for clarifying that plowing, seeding, cultivating, harvesting, minor drainage, and soil and water conservation practices performed on uplands were not intended to require section 404 permits. Such exemptions were provided by the Corps of Engineers' regulations under the current law.

New subsection 404(f) provides that Federal permits will not be required for those narrowly defined activities that cause little or no adverse effects either individually or cumulatively. While it is understood that some of these activities may necessarily result in incidental filling and minor harm to aquatic resources, the exemptions do not apply to discharges that convert extensive areas of water into dry land or impede circulation or reduce the reach or size of the water body. For the same reasons, paragraph (f)(1)(E) provides that farm and forest roads are to be constructed and maintained in accordance with best management practices to minimize any adverse effects that may occur when water is displaced by fill material.

Subsection (t) of section 404 was a provision of the Senate-passed bill which was adopted by the conferees with limited modifications. Subsection (t) clarifies the intent of Congress that the maintenance dredging activities of the U.S. Army Corps of Engineers, as all other Federal activities, should be subject to State permit requirements.

Subsection (t) was offered in the Senate Environment and Public Works Committee by Senator Anderson as a result of varying legal interpretations of the applicability of sections 313 and 404 to dredging activities. The Senate report, page 68, summarizes the past litigation on these provisions. By enacting subsection (t) the Congress will clarify that corps dredging activities are not exempt from State pollution abatement requirements. In fact, under section 404(t) and the amendments to section 313, every Federal activity is subject to State and Federal procedural requirements, including permits, as well as substantive requirements. Activities on federally managed lands are covered as well.

The conferees agreed to three modifications of related Senate-passed provisions. None of these, however, were intended to detract from the basic thrust of subsection (t): The Corps of Engineers, like any other Federal agency, in performing maintenance dredging or undertaking other activities, is to comply with State substantive and procedural requirements. First, the conferees agreed to amend section 313 to provide the President with a procedure to provide limited exemptions for military equipment and vessels from Federal, State, interstate, or local requirements. This provision arises from concerns expressed by the Department of the Navy about the possible application of subsection (t) to military activities, to the detriment of national defense. Only in cases where the Corps of Engineers is performing dredging for access channels for critical military vessels could this authority limit subsection (t) as it applies to maintenance dredging.

Second, the conferees agreed to restrict subsection (t) to State and interstate requirements only, thereby eliminating from the Senate language local requirements.

Third, the conferees agreed to include in the language of subsection (t) the precise language that appears in section 511(a)(1) of the Federal Water Pollution Control Act of 1972:

> This section shall not be construed as affecting or impairing the authority of the Secretary to maintain navigation.

The Senate conferees agreed to this provision since this language is part of the current law and was not primarily at issue in the litigation that prompted this provision. It is also not inconsistent with the Senate report on this provision.

The addition of the language from section 511(a)(1) to subsection 404(t) is not interpreted by the conferees as either contradicting, nullifying, or restricting the principal purpose of this provision on the corps; namely, to comply with State water quality standards when dredging.

Those State water quality standards covering turbidity, suspended solids, and other parameters, that are applicable to all other dischargers to public waters, will now be applied to the significant dredging activities of the corps, and all other Federal activities.

The conferees recognize, as was specifically included in the Senate report on this legislation, that compliance with water quality standards by the corps is dependent on the availability of funds for on-land or confined disposal of dredge spoil. We affirm the language in the Senate report that it is the responsibility of the Secretary of the Army to seek funds from the Congress for maintenance dredging to be performed consistent with State water quality standards. The first evidence of the intentions of the corps to comply with section 404(t) of the Clean Water Act of 1977 in good faith will be the expeditious allocation by the Secretary of the Army and Chief of Engineers of funds to local corps district offices for compliance with this provision during the 1978 dredging season, or, if such funds are not available from funds now under the control of the Army, a request to the Congress for a supplemental appropriation to insure that the corps has those funds required to dredge in compliance with State water quality standards.

In summary on subsection (t), the intention of the Federal Water Pollution Control Act of 1972 was not to exempt the U.S. Army Corps of Engineers or any other public or private agency from State water quality standards and the interpretation of section 404 by the courts is at variance with the intent of Congress. In fact, Congress intended that section 404 in the 1972 act would in its initial implementation end the open water disposal of dredge spoil. Quite the contrary has been the case. Section 404(t) of the Clean Water Act of 1977 is clear direction from the Congress to the Corps of Engineers that dredging must be performed in compliance with the same water quality standards and pursuant to the same procedural requirements with which any other dischargers to the Nation's waters must comply.

EMERGENCY FUND

The emergency fund amendment provides general authority for the Administrator of the Environmental Protection Agency to abate environmental emergencies. The authority is not limited to water pollution emergencies. Examples of the kinds of events for which funds authorized by this section might be used include:

Louisville, Ky.: On March 29, 1977, toxic fumes emanating from a sewer line caused several people to faint on the streets of Louisville. It was later determined that the toxic fumes stemmed from a mixture of hexa- and octachlorocyclopentadienes, resulting in the hospitalization of over 10 persons and the closing of the wastewater treatment plant. The plant was forced to divert millions of gallons per day of untreated sewage into the Ohio River for about 2 months until the plant was able to resume its full operation again. The overall cleanup effort included the removal of the chemical contaminant from the sewer line, decontamination of the waste treatment facility, and ultimate disposal of the contaminated sludge. The two organic chemicals are not designated on EPA's hazardous substances regulation, therefore, the 311(k) revolving fund would not have been available for expenses incurred for the cleanup operation.

Kernersville, N.C.: On June 3, 1977, vandals had entered a facility, owned by Destructo Chemway Corp. near Kernersville, N.C., and opened valves on six storage tanks. Approximately 30,000 gallons of waste oil and a mixture of organic chemicals were discharged into an unnamed tributary and eventually entered the Kernersville Reservoir, a 24-acre lake serving as the primary drinking water source for Kernersville's residents and industry. All costs associated with the removal and disposal of the waste oil, which were on the surface of the lake, were charged to the Federal revolving fund under section 311(k) of the Federal Water Pollution Control Act. Other nonoil contaminants remained in solution in the water column and were not removed. These contaminants would pose an imminent threat to downstream water use in the event the reservoir overflows.

Kingston, Tenn.: On March 5, 1973, a transformer owned by General Electric Co., was transported via truck to its new destination. When the transformer started to leak on highway 58 near Kingston, Tenn., the driver of the truck dumped approximately 1,500 gallons of Pyranol near the roadside. Pyranol is composed of a mixture of PCB's and chlorinated benzenes. Because the spill occurred near the top of a hill, a considerable area was contaminated. The contaminated soil was excavated, placed into 11,500 drums, transported and disposed of at a chemical landfill in Texas by General Electric Co. The overall cleanup cost incurred by the company was over $1.7 million. Although PCB's are on the 311 hazardous substances designation list, section 311 of the Federal Water Pollution Control Act is not applicable because the incident did not involve navigable waters of the United States.

Charleston, W. Va.: On February 18, 1977, EPA detected unusually high concentrations of carbon tetrachloride in the Kanawha and Ohio Rivers. It was estimated that 70 tons of carbon tetrachloride had found their way into the rivers. On February 24, 1977, FMC Corp. reported a spill of 5,300 pounds of carbon tetrachloride into the Kanawha River. On March 8, FMC notified EPA of another spill, and again on May 26, FMC experienced a spill of between 200 to 400 pounds of carbon tetrachloride. Carbon tetrachloride is not currently designated on EPA's 311 hazardous substances list—proposed rule.

Hopewell, Va.: A converted gasoline station, owned by Life Science Inc., was used to manufacture kepone at Hopewell, Va. After 16 months of operation, the facility was shut down on July 14, 1975. The kepone was responsible for disabling some of the workers who work at the site. During the operation of the plant, kepone-contaminated effluent was chronically discharged into the James River via Hopewell treatment plant, and it is now found to be spreading in the Chesapeake Bay. In late 1974, the failure of the digesters at the Hopewell treatment plant led to the discovery of relatively high kepone concentrations in the sludge. This kepone-contamined sludge was placed in a specifically constructed storage lagoon where it remains today. Other materials, such as filters, clothing, and activated carbon, which became contaminated during the demolition of the converted gasoline station, were also stored in sealed barrels at the Hopewell sewage treatment plant site. The lagoon sludge, barreled material, and decontamination water still require ultimate disposal in an environmentally acceptable manner.

Oswego, N.Y.: On March 23, 1977, a potential major spill of 1.4 million gallons of waste oil and other chemicals at Pollution Abatement Services (PAS) near Oswego, N.Y., was reported to EPA Previous spills from PAS, a liquid waste disposal company, had occurred in June and December 1976. EPA region II assumed responsibility as on-scene coordinator and activated EPA's treatment trailer. On August 29, 1977, a district court judge in New York granted a preliminary injunction against PAS, enjoining it from further discharge of oil or chemical waste. The judge also directed EPA to remove the contents in two containment lagoons and lower the level in two others to eliminate leakage through the dikes. All costs associated with the removal and disposal of PCB-contaminated surface oil and oily sludge can be charged to the Federal revolving fund under section 311(k) of the Federal Water Pollution Control Act. Removal of other nonoil contaminants, such as chemical waste in 55-gallon drums, could pose an imminent threat upon discharge. Expenses incurred for the removal of these nonoil contaminants cannot be charged to the 311(k) Federal revolving fund because the majority of the contaminants are not designated on EPA's hazardous substances list.

Chicago, Ill.—On April 26, 1974, a chemical storage tank at bulk terminal on Chicago's south side ruptured, discharging silicon tetrachloride. The chemical reacted with the moist air and produced a nausea-inducing, acid cloud which measured from 5 to 10 miles long as it moved across the city. Nine governmental agencies were involved in the incident. State, city, and Federal agencies worked for 8 days to stop the leak, neutralize the spill and transfer the material to another tank.

Pensacola, Fla.: L. & N. railroad suffered a 15-car derailment on the east side of Pensacola's city limits, west side of Escambia Bay. Derailment occurred at 6:30 p.m. CST on November 9, 1977. Two cars of anhydrous ammonia were involved, one car ruptured and one car leaking. Sixteen people were hospitalized, four critical and one dead. One thousand people were evacuated. On-scene decisions were made by a disaster team from air products. Their decision was that they could not patch either tank so they hooked a water hose to each tank, flushed it out, diluted the ammonia and discharged it into the bay. This was not a 311 incident, there was no EPA 311 emergency personnel on-scene and no 311 funds were utilized.

PBB'S IN MICHIGAN

In 1973, a large batch of cattle feed was contaminated by the chemical PBB in Michigan. The result of that contamination and its subsequent dispersal throughout the environment of Michigan has resulted in the contamination of some 9 million human beings with the chemical and the destruction of thousands of head of livestock.

While the responsible chemical was identified in 1974, reaction by the State and Federal officials to prevent the spread of the chemical and to take remedial action was incredibly slow. For example, in January of this year, nearly 4 years after the contamination incident, Government officials are finally beginning to examine whether or not workers engaged in the manufacturing and processing of PBB may be experiencing ill-health effects. If a section 69 had been applicable when the contamination occurred, the spread of this chemical could have been reduced and much of the suffering and economic damage which exists even today could have been avoided.

NONCOMPLIANCE FEES

The conferees deleted a provision in the Senate-passed bill which required the Administrator to assess a noncompliance fee against industrial point sources not in compliance with the requirements of the act after July 1, 1979, in amounts commensurate with the economic benefit of the delayed compliance. A similar provision was contained in the Clean Air Act Amendments of 1977.

The conference committee dropped this provision as unnecessary at this time, for two reasons. First, although there are well over a thousand major sources of air pollution that will not be in compliance with Clean Air Act requirements on July 1, 1979, there are only a few hundred major industrial sources of water pollution that are expected to be in noncompliance with Federal Water Pollution Control Act requirements by that date. This relatively good compliance record appears to make the addition of a new enforcement tool unnecessary at this time. Second, the Agency's current enforcement policy is to seek court imposed penalties for noncompliance with Clean Water Act requirements in amounts commensurate with the economic benefit of delayed compliance, among other factors.

This policy embodies congressional intent on the criteria that should be considered by courts in imposing civil penalties under existing provisions of the act. Successful implementation of this policy by the Agency through the courts may make the provision for administratively assessed, economic benefit fees unnecessary. Subsequent review of compliance under the Clean Water Act, the success of the Agency in implementing its penalty policy through the courts, and the time delay and resource demands of seeking judicially imposed penalties may indicate that the administrative assessment mechanism will become necessary in the future.

The deletion of this provision is in no way intended to affect the Agency's current enforcement strategy.

Mr. President, I ask unanimous consent that a letter and a document outlining EPA's enforcement strategy be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

WASHINGTON, D.C.,
December 14, 1977.

HON. EDMUND S. MUSKIE,
Chairman, Senate/House Conference Committee on H.R. 3199, U.S. Senate, Washington, D.C.

DEAR SENATOR MUSKIE: You have asked for an elaboration of the Agency's policy with regard to civil penalties under section 309 of the Federal Water Pollution Control Act and section 113 of the Clean Air Act.

The Agency believes that civil penalties should be utilized to deter violations of and to encourage future voluntary compliance with the requirements of the Acts. To achieve these goals the Agency believes that the amount of civil penalties assessed against major industrial sources of pollution must at least remove any economic gain achieved by non-compliance and may have to be larger in some cases.

The assessment of civil penalties in these amounts will result in greater equity in the enforcement of these Acts by insuring that sources which comply with the Acts' requirements in a timely manner do not suffer an economic disadvantage in comparison with those that do not.

Accordingly, it is the Agency's policy to compute penalties in agreed upon settlements in civil cases commenced under the Acts against major industrial sources of pollution by:

1. Calculating the amount of economic advantage secured by non-compliance;
2. Adding appropriate amounts for aggravating circumstances, such as the degree of environmental harm caused by the violation, the degree to which the integrity of the regulating systems created by the Acts is threatened by the violation, and abnormal expenditures by the Agency to secure compliance;
3. Multiplying the sum of (1) and (2) by a percentage reflecting the probability of successfully proving the alleged violation in court; and
4. In extreme cases, by deferring or reducing the penalty in whole or in part, where the immediate payment of the full amount would render it impossible for the source to install the required pollution controls and stay in business.

In cases that are tried rather than settled the Agency would ask the Judge to take the same factors into account, with two exceptions. Since a litigated case would not reach the issue of penalties unless the underlying violations are proved, no discount to reflect probability of success on the merits would be appropriate. Moreover, penalties assessed by judges should be sufficiently higher than penalties to which the Agency would have agreed in settlement to encourage violators to settle.

This policy was established for civil cases under the Federal Water Pollution Control Act in a policy memorandum dated June 3, 1977, a copy of which is attached. That policy now also applies to civil actions commenced under section 113 of the Clean Air Act.

The economic benefit component of civil penalties assessed under section 113 of the Clean Air Act, of course, should not be duplicative of administratively assessed noncompliance penalties under section 120 of the Clean Air Act.

The Agency is currently consulting with the Department of Justice, U.S. Attorneys and State officials around the country to explore various issues and questions which have been raised with regard to the implementation of the policy. Such consultation, together with experience in implementation of the policy over time, will lead to future guidance to elaborate and improve the policy to deter violations and encourage compliance by securing penalties in amounts at least equal to the economic benefit of noncompliance.

If I can be of further assistance in clarifying this policy, please do not hesitate to contact me.

Sincerely yours,

(s) JEFFREY G. MILLER.
MARVIN B. DURNING,
Assistant Administrator for Enforcement.

MEMORANDUM

Washington, D.C. June 3, 1977.

To Regional Administrators.

Subject: Settlement of Section 309(d) Enforcement Cases for Monetary Amounts.

Section 309(d) of the Federal Water Pollution Control Act sets a maximum civil penalty of $10,000 per day of violation. Although the statute sets a maximum, it provides no guidance as to what would be an appropriate penalty for a particular violation. The amount of the appropriate penalty is especially important when the Agency and a violator are attempting to settle a case without litigation. This memorandum is being transmitted in order to provide some guidance on the level of appropriate penalties in settlement.

The first task in determining an acceptable settlement figure is to estimate, as precisely as possible, the monetary judgment likely to result if the case were to proceed to trial. For planning purposes at this stage the assumption is made that the Agency's position will prevail on the merits.

In arriving at the estimated judgment figure, a number of factors should be considered, including the following:

(1) The extent to which the defendant may have profited by failing or delaying to comply,

(2) The degree of harm to the public caused by the defendant's failure to comply.

(3) The willingness of the violation, or the good or bad faith of the defendant in meeting its obligation to comply,

(4) The necessity of vindicating the authority of EPA,

(5) The ability of the defendant to pay the penalties.

Many of these factors will necessarily be quite subjective; as the attachments explain in more detail, however, these are the considerations analyzed by the courts in determining an appropriate penalty.

Perhaps the most important single criterion in estimating an appropriate judgment amount is an analysis of the economic benefit that accrues to the discharger as a result of noncompliance. From this starting point appropriate penalties can then be calculated either up or down depending upon an examination of the other factors listed above.

After determining the approximate benefit of noncompliance to the violator, the estimated judgment figure should be increased by the amount of any economic harm resulting from the defendant's failure to comply.

An extremely important criterion, which may either increase or reduce the estimated judgment figure, is the degree of willfulness connected with the violation, or the good or bad faith of the defendant.

A factor which could increase the estimated settlement amount is the necessity of vindicating the authority of the Agency, This criterion is frequently intimately connected with the concept of willfulness. For example, an intentional flouting of an order issued by the Administrator under subsection 309(a) of the FWPCA would certainly require a more severe penalty than a negligent or unintentional violation.

It should be noted that, in reaching the estimated figure, a best judgment approximation should suffice, rather than the precise economic calculations necessary if the case were to go to trial. After the above calculations have been made and an estimated judgment amount derived, consideration should be given to the likelihood of prevailing on the merits. The probability of success, expressed in percentage terms, should then be multiplied by the estimated judgment figure. The product represents the bottom-line settlement amount; if the discharger insists on a lower figure as a condition of settlement, (except in the "inability to pay" situation mentioned below) the case should proceed to trial. For example, if the estimated judgment is $1 million, and the probability of success 80%, the Region, while free to seek a higher amount, should not settle the case for less than $800,000.

If the minimum settlement figure, derived in the manner described above, appears excessively disproportionate to the defendant's resources, the Region may determine to lower its settlement demand to a more appropriate level. Two points should be noted here. First, such a reduction is discretionary on the part of the Region, and should not, in any event, be tied to the discharger's concept of what is or is not excessively disproportionate. Second, the defendant's financial condition should be considered only from a standpoint of reducing, rather than increasing, the settlement figure.

If an appropriate settlement cannot be obtained, the case should proceed to trial with the Region seeking the maximum permissible penalty. Although the maximum penalty will in many instances far exceed the estimated judgment figure, such a policy is necessary in order to provide an incentive to settle. This is especially true in those cases where the probability of success on the merits is high. For example, assuming an estimated judgment of $1 million, and a 90 percent success probability, the minimum settlement figure would be $900,000. Assume further that the maximum penalty amounts to $5 million. A policy of seeking only the estimated judgment figure ($1 million) in contested cases provides the discharger with a substantial incentive to litigate—exactly the opposite of what we are seeking to accomplish. This anomaly occurs because the company has only $100,000 to lose (up to $1 million from the settlement figure), while standing to save as much as $900,000 as a result of litigation. On the other hand, the discharger is much more likely to settle if it knows from the outset that, if contested, the penalty could be substantially greater than the settlement figure.

The foregoing guidance should prove helpful to you in articulating the approach we have developed and which is generally already in practice. Regional expertise and knowledge of the situation are major factors to be applied by the Region in applying this guidance to specific cases. On large cases likely to attract widespread interest, and particularly on cases involving industrial facilities or situations similar to those encountered in other Regions, the process should be coordinated closely with the Office of Water Enforcement to ensure that similar situations nationally are receiving comparable treatment. While the foregoing guidance should be useful, it does not constitute a substitute for good judgment, timely and open communication between the Regional Office and the Office of Water Enforcement, and a large measure of common sense in apapplying this guidance to actual cases.

STANLEY W. LEGRO.

I assure my colleagues that if any of them would like to raise any point raised in any portion, I would be glad to discuss it at length.

Mr. STAFFORD. Mr. President, one of my principal concerns during the development of the Clean Water Act of 1977 has been the water pollution control problems of small communities in rural America. According to the 1970 census there are 54 million people in this country who live in places of 2,500 or less, some 26.5 percent of the total U.S. population. Because my own State of Vermont is the most rural of all the 50 States (nearly 68 percent of our population is rural), I come by my interest in small communities quite naturally.

However, even the least rural State in America, California, with a 9 percent rural population, nevertheless has 1.8 million people living in communities of 2,500 or less. Pennsylvania, which is thought of as a highly industrialized and heavily populated state, nevertheless boasts the largest rural population in America, some 3.4 million people. I make this point to emphasize that the problems of rural America are not limited to small States, and that the measures suggested by this new law should command the attention of nearly every State environmental agency. The conference report submitted for the Senate's approval today represents a significant step forward in directing the attention and resources of the U.S. Environmental Protection Agency and the States toward the peculiar financial and institutional characteristics of rural communities.

One of the most important features of the national water pollution control efforts that developed from the 1972 amendments to the Federal Water Pollution Control Act was a vigorous and heavily funded construction grant program to assist and encourage municipalities in the abatement of water pollution. For the last 5 years most States have directed their efforts and their allotments of Federal and State funds to the cities and urbanized areas.

This was certainly appropriate, as these areas were afflicted with the greatest pollution abatement problems. However, in the next 5 years we can expect to see States reaching down in their priority list to plan and fund projects in smaller towns and villages. States like Vermont, or West Virginia, or South Dakota, whose rural populations are such a large proportion of their total populations, have already gained some experience in addressing the special problems of smaller settlements which may be of value to future grant applicants in their own States and elsewhere. Very succinctly, the problem seems to be that conventional centralized collection and treatment systems, which offer many economies of scale in densely populated cities, simply do not work and are far too expensive and extravagant for a community of 500, or 2,500, and perhaps even 10,000 people.

In Vermont we can relate several horror stories where the costs per household of the planned conventional system were outrageously expensive, both in connection costs and in annual charges. Communities in other States face similar situations. There has consequently developed in this country a small cadre of concerned and dedicated people who have been searching for and promoting alternatives which might be suitable for smaller, rural towns and villages. They confront, however, an army of consulting engineers, developers, State environmental and health department administrators, and the construction industry, who have been convinced that the only solution is to build a central facility with tendrils of concrete pipe reaching out to capture the wastewater from remote settlements. To the extent that septic systems or other alternatives are used in less densely populated areas they are considered a temporary solution, until the population grows large enough to support a collection system. The availability of grants of up to 90 percent in some States has often encouraged collection and central treatment solutions even where the population density may never justify such a system. The moment of truth comes, however, when the operating and maintenance costs are revealed.

For various reasons, septic tanks and other onsite or cluster-type alternatives have no favor with those who plan and construct pollution control facilities. For the health officials, these systems have been unreliable in the confinement of disease organisms; for the construction industry, there is simply less money to be made in some of these alternatives (or it goes to different sectors of the economy); for the consulting engineers, there is less profit associated with a project that costs less than one that costs more; furthermore, engineering schools simply are not teaching much in the way of how to design alternatives; for the State environmental agencies and for many local officials, it is comforting to know that the Federal EPA will approve a known and proven type of technology; also, they do not have the manpower to seek out or administer alternatives which require additional management resources. Finally, there is a lack of direction or mandate from the Federal agency or the Congress to examine alternatives before approving the funding of conventional secondary plants. EPA has failed to encourage, for example, rehabilitation and repair of septic systems before awarding a construction planning grant.

It is the intent of the conferees in developing a number of new provisions in the Clean Water Act to encourage the Environmental Protection Agency, and the States and local governments, to seek out alternatives which are both more cost effective and provide a greater degree of water pollution abatement than the systems we have been building in the past. The problem of small communities should be seen as a subset of the larger problem of the failure to adopt technologies which achieve the requirements of the act, requirements which were in fact in the statute as far back as 1972: the recycling of potential sewage pollutants through the production of agriculture, silviculture, or aquaculture products, the confined and contained disposal of pollutants not recycled, the reclamation of wastewater and the ultimate disposal of sludge in a manner that will not result in environmental hazards.

One of the provisions to encourage these results, which I sponsored, and which was cosponsored by the chairman of the Committee on Environment and Public Works, Senator JENNINGS RANDOLPH, is section 27, set aside for alternative systems for small communities.

This section directs the Administrator to set aside 4 percent of the allotment to any State with a rural population of 25 percent or more as determined by the Census Bureau. The Administrator is also authorized to set aside not more than 4 percent of the allotment for any other State, at the request of the Governor.

Such sums are available only for alternatives to conventional sewage treatment works for communities having a population of 3,500 or less, or for the highly dispersed sections of larger municipalities as defined by the Administrator.

Alternatives to conventional treatment works are systems different from conventional secondary treatment (particularly activated sludge) and from conventional advanced waste treatment. In passing this measure, the Congress recognizes that conventional systems are too costly for smaller communities. We also recognize the inherent shortcoming of conventional systems. These include sludge production, nutrient and chlorine pollution, high operating costs, waste of water, and excessive energy demands.

Alternatives are, in general, of two types: First, those described in the new section 201(g)(5); namely, "innovative and alternative wastewater treatment processes and techniques which provide for the reclaiming and reuse of water, otherwise eliminate the discharge of pollutants, and utilize recycling techniques, land treatment, new or improved methods of waste treatment management for municipal and industrial wastes (discharged into municipal systems) and the confined disposal of pollutants, so that pollutants will not migrate to cause water or other environmental pollution"; and

Second, privately owned treatment works of the type described in new section 201(h), subject of course, to the safeguards and limitations in 201(h), including most especially the requirement that such privately owned treatment works will be properly operated and maintained. This essential requirement is expected to overcome the objections of State health officials and environmental agency administrators. There is every reason to believe that onsite systems, including septic tanks, will meet health and pollution abatement concerns when they are properly designed, operated and maintained in accordance with a communitywide program. They need not be, as they have been, a haphazard or temporary solution.

In general, the Congress expects that the rural set-aside will result in, first, lower operating and capital costs for sewage treatment works in small communities; second, energy and water conservation; and third, elimination of pollution or substantial progress in that direction, for rural communities.

It is anticipated that many of the projects funded by the set-aside will be eligible for an increased grant pursuant to new section 202(a)(2).

The set aside for alternative systems in small communities goes into effect for each fiscal year after October 1, 1978.

At this point, Mr. President, I would like to say a word about two other provisions in the Clear Water Act which are particularly important to Vermonters.

The first, with which I am very satisfied, concerns the allotment of construction grant funds to the States. The conferees agreed to a provision which I sponsored in the Senate-passed bill, authorizing a minimum share for small States. Under the conference agreement, no State will receive less than one-half of 1 percent of the total allotment for fiscal years 1978, 1979, 1980, and 1981. Depending of course on the availability of appropriations, this means that no State will receive less than $22.5 million in fiscal year 1978 and not less than $25 million in the following fiscal years. The allotment formula is a complex amalgam of population and needs in various construction grant categories, and is necessarily an imprecise and imperfect way to distribute funds. However, because of the relatively small amounts involved, the less-populated States would be the ones most disadvantaged by errors or biases in the formula. The minimum allotment is designed to overcome this possibility.

The second notable provision, which is a great disappointment to me, is the exemption from the second 404 dredge and fill permit requirement for congressionally authorized projects. I believe most emphatically that all projects, and perhaps especially specific Federal projects sponsored in the Congress, ought to measure up to the standards designed to protect vital and often irreplaceable wetlands and marine environments from the devastation of pollution and the total obliteration by development or altered land use. I understand and appreciate the need for the Senate conferees to come to an agreement in order to secure an otherwise valuable new law, but I cannot personally support this part of the amendment to section 404, and did not in conference.

I would like at this point to describe what was done to the provision in the water bill dealing with the discharge of dredge and fill material. This section amends sections 404 and 208 to modify the existing program for controlling the discharge of dredged or fill material into waters of the United States. The conference bill amends section 404 to provide authority for EPA to approve State permit programs that EPA determines have demonstrated the capability to replace the Corps of Engineers permit program in phase II and III waters. The conferees agreed to adopt the exemptions and the general permit procedure from the Senate bill to prevent overregulation of activities that have little or no effect on the aquatic environment. The bill includes the clarification that permits are not required for certain normal farming activities such as plowing and seeding which are not discharges of dredged or fill material. It should be noted, however, that permits will continue to be required for those farm, forestry, and mining activities that involve the discharge of dredged or fill material that connect water to dry land including, for example, those occasional farm or forestry activities that involve dikes, levees or other fills in wetland or other waters.

Section 404 is further amended to provide that discharges of dredged or fill material by Federal agencies to construct Federal projects specifically identified by Congress when authorized are not subject to permits under section 404 or under an approved State permit program if the environmental impact statement submitted to Congress includes a complete analysis of the effects of the discharge based on the 404(b)(1) guidelines. The conferees agreed that discharges from any activity conducted with assistance from the Federal Government and maintenance of existing Federal projects will remain under the permit program.

Projects, even though fully financed by the Federal Government, which are authorized under continuing authorities or lump sum appropriation shall be subject to 404 permits not withstanding the issuance by the responsible Federal agency of a programmatic or individual NEPA review document. Only the discharge of dredged or fill material for the construction of a new individual Federal project for which there is an environmental impact statement dealing solely with that project furnished to the authorizing committee prior to specific authorization of that project by the committee and by Congress shall be exempted from section 404 permits. In order for the exemption to take effect, such environmental impact statement must contain a full and complete analysis of adverse effects and alternatives as required by the 404(b) guidelines.

For the purposes of this act, Federal projects are those which are entirely planned, financed, and constructed by a Federal agency in every respect. The committee bill includes a number of important improvements to cut redtape and to expedite decisions on section 404 permits. Among these is a section 67(m) which requires that the Department of the Interior submit its written comments on a section 404 permit application within 90 days of receiving notice from the Department of the Army. I am in agreement with the purpose of this provision which, as I understand it, is to assure that the Fish and Wildlife Service submits within a reasonable time, a specific written analysis of the permit application, together with recommendations thereon, and that the Service's comments be in a form that is publicly available. I also concur in section 67(g), which directs the involved agencies of Government to work out procedures for completing the processing of most permit applications within a total of 90 days. I understand that the agencies have already begun to work out these procedures. I would like to point out, however, Mr. President, that there are going to be a few cases where more than 90 days will be required for the total processing of permit applications, and that it is highly desirable that these cases be resolved at the local level.

There is no intent by the conferees to impose any condition that would automatically or arbitrarily cut off negotiations between any Federal agency and a permit applicant. The conferees intend that the procedures for managing such negotiations, and for the referral of unresolved agency objections to higher authority, be worked out as a part of the interagency agreements developed pursuant to section 67(g).

The conferees have expressed their view that the section 404 permit process is not to be used independent of the provisions of other applicable authorities to force upon non-Federal applicants a requirement for land exchanges. By this, the conferees intend the work proposed within permit applications to be evaluated on its own intrinsic merit. It is not meant by this to absolve any class of permit applicants from the obligation to invest their proposals with environmentally sound design and operational features. Nor do the conferees intend to prevent the Corps of Engineers, or the State permitting agencies from considering the need to incorporate in permit plans desirable provisions for the balanced use and preservation of aquatic resources, including lands or waters which an applicant agrees to set aside for general public benefit. Some State permit processes already recognize these concepts.

Finally, section 404 is amended to assure that all Federal activities comply with all procedural and substantive Federal, State, and interstate requirements. The Secretary is expected to coordinate his authority to enforce Corps issued permits with EPA as EPA is the primary agency responsible for administering the Clean Water Act.

The conferees also agreed to amend section 208(b)(4) to authorize the Administrator to approve statewide regulatory programs to control those discharges of dredged or fill material that are better handled through imposition of best management practice. The 208(b)(4)(B) program is intended to complement State permit programs approved under section 404, but not as a substitute for State permit programs. Once a State has an approved 404 permit program and approved 208 regulatory program, the Administrator may approve best management practices imposed by the State to control those activities which he determines will have only minor individual and cumulative effects on the aquatic environment. If the Administrator approves best management practices as adequate to control a specific activity without additional permit review, Federal permits should not be required. Best management practices will not be appropriate as the sole means of control of activities such as channelization and site development fills that can impair the circulation or reduce the reach of navigable waters. Such activities, by their very nature, will continue to require individual attention through a permit review process, as will all discharges involving toxic substance requirements under section 307.

I have not addressed myself to the numerous changes these amendments make in the control of pollution from industrial dischargers. I know that others, especially Chairman MUSKIE, will cover this aspect with care and competence. I do believe, however, that we have succeeded in devising an industrial pollution control program which will require less in the way of control of additional increments of conventional pollutants where the costs may begin to be prohibitive, but more in the way of control over toxic pollutants or nonconventional pollutants about which we know very little. Under the Clean Water Act of 1977, the Environmental Protection Agency must necessarily turn its attention to these suspect and sometimes virulent forms of pollution in accordance with a comprehensive strategy, rather than on a crisis basis.

In sum, Mr. President, I can confidently say that we have produced a thoughtful and beneficial bill which deserves the support of all our colleagues in the Senate and I encourage the adoption of the conference report on H.R. 3199, the Clean Water Act of 1977.

Mr. President, I would like to join the distinguished chairman of the Subcommittee on Environment and Public Works in what he has said about the excellent staff work on both sides of the political aisle in the preparation and management of the bill and the preparation of the conference report in connection with the clean water bill.

I want to pay particular tribute to my colleagues on the committee and especially my senior partner in this matter, the distinguished Senator from Maine (Mr. MUSKIE), the chairman of the full committee (Mr. RANDOLPH), and my distinguished colleagues on my own side of the aisle, all of whom contributed in great measure to the final product of the Clean Water Act of 1977.

As always when legislation from the House and the Senate differ in their details, it requires a compromise in good faith on the part of colleagues and conferees from both sides to achieve the bill which is in the conference report before us now.

I am sure that nobody is completely satisfied with the bill which we are asking the Senate to accept as the managers on the part of the Senate. This Senator gave up at least one or two issues which he considered to be important in order for us to reach a bill that we could agree upon between the House and Senate conferees and bring here for passage and, hopefully, Presidential signature.

So with admiration and gratitude on the part of this Senator for all of his colleagues who helped prepare the conference report, and to the members of the staff on both sides who helped us so instrumentally in what we have done, I shall yield the floor.

Mr. DURKIN. Mr. President, in accordance with Federal requirements, the city of Manchester has undertaken a $50 million water pollution abatement program, much of which is already constructed. In addition to this program, and in order to fully abate pollution as required by the Environmental Protection Agency, the city must undertake a program to separate storm and sanitary sewers.

In compliance with the law, the city initiated a report which studied the various alternatives for its separation program. Because the city has built over a period of 100 years 200 miles of sanitary sewers, the report indicates that the most cost effective and only solution is separation by means of building a storm drainage system.

However, officials of the New Hampshire Water Supply and Pollution Control Commission feel that wording in section 36(c) of the conference report on H.R. 3199 dated November 28, 1977 (amending the Water Pollution Control Act) may prohibit the use of Federal funds for construction of separate storm sewer systems where separate treatment is not contemplated. Consequent to this interpretation, the Commission has indicated that no State funds will be available for a separate storm water system in Manchester.

In response to a letter from Senator McIntyre and me asking for clarification of the intent of section 36(c), Chairman Jennings Randolph and ranking minority member, Senator Robert Stafford of the Environment and Public Works Committee have written to me:

> The section to which you refer only limits the eligibility of the construction of treatment works for treatment of storm water discharges. The Senate Report 95-370 speaks to this issue:
>
> "This amendment is not meant to restrict the opportunities available to solve pollution problems created by combined sewer overflows or bypasses."
>
> The Conference bill is the same as the Senate bill in this respect.
>
> I hope this will clarify the issue for you.

I see they are both on the floor. They both understand the letter.

I might add that there are other communities besides my home city. I understand there is a problem in Rhode Island and some other problems around the country.

With this clarification, it is clear that communities such as Manchester that want to build are required to build or are building separate storm drainage systems where separate treatment facilities for storm water are not contemplated are eligible for Federal funding under the Clean Water Act of 1977, and there is absolutely no prohibition or conflict with section 36(c).

Thus, the city of Manchester's separation project is eligible for funding. The prohibition on separate treatment plants for storm drainage systems contained in paragraph 36(c) of the conference report is not applicable.

Mr. President, I ask unanimous consent that the letters from Chairman Randolph and Senator Stafford making clear the conferees' intent be printed in the Record, together with letters from Manchester to Senator McIntyre and me, and our joint letter to Chairman Randolph and Senator Stafford.

There being no objection, the material was ordered to be printed in the Record, as follows:

Washington, D.C.,
December 15, 1977.

Hon. John A. Durkin,
U.S. Senate,
Washington, D.C.

Dear John: Thank you for your letter of December 13, discussing section 36(c) of the Clean Water Act of 1977.

The section to which you refer only limits the eligibility of the construction of treatment works for treatment of storm water discharges. The Senate Report 95-370 speaks to this issue:

"This amendment is not meant to restrict the opportunities available to solve pollution problems created by combined sewer overflows or bypasses."

The Conference bill is the same as the Senate bill in this respect.

I hope this will clarify the issue for you.

With kind personal regards, I am,

Truly,

Jennings Randolph,
Chairman.

Washington, D.C.,
December 15, 1977.

Hon. John A. Durkin,
U.S. Senate,
Washington, D.C.

Dear John: Thank you for your letter of December 13th, discussing section 36(c) of the Clean Water Act of 1977.

The section to which you refer only limits the eligibility of the construction of treatment works for treatment of storm water discharges. The Senate Report 95-370 speaks to this issue:

"This amendment is not meant to restrict the opportunities available to solve pollution problems created by combined sewer overflows or bypasses."

The Conference bill is the same as the Senate bill in this respect.

I hope this will clarify the issue for you.

With kind personal regards, I am,

Truly,

Robert T. Stafford,
Ranking Minority Member, Environment and Public Works Committee.

Manchester, N.H.
December 8, 1977.

Hon. Thomas J. McIntyre,
U.S. Senate.
Hon. John A. Durkin,
U.S. Senate.
Hon. Norm D'Amours,
Member of Congress.
Washington, D.C.

Dear Senators McIntyre and Durkin and Congressman D'Amours:

In accordance with Federal requirements, the City of Manchester has undertaken a fifty million dollar Water Pollution Abatement Program, much of which is already constructed. In addition to this program, and in order to fully abate pollution as required by the Environmental Protection Agency, the City must undertake a "separation" program.

In compliance with the law, the City had initiated a report which studied the various alternatives for its separation program. In essence, the report indicates that the most cost effective and *only* solution is separation by means of building a storm drainage system.

The City is unique in that over a period of about one hundred years it built about two hundred miles of "sanitary" sewers. Periodically the City obviously connected catchbasins to the sewer system to handle stormwater. As the City does not have a separate storm drainage system the *only* solution to the separation problem is to construct a storm drain system.

The estimated cost of this separation program is 140 to 200 million dollars over a 10 to 20 year period. The City of Manchester under the current program of 75 percent Federal, 20 percent State of New Hampshire, and 5 percent local funding, has been prepared to share in the allocated costs.

The final Committee of Conference Report on H.R. 3199 amending the Federal Water Pollution Control Act dated November 28, 1977, includes the following language on Page 38, Sec. 36, paragraph (c):

"(c) No grant shall be made under this title from funds authorized for any fiscal year during the period beginning October 1, 1977, and ending September 30, 1982, for treatment works for control of pollutant discharges from separate storm sewer systems."

This Section of the Conference Report has been interpreted by officials in the Water Supply and Pollution Control Commission of the State of New Hampshire to mean that no Federal funds would be available for Manchester's separation program which requires construction of storm drains. Therefore, they say, no State funds would be allocated for such an undertaking by the City of Manchester.

If the City of Manchester is required to proceed with separation and is determined to be "ineligible" for Federal or State assistance as extended to the separation efforts of other cities, additional local property tax or user charges of up to $2,500 per person will be required. There is absolutely no possibility for the City to meet the objectives of water pollution abatement under such circumstances.

Certainly we must presume it is not the intent of the Congress to punish the City of Manchester for striving to meet the Federally-mandated standards of clean water in an orderly and efficient manner.

It is our considered opinioin that the State officials have misinterpreted the legislative intent of Section 36, paragraph (c) of the final Conference Committee Report on H.R. 3199.

We would appreciate substantiation of our view by the Committee of Conference before any floor action is taken on the Committee Conference Report.

We are sure you understand our concerns.

Sincerely,

Charles R. Stanton,
Mayor, City of Manchester.
Christos Spiro,
Chairman, Highway Commission.

Washington, D.C.,
December 13, 1977.

Hon. Jennings Randolph,
Chairman, Committee on Environment and Public Works, U.S. Senate, Washington, D.C.

Dear Mr. Chairman: We enclose a copy of a letter we recently received from officials of the City of Manchester, New Hampshire, regarding the Conference Report on H.R. 3199 amending the Federal Water Pollution Control Act.

The letter describes a difference of opinion between the State of New Hampshire and the City of Manchester over the interpretation of Section 36, paragraph (c), of the Conference Report, which is seen by the State as forbidding the use of any funds under this title for the construction of separate storm drain piping. The City contends that this is a misinterpretation of the section in question. Because the City is not contemplating constructing a separate treatment facility for storm drainage but is only trying to comply with P.L. 92-500's "separation" requirement, Manchester should not be declared ineligible to receive Federal funds by virtue of this section of the Conference Report.

We would like a speedy clarification of the legislative intent of this particular paragraph in order to determine which interpretation of the disputed paragraph is correct. We request that Senate consideration of the Conference Report be delayed until this matter is clarified. If you believe a colloquy on the Senate Floor in conjunction with consideration of the Conference Report would be useful in settling this issue, we would be pleased to arrange one with you.

Thanks for your attention to this matter.

Sincerely,

THOMAS J. MCINTYRE.
JOHN A. DURKIN.

WASHINGTON, D.C.,
December 13, 1977.

Hon. ROBERT T. STAFFORD,
Committee on Environment and Public Works, U.S. Senate, Washington, D.C.

DEAR BOB: We enclose a copy of a letter we recently received from officials of the City of Manchester, New Hampshire, regarding the Conference Report on H.R. 3199 amending the Federal Water Pollution Control Act.

The letter describes a difference of opinion between the State of New Hampshire and the City of Manchester over the interpretation of Section 36, paragraph (c), of the Conference Report, which is seen by the State as forbidding the use of any funds under this title for the construction of separate storm drain piping. The City contends that this is a misinterpretation of the section in question. Because the City is not contemplating constructing a separate treatment facility for storm drainage but is only trying to comply wih P.L. 92-500's "separation" requirement, Manchester should not be declared ineligible to receive Federal funds by virtue of this section of the Conference Report.

We would like a speedy clarification of the legislative intent of this particular paragraph in order to determine which interpretation of the disputed paragraph is correct. We request that Senate consideration of the Conference Report be delayed until this matter is clarified. If you believe a colloquy on the Senate Floor in conjunction with consideration of the Conference Report would be useful in settling this issue, we would be pleased to arrange one with you.

Thanks for your attention to this matter.

Sincerely,

THOMAS J. MCINTYRE.
JOHN A. DURKIN.

Mr. DURKIN. Mr. President, I yield to my good friend from West Virginia.

Mr. RANDOLPH. Mr. President, referring to the situation that Senator DURKIN has brought to our attention, he is correct that correspondence clarifies the matter which was of concern to him and also to Senator MCINTYRE.

We were delighted to respond in a way which insures that not only would the two Senators of that State understand the matter, but more importantly, really, so would the people of the area who are affected. We were delighted to cooperate.

Mr. DURKIN. Once again, I thank the distinguished chairman and the ranking member for his cooperation, because it is very important to our people in Manchester and some other communities around the country.

Mr. RANDOLPH. Mr. President, we have had comment from the able chairman of our Subcommittee on Environmental Pollution. I take this opportunity to express the sincere appreciation for his efforts that I feel personally and as chairman of the Committee on Environment and Public Works. I know this is shared by the ranking member of that committee, Senator STAFFORD, who is in the Chamber. We are grateful for the continuing leadership of Senator MUSKIE in a field which is not always easy of a solution in its various aspects, but one that must have the constant attention that he has given for so long, in constructive ways, to measures to purify the air, to clean the water, and to bring about the stabilization of waste materials in this country.

These are tasks which are very complicated; they are very complex; they are subject not only to differing viewpoints but also ofttimes without the entire story understood, resulting in misunderstandings of people. For that reason it is good that, through the years, we have had not only the advantage but also the compelling leadership and the commitment of the Senator from Maine.

I believe it is important for me to say in connection with this conference report that we have had the matter before us since September of 1976, not September of 1977. So we really have had three conferences on the subject, although one of them was in connection with the public works jobs bill.

Mr. MUSKIE. That is right.

Mr. RANDOLPH. Along the way, we have benefited from the knowledge, experience, and the "stickability" of the Senator from down Maine to his task. I appreciate that, as do all the other members of the committee and all Members of the Senate.

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. RANDOLPH. I yield.

Mr. MUSKIE. I had the feeling, I say to my good friend from West Virginia, that if in future conferences the Senator from Maine could find a way to preside while also being absent from the conference, we could shorten the conference time.

The Senator heard me compliment him earlier on the leadership he demonstrated in the conference, and I say to him personally that I meant what I said. I know how effective he can be when a stalemate seems imminent in getting the conference off dead center and moving. I take this opportunity to underscore and emphasize that point, which I made earlier.

Mr. RANDOLPH. Mr. President, I am very grateful for the thoughtful comment and the generous response made at this time by the Senator from Maine.

Congress first addressed the vitally important issue of water quality protection in 1965. Seven years later the Federal commitment to that concept was substantially broadened and extended under the Water Pollution Control Act of 1972 which became Public Law 92-500.

As significant as those measures were at the time of their adoption, those of us who had a part in fashioning them knew they did not provide all of the answers to the problems at which they were aimed. We were aware that changes and refinements would be required which could effectively be devised only in the light of experience with the program and its impact on the Nation's economy and environment.

The Clean Water Act of 1977, before us for final consideration today, is the product of what we have learned in those intervening years. The more than 50 amendments which it proposes to existing law are the composite result of more than 2 years of intense debate over Federal water policy, culminating with a comprehensive review of the entire water policy, pollution control program this summer by the Environment and Public Works Committee. The final product came after more than a month of give-and-take discussion in conference to work out the wide range of differences between the Senate and House versions of the bill.

Our task was not an easy one and there were times when I frankly questioned whether agreement could be reached in time for final passage of the legislation this year. The fact that we were able to find a common ground between strong and diverse opinions and positions attests, I think, to the overriding commitment of conferees to the objective of ultimate elimination of water pollution and the inherent risks involved in any substantial delay in further progress toward that goal.

The terms on which we agreed constitute a fair, flexible, practical, and workable program for better pollution abatement.

Since many parts of the conference report are similar or identical to those adopted last August by the Senate, you are already generally familiar with them. For that reason, I confine my comments to the key points in the measure.

One of its most significant aspects is its emphasis on the need for development of new and less costly methods of sewage treatment, particularly in sparsely populated areas, as alternatives to the increasingly expensive conventional systems.

This is a matter which has long been of concern to me both in my capacity as chairman of the Environment and Public Works Committee and as a Senator from the Nation's second most rural State. I have seen the fallacy of trying to apply the same treatment yardstick to rural America as to highly urban areas where large and centralized collection and treatment systems can be used effectively and economically.

Because of that concern, I began urging the Environmental Protection Agency nearly 2 years ago to establish an active program for development and implementation of a cost-effective alternative waste water treatment system for use in rural areas.

I gave that concept a high priority in planning for the bill on which we are now ready to act. I introduced or jointly sponsored three provisions in the bill which bear on the subject.

The first of these proposals directs the Environmental Protection Agency to establish a clearinghouse to collect and disseminate information on the types of technology that are available for alternative systems and how they may be applied to various situations.

I believe this provision will be very helpful in assisting the development of this type of approach in various parts of the country to which it is especially suited.

As a further means of encouraging the use of that concept, I sponsored an amendment with Senator STAFFORD which requires specific amounts to be earmarked for alternative systems. For those 34 States in which total population is more than 25 percent rural, the Administrator of the Environmental Protection Agency would be required to set aside 4 percent of their allotted waste water treatment facilities construction grants funds for exclusive use in alternative or unconventional systems in communities of 3,500 population or less.

A major policy change, which I did propose, permits Federal grants for construction of privately owned treatment works where a public body, not the person but a public body applies on behalf of a number of such units where we can be assured that they are properly operated and maintained and will be more cost effective than the central systems, the large massive systems which we have in the cities which are not applicable to the rural sections of the country.

It is not enough just to spend money. We want to spend money intelligently, and that is the reason we are making this change. Grants of this type would be intended to solve pollution problems in the lightly populated areas as I said where conventional collection and treatment systems are not suitable. They are available but they are not suitable. They are not practical. They are not reasonable.

The Appalachian Regional Commission, this Commission which serves 13 States, the State of West Virginia as a whole and parts of 12 other States, has conducted a demonstration program. It has been held in Boyd County, Ky., and we have had the experience of that project, and it indicates that individual and cluster systems are a realistic means of meeting the sewage treatment programs at the rural community level.

So, the small communities are going to benefit also from a provision in the bill which will allow the reduction of time, cost, and administrative redtape by combining the design and construction phases of sewage system projects into a single application and grant procedure where the project cost is under $2 million and planned for areas, as I have said, in the first instance 3,500, and in this instance with a population of under 25,000.

These are the innovative programs. They are the necessary programs. These are the helpful programs as we move with the leadership of Senator MUSKIE and others to this hour.

Similarly, small communities such as those in West Virginia and other rural States will have a strong interest in the section of the bill allowing reservation of up to 2 percent of a State's construction grant allotment, with a minimum of $400,000, for a State to use in administration of any aspect of the construction grant program. This particularly can include developing the capacity and responsibility for managing construction grants for small communities.

Mr. President, one of the most extensively-debated sections of this bill is that relating to the types of facilities which are eligible for Federal assistance under the construction grant program. The Environmental Protection Agency proposed removing collector sewer systems from eigibility. The conferees rejected this recommendation. The bill continues eligibility for collector sewers under existing law.

I recognize that under the existing program there may have been abuses in some States and communities which utilized funds for excessive construction of collector sewers. In many areas, however, it is impossible to build a treatment system without assistance for the total sewer system. I turn to the State of West Virginia as an example. Our State generally has a widely-dispersed population and extensive sewer lines are needed for the system to function. The cost is so high that occasionally sewage plants cannot be built if local funds must be relied on for all of the sewers. Without some Federal assistance for collector sewers, many communities in West Virginia would be unable to participate in the program and would be forced to continue without pollution abatement facilities.

The conferees, as the Senate bill provided, decided to continue collector sewers as an eligible item. Excessive construction of collector sewers will be controlled by other provisions in the bill which restrict the reserve capacity of treatment systems. I refer again to the emphasis on alternative treatment systems to stress that their use should reduce the need for the construction of extensive sewage networks.

I have directed my remarks to the special provisions of the construction grant program as outlined in this legislation because I think it is important that the significance of the changes should be fully understood as we prepare to vote on the bill as a whole.

I stress the vital role of the grant program as a whole in the overall effort to control water pollution and the complete justification and necessity of its continuance as proposed in the measure before us.

As you know, the $18 billion authorized for this purpose in 1972 has been almost totally committed and a number of States had exhausted their funds and were already being forced to mark time while awaiting the new authorization.

By allocating $4.5 billion for fiscal 1978 and $5 billion for each of the 3 following years as this bill proposes, I am confident that we will be able to restore and maintain the program's momentum.

I likewise believe that the formula we have devised for combining factors of population and demonstrable need will insure both equity and effective utilization as nearly as that can be achieved. There are, however, other issues than the grant program which warrant mention in the context of this legislation.

One of the most controversial of them relates to the regulation of disposal of dredge and fill material, resulting from a judicial decision as to the authority and responsibility of the Army Corps of Engineers under section 404 of the 1972 act. That decision resulted in widespread concern that many activities usually considered routine would be prohibited or made extremely difficult because of the complex regulatory procedure set up by the corps unless there was a new statement of congressional intent.

I believe H.R. 3199, in its present form, provides that clarification and necessary direction. It recognizes that there must be no basic gaps in the program for protection of wetlands and waterways from contamination and thus provides a broad program of control and required discharge permits. Parts of the program would continue to be administered by the Corps of Engineers but the bill also assigns States substantial new areas of administrative responsibility.

To facilitate carrying out the routine activities, it exempts from permit requirements normal farming, silviculture and ranching activities and some mining and construction work.

Mr. President, for many years I have been concerned about the effect on the environment of certain activities carried out in the management of forests. I have been particularly distressed by the results of clearcutting of timber and have worked for the adoption of legislation to restrain this practice in national forests. I have personally seen on many occasions the damaging results of clearcutting. One of its most serious consequences is the adverse effect on water quality.

In its development of this legislation, the Committee on Environment and Public Works provided an exemption from the permit process for "normal silviculture activities." This exemption, among others, was endorsed by the Senate and is retained in the conference report.

The committee report on the bill emphasizes, at my urging, that "normal silviculture" does not include clearcutting in eastern mixed hardwood forests. The intent of the committee was clarified in a colloquy with Senator CHURCH during Senate debate on the bill. I believe it is important for any legislation which seeks to protect and enhance water quality to insure proper regulation of those activities which would damage the integrity of our waters. This definition of "normal silviculture activities" does not prohibit clearcutting. Rather, it insures that this method of harvesting timber will be carefully controlled so as to reduce the potential for damage to water quality.

The conferees were asked by Representatives THOMAS FOLEY, chairman of the House Agriculture Committee, to include language in the conference report which would modify and weaken the language of the Senate report. The conferees did not agree to alter the statement in the Senate report. Therefore, it remains the policy of this legislation that clearcutting on eastern mixed hardwood forests is not a normal silviculture activity, and it is subject to the permit requirements of the Act.

As modified, the section 404 program will also allow for general permits on a regional or national basis for various classes of activities. Federal projects authorized by Congress are likewise exempt from permit requirements but only in those instances in which a final environmental impact statement had been prepared and submitted prior to project authorization and appropriation. That environmental impact statement must have included a full assessment of the effect of the specific dredge and fill discharge, evaluated from the standpoint of the section 404(b)(1) guidelines, and a judgment similar to that required in a section 404 proceeding.

I am convinced that those stipulations provide all the safeguards necessary, and that the congressional authorization review will provide at least as broad a basis for determining possible environmental damage as the regular permit procedure. That view is shared by EPA Administrator Douglas Costle, who has said officially that he does not see the exemption as, in any sense, a loophole in the law.

In short, President, I believe the provisions of the bill will significantly improve the operation and administration of the section 404 program without impairing its effectiveness or altering its basic purpose.

Other key provisions of the bill include:

An easing of 1983 "best available technology" requirements for nonharmful pollutants.

Extension of oil spill liability and cleanup requirements to a 200-mile limit and an increase in the maximum spill liability.

A cost-sharing program to assist farmers in meeting requirements for control of nonpoint pollution.

Revision and tightening of the program for control of toxic pollutants.

Allowance for enforcement flexibility for those unable to meet 1977 quality requirements despite good-faith efforts.

As that summary suggests, the legislation combines the creation of new goals and policies with adjustment of some of the old ones in the context of past experience and current realities.

There was expectation, when the 1972 act was adopted, that both municipal and industrial dischargers would by the middle of this year have at least "best practical treatment" technology installed and in operation. Principal dischargers could have attained the uniform secondary treatment requirement. That has not proved to be the case in all instances for a variety of reasons.

Lack of Federal funding was a major stumbling block in the case of the cities. Much of the $18 billion provided under the act was impounded by the White House during the early years of the program. Its subsequent release came too late to make full compliance possible by this year's deadline. As a result of the funding problem and some other extenuating circumstances, only about half of the participating municipalities were able to meet that target date. An extension of up to July 1, 1983, will be permitted under the bill before us for those able to establish extenuation for failing to meet the initial deadline.

Industry's compliance record has been much better. Of the 4,000 major industrial dischargers, nearly 90 percent had installed the "best practical treatment" facilities on schedule, leaving only about 600 in the country short of required standards.

The steel industry is the one notable exception to the general rule in this instance. Less than 50 percent of its facilities have so far been brought to required standards, despite allocation of an estimated 75 percent of its capital spending for environmental improvement in recent years.

The difficulty stems from the need to modernize production facilities as well as the pollution control devices and the lack of enough capital funds to achieve both goals at the same time. That capital shortage may reach the $1 billion mark before long and a Presidential task force is recommending a series of Government actions to help restore the industry's general strength and viability.

Meanwhile, the measure before us recognizes the counterproductivity of insisting on retention of unattainable goals in such situations and the necessity for adjustment of timetables without lessening requirements for eventual compliance.

The measure also provides a degree of flexibility in some other areas. Among the most notable are modification of requirements for application of "best available technology" for discharge of nontoxic pollutants and for secondary treatment of discharges into marine waters where waiving that requirement would not interfere with a specific water quality standard.

In the requirements for the control of toxic pollutants adopted by the conferees, the measure before us largely follows the strategy presently being used by the Environmental Protection Agency under the settlement agreement in the case of the Natural Resources Defense Council against Train. That important case required the development of a minimum degree of control for a specified list of pollutants to be achieved on a definite schedule. The principal way in which the conference report modifies the settlement agreement is to require the publication of effluent limitations based on best available technology at a minimum for the listed pollutants by July 1, 1980, and to specify July 1, 1984, as the latest date for compliance with those effluent limitations.

The legislation follows the settlement agreement in listing 65 pollutants and families of pollutants and declaring that each such pollutant is toxic. In publishing an effluent guideline for a particular industrial class or category of sources, the Administrator may specify limitations for individual compounds or members of families of listed pollutants, or the Administrator may establish a limitation for an entire generic class of a listed pollutant. His judgment in choosing between these approaches is not subject to review.

The Administrator does, however, have some flexibility as to the degree to which any effluent guideline for a particular class or category of sources deals with all the 65 listed toxic pollutants. This is similar to some of the authority provided to the Administrator under section 8 of the NRDC against Train settlement agreement. In writing an effluent guideline, the Administrator is authorized to exclude pollutants which are present in the discharge solely in quantities and concentrations found in the intake water, or which are present in insignificant or trivial amounts.

Flexibility in this area is one of the real strengths of this bill and typical of the basis on which the legislation was conceived as a response to experience under the 1972 act, to conditions of today and to the outlook for the future.

There is another element of the measure about which some explanation is appropriate. The objective of the act is to restore and maintain the chemical, physical, and biological integrity of the Nation's waters. Toward that end the act and certain provisions of this conference report require attainment of a degree of water quality variously described as that necessary for the protection and propagation of a balanced population or a balanced, indigenous population of fish, shellfish, and wildlife. Such a balanced population is one which would be found in the waters in question in the absence of population. This would mean taking into account the changes major hydrological modifications might make in the population that would otherwise naturally occur. Of course, in determining whether a particular discharge would interfere with the protection and propagation of such a population, the impact of other sources may be considered.

The Administrator is required to publish information on the factors needed to assure attainment of that degree of water quality. I sponsored the amendment requiring this because of the inadequacies of EPA's earlier efforts under section 304(a)(2) of the 1972 law.

The Subcommittee on Environmental Pollution and its exceptionally able chairman, Senator MUSKIE, developed the initial approach to the measure on the basis of hearings.

When the bill came to the full Environment and Public Works Committee, however, there were significant contributions from every member during the markup phase. As always, BOB STAFFORD was extremely helpful as ranking minority member but the proposal we reported also carried the imprint of all of our committee colleagues. Thus, appreciation is due to all—MIKE GRAVEL, LLOYD BENTSEN, QUENTIN BURDICK, JOHN CULVER, GARY HART, WENDELL ANDERSON, DANIEL MOYNIHAN, HOWARD BAKER, JAMES MCCLURE, PETE DOMENICI, JOHN CHAFEE, and MALCOLM WALLOP.

Most of them also served on the conference committee and afforded the strong and informed support necessary to sustain the Senate's position on major issues. In so doing, they performed a service for which I am grateful and for which I think they are due the thanks of the Senate and the country.

Mr. President, H.R. 3199 as we brought it from conference is a balanced, comprehensive, and effective bill. I believe that, properly implemented, it will give a new impetus and momentum to the drive launched 5 years ago for an ultimate end to water pollution.

I hope the legislation will receive the overwhelming approval it warrants as further evidence of the national commitment to that cause.

Let me digress for a moment. Many

people fail to consider the serious problem of solid waste disposal. We have passed legislation on the subject, however, which is now law. I bring it into the discussion now because it is a vitally important part of the all-out war on pollution of all kinds which originated in our committee and has been approved by the Congress. We are going to end what? Open dumping in this country, which is a scourge upon the landscape, adding to the hazards of health. We are going to stop this dumping of solid waste all over America and, in the process, begin turning it into usable material again.

I believe the American people are going to be responsive to what we have done in this area. It was our obligation and responsibility to do it. I am convinced that in doing it we have built at least in part a strong base for a better America.

THE DEFINITION OF NORMAL SILVICULTURAL PRACTICES

Mr. TALMADGE. Mr. President, I am pleased to note from the conference report that the House conferees refused to accept the Senate's definition of normal silvicultural practices in connection with section 404, related to dredging and filling in the waters of the United States.

The Senate committee report on this bill stated that for Eastern mixed hardwood forests, clearcutting timber or harvesting associated with even-aged management of timber and related activities are not to be a normal silvicultural practice.

As I understand it, when the Senate conferees asked that this same language be agreed to in the conference report, the House conferees declined.

This is certainly appropriate. Last year the Congress made its policy position clear in connection with the even-aged management and clearcutting of Eastern hardwoods when it caused to be enacted the National Forest Management Act.

At that time the Congress learned that Eastern mixed hardwoods are especially well suited to management practices such as shelterwood cutting and clearcutting. We also learned that even-aged practices create the widest range of plant communities of any regeneration method. Therefore, the interpretation of normal silvicultural activities should not restrict or constrain the use of a wide range of sound forestry practices.

In order to make clear what normal silviculture should comprise in connection with the management of Eastern mixed hardwoods, I ask unanimous consent that a letter from the Chief of the Forest Service to Congressman JOHN BREAUX be included in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF AGRICULTURE

FOREST SERVICE,

Washington, D.C., October 31, 1977.

HON. JOHN BREAUX,

House of Representatives.

DEAR CONGRESSMAN BREAUX: We appreciate the opportunity to respond to the questions you raised pertaining to a definition of normal silvicultural activities, procedures used to determine what system of timber management or harvest method is to be used, and procedures used to protect water quality.

Forest managers have two basic management options available to them for establishing forests and controlling composition and growth: uneven-aged and even-aged management. The normal silvicultural systems to achieve these management options are:

For uneven-aged management:

The selection system of silviculture

a. Single tree selection

b. Group selection

For even-aged management:

The clearcutting system of silviculture

The seed-tree system of silviculture

The shelterwood system of silviculture

The selection system of silviculture is the manipulation of a forest for a continuous high-forest cover, recurring regeneration of desirable species, and the orderly growth and development of trees through a range of age or diameter classes to provide a sustained yield of forest products. Individual tree selection involves the removal of individual trees rather than groups of trees. In mixed stands, it leads to an increase in the proportion of shade-tolerant species of the forest. Group selection can be used to maintain a higher proportion of the less shade-tolerant species in a mixture than individual tree selection.

The three silvicultural systems for even-aged management are used to manipulate forests for the periodic regeneration of desirable species, the orderly growth and development of trees to a given size in each stand, and progressive development of harvestable stands to provide sustained yield of forest products. Regeneration occurs at or near the time of complete harvest when the stand reaches the desired age or size. Stands are treated between harvests with thinnings, cleanings, or other cultural treatments designed to promote growth and improve quality.

In the shelterwood system the mature stand is removed in a series of cuts. Regeneration of the new stand occurs under the cover of a partial forest canopy. The seed-tree system involves harvesting nearly all the timber on a selected area in one cut. A few of the better trees of desired species are left, well distributed over the area, to reseed naturally. In the clearcutting system, the harvesting is accomplished in one cut of all trees on an area. The area harvested may be a patch, stand, or strip. Regeneration is obtained through natural seeding, through sprouting of trees that were in or under the cut stand, or through planting or direct seeding. All three techniques have the purpose of creating a new, even-aged stand.

The Forest Service believes any of the above silvicultural systems could be considered normal in certain timber stands under certain conditions. The complex aspect of silviculture is the application of the proper system to a specific stand to meet land management objectives taking into account a broad array of resource values and physical and biological factors. What would be appropriate under one set of conditions might not be appropriate under other conditions. Thus, the prime concern is the selection of the silvicultural system which best meets management objectives. To provide further background on the scientific base for the selection of silvicultural systems, we enclose selected papers prepared for congressional hearings in 1976, "The Scientific Base for Silviculture and Management Decision in the National Forest System," "Agriculture Handbook—Silvicultural Systems," and a recent paper by Dr. David M. Smith, Professor of Silviculture, Yale University, "The Scientific Basis for Timber Harvesting Practices."

We understand that the National Association of State Foresters has provided the conferees with the following definition of normal silviculture:

"Definition of normal silviculture activities as all those generally recognized by professional forest managers for the production of timber crops including site preparation, planting, construction of roads and minor drainage ditches, harvesting methods including clearcutting, prescribed fire, and application of approved chemical pesticides and fertilizers."

We also understand that the Society of American Foresters has provided you and other interested members with a definition of normal silviculture. These definitions will be helpful to you in understanding the broad, recognized usage of the term.

Of particular concern in the Senate Report on S. 1952 is the selection of silvicultural systems for eastern mixed hardwood forests. As presented in our papers prepared for the congressional hearings in 1976, even-aged management practices, such as shelterwood cutting and clearcutting, are especially well suited to many eastern hardwood types because they satisfy the biological requirements of the present stands and maximize many of the resource values. Even-aged practices such as clearcutting create the widest range of plant communities of any regeneration method. These practices are appropriate for areas where wildlife habitat diversity and water yield are primary objectives. Single tree selection, an uneven-aged management practice, leaves the forest with a more undisturbed appearance and is suitable for areas where esthetic and recreational values are important. Timber values may be increased by either even-aged or uneven-aged management depending upon the species present or desired and the extent to which other resource values are to be maintained or enhanced. Perhaps more than any other forest type, eastern hardwoods require a wider range of cutting methods and cultural measures with prescriptions varied to fit each particular tract. We believe that the interpretation of normal silvicultural activities should not restrict or constrain the use of a wide range of scientifically proven silvicultural practices, including both even-aged and uneven-aged systems, in any forest or region.

As you can see, our discussion of the definition of normal silvicultural activities involves a discussion of factors used to determine the proper system for a specific stand. On National Forest System lands, specific management objectives are developed through multi-resource land management planning. In addition, generalized guidelines have been developed for broad classes of timber stands. Based then on the management objectives and guidelines and specific resource information, a specific prescription is prepared by a skilled silviculturist in consultation with other resource specialists. This prescription is made by the man on the ground and prepared and carried out to meet management objectives for the area. State and private forest landowners are similarly encouraged to define multi-resource land management objectives for their lands and proceed with specific silviculturally sound prescriptions.

In answer to your third question, the Forest Service has many procedures and activities underway to protect water quality from sedimentation caused by silvicultural practices. A great deal of research effort is directed toward this subject and results in new information, publications, and knowledge that help to guide action programs. Through our cooperative programs with State forestry organizations we provide technical assistance, training, and advice to loggers, forest landowners and others. This includes, for example, helping to develop and encourage best management practices on non-Federal forest lands.

Logging roads and skid trails are generally the greatest source of possible water quality degradation. Therefore, the engineering specifications for road construction and contract provisions that control road and skid trail use are of major importance. These controls need to be carefully drawn to meet specific problems for the area being harvested. On National Forest System lands we provide this close control and encourage similar controls on lands of other ownership.

Methods of logging and access route management that hold soil losses close to geological rates are well known and are included in our specifications and sale provisions:

(1) Do not log in streams;

(2) Build the least temporary access routes and skid trails possible, avoiding steep and unstable slopes;

(3) Locate roads away from streams, the distance depending on slope and soil characteristics;

(4) Design access routes carefully;

(5) Apply erosion-control measures as needed; and

(6) Revegetate all temporary access routes as soon as possible.

The selection of the most appropriate silvicultural system, the careful layout and supervision of the actual road construction and harvest, and the treatment of the area following harvest are key factors in protecting water quality.

The control of discharges of sediment from silvicultural practices is specifically identified in EPA regulations 131.11 (J) which were promulgated pursuant to section 208 of P.L. 92–500. These regulations require the identification and evaluation of all measures necessary to produce the desired level of control through the application of best management practices to silviculturally related nonpoint sources of pollution. In addition, the National Forest Management Act of 1976 provides detailed direction for the planning and management of National Forest System lands with emphasis on the protection of watersheds and water quality.

We would be happy to meet with you or others to discuss the scientific base of silviculture and current management practices.

Sincerely,

JOHN R. MCGUIRE,
Chief.

Enclosures.

SOCIETY OF AMERICAN FORESTERS,
Washington, D.C.

DEFINITION OF THE TERM "NORMAL SILVICULTURE" FOR THE PURPOSES OF INTERPRETING H.R. 3100 AND S. 1952, A POSITION OF THE SOCIETY OF AMERICAN FORESTERS[1]

Silviculture has developed as a science and art for more than 400 years. It is the body of scientific and practical knowledge applied to the management of closed stands of trees, shrub lands, forested grazing lands, taiga and related bogs, and tundra, shelterbelts, protection forests, savannas, desert shrub, pocosins, and man-made forests.

Some degree of manipulation of the forest environment is implicit in any silvicultural action. The forest environment includes but is not limited to the soils, waters, animals, plants, and related geologic features that support, affect, and influence the regeneration, growth, and development of the biological systems.

Normal silvicultural actions follow accepted principles, theories, and practices for enhancing the regeneration, growth, development, and utilization of forests for multiple benefits. Normally accepted silvicultural actions of long standing and worldwide use include:

1. Regeneration of forest stands by various methods, including clearcutting, seedtree, shelterwood, and selection systems, as determined by the silvical requirements of the species, the properties of the site, and ownership objectives.

2. Regulating stand density, tree form and quality, by thinnings, pruning, fertilizers, and spacing of plantings.

3. Regulating genotypes by changing seedbeds, selecting planting stock, planting genetically superior seedlings, introducing exotics, removing undesirable genotypes, changing fertility and soil moisture relations, and affecting succession and competition.

4. Regulating growth rates by controlling the composition and growth of understory species using prescribed fire, chemicals, drainage of surface and ponded water, mechanical removal of slash and litter or their incorporation into the soil, or other techniques.

5. Improving forest productivity for multiple benefits by various techniques, including surface and subsurface drainage, addition of fertilizers, cultivating and shaping the soil, limiting the removal of nutrients, irrigation, and insect and disease management.

6. Regulating the quantity, quality and timing of water yields by timber harvest, size of openings, drainage, terracing, bedding, changing species composition, and vegetation type.

7. Enhancing plant and animal habitat by ponding, stream habitat improvement, drainage, food plots, game and non-game food plantings, timber removals, thinnings, and building access roads and trails.

8. Enhancing visual appearance, recreation enjoyment and aesthetic values by scheduling harvest, building lakes and improved recreation sites, controlling erosion with vegetation, constructing trails and roads for access, and protecting the forest from fire, disease and insects.

9. Improving natural range and savannas by seeding, controlling brush, regulating timber harvest, increasing browse, changing species composition, impounding and regulating water, and amending the soil.

10. Providing environmental amenities by establishing shelterbelts, protection forests, and aesthetic screens.

As indicated, the array of silvicultural actions considered "normal" is very broad. Stand and site characteristics that influence the need for silvicultural action vary from region to region and within regions. The training and experience of the forester, and his understanding of the ecological and economic aspects of the location situation, determine his prescriptions for silvicultural action.

Mr. TALMADGE. Mr. President, second, I would like to include a definition of normal forest practices adopted by the Society of American Foresters, the professional foresters organization.

Mr. President, these documents show beyond question that the House conferees acted wisely in refusing to accept conference report language which would have excluded clearcutting or even-aged management of Eastern mixed hardwoods from any rational list of normal forest management practices:

The National Association of State Foresters urges the Conferees of the Senate House Conference on H.R. 3199 and Section 404 of P.L. 92–500 this session to consider that it is essential to remove unnecessary and negative Federal regulatory burden for millions of private forest landowners. State Foresters are trying to encourage these landowners to grow more trees through positive technical assistance and incentive programs.

The amendments should include:

1. Exclusion of all normal silviculture activities from permit requirements of section 404 or 402, and,

2. Definition of normal silviculture activities as all those generally recognized by professional forest managers for the production of timber crops including site preparation, planting, construction of roads and minor drainage ditches, harvesting methods including clearcutting, prescribed fire, and application of approved chemical pesticides and fertilizers.

We support the direction of Congress under section 208 that individual states, with the involvement of State Foresters, determine when silviculture activities are a significant water pollution problem and develop appropriate abatement programs.

Unanimously approved at meeting of State Foresters in Orlando, Florida, on October 13, 1977. (Sent by mailgram to Conferees on October 13 or 14.)

The Society of American Foresters urges Foresters in Orlando, Florida, on October the members of the House-Senate conference on the 1977 Federal Water Quality Act Amendments (P.L. 92–500) to recognize that even-aged management of eastern hardwood forests, including clearcutting, is one of several "normal" silvicultural activities for this group of forest types. This is in accordance with the silvicultural principles, theories and practices set forth in the Society's "Definition of the term 'normal silviculture' for the purposes of interpreting H.R. 3199 and S. 1952."[1]

The Society further suggests that any concern for water quality resulting from this or any other silvicultural system is properly addressed in accordance with Section 208 of the Federal Water Quality Act.

Mr. BAKER. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the distinguished Senator from Rhode Island (Mr. CHAFEE).

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR CHAFEE

Among several issues resolved during our conference deliberations on the Clean Water Act of 1977, one issue was of particular interest to me and several of my colleagues. I am talking about the exemption from Section 404 permits for certain Federal projects. Section 67, subsection (r) provides a limited exemption from Federal and state permit programs for discharges of dredged or fill material to construct Federal projects specifically identified by Congress, when authorized or funded. If the procedural and substantive requirements of subsection (r) are satisfied, such discharges shall not require permits under Section 404, as amended, or under state permit programs approved pursuant to this section. The conferees did not intend to exempt Federally assisted projects or maintenance of existing Federal projects from the section 404 review.

The exemption provided by this subsection applies only to discharges that are an integral part of constructing a Federal project which has been reviewed and approved by Congress. Federal projects include only those conducted by a Federal agency and by such contractors as the agency may employ. The conferees did not intend to exempt other discharges which may be associated generally with constructing Federal projects, but which are ancillary to the specific activity submitted to and approved by Congress. For such ancillary discharges, the full section 404 review and approval procedures shall be applied by the Secretary and the Administrator unless other exemptions are applicable.

---

[1] Approved by the Council of the Society of American Foresters, September 29, 1977. A position of the Society of American Foresters expires three years after the date of its adoption unless after thorough review, its continuance is approved.

---

[1] Approved by SAF September 29, 1977.

In order to qualify for the exemption, an adequate environmental impact statement on the project must have been submitted to Congress prior to authorization of the project or appropriation of construction funds and, in all cases, prior to the actual discharge of dredged or fill material at any particular site. The statement must satisfy the requirements of the National Environmental Policy Act and include complete information and analysis, consistent with the requirements of sections 403 and 404, on the effects of the proposed discharge. Moreover, the guidelines developed by the Administrator under section 404(b) (1) must be fully complied with in developing and assessing this information.

Congress must have adequate siting, engineering, and environmental information on each proposed Federal project, as well as on modifications recommended by reviewing agencies, in order to review the available alternatives to and potential adverse impacts of the proposed discharges, and to weigh those impacts and alternatives against the benefits of the project. The Administrator will be required to see that the section 404 (b)(1) guidelines are sufficiently explicit to focus attention on those aspects of Federal dredged and fill material discharges, in the construction of new projects, that could result in environmental degradation. And the Administrator must assist other agencies by carefully reviewing draft environmental impact statements to ensure that the guidelines are being interpreted and implemented properly.

In reviewing a proposed Federal project, which includes the discharge of dredged-or fill material, several factors must be considered. Among these are the effects of such discharges on the aquatic biota, wildlife, shellfish beds, and fishery areas (including spawning and breeding areas). Possible changes in the ecosystem diversity, productivity, and stability must be considered. Effects of disposal on recreation and esthetic values are to be studied. Adverse impact on municipal water supplies and groundwater systems must be identified. These are only a sample of the effects to be considered in preparing the environmental impact statement required for an exempted project.

I look forward to working with the distinguished Chairman (Senator Randolph) and the able Ranking Minority Member (Sen. Stafford) of our Environmental and Public Works Committee, and especially with the Chairman (Sen. Grave) and Ranking Minority Member (Sen. Domenici)of the Water Resource Subcommittee, to develop a thorough process of Committee review for each Federal project and accompanying environmental impact statement for which an exemption from the 404 permit program is sought. A great deal of responsibility is being placed in our Committee to insure that these Federal projects, including discharges of dredged or fill material which are an integral part of these projects, will be conducted in an environmentally sound manner. I would hope that other Committees which have jurisdiction over Federal projects would also adopt strong review procedures for this new provision.

Mr. HANSEN. Mr. President, in June during consideration of the Clean Air Act Amendments of 1977, I stated that I believed that one of the greatest environmental crises that this Nation could experience would be if the lights were to go out in New York City. I made such a statement because, to my way of thinking, some of the actions contemplated in the Clean Air Act amendments appeared at odds with the need for America to achieve a degree of energy independence.

It is my belief that there are some hard lines to draw, some difficult choices to make in the energy area, but we must make those choices and we must make them now or face the type of crisis which confronted New York City on July 13 of this year.

Recently there appeared in the December issue of Harper's magazine a case study of one aspect of the environmental movement. In a detailed analysis of the controversy involving Storm King Mountain in New York State, the author sees the seeds of the energy problems with which we are now faced. In conclusion, he asks "Where is the power going to come from to meet the needs of the next decade and the next generation?" It is a question well worth considering.

Mr. President, I recommend this article to my colleagues and ask unanimous consent at this time that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ENVIRONMENTALISM AND THE LEISURE CLASS

(By William Tucker)

Four years ago, while I was working at the Bergen Record, a suburban newspaper in Hackensack, New Jersey, a press release crossed my desk from the Scenic Hudson Preservation Conference, a small group with headquarters on Madison Avenue which, by its own advertisement, had been working for more than ten years to "save Storm King Mountain."

Although I had grown up in the New York area, I hadn't been living there much during the 1960s, and my memory of the whole Storm King incident was hazy. The most I could recall was the image of a majestic, looming mountain somewhere along the Hudson, a threat by Consolidated Edison of New York to do something terrible to it, and the recollection of protesters and entertainers strumming their guitars and parading in boats until the apparition had somehow been exorcised.

I doubt if I could have identified the Con Edison proposal as a pumped-storage plant. If I had been asked, I probably would have said it was a nuclear plant. I did not know at the time how many other people, including some of the principals of the controversy, would have responded in the same way.

Yet I was getting awfully suspicious about environmentalists. Their solutions to problems had an inordinate amount of impracticality about them, more than they would have tolerated in their own lives. The environmentalists in any given area seemed very easy to identify. They were, quite simply, members of the local aristocracy, often living at the end of long, winding country roads. They had learned the lessons of conspicuous consumption and had allowed a certain amount of genteel rusticity to enter their lives. Instead of imitating Greeks and Romans, they seemed to be patterning themselves after the English gentry.

The environmentalists knew the language of energy and ecology, and could describe a future filled with windmills and with bright sunshine radiating "inexhaustible energy." Yet one never got the impression that these people were planning to be part of it. The "soft energy" of the future was a vision offered to persuade people to forgo the nastier, more vulgar realities of the "hard energies" of the present. I knew this was mostly a lot of nonsense. Solar electrical generating stations would be massive installations, hiding acres upon acres from the sunlight. Storage problems could prove insurmountable. Solar heating on a large scale could mean rebuilding half the homes in America. When I questioned the environmentalists closely, I found these details rarely intruded upon their vision. "Have faith" was the rejoinder, while economics and matters of sheer quantity were dismissed. "We certainly can't go on the way we're going now" was the comment I heard over and over again. It was difficult to tell just which, if any, of these people really knew what they were talking about.

There was another thing that disturbed me about environmentalism. That was the way it always seemed to favor the status quo. For people who found the present circumstances to their liking, it offered the extraordinary opportunity to combine the qualities of virtue and selfishness. When the first environmentalists were showing up at town meetings arguing against new apartment houses, shopping centers, or whatever, it seemed obvious that they were acting out of the universal human impulse which makes people respond to incursions on their surroundings by saying, "Put it somewhere else." Like everyone, the environmentalists wanted to be left with the illusion that they lived alone in nature without the assistance of other people. They had simply refined their arguments with talk about "ecosystems," "rare, endangered species," and "carrying capacities."

That was before everyone else began catching on to the possibilities of environmentalism. From 1972 to 1974, "protecting the environment" became the favorite argument in the endless debates over new development in the suburban area of Rockland County, New York, where I was reporting. People who would starve to death if they couldn't drive their cars to the supermarket were opposing new road construction because "fossil fuels are disappearing" and "we aren't going to be using cars anymore."

And really, there was nothing in it that was logically inconsistent with the tales of the original environmentalists. Nothing these first country prophets had said ever had much to do with sacrifice or self-restraint. If tweedy people living at the end of country roads with fireplaces in their living rooms could protect their "environments," why couldn't tacky people living in pink-and-gray houses at the end of cul-de-sacs do so as well? "Environmentalism" always seemed to work in favor of the people who were already established in "the environment." I didn't realize how true this was until I learned that a group of middle-class whites in Newark had been able to block a highly controversial low-income housing project by bringing a long series of challenges to the project's environmental impact statements.

In the course of about six months, I saw several garbage-recycling projects and an experiment in pollution-free burning of coal blocked by local residents who were "protecting their environment." It was easy to see that people who talked about "environmentalism" were not terribly concerned with things like recycling, conservation, and biology.

With all this in mind, I decided it might be worth taking a long look at the incident which is considered the "birthplace of the environmental movement," the Storm King Mountain controversy. I admit I started my investigation with certain anticipations. I expected to find a project that had been opposed by a small but determined group of wealthy people. This turned out to be correct. What I didn't expect to find was the degree to which the opponents of the project had managed to commandeer public opinion and win supporters among people whose best interests might have been served by supporting the plant. Among these was the entire government of the city of New York.

What is most astonishing is that the whole issue is still alive, miraculously embalmed in the deep-freeze storage of the court system. The crowds have departed, the newspapers have stopped covering the story, and no more than a few people can remember even the sketchiest details of the issue. Only Con Edison and its little band of determined opponents remain in deadlock, struggling far into the night.

The chronicle as it comes to us now is really a historical saga. The written record would probably fill a wall of bookcases. I have read the *New York Times* file on the subject, the Bergen *Record* file (which includes most AP dispatches), and several books relating to the subject; I have visited the Storm King area many times, and interviewed close to forty people who played major roles in the controversy. Yet most of the testimony from the fifteen years of court cases and Federal Power Commission hearings is known to me only through excerpts and newspaper reports.

Nevertheless, there is a consistent pattern in the Storm King Mountain controversy, one which, I think, offers an answer to the big question—Why has this particular plant stirred up so much opposition?

The question has long tantalized nearly all the participants. One can see editorial writers, utility executives, residents of the Storm King area who favored the plant, and even the environmentalists themselves reaching for an answer over and over again. I wasn't able to make more than a few vain stabs at it until this year, when I went back and finished a book I should have read in college, *Thorstein Veblen's Theory of the Leisure Class*. There, in a slim fourteen-page chapter called "Industrial Exemption and Conservatism," I found an explanation of "environmental" behavior which I believe goes far beyond the issues at Storm King Mountain. It bears most specifically upon our present industrial crisis—the prospect of fossil-fuel shortages, the conversion to new technologies, the support for "no-growth" economics, and the general future of the industrial system.

I believe the Storm King Mountain controversy contains a story that has never been adequately told but has enormous bearing on the future of our economic system. It is offered here in the hope that, once understood, it will not have to be repeated on a large scale.

THE CHRISTMAS-LIGHT DEMAND

The leisure class in great measure sheltered from the stress of those economic exigencies which prevail in any modern, highly organized industrial community. The exigencies of the struggle for the means of life are less exacting for this class than for any other; and as a consequence of this privileged position we should expect to find it one of the least responsive of the classes of society to the demands which the situation makes for a further growth of institutions and a readjustment to an altered industrial situation.—Thorstein Veblen, "*The Theory of the Leisure Class*."

In 1962 Consolidated Edison Company, the sole supplier of electricity to New York, was the giant of the industry. The company had some of the most skilled and innovative engineers in the business, and was generally regarded as the most progressive utility in the country. This was hardly a matter of chance, because whatever problems occurred in the utility industry were sure to happen first in New York City.

In the 1950s Con Ed had experienced almost nothing but major changes. The capital-short years of the depression and the diversion of resources during World War II had left the utility almost a generation behind in construction of new generating plants. In 1952 the company had eleven power stations, all of them in New York City and all but three built before 1933. They could produce a peak output to meet a demand of 3.3 million kilowatts.

But the arrival of new energy-consuming technologies—particularly air-conditioning—was changing the entire pattern of electrical consumption in New York City. Throughout the history of the utilities industry, peak demands always occurred at night. Right through 1957, the biggest strain on Con Ed's system occurred when midwinter lighting and heating demands were at their highest. Old-timers in Con Ed's control command could fondly remember a time when the annual peak usage occurred on Christmas Eve, when tree lights and toy trains put the largest demand on Con Ed's generators.

But by the early 1950s it was obvious that the city's systems were on the verge of enormous changes. Daytime peaks, particularly during the summer air-conditioning season, were growing in gigantic leaps and would soon be overtaking winter nighttime demands. Carrying summer loads was soon going to be the utility's biggest challenge.

Con Edison responded with actions that can only be called appropriate. In the late Fifties the company contracted with the Allis-Chalmers Corporation to build a 1 million-kilowatt coal-burning plant—later to be nicknamed "Big Allis"—that would be more than twice the size of an existing plant, yet would hold off the rising peak demands for only four years.

At the same time, Con Ed ignored the conservatism of other utilities and began developing a nuclear technology. The only atomic generating stations had been built by the U.S. government, and other utilities were avoiding the risks of pioneering in the field. But Con Ed did not have time for such caution. The company bought an abandoned riverside park at Indian Point in upper Westchester County and contracted with General Electric to build, for $140 million, the first privately owned nuclear station in the world. Indian Point would provide only 237,000 kilowatts—less than the next year's projected increases in demand—but would open the way for larger efforts in nuclear technology.

On June 26, 1957, with both Big Allis and Indian Point One still in construction, the company passed a watershed. During the mid-afternoon of an extraordinarily hot day, Con Ed's demand rose to 3.5 million kilowatts. It was the first time a daytime peak had surpassed the annual nighttime peak, and it also put Con Ed over its own capacity. Electricity had to be imported from Long Island and New Jersey over lines that were originally built so Con Ed could sell power to neighboring utilities. All during the long afternoon, Con Ed executives sweated it out at the Manhattan control center, praying that the improvised system would work. Over the next three years, demand would grow at an average rate of 300,000 kilowatts per year.

Big Allis and Indian Point One came on line as scheduled, but the exasperating situation of "peak demands" was leaving Con Edison and other utilities playing a losing hand. New generating capacity was going to have to be added almost continually, yet this capacity would remain idle during most of the year. It was like building an extra wing on a house to accommodate a guest who visited only at Christmas. There were extraordinary inefficiencies in building and maintaining generators whose average "load demand" over the entire year was only about 55 percent of their full capacity.

The problem is that electricity must be used as it is generated. It cannot be stored in normal generating systems. The only proven method of storage—then and now—is "pumped storage," a system whereby water is pumped from a lower to an upper reservoir during off peak hours and released during peak hours to create hydroelectric power.

A few utilities had built pumped-storage plants during the 1940s, and 50s, but they were clumsy, costly affairs. Two separate water tunnels were required—one for pumping, the other for generation. Then, in 1960, engineers perfected a reversible turbine that could serve as both pump and generator. One tunnel could be used for both purposes, cutting construction costs nearly in half.

Several utility companies in areas where mountains and rivers would make pumped-storage systems feasible started exploring the new techniques. Con Ed did not make a deliberate investigation, but in 1961 one of its executives received a call from a manager at Central Hudson Gas and Electric in Newburgh, who said his company had been investigating what appeared to be two excellent pumped-storage sites on opposite sides of the Hudson River within five miles of Newburgh. The first, below Breakneck Ridge on the east bank, would suit Central Hudson, but the second, just south of Storm King Mountain, was too large for the Newburgh utility. It might, however, be on a scale required by the New York City company.

Con Ed made its own investigation of the Storm King site and found it was highly suitable for pumped storage. The generating plant could be tucked into a small inlet in the Palisades Interstate Park just south of Storm King. An upper reservoir for drinking supplies had already been developed about two miles behind the mountain. It belonged to the village of Cornwall, which lay just north of Storm King. The village would probably be happy to have the reservoir put on the tax rolls, and could be furnished with new wells by the company for about $3 million.

Working covertly to avoid land speculation, the utility acquired most of the property around the upper reservoir during the spring and summer of 1962. Then, in July, Con Ed broke the news to political officials in Cornwall, Mayor Michael Donahue was delighted—almost overwhelmed—at the idea of having the huge enlargement of the upper reservoir on the tax rolls. The benefits to the community would be enormous.

On September 27, 1962, village officials and Con Ed made a joint public announcement of the new plant, which they predicted would win quick approval from village residents and from the Federal Power Commission, the licensing agent. In his first interview with the press, Mayor Donahue, a Cornell-educated veterinarian who had grown up in Cornwall, noted, "There's no chance that the building will reduce the aesthetic qualities of the area" because it would be located "on the waterfront, not on the hills."

Five miles downstream however, a part-time resident on the east bank looked out the front window of his mountain retreat, one of many luxurious second homes in the area, and found a different view of the matter. William Osborn, an engineer whose family owned 2,000 acres and a mountainside castle, and who served as president of the Hudson River Conservation Society, realized that he would have a clear view of the transmission lines that Con Ed was planning to string across the river to connect the Storm King plant to its circuits in Putnam and Westchester Counties. Osborn called a few of his neighbors in similar mountaintop hideaways and found that they too were upset about the plant, which would be visible from several lookouts on the east side of the river. Osborn, whose brother Frederick was a commissioner of the Palisades Interstate Park, was soon on the phone to Con Ed to see if it couldn't be persuaded to make a few slight changes in the layout of the plant.

At the time, "ecology" was an obscure discipline found only in a few biology textbooks, "conservation" was a movement whose main impetus had occurred around the turn of the century, and "environmentalism" was a word that didn't even appear in the dictionary. But most people familiar with the history of the Storm King Mountain controversy rightly consider William Osborn's phone calls to his mountaintop neighbors as the birth of the environmental movement.

HUDSON RIVER VISTAS

The scenery along the Hudson River's 130-mile length from New York to Albany can hardly be characterized in a few simple phrases. Nor can its long history. Both are notable for their diversity.

The Hudson's scenery ranges from the rocky columns of the Palisades at the lower end to the dreamlike vista of the Catskills along its upper reaches; from the beauty of mountainside farms to the leaden industrial shores of Haverstraw and Newbaugh Bays. The latter are two of the larger industrial centers that sprang to life during the early nineteenth century, when the Hudson became the main thoroughfare for most of the new nation's commerce.

Between them lies a stretch that has remained largely untouched. These are the Hudson Highlands. Here, for a length of fifteen miles, the mountains rise straight from the water's edge like the burly shoulders of huge animals. The stretch is the point where water from a preglacial lake broke through on its way to the Atlantic. It is the only breach in the Appalachian Chain, and thus forms a natural pathway from the Eastern coastline to the hinterland of the American continent, making the Hudson the nation's first main highway.

The highlands offered few footholds for commercial and industrial settlement, however; they served instead as a retreat for the wealthy. During the Revolution, they housed the biggest concentration of Tories in the thirteen colonies. As New York City prospered in the early 1800s, some of the area's most successful citizens began trekking up the Hudson to find solace on riverfront properties. The east bank of the river had been "estate country" ever since the Dutch made their first land grants along its shores while the west bank remained "Indian country," and was first settled only by small farmers who were willing to risk confrontations. As the nineteenth century progressed, the distinction remained. The Astors, the Goulds, the Vanderbilts, the Roosevelts, and the Rockefellers all took up residence on the east bank, while the western shore remained in the hands of small farmers except for the large holdings of the Harriman family in Orange and Rockland County utilities.

The highlands were the scene of some of the more elaborate attempts to mimic European nobility. A succession of wealthy stockbrokers and businessmen built mountainside castles in the region. Some proved drafty and uninhabitable, and were succeeded by less ambitious but still impressive second homes. Eventually, many of the great estates became unmanageable and were sold to charitable institutions. But the little colony of wealth in the highlands persisted. A group of artists and admirers of the past clustered around it, and an aristocratic, inward-looking community was formed, with the hamlet of Garrison as its center.

In the cities to the north and south, the story was different. Commerce declined, and industries deteriorated or departed. A wave of urban-renewal projects in the 1950s sent displaced blacks moving from city to city along the river looking for homes.

In the period of 1955–61, two strking incidents occurred within ten miles of each other on either side of Storm King. A group of wealthy activists moved an eighteenth-century mansion piece by piece all the way from Peekskill to Garrison after the federal government threatened to tear it down. It became the Boscobel Restoration, a minor tourist attraction. On the other side of the river, Newburgh was also briefly in the news. Exasperated by the number of welfare recipients moving into the community, the city manager, Joseph Mitchell, announced that all able-bodied welfare clients would have to perform city jobs to receive their payments. The directive was quickly overturned in the courts, but city officials said it had highlighted the community's economic plight.

Less than a year later, Consolidated Edison of New York arrived on the scene with a proposal to spend $115 million to build a pumped-storage plant at the base of Storm King Mountain.

An advance in technical methods, in population or industrial organization will require at least some of the members of the community to change their habits of life . . . ; and in doing so they will be unable to live up to the received notions as to what are the right and beautiful habits of life—The Theory of the Leisure Class.

Right from the beginning, Con Edison was willing to compromise. It may have been their biggest mistake.

When Osborn made his objections known to Con Ed, the utility quickly agreed to move the plant around to the north side of the mountain, so that, instead of lying within the narrow gorge of the highlands, the plant would be facing the dilapidated scenery of Newburgh Bay, and sitting almost atop the burned-out ruins of Cornwall's abandoned waterfront. The company also agreed to run the power lines through an underwater cable beneath the Hudson. The relocation of the plant would mean a slightly longer tunnel, but it would also put the generating station within the village of Cornwall, which would make local residents even more willing to welcome the project. The additional expense would raise the total cost to only $121 million. Osborn registered his satisfaction, Cornwall was even happier about the plant, and the matter seemed settled. But not quite.

Other owners of weekend homes and small estates on the east bank of the highlands were unhappy about the transmission lines, which, in some cases, would run near to or over their properties. If Con Ed was submerging its cables under the river, why couldn't it bury the lines near their properties as well? Con Ed executives replied that burying all the wires would run the costs far beyond acceptable levels for its New York City and Westchester customers. The estate owners were not satisfied.

As they voiced their complaints, they heard that they had counterparts across the river in a little colony of about twenty-five families of wealthy New York City businessmen and attorneys with summer and weekend homes behind Storm King These "weekenders" and "mountain people," as they were known in Cornwall, lived around a private compound developed in the 1880s by James Stillman, the president of National City Bank and one of the organizers of the Consolidated Gas Company, the forerunner of Con Ed. Stillman had been regarded as a nouveau riche when he tried to gain entrance to Tuxedo Park, the exclusive community at the other end of Orange County. Rebuffed, he expanded his family holdings at Storm King and started his own private community. Many of the current residents are descendants of the original families, although one of the reigning patriarchs, Chauncey Devereux Stillman, had moved further north, to Columbia County, where he kept a set of four-in-hand coaches and raised peacocks on his property.

The "mountain people" were also unhappy about the new plant. A parade of bulldozers and construction workers threatened havoc for their quiet weekend retreats. Some would lose property holdings around the upper reservoir. In addition, the plant would mark a kind of symbolic invasion of their privacy.

The "estate country" people made contact with the "mountain people," and together they talked about the possibilities of blocking the plant. One of the Cornwall people, Stephen Duggan, was a senior partner in the blue-chip Wall Street law firm of Simpson, Thacher and Bartlett. Duggan felt that if the group could harass Con Ed for a while, the economics would change and the company might give up the project. The Cornwall Stillmans polled their relatives and found they were nearly all opposed to the plant.

Benjamin Frazier, a Garrison antique dealer who had led protest marches in front of the Boscobel mansion when the federal government had wanted to tear it down, felt the same technique might work at Storm King. Alexander Saunders, a Garrison resident, felt a case could be made for keeping industry out of the area, even though in 1964 he would move his own family business, a small tool-and-die factory, from Yonkers to the highlands. The group found its ranks joined by another activist, Leopold Rothschild (not a *real* Rothschild), a well-connected New York City attorney who liked to hike in the Storm King area and had been active in conservation groups since an attempt to oppose construction of the George Washington Bridge in 1927.

They decided to attend Cornwall Village meetings and express their views, but soon found themselves facing almost unanimous public hostility. There were even a few threatening phone calls. Mayor Donahue, although quietly appalled that the "mountain people" might try to block the plant, made several efforts to mediate. Years later, when I visited his home, he told me of the time when he was invited "up the mountain" to a cocktail party where the Storm King project was to be discussed. "Nobody said much during the entire afternoon," he recalled, "but toward the end a retired West Point general took me aside and said, 'Look, we've got it nice and peaceful up here, why do you want to spoil it?' I bit my tongue and didn't say anything, but what I wanted to say was 'What about all the little people down there in the village who need this plant? Did you ever think about them?' "

Things did not look promising for the fledgling opponents during the early months of discussion, but in April 1963 Con Ed made a bad mistake. In its annual report, the utility printed an artistic rendering of the proposed pumped-storage plant. In an effort to highlight the technical aspects, the artist drew the plant larger than its actual size. As one writer would later describe it, the drawing showed "a portion of Storm King mountain missing, like a slice removed from a tub of cheese." Rothschild wrote letters of protest to both Governor Rockefeller and John B. Oakes, the editorial-page editor of the *New York Times*.

Rockefeller, an aristocrat among aristocrats, made the half-serious suggestion that if the group didn't want the plant they should buy the mountain. (His brother, Laurance Rockefeller, was later to use the family money to buy the Breakneck Ridge site from Central Hudson.) Oakes, however, was more responsive. On May 29, 1963, the *Times* ran its first editorial on Storm King, asserting that "it is almost as bad to plunk down a couple of power installations right in the heart of one of the most stunning natural regions in the Eastern United States, Storm King Mountain" as it would be to put a power plant in the middle of Central Park. The paper had proudly taken its stand. It has not wavered one iota from its original position over the succeeding fifteen years.

Duggan, Rothschild, Saunders, and their associates spent the rest of the summer looking for checkpoints where the plant could be temporarily delayed. The village had waived a referendum on selling the upper reservoir, so they asked that the vote be held. The result was a 499-25 defeat in 1964.

The only other possibility was the Federal Power Commission, which would be licensing the plant under its authority to regulate all hydroelectric projects. The little group of opponents discovered the deadline for filing for appearance at the FPC hearings had already passed, but through Rothschild's connections they were put in touch with Dale Doty, a Washington, D.C., attorney who had sat on the FPC during the 1950s and had once persuaded it to reject a dam proposed in Wisconsin because it would ruin recreation for the area. Doty was eager to argue a case before the FPC in which scenic and conservation values would be an issue.

On the evening of November 8, 1963, Rothschild met with representatives from four national conservation groups in the living room of the Westchester home of Carl Carmer, a popular historian who had written a book on the Hudson. Together they set up the Scenic Hudson Preservation Conference, an alliance of conservation groups that would devote itself to the Storm King case. Carmer was named honorary chairman, and Rothschild was elected president.

Through a combination of Doty's influence and the FPC's desire not to ignore any of the issues, Scenic Hudson was granted permission to appear at the license hearings even though the deadline had passed. Doty felt that a case could be made on the basis of the FPC's responsibilities to consider the total impact of the plant. He felt scenic values should play a part. For Rothschild, Saunders, Carmer, and Duggan, it was chiefly a matter of keeping the plant from going ahead on schedule. When the FPC hearings opened in Washington on February 25, 1964, they and their little band of followers from Garrison and Cornwall were waiting to speak in their turn.

> As population increases, and as man's knowledge and skill in directing the forces of nature widen . . . the habitual methods of carrying on the life process of the group as a whole, no longer give the same result as before. . . . If the scheme according to which the life process . . . was carried on under the earlier condition gave approximately the highest attainable result . . . in the way of efficiency or facility . . . then the same scheme of life unaltered will not yield the highest result attainable . . . under the altered conditions.—The Theory of the Leisure Class.

Con Ed officials believed that the huge, 2 million-kilowatt pumped-storage plant at Storm King would offer three major advantages to its electrical system.

First, it would solve the problem of peaking power at bargain rates. For an investment of only $121 million, Con Ed woud be able to increase its current capacity of 5.5 million kilowatts by more than 33 percent, enough to carry it through to 1969. Building the same capacity with fossil fuel or nuclear plants would cost more than $200 million.

Second, the Storm King plant would create greater efficiencies in Con Ed's existing systems. Instead of adding new generating capacity, it would use existing capacity more efficiently. Coal- and oil-burning plants could be operated at higher levels and would consume less fuel per kilowatt, just as cars burn gas more efficiently at fifty-five miles per hour. Con Ed would be able to retire four of its oldest, least efficient plants. This would be doubly important, since the oldest plants were the worst contributors to air pollution, a growing public concern.

The third advantage was reliability, an increasingly important concern among utilities in the early 1960s. As generating plants became bigger and as transmission lines stretched longer, the possibility of widespread power failures was increasing. Ordinary steam-driven plants could not cope with emergencies because it took from fifteen to thirty minutes to stoke them up to higher capacity. But a pumped-storage plant, with enormous quantities of water sitting behind simple sluice devices, would be a godsend in an emergency. The Storm King plant could go from zero to 2 million kilowatts of power in less than a minute. The man-made waterfall could be used to restart other generators after a widespread power failure. The plant could prevent some blackouts and limit the effects of others.

Fifteen years later, New York City public officials would have done well to remember the reliability promised by the Storm King plant. The city had suffered two major blackouts in twelve years, the second leading to widespread looting and costing the city more than $1 billion. But by 1977 hardly any political officials could recall more than a few sketchy details of what Storm King had been all about. And none could remember that the city itself had been the major opponent of the project for nearly ten years.

A CONFLICT OF INTERESTS

The FPC hearings added many novel aspects to what had formerly been a staid and pro forma proceeding. The members of Scenic Hudson presented their arguments under Doty's examination. Rothschild warned that the transmission lines running down the east bank of the highlands would cut a "raw scar" into the landscape. Saunders went even further. "This historic area will be permanently defaced," he warned. The plant would "set a precedent for other projects," while "crisscrossing the area with overhead power transmission lines would destroy many beautiful views."

Carmer made the most eloquent summation of Scenic Hudson's position:

"We believe that ugliness begets ugliness and that nature's beauty, once destroyed, may never be restored by the artifice of man. . . . We would offer the peace and healing our river gives, as it has always given, to those who seek its waters for respite from the tension of their lives. . . . The real question is whether the river's national importance shall be sacrificed to these enterprises which would change the shoreline, lower high peaks [sic], destroy groves of trees. . . . The Hudson answers a spiritual need more necessary to the nation's health than all the commercial products it can provide, than all the money it can earn."

Carmer's interpretation of Hudson River history was a limited one. It ignored the river's combined role as the first highway of the nation's commerce, the birthplace of the steamboat, the home of one of the nation's first railroads, and the breeding ground for many of its first industries. The suggestion was that the river would now serve only as "respite from the tension of [the] lives" of people who presumably made their living elsewhere. The same kind of reinterpretation of history was taking place along the river, where the interest arising from the Storm King case was bringing suggestions from conservation groups that power boats be banned on the river and no house worth less than $50,000 be built on its shorelines.

The hearing officer, Edward B. Marsh, took their testimony into account, and in June 1964 recommended to the full five-member commission that the plant be granted a license. Con Ed had proposed to turn the rotting waterfront area into a park, and Marsh noted that recreation in the area would actually be improved. He said the plant would not affect the scenery of Newburgh Bay, but found sympathy with the argument that the transmission lines would despoil scenery in the highlands. He told Con Ed to find an alternative route that would take the lines behind the mountains at Breakneck Ridge. Marsh called the project "an exceptionally fine pumped-storage site" and suggested that Con Ed might even consider enlarging the reservoir to 12 billion gallons for storage of 3 million kilowatts of electricity.

But by the time Marsh was issuing his recommendations, it was obvious that the approval of the Storm King plant was not going to be a routine matter. The New York newspapers had discovered the issue and already, on the pages of every city newspaper (there were then seven), the "Storm over Storm King" was brewing.

> The fact that the usage, actions, and views of the well-to-do leisure class acquired the character of a prescriptive canon of conduct for the rest of society gives added weight and reach to the conservative influence of that class. It makes it incumbent upon all reputable people to follow their lead.—The Theory of the Leisure Class.

As soon as the New York newspapers woke up to the controversy in the early months of 1964, they lined up almost unanimously against the plant. Con Ed, after all, did not have a glowing reputation in New York City. For one thing, the utility made the mistake of charging people for the amount of electricity they used, whereas the other utility, the New York City Water Department, charged according to fixed "frontage" charges that allow residential customers to consume unlimited amounts of water while extra costs were hidden on the tax rolls. Then, too, Con Ed was constantly digging up the streets to get at its hard-to-service underground lines. Its slogan was "Dig We Must for a Growing New York," and in 1965 *Fortune* magazine was to label it "the company you love to hate." So the discovery that Con Edison was planning to "destroy" a beautiful historic mountain somewhere up the Hudson certainly came as no surprise.

The issue was particularly suited to the practices of editorials. Reporters who visit the scene of a controversy are often forced to trim their sails and adjust their preconceptions. Finding, for example, that an entire village of 3,000 people—indeed, almost an entire county of 200,000 people—was in favor of the project was bound to give some pause. Over the years many extremely balanced stories questioning the "scenic" objections to the plant were filed from Cornwall. But editorial writers are under no such constraints. They can proceed without too much attention to details. In the case of Storm King, two fundamental misconceptions emerged: that Newburgh Bay was virgin territory rather than a declining industrial area, and that it was the highlands themselves that were threatened. What is interesting to note is that there was never any question about the economic advantages of the plant.

"Beauty over Electricity," proclaimed the *Herald Tribune* in a May 10, 1964, editorial which stated:

"The Hudson Highlands are . . . a great scenic asset for all the people. And despite the great virtues of Con Edison's cheaper power, the fact remains that this industrial project (for all the intended landscaping works) will detract from nature's beauty. . . . It is well and good that Con Ed wants to bestow so many benefits. . . . But an undefiled Storm King Mountain is worth more than cheap electricity."

The *Times* offered its own summation on May 23, 1964:

"We do not dispute Con Ed's experts to the effects that this is probably the most economic and efficient means of supplying the next increment of power to meet New York City's constantly growing needs. If the required power plant is not erected at Cornwall but at some other place of less notable scenic and historic interest, doubtless the consumers of New York will have to pay more than they would otherwise pay for their power. We think this choice should be faced frankly; and we also think that in the present instance, preservation is worth the price."

The possibility of there being other sites for the pumped-storage plant was occurring in other people's minds, and at one point a reporter asked Rothschild if he was making any attempt to help the utility find a different location. Rothschild wasn't: "That's their problem," he said.

HOLDING ACTION

A complete review of the examiner's report would ordinarily take the full FPC about four months, but the mounting pressure of public debate was having its effect. The FPC did not issue its final decision until March 1965, nine months after the original recommendation. By then Scenic Hudson had changed its tactics and was mounting a many-sided campaign. The editorials in the New York newspapers had given the opponents of the project a strong indication that there was fertile territory to be mined among the city's celebrity-conscious media. Pete Seeger composed a ballad in honor of the mountain. James Cagney and Aaron Copland went on record against the plant.

In August 1964 the conservationists, as they were being called, hired Selvage, Lee, and Howard, a small Fifth Avenue public relations firm that had just finished trying to persuade the American public to take a more tolerant view of Portuguese colonial polices in Angola. James Cope, one of the more ambitious account managers, found himself immediately attracted to Rothschild and his group.

Cope arranged a favorable story for publication in *Readers Digest*. He also hit upon the idea of a "sail-in" around Storm King. On September 7, 1964, all seven New York newspapers carried broad coverage of the "waterborne picket line" protesting the plan. The *Times* noted that "fifty yachts, led by the *Westerly*, flagship of the New York Yacht Club," paraded from the Highlands Yacht Club in Garrison to Storm King, with "Commodore Chauncey Devereux Stillman, whose family gave the Black Rock Forest [behind Storm King] to Harvard in the 1920s," in command. Aboard the *Westerly* were Rep. Robert R. Barry of Westchester and State Sen. R. Watson Pomeroy of Dutchess County. "Opponents say the power plant will leave an enormous gash up Storm King and will set a precedent for deflement of the historic valley," noted the *Times*. The sail-in made *Newsweek*, and within weeks forty conservation organizations were offering assistance. The fight to "save Storm King" was becoming a national issue.

Senator Pomeroy was soon able to create an even more favorable publicity platform for the opponents of the plant. He offered his New York State Legislature Committee on Natural Resources as a forum for Scientific Hudson. The pretext was legislation on the development of the Hudson, but a reporter at the scene noted that "it became obvious that [the] purpose was to give those people opposed to the . . . project an opportunity to express their views for the national press."

The Pomeroy Committee hearings inaugurated a pattern which was to succeed over and over again as a delaying tactic for Scenic Hudson. Initiated *after* the official FPC hearings had been closed, their aim was to petition the commission to "reopen" the hearings to permit the presentation of "new evidence," which was placed on the record under highly favorable circumstances. Con Ed's attorneys, of course, were not allowed to cross-examine witnesses before the Pomeroy Committee. When the "new evidence" was later subjected to stiff scrutiny, much of it proved to be fraudulent or nonsensical. But after the hearings had been closed yet again Scenic Hudson would return with more "new evidence" and ask for further reopenings.

The Storm King project has *never at any time* been disapproved or rejected by any court or licensing agency in the federal or state government. It has simply been delayed and delayed over and over again by agency and court decisions to reopen the hearings in order to consider "new evidence." In the entire fifteen years of the controversy, through literally tens of thousands of pages of transcript, the Federal Power Commission has never finished hearing all the evidence.

The star witness at the Pomeroy hearings was Alexander Lurkis, a recently retired chief engineer with the New York City Bureau of Gas and Electricity. Although the papers never mentioned it, Lurkis had been hired several months before as a paid consultant for Scenic Hudson on technical matters. He became Scenic Hudson's mouthpiece on "alternative" forms of generating electricity.

Lurkis shocked the hearings by testifying that Con Ed could produce adequate peaking power through "gas turbines," actually jet engines driven by the hot exhaust gases which Lurkis said could be run with Con Ed's "surplus natural gas."

As it happened, Con Ed had no "surplus" natural gas. Federal price controls were already upsetting natural-gas distribution, and utilities were being rationed by the FPC. Con Ed had recently lost an appeal for more gas rations before the U.S. Supreme Court.

But there was another problem. Although gas turbines are very good for restarting downed generators, they would not be as useful as Storm King in supplying emergency power. Con Ed board chairman Harland C. Forbes wrote the *New York Times:* "Mr. Lurkis . . . completely ignored the value of the Cornwall project's ability to provide immediately available operating reserve which cannot be furnished by jet-engine equipment—a matter of extreme importance in maintaining reliability of our electric service to the people of New York City."

In fact, Lurkis's testimony proved so full of holes that Scenic Hudson eventually withdrew it after Lurkis had been cross-examined by Con Ed's attorneys before the FPC two years later. But the testimony led to a reopening of the hearings, and that was probably its main purpose.

The second issue raised at the Pomeroy hearings involved fish kills. Con Ed was already installing screening devices at Indian Point after encountering large fish kills there, but witnesses before the Pomeroy Committee said the problem at Storm King would be different. They noted that eggs and larvae from spawning fish would escape any kind of screening devices, and be sucked into the plant. It was a good point, and Con Ed quickly offered to spend $175,000 to study the problem. But within days the newspapers were carrying statements about how "the Atlantic striped-bass population which spawns in the Hudson will be destroyed for all time."

Robert Boyle, an editor of *Sports Illustrated*, became a participant, forming the Hudson River Fishermen's Association, consisting of the two dozen or so commercial fishermen who still made a part-time living from the river, with "sports fishermen" like Boyle to handle the public-relations aspects. There was a certain irony here, since sports fishermen had long since destroyed major stocks in almost every river and stream in the Northeast, and the federal and state governments were annually spending hundreds of thousands of dollars for restocking so that they could continue their pastime. Con Ed also made an offer to restock the river if there was any significant damage to fish life. The opponents again were not satisfied.

But the Hudson River Fishermen soon found themselves facing a formidable obstacle which might be called "nature." Although it was not widely known, scientists were aware that there were tremendous mortality rates in the river, and killing large amounts of eggs and larvae would not necessarily mean disaster for the population. A single female striped bass lays up to 5 million eggs—enough to renew the river's entire stock. Only one egg in 1,000 ever survives to maturity. But such sophisticated understanding of nature's ways didn't tone down the opposition to the plant.

On March 9, 1965, the FPC approved the license for the Storm King plant in a 3-to-1 vote. Despite the acrimony, the impression remained that the conservationists had made important contributions in the hearings and that the utility was making every effort to accommodate them. If compromise had been the goal, there would have been enormous achievement. But the conservationists' purposes were quite different, and their success was to take a much different form.

The exigencies of the general economic situation . . . do not readily produce, in the members of [the leisure] class, that degree of uneasiness with the existing order which alone can lead any body of men to give up views and methods of life that have become habitual to them. The office of the leisure class in social evolution is to retard the movement and to conserve what is obsolescent.—The Theory of the Leisure Class.

Scenic Hudson immediately filed an appeal with the Second Circuit of the U.S. Court of Appeals, arguing that the FPC should reopen the hearings for more testimony on scenic values, fish life, and alternative sources of energy. Con Ed officials responded by charging that the opponents had "given up trying to defeat the plant on its merits" and were "trying to drag the project into a long war of attrition in the courts."

In any case, the FPC review had already taken far longer than expected, and, with the court case still pending, it was obvious that Storm King was not going to be on line in time to meet the growing power needs. So in November 1965 the utility announced that it would move up plans for a second nuclear plant at Indian Point. The project would cost $90 million but would generate only 800,000 kilowatts—less than half the capacity of Storm King. For New Yorkers, electricity was going to be more expensive.

The dramatic power failure in the Northeast on November 9, 1965, illustrated the dangers of widespread blackouts. Con Ed officials said that Storm King could have shortened the blackout by restarting other generators, but the incident stirred little support for the plant.

Scenic Hudson, for its part, was taking the final step into the big leagues of public relations by hiring Rod Vandivert, a Long Island advertising salesman, as its full-time public-relations director. Vandivert started going after Con Ed executives with a mixture of scorn and sarcasm that was to characterize the conservationist attack for many years. This year I visited Vandivert at his oceanfront home in a small, exclusive community on Fire Island. A big, shambling man with a firm handshake, he wore baggy dungarees and had a patch over his right eye when I saw him.

"We engaged in a technique you might call 'overstatement,'" Vandivert explained. "We learned how to do things like calling in stories to the newspapers on deadline so they couldn't get Con Ed's reaction until the next day, or several days later. The newspapers were very responsive. I remember dictating editorials over the phone to them dozens of times. All along, I think Con Ed was really the underdog in this thing."

I asked Vandivert if he ever thought that Scenic Hudson could simply drag the project on and on through continual rehearings and court delays so that Con Ed would finally give up. "Oh, I'd say we thought it about every third day," he said cheerfully.

The Court of Appeals took only until December 29, 1965, to throw out the first FPC license as "incomplete" and order a reopening of the hearings. The decisions, still regarded as the original landmark of environmental law, ruled that scenic and environmental issues must be considered in large projects, and that Scenic Hudson could intervene on behalf of the "public interest," even though its members had no economic standing in the case. Vandivert, for one, was willing to believe that the publicity campaign had played a part. "Court decisions aren't made in a vacuum," he told me. "Judges read newspapers."

FOUR YEARS OF HEARINGS

The second round of FPC hearings lasted for almost four years. When they began on November 14, 1966, Lyndon Johnson was President and the country was just entering the full-scale conflict in Vietnam. By the time the FPC issued its final decision on August 19, 1970, the Kent State shooting had already occurred, and Richard Nixon had been President for nineteen months. Yet this decision was also eventually remanded for further hearings by the Court of Appeals.

I will not attempt to go into anything more than an outline of the proceedings, but it must be noted that the FPC examiner and the commission itself took extraordinary pains to compile an exhaustive record on every aspect of the case. Scenic concerns, the threat to fish life, alternative forms of energy, and aesthetics of the Hudson were all discussed almost to the point of irrelevancy. At one point, the hearing examiner, Ewen G. Simpson, had to decide whether the upper reservoir would disrupt a scenic vista from a point twenty miles way. By the time the hearings were over, Con Ed had spent $15 million on studies and attorneys' fees, while Scenic Hudson had spent $1 million (the organization had managed to tap a foundation supported by the estate of Andrew Mellon).

Before the hearings began, Con Ed announced that it could bury the entire plant on the Cornwall waterfront, raising the cost to $169 million. They said that would solve the scenic problems, although Scenic Hudson continued to argue against a visitors' booth on the site. But the new plan created other problems. The Catskill Aqueduct, which carries 40 percent of New York City's water supply, runs under the mountain, and Scenic Hudson immediately claimed that it would be endangered. Con Ed offered to pay the entire cost of relocating the aqueduct 400 feet below the plant, but nothing definite was settled and negotiations dragged on between the city and the utility.

Throughout the hearings, reporters from the *Times* (now one of only three remaining newspapers) gave accurate and unbiased coverage, but the editorial page remained heavily confused on the issues. At one point, it was "discharges from the tailrace tunnels" that endangered fish life. At another, it was "thermal pollution." And despite the plans for an underground plant, the facility remained "on" Storm King Mountain, and wouldn't move to "near" Storm King Mountain until 1969.

The issue of air pollution also became a point of contention at the hearings. Scenic Hudson claimed that Storm King would actually produce more air pollution because they said the power to pump the water up the mountain at Storm King would have to come from fossil-fuel plants within New York City. They said the one-third loss of energy in the pumped-storage process would mean a 50 percent increase in fuel burning. Con Ed had long noted that it could buy off-peak power from neighboring utilities, and that in the long run Storm King would be pumped by nuclear plants. But the notion that Storm King would produce "more air pollution" slowly started to become an accepted fact.

The New York City government had also become involved in air pollution before the FPC hearings, and in early 1966, Mayor John V. Lindsay set up a special Task Force on Air Pollution to negotiate with Con Ed. After several months of studying the problem, the task force decided that Con Ed was correct in its contention that Storm King would mean less air pollution. It signed a memorandum of understanding with the utility, agreeing to back construction of Storm King and help the company appeal to the FPC for more natural gas. In exchange, Con Ed would spend millions of dollars in cleaning up stack emissions, and would promise not to build any more fossil-fuel-burning plants in the city.

The city thought it had struck a good bargain, but the *Times*, in a May 19, 1966, editorial, remained unhappy:

"We deplore the unwarranted concession . . . to [support] a giant hydroelectric plant on Storm King Mountain. Some experts believe that this would increase rather than decrease air pollution here . . . Why should New York City for the first time inject itself into the controversy now, particularly when the Scenic Hudson Preservation Conference promised to present expert engineering testimony of the availability of ample other power sources?"

The "experts" on air pollution, of course, were also Scenic Hudson.

On May 23, 1967, Simpson closed the hearings after listening to over 5,000 pages of testimony. They did not stay closed for long.

First, Scenic Hudson wanted to "correct" Lurkis' "expert" testimony, which had been refuted by Con Ed's cross-examination. Scenic Hudson petitioned to present another "alternative" plan, and its request was granted.

Its proposal, presented through attorney David Sive, representing the Sierra Club in the case, was that Con Ed should build a third nuclear generator of about 1 million kilowatts. It didn't say where. The remaining 1 million kilowatts needed in Con Ed's system would be supplied by turbines burning kerosene. There was nothing unusual at the time in conservationists proposing nuclear plants as the solution for energy problems. During the 1960s, the Sierra Club and other environmental groups supported nuclear energy as the best form of power generation.

On August 7, 1968, almost a year after the closing arguments had been presented, Simpson issued the first of three favorable reports on the plant. He said there was no alternative for equally reliable power for New York, and that the hazards to fish life would be minimal. While acknowledging that the mountain was "a surpassing scene," he noted that "it must be said that Storm King does not exist in an environment of untouched natural beauty as in the idyllic past, but rather is all but irrevocably associated with the present realities."

Responding quickly, the *Times* said: "[The] findings on the scenic effects are at odds with the virtually unanimous opinion among conservationists and nature lovers, who have no economic interest other than the preservation of a majestic national heritage." The paper found the conclusions on fish life suspect because Simpson said the plant should be monitored after it was constructed.

One week later, Con Ed officials announced they might have to consider putting a nuclear plant in Long Island Sound, on an island near New Rochelle. The *Times* said that proposal must also be regarded "with great reserve" because of fish kills and radioactive wastes. Where New York City's power was coming from was obviously someone else's problem.

"Even in cases where one recognizes the substantial merits of the case for which the innovator is spokesman . . . still one cannot but be sensible of the fact that the innovator is a person with whom it is at least distasteful to be associated, and from whose social contact one must shrink. Innovation is bad form."—The Theory of the Leisure Class.

Less than two months later, New York City became the major opponent of the plant. On October 28, 1968, Deputy Water Resources Commissioner Robert Clark petitioned for a reopening of the hearings, saying that the negotiations over the water tunnel "had not been fruitful." It is difficult to assess exactly what happened, but it is interesting to note that when the New York City Democratic boss Carmine DeSapio was convicted on corruption charges in 1970, he was found guilty of attempting to exact bribes from Con Ed officials in exchange for permission to build over city water lines.

While the city was joining the ranks of the "nature lovers" opposed to the plant, the economic scenery around New York City was taking a turn for the worse.

In 1962, when Storm King was proposed, Con Ed officials said they thought they would have to provide 7.15 million kilowatts of power by the summer of 1969. The entire increase in demand could be met through Storm King. As the summer months of 1969 rolled around, Con Ed's seven-year-old predictions were coming in right on the button. The city set a midsummer peak record of 7.26 million kilowatts—only 4 percent above Con Ed's original predictions.

The only trouble was, power wasn't there to meet it.

Indian Point Two was supposed to come on line by 1969, but the Westinghouse Corporation had failed to meet its deadline. (What with fish kills and environmental suits, the plant was not put into operation until 1974.) Con Ed contracted to buy 915,000 kilowatts of peak-power from other utilities—the most expensive way to provide electricity—but was still left with only a 14 percent reserve margin, well under the industry standard of 20 percent.

On July 31, 1969, the troubles began. Big Allis fouled temporarily after the installers of a new turbine forgot to remove some insulating equipment. Under the increased strain, two older plants scheduled to be retired by Storm King also broke down. In a matter of hours, more than 20 percent of the utility's power was gone.

For the next two weeks, New Yorkers began to experience what quickly became known as the "power crisis." Air conditioners were turned off, manufacturing plants cut their schedules, businesses closed down. While people throughout the country were celebrating the first moon landing, New York City turned into a sweltering steambath.

Charles F. Luce, a former Undersecretary of the Interior who had just taken over as board chairman of Con Ed, said the problems were due to "a feeling on the part of the public that even though a particular new power plant were not built, somehow the needed power would be provided." He asked for "a better general public understanding that there must be additional power and that . . . we cannot provide it without some impact on the environment."

Vandivert, now being quoted regularly after every statement by Luce, almost as if Scenic Hudson had become Con Ed's alter ego, saw the problem differently, claiming that opposition to Storm King "is not a narrow conservation battle. It's really the public interest versus the big brother or big daddy approach of Con Edison, which assumes we should let it tell us what is good for the public." Scenic Hudson had obviously assumed the task of representing the public on power and energy as well as conservation.

By early 1970, Storm King was still far on the horizon, and Con Ed told the city it would have to build another oil-burning plant in Astoria. City officials were livid. Robert N. Rickles, head of the Department of Air Resources, called air pollution "already an intolerable public health problem." Jerome Kretchmer, head of the Environmental Protection Administration, said the battle over the Astoria plant would be "much deeper than the struggle at Storm King." But it was obvious to some city officials that power plants had to go somewhere, and the Mayor's Interdepartmental Committee on Public Utilities voted 3–2 in favor of Astoria.

But while city officials were voting to accept more air pollution, the corporation counsel's office was throwing in the city's lot with the nature-lovers of the Hudson. On February 12, 1970, after a previous rebuff, the city once again petitioned for *another* reopening of the hearings on a "non-quantifiable yet nonetheless real hazard to the aqueduct."

Was the city simply interested in protecting its aqueduct? It seems unlikely, for, when examiner Simpson allowed a second reopening of the hearings in May 1970, city attorneys quickly said that they were opposed to the plant, whether it endangered the aqueduct of not, because of *scenic* considerations. "The city's concern is for the environment as well as economics," corporation counsel J. Lee Rankin told the FPC. "When we speak of preserving the area, the city is not talking about a superficial or cosmetic job; rather it seeks assurance that an area of exceptional natural beauty be preserved for future generations just as it is."

The *Times* rejoiced that "New York City thus joins the battle waged for years by Scenic Hudson Preservation Conservationists against utility incursions on the river." But, strangely enough, the *Times*, had harsh words for Attorney General Louis Lefkowitz, who was trying to block the opening of Indian Point Two after trial runs produced kills of 120,000 fish a day in January and March. "The right answer, given the imperative role Indian Point now plays in meeting metropolitan power demands," said the same editorial, "is not to shut it off precipitously but to see that its plant deficiencies are corrected. Proper steps are already being taken by the Atomic Energy Commission."

Potential fish kills at Storm King were intolerable, but real fish kills at Indian Point, where the problems were complicated by thermal pollution, could be corrected. In addition Indian Point Two, which was built in place of Storm King, was "imperative," while Storm King was unnecessary. It obviously took the skilled eye of a conservationist to be able to make such distinctions.

THE POWER CRISIS

Things turned out to be much worse than anticipated during the power crisis of 1970. In May, Indian Point One was closed by a defective cooling pipe. Indian Point Two was still far from completion. Then, on July 21, Big Allis went down for extensive repairs immediately projected to last through midwinter. Con Ed had begun installing gas turbines over the winter as a substitute for Storm King; by mid-July one of the turbines had also failed, and Con Ed's total capacity was below the previous year's peak. The result was a summer in which voltage reductions and power failures became almost a daily occurrence. Even rush-hour subways didn't have enough power.

In its scramble for power, Con Ed paid premium prices, importing electricity from as far away as Canada, New England, and the Tennessee Valley Authority. Con Ed's profits, already at the lowest rates of any utility in the country, were getting lower. When another heat wave struck in September, voltage reductions were put into effect for the fifteenth time, and a blackout hit a sixty-five-block area in Queens. The *Wall Street Journal* quoted a Canadian woman who was cutting short a visit to Forest Hills. "You can have New York City," she said. Apparently others agreed. The steady exodus of manufacturing firms and corporate offices was suddenly turning into a rout. From 1969 to 1976, the city, now widely regarded as "unlivable," was to lose 650,000 jobs. Other factors certainly contributed, but the shambles of Con Ed's power system and its soaring rates didn't help. Nothing ripples through an economy more completely than the costs of energy.

On August 19, 1970, the full five-member FPC finally reached its decision to grant a second license for the pumped-storage plant at Storm King. It was Con Ed's one note of optimism for the entire summer. Still, in the midst of the power crisis, the *Times* took the trouble to be gravely disapproving: "Essentially nothing about the plan has changed in the seven years since Con Ed first proposed [it]," said the editorial, without considering that the whole plant would now be built underground. "We are glad that Scenic Hudson intends to carry on the fight in the courts."

Indeed, the possibilities of appeals seemed endless.

Six months after the 1970 power crisis, seven litigants were appealing the FPC's Storm King license to the Second Circuit Court of Appeals. They were the Scenic Hudson Preservation Conference, the Sierra Club, the Wilderness Society, the Izaak Walton League of America, the Audubon Society, the National Parks and Conservation Society—and New York City.

City attorneys must have been dazzled by the company, for, by March 1, 1971, they were telling the Court of Appeals that the project "would be worse from an air-pollution standpoint than construction of additional plants in the city," and were calling the Hudson Highlands "a national treasure" where it would be unlawful to license any site unless there was "a mandate that the site chosen be exactly restored" to its natural state.

But on October 22, 1971, the Court of Appeals upheld the license by a 2-1 vote, and by June 19, 1972, the U.S. Supreme Court had refused to review the decision. A challenge in the state courts followed.

Finally, in August 1973, after more than ten years of effort, the project was suddenly completely free of license requirements and litigation. City officials were furious. Grasping at straws, they took the only possible remaining action and cancelled their ten-year-old agreement to allow the village of Cornwall to tap the aqueduct as part of the plan to replace the upper reservoir. That took another year to overturn in the courts.

Neither had Scenic Hudson run out of "new evidence." On the day of the final state-court decision, Albert Butzel, its new attorney, made a solemn and foreboding statement. "New and revealing evidence has been uncovered which raises serious questions about the viability of this proposed plant and the citizens' need for it," said Butzel. "The evidence is so convincing that the Scenic Hudson group will petition the FPC to reopen the entire case." Butzel said the "new evidence" concerned "fuel cells" which were "just on the horizon."

But in truth the arguments about "alternative sources of power" were wearing a bit thin, particularly since Con Ed was so strapped for power that it was using its peak-load gas turbines for base-load generation, burning fuel at about half its normal efficiency. And so, Scenic Hudson decided to concentrate its best efforts on the fish study that had been made by Con Ed from 1965 to 1968 at a cost of $450,000.

The report, supervised by a panel of high officials from the New York State Department of Conservation, the New Jersey Fish and Game Division, and the Bureau of Sports Fisheries and Wildlife and Bureau of Commercial Fisheries, both divisions of the U.S. Department of the Interior, had found that the plant would draw in no more than 3 to 4 percent of the total number of eggs and larvae that drifted past during the May–July spawning season. Hydrological studies showed that the plant would suck in 4 percent of all the water that passed by the plant each day.

Assuming an even distribution of eggs in the river would mean that about 4 percent of the eggs passing each day would be taken into the plant. Assuming that *all* those eggs would be killed (there was plenty to suggest they wouldn't be) meant that 4 percent of all the eggs that passed the plant would be killed. A fair percentage of eggs was spawned below Storm King and never passed the plant, so the final estimate was a 3.6 percent mortality rate of all eggs and larvae. Since 99.9 percent of all eggs and larvae died before maturity under *natural* conditions, the conclusion was that the plant would have no effect on the total fish populations.

Scenic Hudson, however, wasn't satisfied. They decided there was a "fatal flaw" in the analysis. The "flaw" was that the panel of scientists and federal and state officials had "forgotten" that the river was tidal. The group said that the eggs and larvae would be "washing back and forth" in front of the plant and would have "more chance of being caught." The Scenic Hudson members found a hydrologist who said that the river sometimes washed back and forth ten times in front of certain places in New York Harbor. They decided to multiply 3.6 percent by ten, arriving at a mortality rate of 36 percent.

The whole argument, of course, was a lot of sophisticated nonsense. The study had considered all the tidal movements and arrived at an average figure for the net downstream flow of the river. Once the average was known, it wouldn't matter if the river washed back and forth 10, 50, or 100 times, as long as the *net* flow had been determined correctly. The point was that *the plant could take in only so much water per day.*

It is easy to imagine the problem causing some consternation in a fifth-grade math class, but it is difficult to see this logic finding acceptance before such bodies as the Atomic Energy Commission and the U.S. Court of Appeals. Nevertheless, it did.

Scenic Hudson had its "rebuttal" to the fish study. The problem was to get it on the record. But with their multiplying contacts in government and uncritical treatment in the press, this was a relatively simple matter. The target became Dr. Philip Goodyear, a marine biologist in the AEC who was strongly sympathetic to Scenic Hudson's cause and had been a guest speaker at a fund-raising dinner of the Striped Bass Fund, the financial arm of the Hudson River Fishermen's Association. Dr. Goodyear believed—undoubtedly with sincereity—that the three projected Indian Point plants, plus Storm King, would have significant effects on the river's fish life. Whether Goodyear acted with scientific integrity in the Storm King affair will have to be judged from the record.

Scenic Hudson's connection to Goodyear was Sen. Abraham Ribicoff of Connecticut, also sympathetic to its cause. (Since Connecticut was getting many of the corporate headquarters leaving New York City, he certainly had no reason not to be.) In October 1973 Ribicoff delivered the FPC fish study, plus Scenic Hudson's critique, to the AEC and asked for an evaluation "within two months." Dixy Lee Ray, chairman of the AEC, said it would take at least six months, but, as arranged beforehand, the report arrived on Goodyear's desk at Oak Ridge Laboratories after only two. "It was a situation where they knew what pitch was coming to them and we knew what hit was coming back at us," Vandivert explained to me.

By mid-December, a "preliminary report" was back in Ribicoff's hands. Dr. Goodyear confirmed that the report was "in error" by ignoring the tidal movement, but did some fast footwork to show that "compensating errors" made the figures correct anyway. He then went on to make his own monumental error by deciding that the entire annual kill of 3 percent of all the eggs and larvae in the river would occur *each day the plant was in operation.*

"If [the estimated removal of 3 percent of eggs and larvae] is applied over a period as short as ten days, nearly 25 percent of the larvae population would be withdrawn," he reported. "If the daily removal estimate [is applied] over the entire seven-week [spawning] period . . . then approximately 75 percent of the annual hatch might be destroyed." The "daily" estimate, of course, was actually an *annual* estimate.

Ray attached a letter that was as long as the report itself, warning Ribicoff to "use caution in drawing conclusions" because of the probable absence of completely adequate data." After reviewing the report, she added sardonically that she continued to believe that a critical analysis of this problem would take a minimum of six months." But the cat was already out of the bag, and so by December 1973 Scenic Hudson was back in business. Within days, a letter was printed in the *New York Times* stating that "the Atomic Energy Commission has reported that the Storm King hydroelectric power project might destroy 75 percent of the annual hatch of striped bass in the Hudson River." Sen. Edward Kennedy asked the FPC for a "brief and worthwhile delay" because of the impending "destruction of 75 percent of the striped bass" off the coast of Cape Cod. Ribicoff sponsored an "information meeting" on the report, and a Congressional hearing was eventually arranged. The testimony was inconclusive, but the environmentalists simply declared themselves the winner and carried the "new evidence" back to the Court of Appeals. The court ordered the FPC once again to reopen the hearings for a new study on fish life in the Hudson.

VICTORY OF ATTRITION

The "brief and worthwhile" delay has cost Con Ed $20 million—one-sixth the original cost of the plant. The money was spent for a third major fish study which took four years to complete, involved seven major universities and scientific institutions, and came to essentially the same conclusion reached by Con Ed's lone scientists more than ten years before—that about 4 to 5 percent of the eggs and larvae would be entrained by the plant, and that the total fish population would not be affected.

Two observations show that there may be something to the utility's side of the story. The three Indian Point plants now take in more water than the Storm King plant would, yet after nearly three years of operation AEC scientists admit that there is no evidence that any portion of the river's fish population has been affected. (The amount of fish scraped off the screening devices each day would fill an average bucket.)

There are other pumped-storage plants in operation, and they have fish problems of a different sort. At the Muddy Run plant in Philadelphia, the problem is that eggs and larvae drawn into the plant quickly produce sizeable fish populations in the upper reservoir. Their numbers can get to be a problem, and Philadelphia Electric allows fishing on the upper reservoir to keep them under control.

All this hardly matters now. The "long war of attrition" predicted by Con Ed executives in 1965 has been fought and lost. Con Ed's finances fell apart in early 1974—a direct result of the high costs of buying outside power, the utility's enormous tax burden (25 percent of its revenue from customer billing goes to taxes), the overwhelming expenses of having to buy low-sulfur oil for city generation, and the resistance to rate inceases. The quarterly dividend was cut, and Con Ed's stock—already known as a "widows and orphans" holding (median shareholder, a fifty-year-old woman)—dropped to the floor. "We wanted them to go into receivership so that even we could buy them out—then they would be a true public utility," said Vandivert. But instead the New York State Power Authority authorized the purchase of two uncompleted plants, and Con Ed managed to avoid bankruptcy.

The Storm King plant, of course, could probably have prevented the July 13 blackouts. John B. Oakes, now senior editor of the *New York Times*; Walter Brown, director of the National Electric Reliability Council; and Rod Vandivert all agree on that. After all, that was what the plant was *designed* to do. City officials investigating the power failure said they were amazed to learn that "the generating capacity was available, they just couldn't bring it up in time." Con Ed, of course, had been saying that for fifteen years. The city investigation found that the crucial loss of power didn't occur until the last two lines from the north failed because they became overloaded carrying 2 million kilowatts. The lines from Storm King, which were to run along the same corridor, were to be designed to carry 2 million kilowatts.

But there is hardly a political official in New York who even remembers what the whole Storm King controvesy was about. Ed Koch, the leading candidate for mayor, said the problem at Storm King had been "thermal pollution," and didn't know the city is still the major opponent, nor did Paul O'Dwyer, who has now been City Council president for four years. He said the plant hadn't been built because "Pete Seeger and the environmentalists all over the country didn't want it." (He is undoubtedly right.) State Assemblyman Andrew Stein, who has made a political career out of attacking Con Ed, said about Storm King: "I'm against nuclear plants. I think we should keep the ones we have, but I don't think we should build any more." Stanley Steingut, the Brooklyn Assemblyman who is Speaker of the State Assembly, also told me that Storm King was "a nuclear plant."

What is most remarkable is that Scenic Hudson itself now appears to be the city's expert on the matter. When I called Dr. Carolyn Broncato, staff director of the Mayor's Special Committee on Inquiry into Energy Failures, she admitted she remembered nothing about Storm King, but said, "If you want to know more about Storm King, call Al Butzel." When I talked with Carol Bellamy, who will probably succeed O'Dwyer as president of the City Council, she said that "the person to see on that would be Dave Sive" (the Sierra Club attorney).

Even Norman Cousins, the editor of *Saturday Review*, who voted in favor of Storm King as chairman of the Mayor's Special Task Force on Air Pollution, remembered vaguely that the problems had something to do with "radiation." When I asked him what he remembered best about the environmental opponents, he had one clear recollection: "They had a lot of lovely ladies working for them."

By virtue of its high position as the avatar of good form, the wealthier class comes to exert a retarding influence upon social development far in excess of that which the simple numerical strength of the class would assign it. Its prescriptive example acts to greatly stiffen the resistance of all other classes against any innovation, and to fix men's affections upon the good institutions handed down from an earlier generation.—The Theory of the Leisure Class.

And so we are brought to the point where we can legitimately ask, What in God's name has been going on in New York City for the past fifteen years?

The answer, I believe, can only be understood in terms of Veblen's analysis of leisure-class behavior. It was obvious to anyone willing to look that the opposition was coming from the petty aristocrats of the Hudson Valley who were annoyed that their solitude was being invaded by the advancing society. There was nothing terribly new about this. The Hudson River Railroad laid its tracks right across the front lawns of Washington Irving, John J. Audubon, and William B. Astor in 1842. All were upset, but eventually agreed to yield in the name of the public good. Yet in the Storm King case this did not happen. The question is, Why?

Both critics and defendants of the plant have always assumed that anyone standing in the way of progress could only be acting out of financial self-interest, and that, once a money interest was disproved, the opponents would have to be accepted at face value. The *Times* expressed this so perfectly in defending the conservationists in its August 8, 1968, editorial that it is probably worth repeating: "[The FPC examiner's] findings on the scenic effects are at odds with the virtually universal opinion among conservationists and nature lovers, *who have no economic stake other than the preservation of a majestic national heritage*" (my emphasis).

Veblen, who found this interpretation of leisure-class opposition to progress naive, wrote:

"When an explanation of this class conservatism is offered, it is commonly the invidious one that the wealthy class opposes innovation because it has a vested interest, of an unworthy sort, in maintaining the present conditions. The explanation here put forward imputes no unworthy motive. The opposition of the class to changes in the cultural scheme is instinctive, and does not rest primarily on an interested calculation of material advantages; it is an instinctive revulsion at any departure from the accepted way of doing and of looking at things—a revulsion common to all men and only to be overcome by the stress of circumstances."

But what about the newspapers and the politicians, who are presumably responsible for informing the public and acting in its interest—why were they so completely taken in by sophistries and the publicity gestures of the "environmentalists"?

Here is Veblen's answer:

"Since conservatism is a characteristic of the wealthier and therefore more reputable portion of the community, it has acquired a certain honorific or decorative value. It has become prescriptive to such an extent that it is imperatively incumbent on all who would lead a blameless life in point of social repute [to share these views]. Conservatism, being an upper-class characteristic, is decorous; and conversely, innovation, being a lower-class phenomenon, is vulgar."

This is the puzzle that no one in the entire controversy was ever able to quite figure out. Voting to "save Storm King" gave each of the participants in the political arena the chance to participate in a noble cause, to share an aristocratic vision. It wasn't a matter of money, it was simply a question of good taste. The effort might require of a person that he gaze upon the litter of industrial ruins on Cornwall's waterfront and see "a landscape rich in beauty and history," but isn't selectivity the key to being an aristocrat anyway? It wasn't money that was being passed out aboard Commodore Chauncey Devereux Spillman's yacht as it passed Storm King Mountain on that September morning. It was respectability.

The environmental vision is an aristocratic one, conjured at the point where an idyllic past blends nicely with an imaginary future. It can only be sustained by people who have never had to worry much about their security. They are, in Veblen's term, "industrially exempt" from the normal fluctuations of the economic system.

Nuclear energy, for example, was part of that vision when it was a "bright promise" in the 1960s, but now that the realities are here it looks problematic. Tom Wicker writes in the *New York Times:*

"In three decades of experience with nuclear power, the radioactive waste disposal problem has yet to be resolved. Plant decommissioning costs and problems are not fully known. Nuclear power has grown vulnerable to shortages, breakdowns, and poor productivity; the Federal Power Commission reported 229 plant-months of delay for such reasons at 24 reactors in 1974. The amount of electricity actually produced has averaged, overall, only 55 to 57 percent of full potential."

The litany could easily be made about any new technology. Nothing in the industrial system is "fully known" until it has been done a few times. The "55 to 57 percent" figure is a familiar one, however—it is the average production for the entire electrical industry, due to the problems of peak-load demands. In actual operation, nuclear plants have been slightly more reliable than fossil-fuel plants.

But Wicker has a brighter vision:

"Solar energy, by contrast, is available everywhere, has no public opposition and offers no safety or environmental hazards. It is highly suitable for such low-quality energy demands as space and hot-water heating, while to use electricity produced by nuclear fission for such homely needs is an expensive form of overkill."

Solar energy, of course, has the advantage of not being a reality as yet. A small-scale solar electrical station would be enough to scare the wits out of any environmentalist (one square mile of collectors for a town of 30,000 people with little hope for reducing its size through technological improvements). In any case, if all the country's heat and hot water were produced from solar energy, the demand for electricity would decrease by less than 5 percent.

But the message here is clear, and it should not be obscured by the facts. Nuclear energy is "hard" and "dirty" and involves nasty realities of life. Solar energy, on the other hand, is "soft" and "clean." It is most notable for the *lack of effort* it promises. The future will hold no more grubby realities such as digging coal out of the ground or drilling for oil—no more handling of dangerous materials. There will be nothing to do but sit back and watch the windmills revolve and the sun shine. The correct word for the environmental vision is not *clean* or *soft*. It is *genteel*.

It is also a vision that will call us to disaster.

Veblen's great fear was that, as innovation fell behind under the retarding influence of the leisure class, society would split into two extremes—the permanently wealthy and the permanently poor. Each would be even more resistant to change for its own reasons:

"The abjectly poor, and all those persons whose energies are entirely absorbed by the struggle for daily sustenance, are conservative because they cannot afford the effort of taking thought for the day after tomorrow; just as the highly prosperous are conservative because they have small occasion to be discontented with the situation as it stands today."

Veblen predicted that this polarization in society would lead to the loss of the entrepreneurial classes, which operate under what he called the "instinct of workmanship." The result would be permanent stagnation.

THE LIMITS TO "NO-GROWTH"

There is no doubt that much of our response to the present industrial crisis is being formulated by the leisure class marching under the banner of "environmentalism." This is not to say that we do not face enormous and critical environmental problems and that there are not enormous numbers of people who are dedicated to trying to solve them. My quarrel is with the political "environmentalism" that offers no reasonable alternatives but proposes solutions which entail delaying or abandoning present, feasible, and proven technology and "waiting for" solutions that are "soft," "attractive," and "just on the horizon."

The leisure-class environmentalists will be perfectly content to leave things the way they are, regardless of the economic consequences, since, as Veblen notes, "at any given time this class is in a privileged position, and any departure from the existing order may be expected to work to the detriment of the class rather than the reverse. The attitude of the class [is] to leave well enough alone."

The fundamental environmentalist assumption is that we can "stop growth," at least until the "right" solution to our technological problems comes along. This is foolishness. "Stopping growth" simply means falling behind, with all the economic consequences. It is only the accumulation of social wealth from previously successful technologies that makes it possible to introduce new technologies. The people of New York City will find this out when they realize that they cannot easily turn the clock back and adopt pumped-storage technology. In the 1960s the plant could have offered enormous savings. Now it would cost $1 billion; the people of New York City can hardly afford it."

The great misconception about "stopping growth," is the assumption that things will stay pretty much as they are. They will not. The stagnation of the industrial system will not keep the numbers of the poor from growing. On the contrary, the universal historical experience has been that people do not limit family size until they have achieved a measure of social security. The only way this can be achieved is by the continuing expansion of the industrial system. "No progress" doesn't mean "no growth," and those countries, such as China and India, that have spent the longest periods of their history struggling under the changeless mores of an entrenched leisure class are hardly noted for their achievements in population control.

The great appeal environmental solutions offer is that they can be worn like a badge of success. To say that one is an "environmentalist," or that one favors "no-growth," is to say that one has achieved enough well-being from the present system and that one is now content to let it remain as it is—or even retrogress a little—because one's material comfort under the present system has been more or less assured.

To quote Veblen:

The institution of a leisure class, by force of class interest and instinct, and by precept and prescriptive example, makes for the perpetuation of the existing maladjustment of institutions, and even favors a reversion to a somewhat more archaic scheme of life (*my emphasis*).

Environmentalism has presented itself to us as a form of "science," but it only borrows the language of science to serve its purposes. It is not scientific, either in its origins or its method. It could easily turn anti-scientific, and already has in many instances.

Yet there is no doubt that the environmental vision is winning widespread acceptance and is having an enormous effect on our economy. The Edison Electric Institute, the research arm of the utilities industry, is now warning that large portions of the country face widespread power shortages and blackouts within the next few years because the introduction of nuclear technology is not going ahead on schedule. Environmentalists' opposition and regulatory delays have brought new construction almost to a standstill. Power reserves will fall below 20 percent around the Great Lakes by 1979, and in the Southeast by 1981. By 1986 reserves will have dwindled to 1.4 percent in North Dakota, Minnesota, and Nebraska, to 3.2 percent in New England and New York State, and to 10.1 percent in Illinois, Missouri, and Wisconsin. The nuclear-reactor industry says it is already facing "enormous erosion of skills" and "technological regression" simply because there is no work available in building new plants.

"We're going to see a crisis atmosphere," John O'Leary, deputy secretary of the new Department of Energy, said recently. "By the mid-1980s, we may have very severe economic consequences as a result of our improvident attitudes of the late 1970s."

Yet environmental opposition is now working to hinder not only nuclear-plant construction, but also off-shore oil drilling, importation of liquid natural gas, coal-mining, gasification of coal, hydroelectric plants, and practically every conceivable form of producing energy.

Where is the power going to come from to meet the needs of the next decade and the next generation?

The environmentalists say there are alternative means available.

Mr. BAKER. Mr. President, I would like to congratulate my fellow conferees on completion of their major legislative effort to review the Federal Water Pollution Control Act. Their work is the cumulation of efforts which began with the effort of the National Commission on Water Quality to address any deficiencies in the act. This long sought midcourse correction will be of benefit both to the environment and those effected by the law's provisions.

The Water Act is an unusually complex and comprehensive law that deals with a wide spectrum of water quality problems. It therefore has had and will continue to have major impacts on many sectors of the U.S. industry and economy. This fact makes the conference agreement a most important step in the continuation of our national efforts, which we began in 1972 to clean up the Nation's waters. The breadth of the law's impact also has relevance to the fact that most of the important provisions in this bill are hard fought compromises, the result of long hours spent by the conferees. There were many major differences of opinion between the House and Senate as to what the correct approach to a particular water quality problem ought to be. These differences have been dealt with in a most responsible manner by the conferees with the final result being a reasonable bill that will, over the years, eliminate our water pollution problems while at the same time making allowances for other important economic and social problems. This balancing has not been an easy task and I congratulate each of my fellow conferees for their hard work.

I would particularly like to recognize the hard work and leadership of the subcommittee's chairman Senator MUSKIE and its ranking minority member, Senator STAFFORD, in the passage of this bill

As I have noted, there are many provisions of major importance in this bill but I would particularly like to single out a few for comment as part of my statement.

The conferees have resolved the longstanding controversy that has engulfed the section 404 permit program for discharges of dredged or fill material. The solution presented in the Senate bill was adopted with only minor changes.

First, the conference bill retains the comprehensive jurisdiction over the Nation's waters exercised in the 1972 Federal Water Pollution Control Act to control pollution to the fullest constitutional extent. A permit program will continue to regulate dredged or fill material discharged into all our Nation's waters. However, the Administrator is authorized by amendment to section 404 to approve State permit programs to assume the primary permitting responsibility for protecting those lakes, rivers, streams, swamps, marshes, and other portions of the navigable waters that lie outside the corps program in the so-called phase I waters. After approval of a State permit program for phase II and III waters, the corps will continue to administer the section 404 permit program in those waters which are used, or are susceptible to use to transport interstate commerce, including all waters subject to the ebb and flow of the tide, and including any wetlands adjacent to these waters.

Second, conferees adopted the Senate amendment to section 404 that clarifies the exclusion of activities that do not involve point source discharges, such as plowing and upland conservation activities, and exempts others that may involve discharges or other placement of dredged or fill material that will be successfully controlled by management practices and performance standards imposed through the section 208 program. An amendment to section 208(b)(4) is designed to strengthen the section 208 statewide regulatory programs that will control the minor discharges exempted from section 404 and that will control nonpoint sources of pollution originating from materials placed outside the navigable waters.

The conferees believe that the State permit programs will continue to afford the best protection from potentially harmful discharges as the wide diversity and unique values of the Nation's aquatic resources will continue to require a case-by-case assessment of harmful effects. Permits shall continue to be required for any discharge that alters or modifies the specific uses of a body of water and that impairs the flow or circulation or reduces the reach of such waters. For such discharges, best management practices could be approved only for inclusion in permits issued by the State program approved under section 404, but would not be appropriate for approval as a replacement for the permit process. Similarly, discharges containing toxic substances addressed by section 307 will continue to require permits.

The conferees agreed to adopt the approach taken by the Senate in the Senate-passed bill with respect to activities performed by the farming, forestry and mining industries. First, the conference bill clarifies the exclusion of activities that do not involve point source discharges of dredged or fill material, such as plowing, seeding, cultivating, harvesting, and upland conservation and minor drainage practices. The conference bill also responds to testimony received in both the House and Senate committee hearings on the section 404 question by specifically exempting other farming, forestry, and mining practices that do involve minor discharges of dredged or fill material such as stock and farm ponds, logging roads, temporary mining roads, and farm roads. It is expected that these activities, while exempt from permit requirements, would still be subject to section 208 including the best management practices approved by EPA and imposed through a statewide regulatory program.

The section 208 agencies should continue to concentrate on areawide management of pollution and on nonpoint sources of pollution that degrade surface and groundwaters rather than attempting to duplicate the point source permit programs under sections 402 and 404.

Third, the bill contains a narrow exemption for the construction by Federal agencies of new projects that are specifically identified in the authorization passed by Congress if Congress is provided with a final environmental impact statement that includes a detailed analysis of the adverse effects of the project as required by the section 404(b) guidelines. The purpose of this narrow exemption is not to relieve certain Federal projects from substantive compliance with the Clean Water Act, but rather the intention is to avoid costly delays for Federal construction of environmentally sound projects after they have been authorized by Congress.

Fourth, unnecessary regulation, delays and redtape should be avoided by the use of general permits for discharges that have minimal impact and by the direction to Federal agencies to accelerate interagency coordination during permit review.

The conferees also have clarified the direction which the sewage treatment grants program should be headed. The conference agreement does this in two ways. The first agreement specifies those types of projects that should be eligible for Federal funding. Additionally the bill provides 4 years of funds for this major public works program. Hopefully, the resolution of the questions concerning eligibilities and the assurance of funds over the next few years will be the help and incentive that the States have needed to really make this program accomplish the goal of cleaning up our municipal wastes.

Finally, I am pleased that the conferees were able to resolve most of the controversial issues surrounding the toxic substances question. Recent information received by the Congress from the National Commission on Water Quality and certain other sources have revealed that the toxics question must be dealt with quickly. The conferees have heeded these suggestions and reached agreements on the important provisions related to the control of toxics. The conference agreement in this area is comprehensive and complex but it is a reasonable approach that places the proper burden on both industry and Government to get this important cleanup action begun.

Mr. WALLOP. Mr. President, I am pleased with the conference report on the Clean Water Act of 1977, which is now before the Senate. I am pleased with the substance of the act and the positive effects it will have upon my State of Wyoming, and I am grateful to have had the opportunity to serve as a conferee and to have had some part in the act's formulation. But the benefits which will surely be derived from these amendments are not parochial in nature. Wyoming will benefit because agriculture will benefit from a shift away from permit requirements, and the institution of cost sharing for management alternatives. Wyoming will benefit because municipalities will benefit from increased funding for the construction of treatment works, and the realization that State programs must be provided with a minimum allocation in order to function effectively. We will all benefit because the amendments maintain the Act's goals and standards so that our water resources will remain pure for the use and enjoyment of future generations. Finally, Wyoming will benefit because business will benefit through the application of reasonable timetables and requirements for the installation of only that pollution control equipment which is necessary for the attainment and maintenance of water quality.

Recent Federal actions affecting western water resources have not been good news for the West. The University of Wyoming was fortunate enough to have a professor named Frank Trealease who taught generations of students the practical theorem in water law, that:

> Water runs downhill and toward money.

Recent Federal actions appear intent on altering that theorem to read:

> Water runs downhill or in any direction the Federal Register so orders.

I believe that the Clean Water Act of 1977 will be a refreshing change in that pattern. Though not perfect, these amendments accommodate the needs of States, municipalities, agriculture, industries, and environmentalists. This legislation does not weaken the purpose of the law; it only provides the degree of flexibility and the pragmatic modifications that 5 years of experience have proven necessary.

Municipalities in Wyoming, and throughout the country will find that this act at last provides adequate annual funding for the construction of municipal waste treatment works. That funding will be for a sufficient number of years so that planning can be undertaken. The act authorizes $4.5 billion for fiscal year 1978, and $5 billion for fiscal year 1979 through 1982.

These provisions represent a significant increase in funding for Wyoming. Wyoming was the first State to run short of funds for the construction of municipal waste water treatment works in 1976. Funds allocated to Wyoming were inadequate to provide money for even those communities on our priority list. In fiscal 1976, Wyoming received less than $3 million. This amount would be insufficient to fund a single treatment works in one of our larger communities or in our communities experiencing rapid growth due to energy impact.

The formula is such that if the full amount is appropriated, Wyoming will receive not less than $13.5 million in fiscal 1978, and $15 million in subsequent years. This is almost 5 times the amount of Wyoming's previous allotment.

An additional $75 million is authorized for a "small State supplement" so that no State would receive less than one-half of 1 percent of the total allotment. Under existing law, small States such as Wyoming have encountered difficulty in operating a program of priorization and administration at the State level. The small State supplement, if appropriated, will bring Wyoming's total construction grant allotment to $22.5 million per year for 1978 and $25 million for each fiscal year 1979 through 1981. If only a portion of the small State supplement is appropriated, Wyoming, because of previous funding inequities, will receive a greater percentage of the appropriation than any other State.

In addition to funding authority, provisions of the Clean Water Act of 1977 make other changes of interest to Wyoming municipalities. Due to the lack of the necessary Federal financial commitment, municipalities had no hope of complying with the July 1, 1977, deadline for the installation of secondary treatment works. The conferees agreed to authorize the administrator to grant time extensions up to July 1, 1983. These extensions will be granted on a case by case basis by the administrator, provided that new construction by the municipality is required, and could not reasonably be completed in time, or the necessary Federal financial assistance has not been made available.

The conferees also agreed on two set-aside provisions which are of particular interest to Wyoming. In rural States, at the request of the Governor, up to 4 percent of a State's allocation will be made available for construction of alternatives to conventional sewage treatment works in municipalities with populations of less than 3,500. The second provision requires a set-aside of a half percent of each State's allotment to raise the Federal grant share from 75 to 85 percent for those municipal projects which utilize innovative processes and techniques.

In response to testimony received from State agencies, including Wyoming's Department of Environmental Quality, the Senate, and to a lesser extent the House, realized the necessity of earmarking funds for administration and manpower necessary to establish a meaningful, efficient, and effective program at the State level. The conferees agreed on a provision similar to the Senate proposal. It authorizes the reservation of up to 2 percent of a State's construction grant allotment, but no less than $400,000, for use by the State in administering any aspect of the construction grant program. These funds may be increased to assist in the administering of the 402 permit program, statewide 208 planning, and responsibility for managing construction grants for small communities.

The Conference Committee also adopted a Senate sponsored amendment which should be of particular interest to very small communities in Wyoming. The provision permits the awarding of grants for the construction of privately owned treatment works where a public body applies for the grant on behalf of a number of the works, and will assure that the treatment works are properly operated and maintained. This amendment is designed to assist extremely small rural communities where public ownership of the treatment works is not feasible, and the private system would be more cost-effective than collection and central treatment of wastes.

Agriculture, and in particular irrigated agriculture, should be particularly pleased with some provisions of the Clean Water Act of 1977. The conferees agreed to remove return flows from irrigated agriculture, from the definition of the term point source. In addition, the administrator will be prohibited from requiring permits for this type of discharge.

This amendment corrects what has been a discrimination against irrigated agriculture. Return flows, composed of water which had been applied to crops through irrigation, were subject to permit requirements. Farmers in areas of the country which were blessed with adequate rainfall were not subject to permit requirements on their rainwater run-off, which in effect had been used for the same purpose and contained the same pollutants. Only the manner of application differed.

The Clean Water Act contemplates effluent limitations. However, irrigation that permits will generally regulate pollution from point sources by imposing return flows, like rainwater run-off, are more effectively addressed by management practices which are not generally available in NPDES permits. By placing the responsibility to address irrigation return flows in the local planning process under section 208, the conferees envisioned a program which could utilize management practices rather than permit requirements, ensure that the practices will be tailored to local conditions, remove the possibility of conflict between section 402 and 208, and provide for the consideration of cumulative effects.

While I may take credit for sponsoring this amendment, I cannot take credit for its logic. The Environmental Protection Agency's regulations of July 5, 1975, originally excluded irrigation return flows from the necessity to obtain a permit. EPA recognized that these sources were not of the type which could be effectively controlled through a permit process. Only after a decision against the EPA in NRDC against Train, did the EPA begin to implement the permit program against irrigated agriculture. Their regulations would have required general permits to be administered through general permit program areas. Wherever possible, these areas were to be identical to 208 planning areas. This was nothing more than a circuitous approach to the use of management practices in addressing discharges from irrigated agriculture. Yet, irrigated agriculture was to bear the burden of permit requirements due to the definitional deficiencies of the act. This amendment will remedy that problem.

Recognizing that the implementation of agricultural management practices to improve water quality will be an expensive proposition, the Senate conferees were successful in retaining a provision in the bill for agricultural cost sharing. This section authorizes $200 million in fiscal 1979, and $400 million in fiscal 1980 for Federal cost sharing to implement long-term soil conservation practices for improving water quality under section 208. The Federal cost share could be as high as 50 percent of the total project.

To reduce administrative cost and avoid duplication, or the establishment of additional bureaucracy, the program will be administered through the Soil Conservation Service, or other agencies which the Secretary of Agriculture deems appropriate. There should be no mistake, the conferees agreed that the function of this cost-sharing program is to provide financial assistance to reduce nonpoint, agricultural sources of pollution, utilizing soil conservation practices which improve water quality. It is not intended to be a duplication or extension of existing programs which have as their purpose increased production. It is of course hoped by the conferees that these projects will also have positive, if indirect, effects on production.

Agriculture should also benefit from amendments to section 404 of the Act. Though the conferees did not retreat from the section's broad jurisdiction, the amendments which were adopted should help to solve many of the problems resulting from the corps' implementation of the section. At the same time, I do not believe that the amendments reduce the effectiveness of the wetlands protection effort. They provide for the delegation of the permit program to the States, properly preempt many activities from permit requirements, and require speeding of the permit process. The conferees worked with the corps and the Environmental Protection Agency to insure that the amendments are carefully worded to provide protection from harmful activities, while reducing unnecessary government interference.

The conferees agreed to adopt the Senate amendment on particular exclusions from permit requirements. This legislatively clarifies the exclusion of certain activities that do not involve point source discharge and that will be adequately controlled by management practices. The amendment clarifies that normal farming, ranching and silvicultural activities such as plowing, seeding, cultivating, and harvesting, as well as minor drainage and soil and water conservation practices performed on uplands, were not intended to require 404 permits. The amendment also excludes from permit requirements, discharges of dredged or fill material in conjunction with the following activities that will cause little or no adverse effects either individually or cumulatively:

First, the construction or maintenance of farm and stock ponds or irrigation ditches; second, the construction or maintenance of farm or forest roads, or temporary roads for moving mining equipment so long as they are constructed and maintained in accordance with practices which minimize adverse effects that may occur when water is displaced by fill material; and third, the maintenance and emergency reconstruction of currently serviceable structures such as dikes, levies, dams, and bridge abutments.

The conferees also adopted an amendment to exempt certain Federal projects from permit requirements. Subsection (r) of section 404 will provide a limited exemption from Federal and State permit programs for discharges of dredges or fill material to construct Federal projects specifically identified by Congress when authorized. If the procedural and substantive requirements of subsection (r) are satisfied, these discharges shall not require permits under this section, or under State permit programs approved pursuant to section 404 or section 402 of the Clean Water Act of 1977.

The exemption provided by this subsection applies only to discharges that are an integral part of constructing a Federal project which has been reviewed and approved by Congress. Federal projects include only those conducted by a Federal agency and by such contractors as the agency may employ. The conferees did not intend to exempt other discharges which may be associated generally with constructing Federal projects, but which are ancillary to the specific activity submitted to and approved by Congress. For such ancillary discharges, the full section 404 review and approval procedures shall be applied by the Corps of Engineers and the administrator unless other exemptions are applicable. The conferees did not intend to exempt federally assisted projects from the section 404 review.

In order to qualify for the exemption, an adequate environmental impact statement on the project must have been submitted to Congress prior to authorization of the project or appropriation of construction funds and, in all cases, prior to the actual discharge of dredged or fill material at any particular site. The statement must satisfy the requirements of NEPA and include complete information on the effects of the proposed discharge. Moreover, the guidelines developed by the administrator under section 404(b)(1) must be fully complied within developing and assessing such information.

Congress must have adequate siting, engineering, and environmental information and analysis on each proposed Federal project, as well as modifications recommended by reviewing agencies, in order to review the available alternatives to and potential adverse impacts of the proposed discharges, to weigh those impacts and alternatives against the benefits of the project. The administrator will be expected to see that the section 404(b)(1) guidelines are sufficiently explicit to focus attention on those aspects of Federal dredge and fill material discharges that could result in environmental degradation caused by the construction of new projects. And the administrator must assist other agencies by carefully reviewing draft environmental impact statements to ensure that the guidelines are being interpreted and implemented properly.

The conferees also agreed to provide for State delegation of section 404. This can be accomplished either through the State's assumption of the 404 permit program, or through State assumption of a combination approach, utilizing both a 404 permit program, and a program of management practices for certain dredge and fill activities under section 208. Such a State program will be one which is established under State law and which will function in lieu of the Federal program. It is not a delegation of Federal authority.

The 208 program is a supplement to the 404 program and is intended to complement and be coordinated with a State 404 permit program. It is not a substitute for the 404 program as most discharges of dredged or fill material not specifically excluded will still require a case-by-case review through a permit process. Activities that involve discharges of dredged or fill material that impair the flow or circulation of navigable waters or replace water with dry land will normally require individual permit review. For example, case-by-case permit review is necessary to minimize adverse effects from most channelization and real estate development fills. Moreover, the conferees agreed that a permit should always be required where toxic substances are involved. A case-by-case permit review would not be required for narrowly defined activities that cause little or no adverse effects either individually or cumulatively, including those activities narrowly defined in paragraphs (A–F) of subsection (f) of section 404.

The conferees also agreed that a State must have a permit program approved under section 404 and a statewide regulatory program approved under 208(b)(4) before the administrator can approve the best management practices submitted by the Governor for appropriate activities.

The administrator cannot approve best management practices to replace the State's permit review process in its entirety as only certain activities are appropriate for management practices. A best management practice might be an acceptable method of control for activities that are similar in nature and that cause no more than minimal harm to the environment either individually or cumulatively. Management practices are appropriate for controlling farm roads, log roads, temporary mining roads, stock ponds, farm ponds, and maintenance of existing fills. Management practices will not be appropriate as the sole means of controlling activities the impact of which varies according to location or where advanced review is necessary to assure that the discharge is conditioned to protect the environment.

Management practices might be appropriate for activities that have no more than minor impact, individually or cumulatively and where an approved State permitting agency agrees that permit review is not necessary and that the best management practice will adequately protect the environment. Best management practices are not appropriate for activities that vary in their impact from one ecosystem to the next.

The 208 agencies should continue to concentrate on areawide management of pollution and on nonpoint sources of pollution that degrade critical aquatic areas rather than attempt to duplicate 402 and 404 permit programs that control point sources of pollution.

The administrator should ensure that best management practices are specific enough to inform each person conducting an activity what is specifically required of him. The conferees expect that this 208 process will include an enforcement program with adequate resources.

The third important improvement in section 404 will provide for a reduction in redtape and delay. The amendment provides that the Corps of Engineers, which operates the 404 permit program, will enter into agreements with the administrator of the Environmental Protection Agency, and the secretaries of the Departments of Commerce, Agriculture, Interior and Transportation, as well as the heads of other appropriate Federal agencies, to minimize to the maximum extent practicable, duplication, needless paperwork and delays in the issuance of under section 404 permits. The agreements will be developed to assure that to maximum extent practicable, decisions with respect to applications under section 404 will be made within 90 days.

The conferees accepted an amendment which will reassure the State that it is the policy of Congress that the Clean Water Act will not be used for the purpose of interfering with State water rights systems. I sponsored this amendment with Senator HART on the floor of the Senate. This amendment came immediately after the release of the Issue and Option Papers for the Water Resource Policy Study now being conducted by the Water Resources Council. Several of the options contained in that paper called for the use of Federal water quality legislation to effect Federal purposes that were not strictly related to water quality. Those other purposes might include, but were not limited to Federal land use planning, plant siting and production planning purposes. This "State's jurisdiction" amendment reaffirms that it is the policy of Congress that this act is to be used for water quality purposes only.

The amendment simply states that it is the policy of Congress that the authority of each State to allocate quantities of water within its jurisdiction shall not be superseded, abrogated or otherwise impaired by this act. It also states that it is the further policy of Congress that nothing in this act will be construed for the purpose of superseding or abrogating rights to quantities of water which have been established by a State.

This amendent is not intended to create a new cause of action. It is not intended to change present law, for a similar prohibition is contained in section 510 of the act. This amendment does seek to clarify the policy of Congress concerning the proper role of Federal water quality legislation in relation to state water law. It should be clear. Legitimate water quality measures authorized by this act may at times have some effect on the method of water usage. Water quality standards and their upgrading are legitimate and necessary under this act. The requirements of section 402 and 404 permits may incidentally affect individual water rights. Management practices developed through State or local 208 planning units may also incidentally affect the use of water under an individual water right. It is not the purpose of this amendment to prohibit those incidental effects. It is the purpose of this amendment to insure that State allocation systems are not subverted, and that effects on individual rights, if any, are prompted by legitimate and necessary water quality considerations.

This amendment is an attempt to recognize the historic allocation rights contained in State constitutions.

It is designed to protect historic rights from mischievous abrogation by those who would use an act, designed solely to protect water quality and wetlands, for other purposes. It does not interfere with the legitimate purposes for which the act was designed.

The amendment speaks only—but significantly—to the rights of States to allocate quantities of their water and to determine priority uses. It recognizes the differences in types of water law across the Nation. It recognizes patterns of use.

When Wyoming became a State and the Congress ratified our constitution in the Act of Admission, that constitution stated then and states today:

> The water of all natural streams, springs, or lakes or other collections of still water within the boundaries of this State are hereby declared to be the property of the State.

Water quality and interstate movement is an acceptable Federal role and influence. But the States historic rights to allocate quantity, and establish priority of usage remains inviolate because of this amendment. The Water Pollution Control Act was designed to protect the quality of water and to protect critical wetlands in concert with the various States. In short a responsible Federal role.

The business and industrial community as well should find relief in the Clean Water Act of 1977. For the most part, unrealistic requirements and nonattainable deadlines have been altered to reflect our years of experience with the act. But these amendments, while helping industry, do not detract from the environmental goals of the act, or significantly impair the effectiveness of its regulatory scheme. The Clean Water Act of 1977 is a bill which both industrialist and environmentalist alike can view with some optimism.

The 1972 act requires industrial pollution sources to install what has been defined by the EPA as best practicable control technology by 1977, and best available control technology by 1983. However, the EPA had not been granted the discretion to provide flexibility in these requirements, or to take into consideration the costs of compliance, the quality of the receiving waters, or other special circumstances.

The conferees agreed to a provision authorizing up to an 18-month extension of the 1977 deadline where the administrator finds that the discharger acted in good faith and has made a serious commitment to achieve compliance with the best practicable control technology requirements of the act. The extension will only be granted if compliance will occur no later than April 1, 1979, and the extension will not require the application of additional controls on other sources.

The conference amendment relating to the 1983 requirements is more complicated. It deals separately with toxic pollutants, known harmful substances, conventional pollutants, those nontoxics which we know a great deal about, and for which water quality standards are usually established, and so-called nonconventional pollutants, those about which we know very little. The conferees agreed to provide a 1-year extension, until July 1, 1984 for conventional pollutants. Toxics and nonconventionals would be required to be under control by July 1, 1984 or within 3 years for a newly identified substance, but in no event later than 1987 for nonconventionals. The administrator of the EPA may then modify the requirements for nonconventional pollutants if it were determined that the modification would assure protection of public water supplies, and the protection and propagation of a balanced population of fish and wildlife, as well as allowing recreation in and on the water.

The Clean Water Act of 1977, taken as a whole, expands the role of local 208 planning in the water quality effort. As I have previously stated, we have provided cost sharing provisions for the implementation of agricultural management practices, and provided 208 programs with dredge and fill management responsibilities. The bill also provides continued funding for these 208 programs, of $150 million for each of fiscal years 1977 through 1980. Agencies which were designated after 1975 will be granted an additional year in which to submit their 208 plans. Federal grant amounts under this program will be 100 percent for the first 2 years of a program's operation for the purposes of plan development, and 75 percent for cost incurred in each succeeding year.

In summary, I believe that the Clean Water Act of 1977 is one of the soundest, sanest pieces of legislation to come out of this Congress. It does not compromise environmental goals, nor does it confuse them by injecting unrelated issues. It gives back to the State the flexibility to take more responsibility for its own waters. It relieves agriculture and industry of irrelevant or unnecessary burdens. It provides municipalities with essential funding for treatment facilities, and agriculture with 50/50 matching grants to clean up nonpoint source pollution. It preserves the State's jurisdiction over water quantity allocation. It provides positive incentives and positive programs, and fewer coercive clauses. It does not foster the confusing proliferation of agencies or the unnecessary promulgation of guidelines and regulations.

I commend the conference report on the Clean Water Act of 1977 to my colleagues and ask for their support of its prompt passage.

Mr. MUSKIE. Mr. President, I ask unanimous consent to have printed in the Record a statement by the distinguished Senator from Alaska (Mr. Gravel).

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR GRAVEL

I am pleased that the conference committee completed its work on the Clean Water Act this year so that municipalities, industry and federal, state and local government can go about with their efforts to reduce and eventually eliminate the pollution of the Nation's waters. The committee report is by and large a good one. Its major accomplishment is to provide a continuum of congressional commitment to the proposition of a clean environment. Hence, the "mid-course" correction has been a fine-tuning, not a major overhaul.

The conference report does many favorable things. The report recognizes a principle that the EPA should have embraced long ago—that there are alternative methods of treatment of domestic waste other than massive secondary treatment plants, and the massive commitment of funds necessary to construct and maintain them. There is a firm statement now that the Federal Government must police its own operations so as to comply with existing environmental laws. There is recognition of the problem of toxics as the major health and environmental concern, and a realization that in some cases the principle of "treatment for treatment's sake" is an unacceptable concept. In all, the conference helps to fix the focus of the environmental efforts of government so that pollution control agencies can fix the problems of municipal and industrial discharges. This is but some of the evidence of the rational and constructive measures taken by the conference.

I would comment on three actions taken by the conference: those in the area of federal facilities compliance; compliance of the seafood industry; and modifications from the requirement of secondary treatment for conventional pollutants emanating from municipalities.

Industry is reportedly 90 to 95 percent in compliance, or in progress towards compliance, with the 1977 requirements. Municipalities are well under way towards meeting the requirements of the act. It has become increasingly obvious that in many areas the prime violator of environmental laws has been the federal government itself. Throughout the country, federal facilities fail to meet federal standards, let alone state requirements. This situation has led to the de facto establishment of a double standard that is unacceptable for environmental and economic reasons. Pollution from any source is still pollution; the discharge of a pollutant from a federal facility is none the less harmful because it is under the auspices of the federal government. Discharges from federal facilities should not be exempt from meeting standards set by state and local authorities for the control of pollutants. There is nothing sacrosanct about federal wastes. Thus, the federal government, with certain limited national security interests, will have to comply with the substantive and procedural requirements of federal, state, and local water pollution laws.

During the discussion of the section pertaining to the discharge of dredge and fill materials, a major effort was mounted to exempt all Federal projects. I opposed this effort, and am still in opposition to exempting the Federal Government from any such requirements. However, it became necessary to compromise, and the result was a very limited exemption from section 404 for specifically authorized projects for which there is an adequate environmental impact statement which appropriately addresses the concerns of the effect and mitigating actions necessary to be taken by virtue of the discharge of dredge and fill materials. These must be Federal projects, and the Federal EIS must address the discharge question in the same way as if a 404 permit were required. As I view it, the exemption merely eliminates duplication—it in no way eliminates the necessity both to address the problem and provide mitigation. The EIS will come before the appropriate committees, and it is contemplated at least by the Senate Environment and Public Works Committee that the problem of discharges of dredge and fill will be adequately handled, or the Congress will know that they are acting on a project that will harm the environment.

Two other things should be kept in mind. Guidelines for the preparation of impact statements will have to be updated to accommodate these concerns. The Senate Public Works Committee has jurisdiction over such matters, and it should be expected that that jurisdiction will be exercised to assure compliance with our concerns. Of course, hearings on federally authorized projects will be expected to receive testimony on the adequacy of the particular EIS on the question of dredge and fill materials. In addition, the exemption for Federal projects does not go to the requirement that State and local substantive and procedural requirements be met.

Congress has authorized a study of the seafood industry to determine whether there are grounds for relief from the EPA guidelines for the industry. The study will be of a one year duration, with several parties participating in consultation with the EPA. The Senate bill, and colloquies that took place on the floor of the Senate between Senator Chafee and I and among Senators Muskie, Stevens and I on the fourth of August clearly state the purposes and direction of the study. There is no reason to restate those conversations and understandings. I have been pleased already by the spirit of cooperation from the EPA in this regard. At least in this case, a study will not be an offhand dismissal of a thorny problem.

Finally, a word about the municipal modification procedure. The conference report accurately reflects my concerns about the requirement that certain coastal communities should provide secondary treatment of conventional pollutants when natural action of the receiving body eliminates the need to do so. The conference report mentions several communities that might be likely to qualify for the modification provision. When I introduced the measure I did not intend to limit the application of the provision to Anchorage, Seward, and a few other cities. I intended to allow any city that can meet the geographical requirements to come forward and attempt to prove their case. (That might even include communities currently under schedule to provide traditional secondary treatment.) That is my understanding of the conference's intention as well. I can understand the EPA's concerns about the administrative burden this provision might place on the agency, but I might remind my friends at the agency that we should not legislate unreasonably so as to accommodate an agency. There are a number of communities that have been and will be subjected to administrative burdens way beyond their financial and administrative capacity because of the need to comply with the secondary treatment requirement. With this modification procedure for coastal communities that qualify, and the other provisions in the bill for alternative and innovative technologies, as well as recycle capabilities, the Congress has announced its intention to put some sense into the treatment of municipal wastes.

The modification procedure, then, guarantees to no one that modifications will be granted; it denies no coastal community with the qualifying geographical characteristics the right to show its ability to meet the other conditions of the provision.

The provision applies to communities with discharges into the waters of the territorial seas and the contiguous zone or into saline estuarine waters where there is strong tidal and other hydrological action. There is a recognition that depth is a factor. The conference report clearly states the importance of depth with regard to the territorial seas and the contiguous zone; emphasis is not placed on depth with regard to saline estuarine discharges, but rather on tides and currents and flushing action which act to remove pollutants from large bays and estuaries.

The conditions that an applicant must demonstrate ability to meet are forthright. They are geared to protection of the water body from toxics and violations of water quality in the area of the discharge. To the extent practicable, monitoring of a periodic nature should occur to assure against water quality violation. Modifications will be granted in 5-year increments as a further protection. Pretreatment requirements will be enforced.

In essence, the provision says that there are areas which may be able to show that the discharge of conventional pollutants from a municipal sewage system can be made without secondary treatment and without harm to the environment. If this concept is adopted in regulations promulgated by the agency, we can assure a reasonable approach to sewage treatment in coastal communities while not violating the environment, or the fabric of the act. I will watch closely to see that the provision is implemented in the manner in which I proposed it and the conference adopted it.

I would like to remind my colleagues of the Herculean efforts of Senator Muskie in steering the Clean Water Act off the rocks and shoals of deadlock earlier this year onto a course that ultimately led to a comprehensive measure that will provide the greatly needed direction to the Nation's efforts at providing clean water. During the voyage to passage of the measure by the committee, then the Senate, then the conference, the seas were not always tranquil. But Senator Muskie, with the assistance of Senators Stafford and Burdick and Chairman Randolph, once again delivered. The committee and the conferees deserve a great deal of credit for their determination to arrive at a good bill. I particularly appreciate the efforts of the staff of the committee in working with me on a number of provisions that are important to my State and me.

Mr. MUSKIE. Mr. President, I ask unanimous consent to have printed in the Record a statement by the Senator from Minnesota (Mr. Anderson).

The PRESIDING OFFICER. Without objection, it is so ordered.

Statement by Senator Anderson

As a member of the Subcommittee on Environmental Pollution of the Senate Environment and Public Works Committee, I have several comments I would like to make about the development of the Clean Water Act of 1977, particularly the federal facility compliance, permits for dredged or fill material, and marine sanitation devices sections of the conference report.

It is a remarkable achievement in my judgment that the Senate has before it today for final passage the Clean Water Act of 1977. The Senate and the nation owe a debt of thanks for the dedication and diligence of our Subcommittee chairman, Mr. Muskie; our Chairman, Mr. Randolph; the ranking minority member of the Subcommittee, Mr. Stafford; and the staff of the Senate Environment and Public Works Committee for completing a lengthy series of hearings, extensive markup sessions, floor consideration, and a difficult conference committee in less than 7 months on such a complicated and controversial piece of legislation.

My colleagues should be aware that the Environment and Public Works Committee not only has completed the entire legislative process on the Clean Water Act of 1977 in a very short period of time, but also that the Committee was involved during markup of this bill with an arduous conference on the Clean Air Act, and, during the Conference on the Clean Water Act, several conferees were also members of the Energy Conference Committee.

I am pleased that the father of the Clean Water Act, and most of the major federal environmental statutes, our colleague, Ed Muskie, is here on the floor today to manage this conference report. Senator Muskie without question is responsible for the basic thrust and content of this legislation and the previous congressional actions to preserve and protect the natural resources that we absolutely depend on in this country. I have had the honor and pleasure this year to closely observe Senator Muskie on both the air and water pollution bills. His knowledge, commitment, energy, and dedication to clear air and clean water is without equal.

In the absence of Senator Muskie from most of the latter conference committee sessions, Senator Burdick chaired the conference. The Senate and the Environment and Public Works Committee were exceedingly well-served by him. I want to add my appreciation to Senator Burdick for assuming a most difficult assignment and discharging it well.

Since becoming a member of the Environment and Public Works Committee in January, apart from my involvement in the Public Works Employment Act and the Navigation Developemnt Act, I have devoted considerable time and effort to the Environmental Pollution Subcommitttee's consideration of the Clean Air Act and Clean Water Act. Senator Muskie has assembled a dedicated and experienced staff to whom I am most grateful, especially for this legislation; Leon Billings, John Freshman and Sally Walker, and, Phil Cummings, Dick Harris, Bailey Guard, Jackie Schafer, and Jim Range of the Committee staff.

In the Senate Environment and Public Works Committee report on S. 1952 and during the floor debate on the Clean Water Act of 1977 on August 4, I stated in some detail my own views on this legislation, the importance of clean water to the people of Minnesota, and indicated the background of the several amendments I offered to this legislation that the Senate adopted, most importantly on provisions relating to dredging by the Corps of Engineers, the Clean Lakes Program, and marine sanitation devices. I do not intend to reiterate this information at this time to any great extent, but do want to make very brief comments about several aspects and sections of this conference report.

As a member of the conference committee, I am pleased with the conference report, especially in light of the wide divergence between the House and Senate bills on many of the most significant sections. The Clean Water Act of 1977 as submitted by the conference committee is worthy of support by my colleagues and when enacted should be signed into law by the President.

I very much regretted, Mr. President, that the Senate conferees were forced to drop the provision in S. 1952 offered by Senator Nelson to limit the amount of phosphorous in detergents sold in the eight Great Lakes states. Senator Nelson made a compelling case to the Senate on August 4 for this amendment and it was added to the bill by an overwhelming margin, with no opposition from members from the Great Lakes states. Despite the logic of this provision, an endorsement by the Environmental Protection Agency, the support of every scientific body concerned with the quality of the Great Lakes and the endorsement of a clear majority of the members of the House of Representatives from districts within the Great Lakes drainage and the Governors of the Great Lakes states, the House conferees were unwilling to accept the phosphate detergent provision or a modified, more limited version of it.

I remain confused as to why the manufacturers of household detergents oppose this provision since they must manufacture phosphorous-free products at present for over 35 million potential customers in this country. The House conferees were not able to provide any real justification for opposing the Nelson amendment, except that no hearings had been held in the House on the proposal. While I regret that the Clean Water Act does not include a provision to regulate the sale of phosphate detergent in the Great Lakes, I am encouraged that Representative Roberts has committed the House Public Works and Transportation Committtee to hearings early in 1978 on this legislation.

The provision in the Clean Water Act of 1977 that I offered in Committee and have followed with the greatest interest is subsection (t) of Section 404. One of the long-standing concerns of the State of Minnesota and several other states has been the environmental impacts of dredging by the Corps of Engineers in navigable waterways.

In Minnesota, the Corps of Engineers dredges annually approximately 2 million cubic yards of bottom sediments from the Mississippi River and another 100,000 cubic yards from Duluth-Superior Harbor. The water quality impacts associated with this massive removal and subsequent disposal of bottom sediments are often of great significance. The Senate report and my remarks on the Senate floor on August 4 detail the history of administrative and legal efforts by the Minnesota Pollution Control Agency, and joined in legal action by six other states and several environmental organizations, to insure that dredging by the Corps of Engineers is conducted in compliance with state water quality standards and other substantive and procedural requirements.

The amendment in S. 1952 to Section 404 on compliance by federal agencies with state, interstate, and local substantive and procedural requirements, which I authored, was carefully considered by the conferees in its own right and as an issue in the conferee's amendments to Section 313 and 404 of the statute. While the original language of my amendment was modified in three respects at the request of the House conferees, neither I nor the Senate conferees accepted any amendment that detracts or dilutes the purpose of this provision in the Senate bill, that, the Corps of Engineers must obey the same state standards that any other discharger must obey. I have listened to the floor manager's description and explanation of the conferees action on this provision, which is now labeled subsection (t) of Section 404 and agree with his analysis of this section. However, since the statement of managers is primarily devoted to other issues in Section 404, I have several comments on this provision so it is clear in the legislative history of this subsection what the conferees and Congress intend by subsection (t).

In the description of Section 404(t) the floor manager explained the language the conferees accepted to Section 313 regarding exemptions from non-federal control of dredging related to military equipment and vessels. The Department of Navy raised this issue with the conferees because of the possible interpretation of the requirements on federal agencies engaged in dredging of waters adjacent to military installations. At no time did any representative of the Department of Defense raise any concern about this provision regarding maintenance dredging in commercial waterways. The Corps could request a presidential exemption for dredging they propose to conduct that is strictly military in nature, however, that is not the situation that I brought to the Environment and Public Works Committee's attention or prompted the *Minnesota* v. *Callaway* litigation. It is the judgment of the Senate conferees that maintenance dredging for commercial vessels on the Mississippi River or any other waterway is not subject to the exemption adopted in Section 313.

Mr. Muskie also described the limitation of subsection (t) to state and interstate requirements, not local, which I believe is very clear and the language added to subsection (t) from the present language in Section 511(a)(1) of the Federal Water Pollution Control Act of 1972 regarding the importance of the Corps of Engineers maintaining navigation on the nation's waterways. I believe the burden is now clearly on the Corps to comply with state water quality standards and that the addition of the language from Section 511(a)(1) merely restates the present law, that the Corps does have a responsibility for maintaining navigation that can be cited if necessary.

I am somewhat uneasy that the Corps of Engineers could read subsection (t) and interpret the last line, the language from 511 (a)(1), as controlling. I believe that it is not at all the case. Clearly the intent of the conferees for Section 404 (t) of the Clean Water Act of 1977 is to change the way the Corps of Engineers operates when it dredges millions of cubic yards of bottom sediments each year at dozens of sites in many states. Compliance with appropriate water quality standards is the basic mandate and direction from the Congress to the Corps. The conferees recognize that constraints can and do exist that will preclude compliance in every instance, especially in the dredging seasons shortly after enactment of this provision. But overall, the burden is clearly on the Corps to make every effort in every project to dredge in compliance with the same standards private dredgers and other dischargers must adhere to.

Mr. President, the last comment I desire to ask about the impact of subsection (t) concerns subsection (r) of Section 404, the federal project's exemption Subsection (r) results from provisions in both the House and Senate bills that specific federal projects that have satisfied the requirements of the National Environmental Policy Act of 1969, need not apply for and receive a 404 permit. The conferees did not discuss this provision applying to ongoing maintenance dredging activities by the Corps. In addition, while subsection (r) includes language exempting eligible federal projects from Section 404 permits, whether issued by the Corps or by the state program delegation authorized by the amendment to Section 404, this language deals with the Section 404 permit program itself not any state regulations, requirements, or standards that could be applied to a federal activity. The subsection (r) language does not mention state authority or regulations as activities that could not be applied to federal projects, through the 404 permit program and should not be interpreted consequently as limiting subsection (t).

Mr. President, I have one final comment, concerning the amendments to Section 312, marine sanitation devices. I offered several amendments to Section 312 that the conferees adopted nearly identically to the Senate version. One provision requires that greywater be treated hereforward by marine sanitation devices and another that these devices on commercial vessels using the Great Lakes meet secondary treatment requirements. The latter amendment to Section 312(c)(1) requires, under a new subparagraph B, that the Administrator of the EPA establish standards and regulations to implement the secondary treatment requirement, including a reasonable time period for its implementation. The inclusion of "greywater" to the definition of "sewage" in Section 312(a)(6) does not expressly state a time period for the implementation of the treatment of greywater. It was my intention when I offered these amendments and my interpretation of the Conference Committee report that the EPA will enact regulations both to establish a time period for new and existing vessels to have operable marine sanitation devices to treat greywater, and, to produce an effluent of a quality equal to or better than secondary treatment.

Mr. HELMS. Mr. President, I join my colleagues, including the distinguished chairman of the Agriculture, Forestry and Nutrition Committee, in an effort to correct some misconceptions regarding even-aged management in southeastern forests that has appeared in report language accompanying "clean water" legislation.

First, I think it is important to point out that the Congress held extensive hearings, with expert witnesses, on the subject of forest management and even-aged management, often referred to as clearcutting. At every opportunity the Congress has rejected the prohibition of, or permit requirements for, clearcutting of eastern mixed hardwoods. The Senate specifically rejected an amendment prohibiting clearcutting of eastern mixed hardwoods when it was offered during full Senate consideration of the National Forest Management Act of 1976.

The Senate did this with good reason, for the clearcutting process is part of the practice of even-aged management and is certainly a normal silviculture practice in eastern mixed hardwoods in North Carolina and other States. Even-aged management involves a series of improvement cuts in the rotation cycle of timber harvesting which is culminated by a clear cut for regeneration purposes. Through decades of scientific observation and experimentation, forest managers and conservationists have found that this timber harvesting practice—and it is only one of several techniques used today—is usually the best one for insuring maximum regeneration of some of our most valuable commercial tree species such as Douglas fir, southern pine, and lodge polepine, as well as hardwood species.

These trees require a lot of sunshine to grow well. Foresters call them shade-intolerant. In areas where the trees were planted at the same time, and therefore are the same age, clearcutting is usually the least costly, most efficient harvesting method. It also disturbs the environment the least, for it requires fewer roads. With this technique, lumber production costs are cheaper and so are reforestation costs, and the clearcut areas quickly grow new ground cover, providing browsing for wildlife.

Indeed, nature was the original clearcutter. Overgrown, overmature forests were cleared out by fire, landslides, wind, and insect invasion. Today, man does a better job by systematic rotation of his harvests and by cleaning up his logging debris and replanting the forests for a new harvest later on.

The opponents of clearcutting and even-age management are well intended, if not always well informed. However, the facts are that forest management has used these practices as silvicultural tools in ways that are completely responsible and environmentally sound. Opposition to these practices is not founded upon sound theory and often amount to emotional and uninformed outbursts against the forest industry.

It is my understanding that research performed on the effects of clearcutting —including eastern mixed hardwoods— has indicated little effect on soil erosion or streamflow if clearcutting is properly carried out. Two reasons why clearcutting of eastern mixed hardwoods has relatively little effect on erosion and streamflow are: First, such sites possess a very high proportion of established regeneration onsite before the cutting takes place. Regeneration on such sites burgeons after clearcutting; and second, since eastern hardwoods are deciduous, they do not transpire during a good part of the year. During these months it makes little difference to streamflow whether trees are cut or left standing. These two effects may indicate that clearcutting of eastern mixed hardwoods has a less serious effect than clearcutting of other forest types.

Also, Mr. President, foresters and even the Environmental Protection Agency generally agree that improperly constructed roads, rather than logging, are the principle cause of increased soil erosion from timber harvest operations on steep topography. Other conditions being equal, a forest managed under a selective cutting system may actually result in more erosion than one under even-aged management utilizing clearcutting. This is because, under a selection system, there will be a significantly larger area of land disturbed annually to harvest a given volume of timber. In addition, more miles of roads are left open, continuously used, and maintained; thus increasing the risk of soil erosion from the road surface.

Mr. President, when the Senate held hearings on this subject last year a very distinguished silvicultural scientist from my State offered his valuable and expert testimony. I ask unanimous consent that the testimony offered by Dr. John W. Duffield, professor of silviculture, Department of Forestry, North Carolina State University at Raleigh be printed following my remarks.

Dr. Duffield points out very effectively just how important even-aged management is to sound forestry and to protection of our natural resources, including clean water. This scientific testimony offers proof that clearcutting of southeastern hardwoods is, indeed, a normal silvicultural practice in North Carolina.

There being no objection, the testimony was ordered to be printed in the Record, as follows:

Statement of Dr. John W. Duffield, Professor of Silviculture, Department of Forestry, North Carolina State University, Raleigh, N.C.

Mr. Chairman, I am John W. Duffield, Professor of Silviculture in the School of Forest Resources of North Carolina State University. I am presenting the following remarks at the invitation of the Chairman.

Most of my career as a professional forester has been in biological research and teaching, starting in the Northeastern United States—with the title of junior forest ecologist—then California, the Inland Empire, the Pacific Northwest, and since 1963, in the Southeast. I have also studied forests, for periods of several months, in the American Southwest, Australia, New Zealand, and Yugoslavia. This experience has impressed me with the diversity of forests in our country and with the need to match this diversity with flexibility in the application of silvicultural treatments.

Because of my background and interests, I believe it is appropriate for me to limit my remarks to the silvicultural aspects of the legislative proposals under discussion. As a general comment, I consider that S. 3091, introduced by Senator Hubert Humphrey, is a sound approach to the objective of protecting our forest resources and their many uses in that it mandates, specifically in section 3, guidelines for silviculture practice adapted to local conditions. This approach is, in my opinion, much more appropriate to the diversity of our American forests than the blanket prescriptions proposed in S. 2926 introduced by Senator Jennings Randolph.

Because S. 2926 deals in detail with silvicultural matters, I prefer to confine my comments to pertinent sections of this bill. The definitions comprising Section 3 are fundamental; one of the most important is that of the eastern mixed hardwood forest. This term, used frequently, is defined as "deciduous hardwood forests east of the 100th meridian, except those forests consisting principally of one or more of the following kinds of trees: aspen, paperbirch, or cottonwood." The three types of forests mentioned are obviously not mixed. The implication of the definition is that all other deciduous hardwood forests east of the 100th meridian fall under the bill's strictures against even-aged management or conversion to coniferous stands. Some examples, drawn from a single state—North Carolina—illustrate the silviculture consequences that would follow enactment of the bill as drafted. Old-field, pure, even-aged stands of yellow poplar, not at all uncommon on the mountains of North Carolina, would be forced into treatments unsuited to their age structure. Extensive stands of pin cherry, which followed the logging and burning of spruce-fir stands at high elevations could not be reconverted to coniferous forests. Pure even-aged stands of river birch which have invaded abandoned streamside fields in the Piedmont, would have to be handled on an uneven-aged basis, totally unsuited to the ecological situation. Much the same is true of old-field stands of sweetgum in the coastal plain.

Examples such as these could be cited for state after state in the region east of the 100th meridian. They illustrate the inapplicability of the blanket prescriptions which flow from the definition of the "eastern mixed hardwood forest", and more importantly, the inappropriateness of blanket prescriptions for the complex forest of half a continent. The "eastern mixed hardwood forest" is an abstraction which blankets the complexity suggested by the fact that more than 50 hardwood or hardwood-conifer forest types have been described east of the 100th meridian.

The analysis which in the Congressional Record-Senate for Feb. 4, 1976, follows the text of S. 2926 brings out clearly the inconsistencies written into the bill. An effect of the bill, as stated in section A of the analysis will be the requirement of "greater use of uneven-aged management". The next sentence holds that the "result will be a long rotation high quality timber forest filled with large trees." The forest so described is precisely the sort of forest which does not result from uneven-aged management. A forest "filled with large trees" is obviously one which offers little space for the younger age classes. Such a forest may correspond to a virgin forest, but not to a managed uneven-aged forest. Moreover, the only feasible way to achieve a forest "filled with large trees" is by even-aged management.

The drafters of the bill and of the analysis appear to conceive of the uneven-aged forest as corresponding to the "natural" forest, whereas in fact, a managed uneven-aged forest is more artificial than an even-aged forest, since the former requires more frequent silvicultural treatment to maintain the uneven-aged condition. "Natural" forest regeneration is predominantly by catastrophe—blow-down, fire, insect or disease attack—either by large areas or group-wise. Clearcutting was not an invention of the timber barons.

These obvious biological errors lead one to question the silvicultural competence of the drafters. The good intentions expressed by the drafters are evident; I believe there is general agreement that:

Unsightly clearcuts are an aesthetic insult which should not be tolerated.

Excessively large clearcuts—a characterization which cannot be defined for the forests of the entire territory of the United States, nor for the entire area of the eastern hardwood forests—have adverse effects on wildlife and the appearance of the forest.

Cutting shoulld be carefully controlled near stream courses.

Cutting and road building should be carefully adapted to topography and soil stability.

The public investment in forest management should be protected by the exercise of prudence in restricting these investments to productive and stable soils.

It is desirable that the national forests include a wide diversity of forest types and conditions.

It is highly questionable that these objectives could be assured by detailed prescriptive legislation covering the diverse forests of the United States even if such prescriptions were to be drawn up by individuals with a fundamental understanding of forest biology and forest management. Indeed such individuals would not make the attempt.

Some section by section comments on S. 2926, taken from a detailed analysis of the silvicultural aspects of this bill are as follows:

Sec. 7(a) The general sense of this subsection, namely that no single system dominates in the national forests is to be applauded in that it leaves scope for the exercise of professional judgment in silviculture. The exception, namely that selection management should dominate in the eastsern mixed hardwood forests, is a clear case of special pleading without biological warrant. For example, the enforcement of selection management in the mixed hardwood stands of the Monongahela National forests would tend to reduce the less tolerant components of these stands, such as yellow poplar, black cherry, and the oaks, and lead to the formation of stands dominated by sugar maple.

Sec. 7(c)(1) This sub-section mandates nationwide standards for clearcuts and even-aged cuts. If nationwide silvicultural prescriptions are considered appropriate, one may ask why they are not appropriate for all silvicultural systems, including selection. The implication of this sub-section is that even-aged management poses hazards to the forests but that uneven-aged management does not. The deteriorated condition of most of the eastern mixed hardwood forests is massive testimony to the destructive effects of selection of the largest and best trees, leaving inferior individuals and less valuable species to reproduce. This process cannot fairly be called uneven-aged management; it has most certainly been uneven-aged mismanagement.

By contrast, clearcuts made, for example, in the Bent Creek Experimental Forest, in the 1930's as demonstrations of what were then considered undesirable practices, have regenerated superior mixed hardwood stands, whereas selectively cut stands in the same forest have failed to develop regeneration adequate in quantity or quality.

Sec. 8(d) This provision would prevent the salvage of immature stands heavily damaged by fire, insects, disease, or climatic catastrophes. Its consequence would be to saddle the national forests with increasing areas of understocked stands, unsightly and constituting fire hazards.

Sec. 10(a) The first paragraph would have the effect of leaving many of the degraded mixed hardwood forests in their present unsatisfactory state of understocking with desirable hardwood species. There is no merit in refraining from conversion of degraded mixed hardwood forests to hardwood forests of higher aesthetic, environmental, and economic value.

The second paragraph should be considered in relation to Sec. 4(a)(4) of this bill, which would provide that "timber sales from national forest lands are made only from . . . lands which are capable of regenerating a commercial stand of timber." Many areas of land in the eastern United States will be capable of growing a commercial stand of timber only if they are stocked with conifers. Many stands of mixed hardwoods which have succeeded old field or planted pines on degraded and abandoned farm land have no prospects of producing commercial yields. Yet these same sites can offer considerable recreational, watershed, aesthetic, and economic values if they are converted, totally or partly to coniferous or mixed hardwood-conifer stands.

The overall effect of the proposed highly restrictive limitations on conversion would be to prevent the Forest Service from using the knowledge of soil-species relationships, bought by research, to develop healthy productive stands adapted to the soils they grow on. Another general effect of this section is to set up a highly artificial picture of "natural" forests as consisting of either conifers or hardwoods when, as a matter of record, many of the forests now referred to as the "eastern mixed hardwood forest" contained an appreciable conifer component, but were converted to hardwood stands by "high-grading" the conifers. Many forest uses would be best served if the eastern hardwood forests were restored to this truly "mixed" condition.

Mr. SCHWEIKER. Mr. President, the Federal Water Pollution Control Act Amendments are the result of a long, hard road of congressional action, in committees on the floor of both Houses, and in conference. I congratulate the members of the conference committee for tackling such a difficult job and resolving many sincere disagreements in this deeply complex bill.

However, I would like to take a moment to address myself to one particular aspect of this legislation and its possible effect on a major industry in my State whose future has been of such great concern to me and many of my colleagues. I refer to the American steel industry. This conference report will certainly pass with little opposition, because it is so wide-ranging and deals with so many vital water quality issues. But I would be remiss if I did not voice my serious concern over the impact this legislation might have on steel at the very time when many of us in Congress are fighting to keep the steel industry alive and reverse the terrible setbacks American steel is suffering.

Based upon discussions with members of the steel industry, I am concerned that the April 1, 1979 deadline for compliance with best practicable control technology may be impossible to attain or financially beyond reach in certain cases. The Members of this body are well aware of the desperate financial plight of the steel industry. Many steel firms are reporting little or no earnings and have exhausted their ability to borrow funds. Cash flow does not permit even minor modernization in many cases, and may well prove insufficient to pay for major water pollution control installations on the schedule mandated by this legislation.

Pennsylvania has 150,000 wage earners employed in steel. As we are painfully aware, under the circumstances facing our steel industry, few U.S. facilities can compete on an equal footing with those built much more recently in foreign nations, like Japan, with Government assistance. We have seen the recent closing of Alan Wood Steel and other units near Philadelphia, and the Bethlehem Steel Johnstown plant's struggle for survival. Thousands of jobs have already been lost to the combined impact of unfair foreign competition, obsolescence, and the unwillingness of the White House to vigorously address itself to this critical problem.

Unreasonable increases in environmental costs can harm our efforts to give the steel industry a new lease on life. Of course, necessary public health standards are proper and desirable, and I do not mean to quarrel with the need for environmental protection. But with the conditions I have described facing my colleagues in so many areas of the country, such as Ohio, Alabama, Indiana, and California, I think we in Congress should make it clear that wise environmental regulation means taking full account of the needs of our economy, our workers, and the plight of our steel industry.

For example, I am specifically aware that mills of Jones & Laughlin Steel Corp. in western Pennsylvania, employing about 16,000 steelworkers, face additional water quality projects costing about $100 million for the achievement of best practicable water control technology. These same mills also face air quality costs of about $200 million in the next 4 years.

Therefore, Mr. President, I would like to go on record today as indicating my reservations over the section of this conference report dealing with water quality standards for industry, and my disappointment that it fails to more specifically take into account the very unusual and special problems of our struggling steel industry. It appears to me this might well call for future remedial action by the Congress, if indeed the failure to address steel separately does set back the efforts underway to assure American steel's survival. While many good features of the Water Pollution Control Act Amendments argue for its passage, I felt I should warn my colleagues of the possible future problems we may well yet face in regard to balancing the economic survival of the steel industry against environmental factors.

Mr. HEINZ. Mr. President, the joint conference committee, by completing its work on the amendments to the Federal Water Pollution Control Act of 1972, has done a commendable job in compromising a difficult and contentious issue. The final bill comes close to resolving the existent problems and areas of disagreement between industry, public treatment works and the Federal mandate. The conferees have shown a sincere desire to reach a balance between corporate financial ability and a clean environment.

However, the bill fails to deal adequately with one of the main problems facing the steel industry today; that of insufficient capital. This problem is of critical importance since it raises the question of the very survival of the American steel industry. In my home area of western Pennsylvania a severe capital shortage is being felt by the major steel companies which have older coke, iron and steel works. We are all aware of the severe cutbacks in the Johnstown area and to the west in the Mahoning Valley. Jones & Laughlin and United States Steel in the Pittsburgh area have been forced to cut back on their work forces; and in the eastern part of the State we have just recently seen the closing of Alan Wood Steel and other units near Philadelphia.

These steel companies have reported little or no earnings and have reached or come close to the limit of their ability to borrow more funds. Modernization to become competitive with Japanese and other foreign steelmakers is out of the question while capital expenditures are severely cut back.

Pennsylvania, with approximately 150,000 of its wage earners employed in the steel industry, can only lose if Federal requirements inflict additional capital expenditures on them in the near term without consideration of expansion, modernization and especially, sustained, profitable operation. Although Pennsylvania will probably be the hardest hit State, since the steel industry is fairly concentrated within its borders, it is not unique and I am sure my colleagues can attest to that fact.

Consider specifically Jones & Laughlin Steel Corp. J. & L. employs approximately 16,000 workers in the Pittsburgh and Aliquippa areas. At present, they are struggling to complete environmental projects in both air and water that will cost nearly $300 million, one-third of which is for water pollution controls. There is no feasible way for the company to find this amount of capital in the next 3 years and still survive as complete, integrated mills. Even this forced spending schedule, however, is illegal under this bill and the amended Clean Air Act. The simple fact is that there is no way some part of the industry, J. & L. in particular, can meet the demands of these acts in their present capital positions.

The administration's steel plan partially recognizes this problem in its recommendation that EPA review its environmental recommendations to reduce economic costs and remove barriers and rigidities that inhibit modernization. What that means is a mystery at this point, and we can only hope that it turns out to mean something for the steel industry.

The administration has also recognized the tremendous cost of installing pollution control facilities, and is prepared, I am told, to recommend appropriate tax incentives in its tax reform plan due early next year. My own preference in this regard is legislation permitting the companies to deduct these expenditures in the same year they are made rather than amortize them over a longer period. I have introduced legislation to this effect—S. 1276—and have recently written the President, along with Senators RANDOLPH, PERCY, ALLEN, and DANFORTH urging him to accept this proposal.

The many good parts of the amendments to Public Law 92-500 demand its passage, but I fear that the effect of the bill will be to further endanger communities and cities that are dependent upon the continued survival and prosperity of steel. We must watch the implementation of this legislation carefully to insure that this is not the result.

Mr. MORGAN. Although I support the conference report's exemption of normal farming, forestry, and ranching activities from section 404 permits, I think we should make it clear that in adopting this approach we do not intend to accept the conclusions of the Senate committee report concerning clearcutting of eastern mixed hardwoods.

The committee report could be interpreted to ban or require permits for clearcutting on the 254,000,000 acres of eastern mixed hardwood timberlands in both public and private ownership in every State east of the 100th meridian. This could cripple forest management in the Southern States, the Northeast, the Midwest, and the Lake States.

Many important hardwood species such as aspen, birch, black cherry, walnut, and hickory are difficult, if not impossible to regenerate without clearcutting.

The supply of these hardwoods is vital to the furniture industry of my State, which supplies the overwhelming majority of furniture sold in the United States.

Again and again, the Congress has rejected the idea of banning hardwood clearcutting, or of requiring permits for it.

In 1972, and again in 1976, Congress held extensive hearings, with expert witnesses, on the subject of forest management and clearcutting. In both cases Congress rejected the prohibition of, or permit requirements for, clearcutting of eastern mixed hardwoods. The Senate specifically rejected an amendment prohibiting clearcutting of eastern mixed hardwoods when it was offered during full Senate consideration of the National Forest Management Act of 1976.

Last year, the Congress rejected a proposal to ban or require permits for clearcutting on the 92,000,000 acres of national forest timberlands.

Finally, I emphasize that the vast majority of the 20,000 forestry professionals in the United States recognize that even-aged management is an appropriate practice when properly applied. Congressman BREAUX, the conferee from Louisiana, asked the Forest Service to respond to the questions raised by the Senate committee report concerning clearcutting of eastern mixed hardwoods. Chief McGuire of the Forest Service responded by saying: "Even-aged management practices, such as clearcutting, are especially well suited to many eastern hardwood types." Chief McGuire advised against an interpretation of normal silvicultural activities that would restrict the use of a wide range of scientifically proven silvicultural practices including clearcutting in all regions of the country.

I do not believe we should allow committee report's language to lead to an interpretation which the Congress has consistently rejected.

Mr. CULVER. Mr. President, I am pleased to see the Senate act today on the conference report accompanying H.R. 3199, the Clean Water Act of 1977. I am hopeful that both Houses will approve this legislation without further delays, and I want to commend my fellow conferees for their dedicated attention to this important measure.

One of the major water quality issues which has long been of concern to me is the urgent need to reduce nonpoint source pollution. It is widely recognized that our Nation's water quality goals will not be met in many lakes, streams, and rivers without accelerated attention to the problem of controlling agricultural and silvicultural runoff, which may be so severe as to overshadow current water quality improvements from the control of untreated municipal and industrial discharges. It has been estimated by the U.S. Soil Conservation Service (SCS), for example, that cropland is responsible for at least 50 percent of the total sediment entering our inland waterways. Over 400 million acres of cropland contribute 2 billion tons of sediment annually to our streams, lakes, and rivers.

Effective water quality related soil conservation practices will both conserve our valuable topsoil and abate further degradation of our water. Existing soil conservation programs have simply not addressed the problem of nonpoint source pollution and, frankly, have contributed to poor water quality in many instances. In fact, the General Accounting Office recently reported that existing programs are too production oriented, do not emphasize areas with serious water pollution, and do not foster participation on a geographically related basis. It is possible to conserve soil within limits necessary for continued production of food and yet not meet our water-quality standards. As an example, many soil conservation practices which improve agricultural productivity contribute only marginally toward curtailing soil erosion. Though conservation practices which enhance agricutural output are needed, we also need to finance those conservation efforts which are specifically premised on improvements in water quality.

The Committee on Environmental and Public Works, of which I am a member, has recognized the serious problem of nonpoint source pollution ever since the landmark Federal Water Pollution Control Act Amendments of 1972 (Public Law 92-500) were passed. To begin reducing pollution from these sources, Congress established an areawide local planning mechanism under section 208 of Public Law 92-500. Under this provision, the Governor of each State must identify each area within his or her State which has significant water quality problems and subsequently must designate an agency for developing a regional plan for enhancing water quality. Among its primary responsibilities, the areawide management agency must establish local procedures for controlling nonpoint source pollution. This planning process is to assure the necessary local arrangements for implementing coordinated decisions to achieve our water quality goals. In accordance with this process, guidelines for regional "best management practices" have been identified by the EPA for reducing agricultural runoff. Such conservation measures must be compatible with water quality goals and should be the most effective projects for preventing soil erosion. Because of the variability of sources and geography, no one best management practice will be applicable to all activities. They must be tailored to local needs, and local expertise will be utilized in the final selection.

This year the Environmental Pollution Subcommittee conducted several field hearings to review the progress under section 208. At the hearing in Iowa, which I chaired, and at others in Colorado and Minnesota, we received considerable testimony on the success of the local planning efforts under section 208 and on the future requirements of this program. At the hearing in LeMars, Iowa, members of several farm organizations and environmental groups praised the section 208 areawide planning process at the local level and clearly documented the need for financial assistance to help institute the conservation practices identified as best management practices for abating water pollution.

These conservation measures are a costly endeavor and place a major burden on the average landowner. The National Water Quality Commission, for instance, estimates that presently these rural water quality projects could cost as much as $12 billion nationally. To help farmers comply with water quality goals pertaining to nonpoint source pollution, a system of technical and financial assistance for implementing the appropriate soil conservation practices is essential. Without such an arrangement, it will be difficult for farm operators and owners to install these practices voluntarily.

During consideration of the legislation before us now by the Committee on Environment and Public Works last summer, I offered an amendment, which was approved, to help landowners and operators in rural areas finance the cost of implementing the appropriate conservation measures under section 208 of the Federal Water Pollution Control Act. In order to carry out this cost sharing program $200,000,000 is authorized for fiscal year 1979 and $400,000,000 for fiscal year 1980.

Under this Senate-approved provision, the Secretary of Agriculture, acting through the Soil Conservation Service, with the concurrence of the Administrator of the Environmental Protection Agency (EPA), is authorized to enter into long-term contracts with farm operators and owners for the purposes of installing practices to reduce nonpoint source pollution. Only those soil conservation projects identified under section 208 as best management practices are eligible for funding, and the Federal cost share may be as high as 50 percent.

These rural clean water projects are designed to address a major deficiency of current soil conservation programs in their emphasis on land with the most severe water-degrading soil erosion problems. These funds will not be used for practices instituted by one or two operators in a particular area when broader participation is needed to reduce runoff. Under some watershed, hydrologic, or geologic conditions, water quality goals cannot be achieved unless a high percentage of the pollution source is given appropriate treatment. Accordingly, the section 208 management agencies are to assure an appropriate level of participation by landowners and operators in the area before funding becomes available. Additionally, these funds are to be made available only to those areas which have approved management plans under section 208.

Under this cost-sharing provision, the Secretary is authorized to carry out these rural clean water projects through the local soil conservation districts. These conservation districts are uniquely equipped to help plan, manage, and implement portions of the State- and areawide water quality management plans, particularly those related to the control of pinpoint pollution. They are legal subdivisions of State government, directed by locally elected or appointed commissioners or directors. In most areas, they have been active in the development of 208 water quality management plans and have been particularly involved in the identification of best management practices for nonpoint source pollution control. Providing these districts with the authority and ability to assist with the implementation at the local level will achieve the most efficient use of funds and resources possible.

In addition, the Secretary of Agriculture is to give priority to those areas that have the most significant and adverse problems with nonpoint source pollution. Funds appropriated under this provision will likely not be dispersed evenly throughout the Nation. The intent of this requirement is to limit the application of the program to carefully selected priority project areas.

The heart of this program is the authority for the Secretary of Agriculture to enter into contracts of not less than 5 years nor more than 10 years with cooperating owners and operators of non-Federal rural land. These long-term contracts will be entered into only upon the assurance that the necessary soil conservation practices will be properly established and maintained. Such contracts will help guarantee that the Federal investment will result in the control of agricultural runoff. A project participant will be required to pay back Federal moneys plus interest in the event that the contract is violated during its term.

The conference committee essentially approved the Senate-passed cost-sharing rural water quality program except for a few minor changes. The Secretary of Agriculture has been given greater flexibility to designate other agencies to administer this program in those instances where the soil conservation districts do not exist. The local soil conservation district, where one exists, is to have the primary responsibility for implementing the clean water projects at the local level. Otherwise, another local agency may be designated. The conferees also agreed that the function of this cost-sharing program is to reduce nonpoint source pollution, and that it is not intended to be a copy or extension of existing soil conservation programs in the Department of Agriculture.

The Senate proposal named the Soil Conservation Service as the administering agency, and the conferees retained that provision, adding the phrase "and such other agencies of the Department of Agriculture as the Secretary may designate." This will allow the Secretary to designate other agencies in the Department of Agriculture to assist SCS in its administration of the program.

The conferees decided to strengthen the possible local and State administration of this program. With this change, the Secretary will, where practicable, enter into agreements with soil conservation districts, State soil and water conservation agencies, or State water quality agencies to administer this program.

To clarify the establishment of priorities for assistance among individual landowners or operators, the conference committee authorized the soil conservation districts, with the local departmental representatives to address this issue. Districts can relate to critical water-quality problems as identified in the 208 plan as a source of guidance for priorities.

It is intended that funds appropriated under this program are to remain available until expended. This will let individuals who participate in this program know that funding will be made on a long-term basis and will be available throughout the life of their contract. Additionally, due to the magnitude of the task nationwide and the limited funds available, these funds should be used on private lands only. Both of these points were intended to be included in the conferee's report, however, through an oversight they were omitted. I have checked with both Houses and the conferees agree that these points should be made a part of the legislative history on this act and given the same weight as the statement of managers.

Mr. President, I believe the changes made by the conference committee are worthwhile and do not diminish the full objective of this provision. It has an areawide water quality focus to reduce soil erosion and, therefore, efforts under this program must meet different requirements from those that have guided us in the past. I encourage my colleagues to approve this legislation.

Mr. MOYNIHAN. Mr. President, I wish to congratulate the conferees and the distinguished chairman of the Environment and Public Works Committee for successfully negotiating the clean water amendments reported to the Senate today. The conference report contains a sound compromise in all respects. The conferees, in my opinion, did an admirable job in balancing environmental and economic considerations.

Industrial dischargers who are not in compliance with the 1977 standards will be treated sternly, but fairly. The new law will recognize good faith efforts by industry by granting an extension to industrial dischargers that have made an honest attempt to comply with the 1972 law. The conferees should be commended for working out this approach and for resisting attempts to provide general exemptions or extensions for the 1977 deadlines.

The amended provision for the 1983 treatment requirements also reflects a rational approach to environmental-economic tradeoffs. The conference report recognizes that the enormous costs required to implement best available technology may result in marginal environmental benefits. Exemptions from BAT are now provided when the discharger can demonstrate that the benefits and costs of treating conventional wastes do not support the implementation of further treatment.

Some people have characterized the above changes in the law as concessions to industry. That characterization is inappropriate; the new provisions are manifestations of a congressional realization that water treatment as a goal, rather than an action to attain a goal, may not always be in the Nation's interest. The indiscriminate imposition of the 1977 treatment standards made a great deal of sense: the majority of waste from point dischargers was treated and major gains in water quality were achieved as a result of these expenditures. The benefits of the next step, the 1983 standards, are not so great, but the costs are. The conferees recognized that it is time to reinstate the conceptual connection between treatment and environmental quality into water quality legislation.

The conference report preserves the tough stance that the Congress had taken on toxic pollutants and on the protection of wetlands. There is no room for compromise here: toxics must be controlled and our wetlands must be protected. The conferees should again be congratulated for keeping section 404 almost intact and for providing the impetus for an active toxic control program.

An area of great concern to me was the administrative burden that was imposed on localities by the 1972 law. Localities were not permitted to use ad valorem taxes to collect funds for operating publicly owned sewage treatment plants. I argued during our committee markup against this provision as arbitrarily constraining the local implementation of the law. I am, therefore, pleased that the conferees agreed to an amendment that will permit the use of ad valorem taxes. This new provision is of great importance to local governments, such as Suffolk and Nassau Counties in New York, whose sewage treatment projects would have been jeopardized by the old law.

The conferees also recognized the inordinately large administrative burden of the industrial cost recovery provisions. In some municipalities the administrative cost of recovery would have exceeded the recoverable costs. The provision of a 12-month study of industrial cost recovery and a 25,000-gallon-per-day exemption is a wise one. It will be particularly beneficial for large urban areas with several very small businesses, such as New York City, where industrial cost recovery from all dischargers makes little sense.

Mr. RIEGLE. Mr. President, section 69 of the conference report on H.R. 3199 contains what I believe to be an essential tool to cope with chemical emergencies that have plagued this country over the last several years.

The chemical industry has grown by leaps and bounds in the last decade. With sales in excess of $100 billion per year in this country alone, this gigantic industry is responsible for nearly 10 percent of our gross national product.

While chemicals obviously present great benefit to society, our reliance on chemicals has also brought with it grave emergencies which threaten human health and the environment. For example, since 1968 at least 30 food contamination incidents caused by chemicals have resulted in losses of nearly $100 million. Twenty-four States have been involved, stretching from one coast to the other. Kepone, PCB's, "octa," and BCME have all become code words for human suffering and economic catastrophy.

Earlier this year, I chaired hearings of the Subcommittee on Science, Technology, and Space of the Committee on Commerce, Science, and Transportation to examine the facts surrounding the widespread contamination of food and the environment by the chemical PBB. While this contamination was restricted largely to the State of Michigan, it is merely indicative of those kinds of problems which affect a large number of States. The extent of contamination in Michigan is overwhelming. Of 9½ million residents in the State, fully 9 million have been estimated to contain PBB residues in their systems.

During the 4 days of hearings we held in Michigan, witnesses detailed an incredible story of bureaucratic lethargy and inaction in coping with this catastrophe. While the contamination took place in 1973, and the responsible chemical was identified in 1974, only now are we beginning to understand the full import of the health effects of this disaster. In January of this year, nearly 4 years after the incident occurred, the National Institute of Occupational Safety and Health finally began to examine the occupational implications of the manufacturing and processing of PBB.

In light of this incredible record, it is with great interest and enthusiasm that I note section 69 of the conference report on H.R. 3199, which establishes an emergency fund to deal with the release into the environment of any pollutant or other contaminant. It is precisely this type of need that motivated me to introduce S. 1330, which would establish a chemical emergency response team to deal with chemical disasters. S. 1330 was adopted, in nearly identical form, as title II of S. 1531, which was reported by the Committee on Commerce, Science, and Transportation in May. Unfortunately, a jurisdictional dispute between the Environment Committee and the Committee on Commerce, Science, and Transportation arose with respect to title II. An agreement was reached between our committees, however, whereby a similar provision would be inserted in the Federal Water Pollution Control Act amendments now before us, thus negating any need to retain title II in the Commerce Committee bill.

In early October, I wrote to the conferees on H.R. 3199 urging them to adopt a number of key changes I though important in order to provide in section 69 of H.R. 3199 what I had sought to accomplish in title II of S. 1531. Through the cooperation of the distinguished senior Senator from Maine and other conferees, my suggestions have been incorporated in the product now before us. I ask unanimous consent that my letter of October 11 to the conferees on H.R. 3199 be printed the RECORD.

I applaud the Senate conferees—especially the distinguished Senator from Maine—for their work in this area.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., October 11, 1977.

DEAR CONFEREES: One of the things that keeps cropping up in the country is the high number of chemical contamination emergencies and food poisoning incidents, that the government is being asked to respond to. The Kepone tragedy in Hopewell, Virginia, the polyvinyl chloride catastrophe which killed a substantial number of workers at the Goodyear plant and the PBB contamination incident in Michigan resulting in tens of millions of dollars in damages, are only a few examples of the rise of manufacturing highly toxic substances.

Since the Commerce Subcommittee on Science, Technology, and Space held extensive hearings in Michigan last spring to examine the PBB incident, it has become increasingly clear that the Federal Government must step up its efforts, to quickly and effectively respond to chemical emergencies. The establishment of an emergency fund under Section 17 of H.R. 3199 is certainly a good start. I heartily applaud the authors of this section of the bill, and urge that it be accepted by the conference.

While Section 17 of the House bill is certainly a step in the right direction, our experience in examining the PBB incident in detail leads me to conclude that a number of changes would make it an even more useful tool. Thus, I would suggest that the conferees may want to consider the following:

(1) There are many resources which now exist at the state and local level which could be of considerable benefit in responding to toxic substance emergencies. Local physicians, toxicology labs, police forces, and others could all provide extremely useful services in responding to emergencies. I would thus urge that EPA be required to undertake a survey of these public and private resources to ascertain the extent to which they could be helpful in responding to disaster of a chemical nature.

(2) Since a response capability requires that timely notice be given, I would also urge that EPA establish a reporting system among state and local authorities to enable rapid discovery and dissemination of emergency information.

(3) While it may be difficult to do any advance planning with respect to specific emergencies, it does seem useful to spell out the manner in which appropriate officials will respond to chemical emergencies. The development of "contingency plans" at both the state and federal levels should aid in promoting a rapid response. I suggest that consideration be given to providing funding to the states to help them create this capability.

(4) Since chemical and pollution emergencies frequently affect the responsibilites of a number of federal agencies, it is extremely important that these agencies be incorporated into the response mechanism. Consequently, I would urge you to make provisions in the bill for a corporative effort among the agencies of the Federal Government.

Again, let me congratulate the work you have done on this bill. I would very much appreciate any consideration you can give to the suggestions that I have made for improving the emergency response capabilities of EPA.

Please feel free to contact me if I can be of further help.

With best wishes.

Sincerely,

DONALD W. RIEGLE, Jr.,
U.S. Senator.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The conference report was agreed to.

Mr. MUSKIE. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. NELSON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I take this opportunity to commend the distinguished Senator from Maine, Mr. Muskie, and the distinguished Senator from Vermont, Mr. Stafford, the managers on the part of the Senate, upon the adoption of the conference report on H.R. 3199, the Clean Water Act.

As the Members of the Senate are well aware, there have been few issues more difficult or more complicated to resolve than those surrounding the clean water bill. The attempt to balance the legitimate and often conflicting interests of the public in protecting the environment for the future while permitting necessary continued development has been truly herculean. The very fact that it has taken 2 years to achieve this balance is clear evidence itself of the magnitude of the task involved. Thanks to the expertise and dedication of Senator Muskie and Senator Stafford, however, the near impossible has been achieved and the Clean Water Act will shortly become a reality.

Mr. President, I would be remiss if I did not also single out the distinguished chairman of the Environment and Public Works Committee, Senator Randolph, for his outstanding contribution to this legislation as well. But for his dedication and diligence we would not have been able to act on this conference report today. His persuasiveness and articulateness are well known and led the way toward acceptable compromise in the face of almost irreconcilable conflict. The people of this country certainly owe to him, as well as to the other Senate conferees, a profound debt of gratitude.

THE CROWN OF ST. STEPHEN

Mr. CURTIS. Mr. President, the Crown of St. Stephen should not be returned to the present Government of Hungary. If it is returned it will be an insult to freedom-loving Hungarians all over the world.

This crown was a gift from Pope Sylvester to King Stephen. It marked the occasion of Hungary turning to Christianity in about the year 1000 A.D. Later on, King Stephen was made a saint. This crown has great significance to a true government of Hungary, to the Hungarian people and to all who adhere to the Christian faith.

In 1944 when the armies of Communist Russia were about to overrun Hungary, this crown was turned over to the American military forces who prevented it from being turned over to the Communists.

Some months back, President Carter announced his intention to return the crown to Hungary in spite of the fact that they have a Communist government. Several bills have been introduced in the Congress to resist this. A court action is now pending and unfinished to determine whether or not the President can return this crown. In spite of all this the Department of State today announced that they were going ahead with the delivery of the crown to the present Government of Hungary on January 6 or 7, 1978.

Mr. President, this is an outrage. It is an arrogant move prior to the determination of the issues by Congress and by the courts. It is an excess in the use of executive power. It is morally wrong. I hope that President Carter will reconsider this rash action.

Mr. MUSKIE. Mr. President, there is another matter at the desk to be called up.

Mr. LONG. Mr. President, will the Senator yield to me?

Mr. MUSKIE. I yield.

EMPLOYEE STOCK OWNERSHIP

Mr. LONG. Mr. President, I was pleased to learn that the employees of a Stockton, Calif., company, Pacific Paperboard Products, have been able to acquire ownership of their company through the use of an employee stock ownership plan (ESOP).

This is extremely significant in that approximately 1,000 jobs were preserved through the ESOP. Had the employees not been able to effect this transaction, the company would probably have been liquidated by the parent company, resulting in a loss of these jobs, a dramatic increase in the level of unemployment in the Stockton, Calif., area and a great loss of tax revenues in the locality.

This California ESOP is particularly gratifying because the U.S. Government assisted in the venture. Responding to strong congressional support for the ESOP concept, the Economic Development Administration (EDA) made low interest, long-term funds available to the employees to facilitate their purchase of the company for which they work. We made it possible for them to be the company.

In five pieces of legislation over the past 5 years, Congress has expressed its commitment to the ESOP concept as a means of providing employees with access to stock ownership in their company. These are as follows:

First. The Regional Rail Reorganization Act of 1973 (Pub. L. 93-236) which would have permitted ConRail to utilize an ESOP as part of its financing program, thereby enabling it to repay at least a portion of its indebtedness with pretax dollars;

Second. The Employee Retirement Income Security Act of 1974 (Pub. L. 93-406) which formally recognized ESOP as an employee benefit plan and established criteria for its adoption and administration;

Third. The Trade Act of 1974 (Pub. L. 93-618) which as part of the relief package being established for companies that are members of foreign trade-impacted industries, provided that some preference would be given for assistance to such companies which adopt an ESOP;

Fourth. The Tax Reduction Act of 1975 (Pub. L. 94-12); and

Fifth. The Tax Reform Act of 1976 (Pub. L. 94-455) which established, and expanded, the availability of an investment tax credit for employers that adopt an ESOP and which are otherwise eligible for the investment tax credit.

Mr. President, under these five pieces of legislation, ESOP has grown and expanded; employees of hundreds of companies throughout the United States are beginning to acquire an ownership interest. With this comes an awareness that it is now their company whose success is affected by their labor.

Development of ESOP is critically important to this country's economic health, especially in light of the staggering amount of new capital formation which we will require in the future and the disproportionate distribution of stock ownership that exists today. One of the leading banks in the United States estimated last year that we will require over $4½ trillion of new capital formation in the next decade. Clearly, some new vehicle must be developed to provide that additional capital.

To date, no one has developed totally accurate figures on the distribution of stock ownership in the United States. One of the most conservative reports, entitled "Stock Ownership in the United States: Characteristics and Trends," was prepared by the Wharton School of Economics and contained in a U.S. Department of Commerce publication called "Survey of Current Business."

The Wharton study, and I repeat that it is conservative in this regard, reflected that the top 1 percent of the wealthholders in the United States in 1971 directly owned more than 50 percent of the outstanding stock value in the country.

Clearly, some program which gives the remaining population greater access to stock ownership would help promote this necessary capital formation. I feel that ESOP could be of tremendous benefit both in facilitating the creation of more capital and in the creation of more capitalists.

If there has been any weakness in the development of ESOP, it has been the lack of funds or credit available to employees who wish to use the ESOP mechanism to acquire an ownership interest in their company. Lending institutions have been cautious about extending credit or committing funds for a concept which has been in its embryonic stage. Although this reticence is somewhat understandable, it has impeded the growth of ESOP. However, the participation by EDA in the Pacific Paperboard project reflects a growing interest in ESOP on the part of that agency. I wish that other agencies, like the Small Business Administration (SBA) and the Farmers Home Administration (FmHA), would follow the lead of the EDA and get involved.

Mr. President, the EDA has participated in similar ESOP-oriented projects in the past. In 1975, the EDA assisted employees in South Bend, Ind., in acquiring ownership of South Bend Lathe. In 1976, also with EDA support, employees acquired ownership of Rich-SeaPak Corp., in St. Simon's Island, Ga., and ownership of Okonite Co. in New Jersey.

These projects were all made possible by EDA grants of funds under title IX of the Public Works and Economic Development Act of 1965. However, the EDA has other programs through which funds could be made available to support employee stock ownership, either through direct loans or loan guarantees. This would also be true for the SBA and FmHA.

I would like to see these agencies commit some creative thought to how they can participate in the development of this critically important concept. Continued support by Federal agencies should, in turn, encourage private lending institutions to participate on a greater basis, thereby broadening the access to stock ownership for employees.

Mr. President, I might also point out that the November 27, 1977 edition of the Washington Post contained an article about the adoption of an ESOP by Allied Plywood Corp. in Alexandria, Va., and the use of the ESOP to acquire ownership of that company by its employees. The company is quite small, and, as reflected in the article, is already benefiting from the adoption of the ESOP in terms of employee incentives and motivation. This is a clear example of how an ESOP can be creatively used to benefit employer and employees alike.

CORRECTIONS IN THE ENROLLMENT OF H.R. 3199

Mr. MUSKIE. Mr. President, I ask unanimous consent that the Chair lay before the Senate a message from the House of Representatives on House Concurrent Resolution 444, directing the Clerk to correct the enrollment of H.R. 3199.

The PRESIDING OFFICER. Is there objection to the present consideration of the concurrent resolution?

There being no objection, the concurrent resolution (H. Con. Res. 444) the Senate proceeded to consider the concurrent resolution.

Mr. MUSKIE. Mr. President, briefly, the purpose of this resolution is to correct by interpretation, I suppose, an implication in the clean water bill that was not intended.

The House Parliamentarian is of the opinion that in connection with the cost-sharing program that deals with agricultural pollution the conferees wrote in some contract authority. That was not our intention. It is not our intention to bypass the appropriations process.

The House of Representatives, because of the opinion of its Parliamentarian, introduced this concurrent resolution for the purpose of correcting the record in that respect.

So, since that reflects what the conferees actually intended, I urge that the Senate agree to this resolution.

The concurrent resolution was agreed to.

Mr. MUSKIE. I thank the Chair.

Mr. NELSON. I wonder if the Senator from Maine would yield for a brief question on the conference report we just adopted.

As the Senator knows, in 1963 the Senate passed, with the support of the Senator from Maine, an amendment in the water bill at that time—I think it was 1963—to eliminate the use of phosphates in cleaning agents or reduce their amounts, and then again this year I offered an amendment to the water bill to eliminate the use of phosphates because of the deleterious effect they had on the Great Lakes as a body of water, they being the most serious agent in terms of causing eutrophication, and the Senator from Maine did support that.

It was adopted by an overwhelming margin, but the House would not agree in conference to accept that amendment, although we have passed it twice, if not three times—twice that I recall.

I had understood, although I was not there, that there was some discussion in the conference with respect to holding hearings in both houses on the proposal to prohibit the use of phosphates in the watershed of the Great Lakes. I do not recall whether the chairman was present at that time or not.

Mr. MUSKIE. I was not, but the staff has briefed me on what took place.

May I say the basic problem in conference was that there was disagreement as to the data that bore on the magnitude of this problem in the Great Lakes basin and the contributing causes, so I would like to assure the Senator for myself on the Senate side that we will take another look at the basic data, and I know the Senator will cooperate in undertaking to develop it, and see where we go from there.

I think unless we can establish basic underlying data in a way that is pretty convincing, it would be difficult to persuade the House in another conference. I think we ought to begin at the beginning to look at the underlying data, and when we are ready, if the data indicate it, go to hearings possibly. We will certainly not drop the issue. It is a question of how we pick it up again in order to resolve it.

The Senator from Idaho was in attendance at the conference, and maybe he could add to what I have said.

Mr. McCLURE. I would underscore what the Senator from Maine said. I was one of the conferees and did take part in those conversations, and I think the Senator from Maine is correct. It is going to take some persuasion of House Members as to the basic facts, and I think the Senate committee will be very interested in looking at that basic data to determine what then should be our next move in terms of dealing with this issue.

I would say to the Senator, too, that the act to which these amendments are directed, and these amendments themselves as they are implemented, have an effect upon the problem itself, and the data base, as a result, changes because of the application of the Clean Water Act and the role the activities in pollution abatement play under that act, irrespective of any other mandate with respect to phosphates particularly or separately.

So I think there will be a need for us to look at the basic data, a need for the committee to develop a better information base of what kind of impact current activities are having on the existing law and under these amendments upon the whole question of phosphate pollution. It is not only in the Great Lakes area but in the remainder of the United States.

I am sure the committee will do that. I would cerainly add my own assurances to the Senator that insofar as I am concerned, as far as this one Senator is concerned, we will be undertaking a review of that information.

Mr. MUSKIE. May I say additionally that we will undertake immediately to ask the EPA to give us a report for the purpose of gathering and collating the data bearing upon this issue and this problem so we can have the benefit as early in the year as possible of EPA's input as we consider what steps we ought to take to go from where we are.

Mr. NELSON. May I say to the Senator, when I first introduced that amendment in the past, in 1963, I was satisfied, based upon conversations with scientists who had not done the studies but were extrapolating from their knowledge of how much phosphate was going into the Great Lakes, that certainly there was serious damage and acceleration of eutrophication going on as a consequence, without having a very carefully studied data base to measure the amount or measure the effect.

Since 1972, the statistics I have looked at, based upon the studies made, at least to me, are compellingly persuasive, and I appreciate the comments of the Senator from Idaho and the chairman of the committee, Senator Muskie.

I would hope we could have a chance, at the convenience of the committee, to have the EPA and those who did the Great Lakes studies present their data so that we have it in the hearing record because if, in fact, the studies are correct, it is a very, very serious matter involving the largest collection of fresh water in a chain of lakes anywhere on the face of the Earth.

It has been persuasive enough, the data that have been accumulated over the years, so that the city of Chicago has banned the use of phosphates except for certain measured amounts for industrial and commercial use; the State of Minnesota has done the same, as has the State of New York. So you now have a huge city and two States, all bordering the lakes, which have viewed it as serious enough to ban its use there.

Of course, they are using alternative detergents that work very well. I personally would have hoped the soap and detergent industry would have enough feeling of corporate responsibility toward the welfare of the country and the protection of this great body of water to voluntarily stop selling detergents with phosphates in them in the watershed of the Great Lakes. But obviously they do not or have not thus far, even though they are the same companies that are selling the substitute detergents that are being used very effectively in Minnesota, Chicago, and New York anyway.

Mr. MUSKIE. I appreciate that comment. I assure the Senator we will pursue it.

We are interested not only in the overall impact of phosphates on the Great Lakes, but the sources. I take it agricultural runoff is one of the sources, and how effectively we can deal with that source is a question.

I take it that most, if not all, of the waste treatment plants operating in the Great Lakes basin are taking phosphates out. I do not know how effectively or to what extent that has reduced the problem. Maybe in some cases poor operation is subverting that benign influence on the problem. But in any case let us get all the parameters of the problem and all the data base as refined as we can, and maybe we can find a base that can give us House as well as Senate support.

Mr. NELSON. I might say to the Senator from Maine that many of the same scientists who had thought in 1970 and 1971 that treatment of the wastes and extraction of the phosphate in the plant would be effective have concluded that the answer is to keep it from getting into the plant in the first place. They consider in these studies, which they would be prepared to present, that the factor of the phosphates in detergents is critical to stopping the deterioration of the lakes.
